Happening to get a good opportunity to visit this progressive and hugely entertaining Lodge, on Friday evening, August 18th, we showed up right in their midst about 9:30, and, "of course," we sat down, and took notes, "of course." To say that ordinary laughter would have relieved our aching sides would simply be telling the plain truth, and if we passed anything in making notes of the many interesting features of the evening, it should be attributed, not to our carelessness or inattention, but to a laudable desire to obtain the fullest possible benefit from the highly moral and digestible character of the entertainment. To begin with, Bro. Flood gave us a scientific dissertation on "Popular Errors;" this was followed by a side-splitting burlesque by Bro. Peterson, who kept the audience in convulsions of laughter with a succession of simple little stories through which he managed to preserve his own equilibrium, but when he attempted to render a select reading (we forget from what work it was taken) his self-control deserted him, and he joined in the general explosion of good humor. Bro. Day, who occupied the Past Master's chair, then rendered an extract from Shakespeare in a very dignified and expressive manner. This brother was followed by Bro. Gallagher, who told a story or two, and gave some of his experiences in the legal profession, which were amusing in a high degree. Bro. I. E Alexander also took his turn in the general amusement, and a short but highly amusing entertainment closed. This Lodge is acting on the right principle, and if brethren want to have a good hearty laugh, just let them attend one of these entertainments. Though we cannot endorse all that was said, nor approve it, yet the entertainment feature is the right one, and should ensure a crowded house. We promised to be around regularly on Friday nights (not Saturday) and see that Spartan Lodge is represented in the WATCHMAN. At this meeting there were four initiations in the J. W. degree and one application for membership. The Lodge has an entertainment committee of three and a visiting committee of five. Spartan has now about 172 members.

Magnolia, 41.

Magnolia Lodge held an interesting meeting on Monday evening, August 21st, at which three candidates were initiated in the J. W. degree, and two propositions received. Among several visiting brothers present, we noticed Bro. C. P. Weldon, M. W., of Gilroy Lodge, who reports Gilroy Lodge between 60 and 70 members, and still progressing.

Franklin, 44.

This stately and philosophic Lodge is well adapted to the name it bears At the meeting of Friday evening, August 18th, we had occasion to drop in here, and found Bro. J. W. Henderson occupying the chair, with District Deputy Frank S. Poland at his right. We also noticed several visiting brothers, including Bro. Usinger, Foreman of Valley Lodge. Bro. J. W. Canfield, who has hitherto filled the office of Guide, having resigned on account of inability to attend regularly, Bro. Peter Maurer was elected to fill the vacancy, and was installed by Bro. F. S. Poland, D. D.

Hercules, 53

This Lodge, as its name would indicate, is one of the strong Lodges; and from the amount of eloquence displayed on Friday evening, Aug. 25th, we believe it can be very properly classed as an "oratorical Lodge." Hercules Lodge is situated at the corner of Geary and Steiner streets, and will well repay a visit, for, although at quite a distance from the business center, a ride over the cable road on Geary street makes the trip thither both short and pleasant, and also because, owing to the fact that most of the members reside in the neighborhood of the Lodge-room, Hercules always has more than an average attendance. The event of this evening, which called out an unusual attendance, as well as a number of visiting brethren, was the installation of a new Foreman and Overseer, occasioned by the resignation of Bro. J. H. Congdon, the former M. W. Bro. H. W. Miller, by virtue or his former office of Foreman, succeeded to that of Master Workman, Bro. W. H. Leach, former Overseer, having been elected Foreman, and Bro. W. A. Boey, Overseer. The installation ceremonies were performed by District Deputy Fish, Bro. J. W. Belden, P. M. W., of Fidelity Lodge, in the P. M. W. chair, Bro. L. M. Manzer, P. M. W. of Hercules, as G. F., Bro. Sidney Worth as G. O., and Bro. F. W. Rossbach as G. G. Among visiting brothers we noticed the two genial orators of the evening, Bros. P. M. Reading, of Fidelity, and Judge Toey, of Franklin. Remarks were also made by Past Master Manzer, Bro. J. H. Congdon, Bro. W. A. Boey, Overseer, and Bro. H. W. Miller, M. W. On the whole, a very agreeable evening was passed.

Washington, 60.

This Lodge is in a flourishing condition, and much can be said in praise of officers, members and work. Every brother seems to take pride in being a member of the Order, and manifests laudable interest in the meetings. The odes are sung in a manner which is creditable to the Lodge, every brother raising his voice freely and sonorously in the pleasing anthems, and as the manly voices make the air tremulous with charity's grand vibrations, one cannot but feel enobled with the thought that he is a Workman, and these his friends. At the meeting of Thursday, Aug. 17th, one candidate was initiated in the J. W. degree. After the Lodge had adjourned several brothers, including Bro. Geo. A. Knight, organist, Bro. C. A. Zunkand, Bro. Adam Lowe and Bro. Gregory, gathered around the organ and indulged themselves in resounding songs, which is highly to be commended, as singing, and particularly good, hearty singing goes hand in hand with fraternity.

Olympic, 127.

This Lodge, at the meeting of Tuesday evening, August 15th, concluded to celebrate the anniversary, the 9th of September, with a picnic excursion. The matter of arranging the details of the same was referred to a committee with full power to act in the premises. A goodly number of brothers were present this evening, including Bro. District Deputy Fish, who installed the remaining officers elect, Bro. W. H. Barkly, Financier, and Bro. E. Holland, Receiver. Also Bro. Dixon, who occasionally remembers Lodge night, and on this particular evening, not excepting others, however, succeeded in developing a large amount of hitherto latent humor. We also found here Past Master Eggleston, of Yerba Buena, and Recorder C. D. Coon, of the same Lodge. The J. W. degree was conferred on one candidate. Altogether a very interesting meeting was had.

At the meeting of Tuesday evening, August 22d, the M. W. degree was conferred, and Bro. Peterson, of Amador, 133, noted among visiting brethren. Bro. Dixon favored the members with a select recitation entitled "Casabianca."

Triumph, 180.

There is no better Lodge than Triumph anywhere—a cosy hall, a fine body of men, good singers and a good organist. The minutes of each meeting are kept with commendable skill and precision. At the meeting of Tuesday evening, Aug. 15th, the J. W. degree was conferred upon one candidate, and one application was received.

Lodge Locals.

Magnolia, 6, D. of H.

Magnolia Lodge, No. 6, D. of H., of San Jose, makes a splendid showing for the past term, having initiated 51 during the six months, giving it a present membership of 155. It will give one of its popular receptions on the 29th.

San Rafael, 24.

San Rafael Lodge, No. 24, had a public meeting on Thursday evening, Aug. 16th, when Grand Master Barnes and Past Master E M. Reading were present by invitation. Odd Fellows' hall, where the meeting was held, was crowded to its utmost capacity. Addresses were made by Brothers Barnes and Reading, after which the former brother gave some recitations and music. The evening was very enjoyable, and the meeting was said to have been one of the largest ever held in the town. District Deputy Barstow acted as Master of ceremonies,

Vesper, 62, Alameda.

Vesper Lodge, No. 62, Ancient Order of United Workmen, now has a membership of nearly 100. The Lodge is blessed with a good set of officers, and the work is conducted in a business-like manner.

Manzanita, 154, Forest Hill.

Bro. J. P. Ziph, M. W. of Manzanita Lodge, Forest Hill, writes as follows: Our Lodge has been increasing in numbers during the past few months. At our next meeting we expect to admit two new members; this will be the first time since our institution that we have had this pleasure. A few weeks ago we also for the first time enjoyed a social with refreshments and speech-making. Taking all things into consideration, our Lodge is stronger than it ever has been; our officers are taking more interest, and outsiders are beginning to see that there is something in the A. O. U. W., after all.

Oakland Lodge Locals.

Visit of Grand Officers to Keystone, No. 64.

On Tuesday evening, Aug. 15th, Keystone, No. 64, Oakland, Alameda county, was honored by a visit from the officers of the Grand Lodge, on which occasion delegations from other Lodges in Oakland, Alameda and Berkeley were present, as well as from several Lodges in San Francisco. Quite a number of members came from Brooklyn Lodge, from Occidenta', No. 6, and from Ashler, No. 165, of Alameda. After the routine business of the Lodge was performed, the large Lodge hall being well-filled by members and guests, the Grand Lodge officers were introduced by D. G. M. Chas. E. Alden, who is Recorder of Keystone. Mr. Menges, Master of Keystone, welcomed them as follows:

"*Grand Master Workmen and officers of the Grand Lodge of the A. O. U. W. of California:* In behalf of Keystone Lodge, over which at present I have the honor to preside, I extend to you a heartfelt and cordial welcome, and hope that our meeting this evening may prove mutually pleasant and profitable to each and all of us. Keystone feels highly complimented, I assure you, in having the privilege and honor in extending to our worthy and efficient Grand Master, and to his faithful subordinates, this cordial welcome. And to you, brothers, we look for words of wisdom, good counsel and encouragement. The Grand Master Workman will please take a seat on my right, and the other officers at the right of their respective officers."

At the suggestion of the G. M. W., Deputy E. F. Loud then exemplified the unwritten work of the Order for the instruction of those present.

The founder of the Order in California was then called to his feet, and Grand Recorder Pratt said:

Early History of the Order.

The A. O. U. W. was formed under somewhat peculiar circumstances. It was formed differently from any other organization of a similar character, so far as I know. It began at the bottom instead of the top, as is the usual custom.

When a number of men go to form an organization of any kind, a railroad, gas, or any other company, the people who organize it take charge and run it till their nests are feathered, to use a common phrase. The A. O. U. W. was not formed in any such way. The first body of the A. O. U. W. was a *subordinate* Lodge. It was provided, too, that when there were seven Lodges they should elect delegates to form a Grand Lodge. Also, that when the Grand Lodge was formed, then the officers of that Lodge should act *ex officio* as officers of a Supreme Lodge; and when three Grand Lodges were formed, they should meet and found a Supreme Lodge.

The beneficiary feature was peculiar. Each Lodge was independent. A collection was made and held until some one died. Then the Lodge met, and the money was paid direct to the heir. Then the certificates were issued by the secretaries because there was no Grand Lodge.

I had the honor to pay, after the Grand Lodge was formed, the first beneficiary certificate, and have to-day a receipt for a partial payment of $300. When the seven Lodges were formed, we organized the Grand Lodge, and when three Grand Lodges were organized, representatives met in Kentucky and formed the Supreme Lodge.

The State of Pennsylvania had changed the benefit laws, and made a law which was practically a "separate jurisdiction law." When the Supreme Lodge met all the associations worked under it except those of Pennsylvania. This ran along in this way for two years, and the death rate of Pennsylvania being higher than in Ohio, the latter State became restive

When the Supreme Lodge met, the proposition was submitted to have separate jurisdictions. It was done more with the idea of placating Ohio than of any other jurisdiction. All now ran along smoothly for awhile until her "beer" began to operate and increased deaths, when Ohio went back into the Supreme Lodge jurisdiction.

In course of time it was apparent that two systems would not work. A committee submitted a plan, and in Chicago the same plan of payment of certificates as is now carried out was adopted. The principle is well established, and Iowa is the only one that has baulked, and in her case there is now a new Grand Lodge. You will see, on looking at its form of government, that the A. O. U. W. is on a Republican or Democratic plan.

The Grand Master's Address.

Mr. Pratt was applauded, and then Grand Master Barnes was called upon. It is only the briefest outline of his remarks which we can give—only the texts of his address, upon which he spoke in his well-known manner. Briefly, he said:

I feel pleased at the crowd which has gathered in these rooms. It is similar to that I meet wherever I go. The Lodge-rooms are filled. Men meet to find out the facts concerning their Order, and to be encouraged in its permanency. The Order always has and always will fulfill all of its obligations.

I want to utter words of encouragement; I want to get you to attend the Lodge meetings and encourage your officers. In some places in the country I have given a remedy for small attendance. I told the officers to vote themselves handsome salaries. A great uproar would be made, and a lot of fellows who never show up until their pockets are touched would come and argue the question for two or three months, and the room was crowded.

In this Order we can never make a dollar out of it ourselves. Whatever we get is what we gain by our attendance here. In our business life we have scarcely time to talk with one another. In the Lodge-room we can interchange ideas.

We find here things which are of advantage to us. The fraternal principle is to be carried out. Then there is the great underlying principle of humanity, in which we are all interested. We are acting, each and all of us, for the benefit of others. We are acting as trustees of a fund for the widows and children of all who join our Order.

When we remember that there were laid to rest last year 88 brethren, and that we have paid in money $176,000 to their widows, it is something to be proud of. We have helped boys, girls and women, and have sheltered them under the *ægis* of the A. O. U. W.

This jurisdiction, in a few days, will only celebrate its 7th anniversary, yet we have paid out $550,000 in coin. You will find it a grand thing to think that your little dollars have kept back a storm of desolation and want from so many homes.

If you could go throughout the State and see what I do of the benevolence of the Order, you would, of course, appreciate its efforts more. No wonder people come into the Order! There is no village that its golden stream of relief does not flow to. Men say, who did this good thing? Who paid the widow? Who sheltered the children? When answered that it was the A. O. U. W., can they but appreciate its endeavors and admire its principles?

Sometimes there are two assessments a month, and a few are disposed to grumble. It does not hurt you. Your money is given to the widow who has placed her faith on a rock. It has given shelter to children who might have gone to vagrancy or suffering but for your united efforts. This is what your money does. It is work angels do not hesitate to perform.

Do we live only for ourselves? Is there not something broader for us to think of? Is not the willingness to do for each other a noble feeling which will elevate us all?

We illustrate here a work that will last, not only during the changing sands of time, but throughout all of the cycles of eternity. We are building better than we know.

We, in California, have reason to be proud of our work, and I assure you I felt this when, not many weeks since, at the Supreme Lodge, I heard called the names of the States contributing to the Upchurch fund—the fund for the benefit of the founder of our noble Order. There was $10 from one State, $339 from Pennsylvania, $27 from another, and $429, the highest of all, until California was called, and she responded with $1,010. I can assure you I felt proud to be her representative. They say there, in the East, that we have big ideas; but they acknowledge, also, that we have big hearts. No jurisdiction will ever raise the signal of distress but that California will respond heartily, promptly, and with dollars.

We are not selfish here. Our hearts are as big as our pockets. We are always ready to respond to any reasonable demands.

I have traveled lately 12,000 miles; I spoke in Georgia, New York, Ohio and other States. I feel the honor conferred on me, and have endeavored to represent you faithfully. We are doing a work so far ahead of any other Order that I feel assured that at the end of 10 years you will see a brilliant record of names added.

Brethren of Keystone, we come to you with fraternal Godspeed of the 220 Lodges of the State. We have 15,000 Workmen who stand united and ready to carry forward the work of the Order. You will aid us; you will help us; you will help your officers. Do this, and it will assist the Grand officers too. Bring in your friends; attend your Lodges.

Three years ago, I said of the A. O. U. W., that in 10 years it will be the largest of the fraternal Orders. If you do the right thing well, do this in three years more. We have the spirit of progress and enterprise in our ranks. Do then with energy the duty which lies before you, and there will be no fear of results.

Bro. Barton of Alameda, No. 161, was called upon, somewhat unexpectedly to him, and made a few remarks expressive of his pleasure in listening to the addresses.

Practical Charity.

E. M. Reading, Secretary of the Relief Committee, was called upon by the G. M. W. and introduced in a complimentary manner. He said: "Some say and believe that the A. O. U. W. is simply a life insurance company under another name, and think it is nothing more nor less than the $2,000 that people want who join it.

"If this idea is possessed by many of you, eradicate it from your minds. There is more than this. If you take the fraternal feature of 'Charity' away, you might as well take down your charter. With it gone, the corner-stone of the Order is gone. We can look forward for years to this Order, but fraternity is the only

thing that will make it permanent. You have a power in this that the heartless corporations have not. With charity for a keynote, you have an Order that angels will keep." Bro. Reading then gave an account of the practical work of the Relief Committee and the way it did good.

P. M. W. Northey, of Brooklyn, No. 3, in response to a call, said he had come to get in a corner out of the way. He did not go away from home to talk. When there was talking to do in his Lodge, he generally took a hand. This was the second Lodge he had ever visited. When at the other one he got scared and went home. The District Deputy had guaranteed that he would not get scared here as he would not be called on; but if the members present were glad when he got up, they would be glad when he sat down, which he would do.

Bro. W. I. McKay, District Deputy in San Francisco, made a short speech, as did M. W. Eden, of Oakland, No. 2.

Bro. White, P. M. W. of Oakland, No. 2, was much pleased with what he had listened to, as he felt there was something more to the A. O. U. W. than is usually spoken of. All of us banded together helped each other. It made his heart feel glad that his two dollars was doing as much good as he had been told. We pay it and do not miss it, but it does much good. Bro. Stevens, of Occidental, No. 6, made a few remarks, and then Bro. Misell, the orator of Valley, No. 30, rose, and amid silent expectation, said:

"It was true that the Workmen were laborers who started this organization. One of the first things they resolved was that they would not admit lawyers or people who drank intoxicating liquors. They knew by experience that these two classes would make trouble of one kind or another. Every organization has a focus. Valley, No. 30, has a focus. It started like the river Rhine, in small rills. The true source is way up in the mountains, and gathers force as it increases in size. Valley had a small beginning, its real source being very small. A small circle of men, who gathered in a certain place and heard about this organization, said, let us investigate it; and they did. Then they said: Let us take hold of this; and they did. In April, they started in, and the I. O. O. F. Grand Lodge, meeting in San Francisco in a body, Valley took into the A. O. U. W. the whole Grand Lodge of the I. O. O. F. That gave Valley her big start."

Bro. J. V. Thompson, District Deputy of S. F., made an eloquent address, of which we have the following notes: "I will say this, that, as you have welcomed us we reciprocate the kindly feelings and greet you in the same fraternal spirit, and re-echo the hope that this meeting will be long remembered by us all.

"Brethren of Keystone, I hope you will go on increasing and will be the Keystone of the grand fraternal arch that spans the State of California. We can then greet each other and can overcome the barriers of cold formality. No introductions are needed as we are bonded together by a common sympathy. We have a a common purpose. Charity, Hope and Protection are our principles. Without Charity, we are as sounding brass. Clothe humanity and give it an intellect ever so brilliant and withhold the quality of charity and it will be a human monster. The heart that melts, the hand that opens to aid the poor are beautiful creations. Giving is not all charity. Kindness to each other, kind words and sympathy go far in their way."

We feel the need of these comforting words, even the most self-reliant of us. Then why should we not follow the Golden Rule? There is charity in fraternity, but kind words are not all. Practical aid is necessary at all times. It is a wonder to me that more do not come to us than do. Every man ought to come to our ranks. We aid in soothing the sufferings of the poor and in maintaining the widows and orphans.

Hope, that beautiful quality to bear life's burdens, gives us courage. Bros. Upchurch and Pratt must have had strong hope when they began on their respective paths; their work in this Order must have had strong faith and hope, but they are repaid now when they see their work.

M. W. Townsend, of Brooklyn, No. 3; Bro. Harris, of Oak Leaf, No. 35; Bro. Terrill, of Oak Leaf; Bro. A. T. Dewey, P. M. W. of Keystone; Bros. Alden, Morton and Silverberg, of Keystone; Bro. Hands, District Deputy from East Berkeley, and Bro. Sinton, of Golden Gate, No. 8, each made a few suitable remarks.

The meeting was, altogether, a most successful one, the attendance being large, and the remarks well received.

Silver Star, 2, D. of H.

Silver Star Lodge, No. 2, Degree of Honor, recently gave an entertainment at Humboldt pavilion, Temescal, the purpose being the raising of funds sufficient to purchase a piano. The Lodge has already some $50 towards the laudable object, and hopes by a series of entertainments similar to the last, to raise the necessary amount. The programme, which occupied the former part of the evening, consisted of a two-act drama, entitled "Bread on the Waters," the characters being sustained by the following ladies and gentlemen: Dr. Harlem, principal of Greenlake seminary, F. Barton; Harry Harlem, his son, Edgar Harden; Fred Hastings, Bob Winders, pupils, W. Schenck, P. Barker; Jonathan Wilde Butts, town constable, Tom Lyall; Lucy Harlem, the Doctor's daughter, Jessie Raymond; Mrs. Loring, housekeeper, Kate Lyall; Dilly (picked from the streets), Rose Applegate. The play was greatly enjoyed and the applause was frequent. After the conclusion the floor was cleared and dancing commenced. The Telegraph Avenue railroad company had special cars running for the benefit of the Oakland visitors.

District Meeting.

The first of a series of district gatherings, proposed to be held by District Deputy Poland, took place on Saturday evening, August 20th, at Pythian Castle, with Harmony Lodge, No. 9. The meeting was largely attended, and the hall was packed; but, owing to a poor ventilation, not so enjoyable as might have been desired. So far as numbers go, the meeting was more than a success; but being the first of its kind, was somewhat crude in design as well as execution. Besides quite a full attendance of members of Harmony Lodge, there were present large delegations from Franklin, 44, Excelsior, 126, Memorial, 174. There were also present a great many visiting brothers from other Lodges. The delegations from Franklin and Excelsior Lodges were admitted in bodies.

Among the Past Masters present we noted the following: Bros. Z. T. Whitten, Wm. H. Thackeray, Dr. L. J. Henry, Frederick Blight, Wm. Decker, J. R. Fishbeck, of Harmony Lodge, L. G. Schord, of Burns, Bro. Booth, of Excelsior, A. A. Eggleston, of Yerba Buena, and District Deputy Thompson, of Noe Valley. The usual order of business being carried out, five candidates received the M. W. degree in fine style, and certainly they could not have failed to be impressed with their duties as good Master Workmen, for over 100 brothers took part in the ceremony.

The routine of Lodge business being over, as far as Good of the Order, District Deputy Poland made a few remarks, and read an excellent paper, in which he made some sensible suggestions as to Lodge attendance and harmony of action among members. Dr. Henry endorsed his remarks, and was followed by Bro. Booth, P. M. W. of Excelsior, who sang a song prepared expressly for the occasion. Bro. Adams, of Excelsior, being called on, then took up the sword, and defended "absent members" in a fine manner, whereupon Bro. White, of Excelsior, was called out and gave his views on non-attendance, wherein he differed from Bro. Adams. Bro. White also thought "fraternity" was a fine thing, but thought it might be carried to extremes, and cited a particular instance.

These were followed by Bro. Blight, P. M. W. of Harmony, Bro. Johnson, of Harmony, Bro. L. G. Schord, P. M. W. of Burns, Bro. Brooks, M. W. of Memorial, and a reading by Bro. Decker, P. M. W. of Harmony. Bro. Thackeray intending to leave the city for a time, tendered his resignation as Receiver of Harmony Lodge, which was accepted. Bro. Cohn, Fin., and Bro. Johnson, Rdr., paid him a glowing tribute as a good member and a faithful and efficient officer. The Master Workman of Harmony Lodge deserves credit for the impartial and perfect manner in which he conducted the meeting. The meeting, on the whole, was a good one, although susceptible of great improvement.

A Superb Resort.

A more delightful summer and autumn resort can hardly be conceived of than that of the Blue lakes, in Lake county. The scenery is rare and picturesque as you approach the lakes by an easy and delightful drive of 12 miles from Lakeport, through Scott's valley, on the east, or of 18 miles from Ukiah, on the west. The water is deep and clear, and in the warm season, captivating and healthful for bathing. For fishing and deer hunting the place is superior during the proper seasons. Mr. Theodore Deming, proprietor of the hotel, is a farmer, and one of the oldest subscribers of the PACIFIC RURAL PRESS, and, with its publishers, believes in the true principle, that "whatever is worth doing, is worth doing well," and also practices his good faith in his farming, horticulture and hotel keeping. Mrs. Deming, in the matron's "pleasant home department," is not less thorough and successful. The place is naturally an admirable one for a popular resort, and we should be pleased to present our readers hereafter with engravings of some of the most beautiful of views surrounding these ever charming lakes. Visitors to Lake county miss much who fail to take in the Blue lakes.—*Pacific Rural Press.*

INTELLIGENT LODGE.—Corona Lodge, of Pennsylvania, has followed in the footsteps of Iowa, but Grand Master James was not to be trifled with. The beneficiary certificates of that Lodge were all suspended. The Lodge now seeks compulsory measures in the courts of that State. Have the members of Corona Lodge forgotten their obligations? Have they forgotten that the Order provides methods of procedure and tribunals for the trial of questions arising in the Order? Have they forgotten that they solemnly promised to obey those laws and the decisions under them? If members of the Order cannot trust the fraternal spirit of the organization to interpret its laws justly, their cause must be a bad one indeed. No law of the Order was ever interpreted oppressively, or enforced harshly. —*Kansas Workman.*

Cedar Falls Lodge, No. 32.

We take the following from an address of Cedar Falls Lodge, No. 32, of the loyal side, to G. R. Miller, G. M. W. of the seceding Grand Lodge of Iowa:

To G. R. Miller, Esq., and Workmen of Iowa:—Is it not a fact, that the Chicago meeting of Nov. 15th, 1878, was outside of the laws of the Order, unknown to the Constitution, and edited by Mr. Fouke, and the assessments, ordered by Mr. Fouke, were a blunder, and the original cause of the trouble in this jurisdiction?

Is it not a fact that at the time the Chicago meeting was called the Supreme Lodge had under its immediate jurisdiction 5,000 members, and was abundantly able to pay its own losses and never ask for one dollar to meet them, but honorably carried out her constitutional contract with the Order in assuming Tennessee's losses when that jurisdiction had fallen below 2,000? Then, and then only, to meet these extraordinary death losses from the yellow fever scourge did the Supreme Lodge ask for contributions, and upon that asking did Mr. Fouke blunderingly assess the Order in Iowa. Is it not so?

Sir: What right had H. B. Fouke to order an assessment on the membership in Iowa to pay yellow fever losses, relying only on his "Chicago address" for authority? Was it not an assumption of power, and the attempted collection an imposition and a presumption on his part that the Order in Iowa would, then as now, blindly follow his beck and call? Is it not so? And had he succeeded in coercing the Order to pay his unlawful assessments, would he not have demanded the Supreme Master Workman's badge as a reward for his success?

Is it not a fact that Mr. Fouke recommended the "relief law" in 1880, and never questioned its merits until the Supreme Lodge, in June, 1881, refused to longer continue him as chairman of the committee on "Laws and Supervision," and did not his removal from this committee at once change the bent of his unbiased mind? Don't you think it did?

Was Mr. Fouke honest, in 1880, when he stated that all beneficiary certificates were issued by authority of the Supreme Lodge, and therefore valid, and is he dishonest, in 1882, when he says loyalty to the Supreme Lodge will jeopardize them? Or, is he honest in '82, and was he honest in '80? What do you say?

Is it not a fact, and one that Nichols and Fouke have done their level best to keep from being brought before the membership in Iowa, viz: That every beneficiary certificate of the Order in the United States, the Territories, or Canada, by whoever held, is only good and valid in the Ancient Order of United Workmen when such certificate is recognized by a subordinate, a Grand and the Supreme Lodge of the Order? Don't you know this is true, sir, and that as you value your character for truth, and your reputation as a lawyer, you cannot and dare not deny it?

Don't you, as an honest man, think that the appeal to the Supreme Lodge, under the Grand Lodge resolutions adopted at the last session at Cedar Rapids, and presented at Cincinnati by Mr. Fouke in person, Mr. Nichols being conspicuous by his absence, was decided against you, and, as honorable Workmen, all should abide by the decision? Don't you?

Don't you know that the young men in the Order all over the State are sending in their names, per capita tax, relief call, number of their beneficiary certificates, etc., to the Grand Recorder, and propose remaining in the Order, loyal, no matter what axe Attorneys Fouke and Nichols may have to grind? And don't you know that all suspended Workmen belonging to the Select Knights are suspended in that body also? And don't you know that, as loyal citizens in 1861 sustained and upheld the Government, so loyal Workmen, not only in this State, but all over the land, will stand by and uphold the Order in Iowa? And don't you know that not a Workman in Iowa can gain admission to, or secure membership in a Lodge A. O. U. W. outside the State until he can prove his loyalty to the Order through the Grand Lodge of Iowa, as recognized by the Supreme Lodge? Don't you know these things are so?

Is it not a fact, that the Attorney-General was imposed upon by a Senator and Grand Lodge officer asking for an opinion based on false premises, and obtained to hoodwink the Order in Iowa, thus making another step in this wrecking conspiracy? And have you ever thought that the old-line life insurance companies would find profit in the destruction of the A. O. U. W., and had you ever thought that there are Attorneys who will work for pay, and that the A. O. U. W. in Iowa for the past few years has been managed by Attorneys Nichols and Fouke? And had it ever occurred to *you* that H. B. Fouke and J. D. Nichols are attorneys of the old-line life insurance companies, and paid to wreck the A. O. U. W. in Iowa?

Is it not a fact that H. B. Fouke used the Order for his personal benefit to climb into political power and place, and should he be renominated for District Attorney, would his modesty prevent his again mentioning the fact in a Workman Lodge?

Honestly, now, don't you think the statement made by Fouke & Nichols, "that further association with Indiana and Ohio means paying for drunkards," comes with poor grace from a firm who have been jointly working for free rum, undisturbed drunkards and unhappy homes in Iowa for the past few months? Don't you?

Don't you believe that Messrs. Fouke & Nichols, Attorneys, have sold their honor and attempted to sell the honor of Workmen in Iowa for less than Esau sold his birthright, viz., 10 cents?

Now, sir, in conclusion, and in all candor, do you not, in your own heart, honestly believe that the Ancient Order of United Workmen in Iowa would be better off had H. B. Fouke and J. D. Nichols never been born? Yours for the right, loyal and true,

L. PENNINGTON, Rec. JAY W. SMITH, M. W.
Cedar Falls Lodge, No. 32, A. O. U. W.

New Lodges in Utah.

Bro. J. W. Kinsley has succeeded in instituting another Lodge of this Order in Utah, this time at Springville. The new Lodge is Lake Lodge, No. 9, and the material selected has been of the very best. It promises to become a good, strong Lodge, as it will have Springville, Payson and Spanish Fork to draw on for membership. The officers elected and installed were as follows: Past Master Workman, Hugh M. Dougall; Master Workman, Nelson D. Crandall; Foreman, Thomas Dallin; Overseer, Wm. H Nelson; Recorder, Wm. Hatfield; Receiver, G. Spoerry; Financier, Isaac Frodonski; Guide, Geo. V. Huntington; Inside Watchman, Wm. M. Coffman; Outside Watchman, Don C. Huntington. With the organization of this Lodge the A. O. U. W. has taken the lead of all other fraternal societies in Utah in point of number of Lodges. The next largest number of subordinate Lodges of a society is the Masons, who have eight Lodges, while the Workmen have nine.

Still another new Lodge was instituted by Bro. Kinsley, Deputy Grand Master Workman, on last Monday evening, Aug. 14th, at Nephi, Juab county, Utah. It was named Monitor Lodge, No. 10, and was instituted under the most favorable auspices and with fair prospects of becoming a large and influential subordinate. The following were elected as its first officers: Past Master Workman, Joel Grover; Master Workman, W. A. C. Bryan; Foreman, Alma Hague; Overseer, E. J. Wright; Recorder, J. A. Hyde; Receiver, George C. Whitmore; Financier, A. W. McCune; Guide, Thomas J. Schofield, Jr.; Inside Watchman, George H. Howard; Outside Watchman, J. T. Belliston.

Election of Officers, A. O. U. W.

COLFAX LODGE, No. 99.—P. H. Maginn, M. W.; J. D. Nash, F.; H. Wales, G.; A. J. Henry, Fin.; M. Lobner, Rdr.; J. Butler, Rvr.; W. B. Hayford, I. W.; J. Kuengly, O. W.

QUINCY LODGE, No. 129.—L. F. Cate, M. W.; R. W. Gill, F.; George Wilson, O.; T. L. Haggard, Rdr.; P. L. Hallsted, Fin.; W. E. Ward, Rvr.; E. Garner, G.; I. W. Larrison, I. W.; N. H. Hapgood, O. W.

PLUMAS LODGE, No. 132.—W. D. Fletcher, M. W.; J. S. Bransford, F.; Thos. Treleaven, O.; T. W. McPherson, Rdr.; J. S. Drysdale, Fin.; J. D. Compton, Rvr.; R. A. Gray, G.; C. A. Moore, I. W.; Frank Kniger, O. W.; R. A. Gray, Med. Ex.

SHARON LODGE, No. 142.—A. J. Krumb, M. W.; J. V. Hedge, F.; Thos. Hart, O.; S. Kinsey, Rdr.; C. H. Levy, Fin.; E. K. Hill, Rvr.; J. S. Iler, G.; A. J. Townsend, I. W.; J. W. Albert, O. W.; Dr. Turbeville, Med Ex.

COLOMA, No. 203.—J. H. Thomas, M. W.; W. Stearns, F.; E. M. Lowry, O.; M. J. Allhoff, Rdr.; J. W. Quirk, Fin.; Robert McKay, Rvr.; J. Anderhalden, G.; J. Crocker, I. W.; D. Haggert, O. W.; H. W. Smith, Med. Ex.

SUPREME LODGE PROCEEDINGS.—The proceedings of the tenth annual session of the Supreme Lodge, A. O. U. W., which convened in Cincinnati, June 6, 1882, have come to hand in a pamphlet of 662 pages. It contains, also, the names and addresses of Grand Lodge officers, Supreme Lodge Representatives and officers and A. O. U. W. publications, also a "document index," which shows exactly by whom each was introduced, title of document, to what committee referred and final disposition of the same. Everything is carefully arranged, and in order to ascertain the whereabouts of any information contained therein, it is only necessary to refer to the different indexes, which are very creditably prepared.

TOTAL MEMBERSHIP.—The following was the membership of the various jurisdictions, June 30, 1882.

New York	17,224	Oregon	3,300
California	11,659	Tennessee	2,469
Pennsylvania	13,325	Massachusetts	2 450
Illinois	10,689	Maryland	2,366
Missouri	7,782	Minnesota	2 300
Michigan	6,590	Indiana	2,300
Ontario	5,242	Iowa	2,000
Wisconsin	4,176	Supreme Lodge	9,369
Kansas	3,678		
Grand Total			109,919

BRO. FRED. SPERBER, Recorder of San Benito Lodge, No. 96, of Hollister, was in this city recently, and reported his Lodge as doing finely, and having now over 80 members. San Benito is one of our most enterprising and progressive country Lodges.

DISTRICT DEPUTY THOMPSON proposes holding a meeting of the Lodges in his district with Yerba Buena, No. 14, this evening, Friday, Sept. 1st.

Ancient Footprints.

The Discoveries in the Carson Quarry.

In a late number of this paper we referred at length to the subject of the footprints found in the State Prison quarry, at Carson, Nevada. The following paper, describing the discovery, was submitted at the last meeting of the California Academy of Sciences by C. D. Gibbes and Dr. H. W. Harkness, and was read by the latter:

The western declivity of the Sierra Nevada has thus far proved to be a valuable field for the paleontologist in his researches into the life, history and surroundings of primitive man. That this field is of value is owing chiefly to two causes: First, the effect of volcanic action in changing the course of rivers; secondly, to the extensive areas laid bare by mining. The pliocene rivers of this region were filled by gravel and lava, so that their waters were diverted from their original courses and were compelled to wear away new channels. Many of these channels are from 1,000 to 2,000 ft. in depth.

In these old river channels human remains have been found, which seem clearly to establish the fact that man was a resident of these valleys before the volcanic overflow which filled them with lava. Beneath these mountains, the miner, as he burrows in search for gold, is bringing to light arrow-heads, mortars, spears and other implements, and has, it is believed, in two instances at least, unearthed the bones of the men who had used them. Associated with these implements, or found in the gravel deposit, have been found the fossil remains of many species of animals, including those of the rhinoceros, two mastodons, three species of the horse, the wolf, the deer and other mammals. These remains have been found in 30 different localities, and in 11 different counties in California. In trying to determine the age of these remains, we must bear in mind that they

Antedate the Present River System

Of the Sierras. Were we able to ascertain the number of thousands of years that were required by the present rivers to cut their channels through slate and granite to the great depths they have now attained, we would be able to proximately fix the time when these denizens of the Sierra were in existence.

The Nevada State prison is situated at a distance of one and one-half miles from Carson City, the capital of the State of Nevada, and three miles from the base of the Sierras. It lies in a valley which has an elevation of 4,630 ft. above the sea level. This valley is flanked upon the west by the Sierras, which rise abruptly to the hight of about 2,670 ft. above the valley. To the north it is bounded by the Washoe range, and upon the east and south by a somewhat elevated range of hills in the Carson desert, through which the Carson river finds its way to what is known as "the sink of the Carson."

The prison was built about 20 years since, on the extreme point of a hill, having an elevation of about 60 ft. This hill is formed of sandstone, which had its origin in the detritus brought by wind and water from the Sierras. This point was chosen with a view to utilizing the labor of the convicts in quarrying stone for building purposes. As a result of this quarrying, the stone has been removed from an area of about one and three-quarters acres and to a depth varying from 15 to 32 ft., showing the hill to be composed of layers of sandstone alternating with seams of clay. It had been known that

Animal Remains had Been Discovered

In the above-named quarry, but no special attention seems to have been called to the fact until the appointment of the present warden, William Garrard, under whose quick intelligence, and by whose energy a systematic effort has been made to collect and preserve these fossils. And, not only this, he, together with Mr. Hanks, the Sheriff of Storey county, determined to have the situation carefully examined, and, to this end, they opened correspondence with the curator of our Geological Museum, C. D. Gibbes.

At one of the recent meetings of the Academy, Mr. Gibbes read the correspondence, which so impressed the members that it was determined at once to visit the locality. This, Mr. Gibbes and I did, and to-night we wish to submit to you our report.

The formation to which allusion has been made is called by Clarence King, in his egological survey of the fortieth parallel, the lower quarternary. Referring to this region, he says it is composed of sandstones and clays worn down from the adjacent high mountains, and deposited in the water and on the shore of a lake of many hundred miles in area, that at one time extended along the eastern base of the Sierras and in central Nevada, and having an elevation of 4,388 ft. above the sea level. Pyramid, Winnemucca and Walker lakes, and the sinks of the Carson and Humboldt are now the lower points of this lake, which spread its waters in the Pliocene age, and which Mr, King has called Lake Lahontan

Returning now to consider our quarry, we find in the lowest strata exposed by the workmen

Numerous Fresh-water Shells,

Which, through the kindness of Professor R.E. C. Stearns, we learn are those of a mussel, of the genus *Anodonta*. At an elevationof 13 ft. above these is found another strata in which, in addition to the shells of *Anodonta*, we find a species of Physa. This discovery is of additional interest from the fact that King reports that he found no fresh-water shells in the region excepting those of *Planorbis*. It should be mentioned that the floor or area of the yard we are now studying bears evidence of having been slightly tilted at a period subsequent to its deposition.

It also gives evidence of having been at one time the shore of some lake, or, perhaps, pond, local and isolated, as its level was above that of Lake Lahontan. Presumably we stand on the shore of this ancient pond or lake, and as we look about us we see the footprints of a variety of animals, among which we recognize those of the mammoth, the deer, the wolf, those of many birds, apparently those of a horse, and, most important of all, what seem to be the imprints of the sandaled foot of man.

There are

Six Series of the Tracks of Man.

Each of these six series is represented by a number of footprints (from 8 to 17) in regular order, and each showing more or less plainly the imprint of a sandal. Besides this, in one of the series there is a marked difference in the form of the sandal.

The first of these series which we examined is to be seen emerging, as it were, from the southern side of the yard, and where the cliff is 15 ft. in hight above the tracks.

This series consists of 12 tracks, to which number four were subsequently added by tunneling into the rock. These tracks were evidently made in a layer of sediment of perhaps two inches in depth, for below this layer we find the compact sandstone. In each instance the mud had been raised by the pressure of the foot into a ridge which entirely surrounded it. This mud is only partially solidified, and is still flakey and easily broken on exposure. Each of the imprints furnishes us with evidence, as we believe, that the feet of the one making the tracks were protected by sandals.

In no single impression, perhaps, do we find conclusive evidence of this fact; but, when we study them as a whole, we find that that which is wanting in one is furnished by others which follow.

In nearly all the toe portion of the sandal is well shown, it being as smooth as the work of a mason, for the distance of two or three inches. Backward from the toe we generally find the impression of the outer portion of the sandal. When studied as a whole, we can determine, with a good deal of exactness, the actual length and breadth of the sandal, which we find to be 19 inches in length, 8 inches at the ball of the foot, while the heel is 6 inches in breadth. In its outline the impression follows clearly the shape of the human foot. From the great toe outward there is a really graceful curve, which draws in toward the heel; while from the great toe inward, the line is drawn toward the instep, and thence in an outward curve to the heel. In one series this curve is deeper, showing a slightly different form of sandal.

The average length of the stride is two feet three inches. The distance between the feet, or the straddle, is 18 inches.

It must be borne in mind that these footprints proceed outward from the part of the quarry the rock of which is still in place, the face standing like a wall 15 feet high.

Taking Casts of the Tracks.

It seemed very important to know if there were more footprints of the same series still running into and under this rock face. To determine this fact, Mr. Gerrard, who was anxious to assist us in every way possible, immediately commenced a tunnel upon the line of the prints of the same series, if such existed. In this effort he was completely successful, bringing to view four other footprints, three of which were more perfect than those which had been previously exposed. One of the four, owing to a fault in the rock, was too obscure to be of value. Of this series we secured 12 more or less perfect casts in plaster, which are placed before you for inspection this evening.

One marked feature to which we wish to call your attention is, that in all of these tracks the toes all turn well outward, which is not, as a rule, the habit of the North American Indian. Within a few paces of the prints we have described is to be found another series of tracks, made by an individual who was walking in deeper mud, which clung to and closed in upon the foot. Seven or eight such are to be seen in regular order, and then the track, like the one previously described, is lost in the ledge toward which the steps are tending. On the western border of the area are four other series of tracks. Three of these are somewhat smaller than the ones described, while one has a sandal more curved than that of his fellows. These are also lost in the ledge, where they may be followed by future explorations. These prints appear to be upon a floor a few inches lower than the one first described.

Returning now to our first-described tracks, we find, at a distance of 10 or 12 paces, other tracks, which we suppose to have been made by a mammoth. They are in regular order, and eight in number, with an average stride of four feet four and a half inches. The foot is 21 inches in diameter. They were found imprinted on what is now a pretty compact sandstone. We find no distinct traces of toes, but only a general outline of the foot. Neither did we find any distinct impressions of the pads of the foot. Underneath each foot we found a thin layer of calcareous formation which rested immediately upon the sandstone. Owing to the pressure of the foot, a ridge of soft material of one or two inches was forced up and hardened around each footprint. As the direction of these tracks was also toward the edge of the exposed ledge, we were anxious to follow them further. To thoroughly satisfy every wish of ours, Mr. Garrard immediately began to tunnel into the ledge. By this means two more tracks were fully uncovered and exposed to our view, thus giving us 10 tracks in a line. The newly exposed tracks were found to have been made in mud so soft that a ridge had formed around each to a hight of nearly five inches, while the imprint upon the rock was like that we had previously examined. It was now made apparent that all these mammoth tracks upon the exposed portion of the floor of the quarry had been made in the same layer of soft material, and that the raised border had been removed by the quarrymen in the progress of their former work. Each footprint had evidently been filled with rain water, and the sand had been blown into and filled it. Owing to sub-percolation, the sand continued to adhere to the moist surface, and thus had formed a mound of sand above each footprint. After the formation of this mound, a tongue of sand had drifted out from it a short distance in a northwesterly direction, and as this tongue of sand had been hardened into stone, it has remained as an indication that the wind which raised these mounds above the tracks had come from the south-east. It was only with much difficulty that we removed the superincumbent sand by breaking it carefully into fragments. Had we attempted to save this entire we should certainly have injured, if not have fully destroyed, the footprints which we were most anxious to preserve.

After the removal of the stone above the cavity, the cavity was, in each instance, about five inches in depth, and showed the impression of the side of the foot with tolerable distinctness. We did not deem it advisable, however, to take a set of casts of these, since they could not be of much service in determining the exact form of the foot.

Tracks of Birds and Animals.

Besides the above-described tracks there were abundant tracks of some wading birds, as before mentioned. These did not seem to differ much in form and size from those of the same order now living. Several quite distinct tracks of deer are also to be seen. Others, again, were found which, in size and length of stride, much resemble those of a wolf. At one point these tracks may be traced for a distance of 20 ft., where they, also, are lost in the ledge. There are also a few poorly defined imprints of what we believe to be a horse. Near the western limit we find clear indications of animals having wallowed and lain in the soft mud.

There have been, we believe, but two objections thus far raised against the claim that the imprints first described were those of man.

First, that the colossal size of the sandal will be likely to cause doubt in the minds of many.

Secondly, that the space between the feet, or, as it is called, the straddle, is so marked as to create a suspicion that they were those of an animal other than man.

To the first objection, we reply that for the protection of his feet the primitive man would naturally select the sandal. In fashioning this sandal of wood, it is reasonable to suppose that with his gouge of obsidian he would cut out a hollow to correspond to the size of his foot, leaving a raised border which might serve as a protection to the side of his foot, as well as to the heel and toe. Its raised border would also be of great service in securing the thongs by which the sandal was attached to the foot. Some such plan must, we think, have been adopted for securing the sandal, as we find no indications of holes in the bottom of the sandal through which thongs might be passed to fasten it to the foot.

The Footprints.

Taking this view of the case, it seems to be apparent that, to protect a foot of 12 or 13 inches, he would be likely to fashion a sandal of nearly, if not quite, the proportions of the one shown by the impression.

While it must be admitted that the print of the sandaled foot is unusually large—much larger, in fact, than the hide sandals worn by the Mexican Indians, or the straw sandals of the Japanese, yet the stride is but that of the average man of five feet ten inches in hight.

Throughout these notes we have used the word sandal in describing the footprints which we are convinced were made by man. No complete impression of the sandal is to be found in any single footprint, yet an examination of all the footprints of series No. 1 shows in each a part of a perfect impression of some portion of the sandal. By uniting these several parts of that portion of each which remains perfect, there will be seen a complete impression of a sandal, except the heel, which remains indistinct.

This may have been caused by the natural slipping which takes place in walking in soft mud.

It is worthy of remark that there appears to have been a smooth surface about three-fourths of an inch in width which extended, except on the heel, entirely around the outer portion of the sandal. In all the footprints, save one, the impression of the toe of the sandal is very distinct.

As to the straddling gait, we need only say that in walking in muddy and slippery places we all walk with our feet further apart. And furthermore, by using such an unwieldy footgear as we have described, such a position of the feet would be almost a necessity. It must not be forgotten that there are five other series of footprints other than those we have particularly described.

If now it be urged that they are all the footprints of the same biped or animal, or of some gigantic bird, then they should be of the same general form, which can plainly be seen is not the case.

As these footprints run into the ledge in several instances, should it be deemed advisable, a tunnel may be run for the purpose of obtaining other evidence relating to this subject. Evidently this sandstone quarry was long ages in being deposited, and during its formation generation after generation of various forms of animal life lived and died upon its changing surface, and have left the evidence of their existence in the remains still to be found imbedded in its structure.

It is still, and must ever be, a rich field replete with facts of great value to the student of the history of animal life upon this planet.

Proposed Line of Steel Steamers.

The danger of complete monopolization of existing lines of transportation from this coast to the East and Europe is leading to renewed discussion of the establishment of lines of steamers owned and built in California. At the last meeting of the Board of Trade, C. T. Hopkins described the advantages of having a line of steamers, owned in San Francisco, to trade with the Atlantic and European ports. He pointed out that San Francisco merchants were threatened with a loss of trade in the North by the completion of the Northern Pacific. A gentleman engaged in the business of building steel and iron steamers, a member of a firm having £1,000,000 capital, has recently been on this coast examining our iron ore, and he has gone away with the impression that he could manufacture steel here and work that steel into ships and machinery as cheaply as he could do it in England. He had also been informed by a man whose word is beyond question, a capitalist who intends to take an interest in this venture, that if there is any encouragement to come here with a force of 200 men, with all the money and machinery necessary to go to work to start the construction of steel steamers on this coast, they will come here and do it. In view of these circumstances, he thought it would be wise to appoint an active committee to ascertain whether proper encouragement could be given. Could sufficient capital be raised here to induce such a venture to become established, and manufacture steamers that can carry goods from New York to this coast and deliver them in 60 days, giving the advantages of competing with the railroads? Could enough money be obtained from loyal, faithful men to put this enterprise on its feet? He thought it could be done. On exports alone we pay $16,000,000 per annum for freights, and nobody, so far, seems to think much about it. To carry out the suggestion, he offered the following, which was approved:

Resolved, That a committee of five be appointed by the chair to consider the feasibility of the construction of a line of large steel propellers, to be owned in San Francisco and employed in a direct trade between this city, Liverpool and New York, via the straits of Magellan and Panama or Nicaragua; also, to correspond with iron ship and steamer builders in the United States and Great Britain, with a view to the establishment of their industry on this coast.

Capt. Merry and Mr. Williams also spoke in favor of the establishment of a line of steamers to ply between here and New York and Europe. It must be acknowledged that the realization of some such projects is of vital importance to the producing interests of the Pacific coast.

HAS THE MOON AN ATMOSPHERE?—The Providence *Journal*, in an article on the planetary attractions for the month of July, says in regard to the probability of the moon possessing an atmosphere: The moon just now is an important member of the solar family. Something new may be anticipated in her monotonous story. The observers of the recent solar eclipse detected imitations of an atmosphere on her apparently lifeless surface. This seems to confirm indications of movement that have never been accounted for, and scarcely credited in scientific quarters. Two days after the eclipse, an observer of 40 years' experience, while looking at the moon, saw a cloud 100 miles long and 40 or 50 miles broad, hovering over the "Mare Crisium," presenting a misty, feathery appearance, unmistakably different from other portions of the moon's disc. If this appearance was a reality and not an optical illusion, other observers will be sure to detect something similar. * * The moon comes in for her share in the novel celestial problems that are the delight of the scientific mind. Indications of an atmosphere, observed by the French astronomers, and a misty, feathery cloud floating over one of her huge craters, revive the interest in her desolate face, and suggest the possibility that life may exist, in some form, in a world that seems to have played her part in the material economy of the universe.

A DISPATCH from Jamaica says that Westgate, the self-confessed assassin of Lord Frederick Cavendish and Burke, has arrived there, and the evidence implicating him in the crime is strong.

WALLA WALLA is fast building up. There are now several large business blocks going up. Grain is pouring into the depot very lively, and busy times are confidently expected after harvest.

The Curse of Drunkenness.

The daily record of events, as set forth in the morning and evening papers, is almost a continuous chain of evil deeds prompted and pursued by those who are maddened by alcoholism. Brutal assaults and cruel murders are almost nightly occurrences. Occasionally, however, there is an inhuman deed which sinks far below the average crime, and seems to open to the view and contemplation the very bottomless pit of human depravity and cruelty. Such was the murder of Mrs. Wilson by her husband, which occurred on Thursday, Aug. 10th. The woman was found dead in her house. The police surgeon who made the examination made the following report:

The woman had received a terrible beating, and came to her death from inflammation of the brain following the violence. He discovered on the head a severe scalp wound in the shape of a horseshoe, such as might have been produced by the heel of a boot; another scalp wound on the right side of the head above the ear, and three inches in length; a wound a little to the left side of the middle line of the forehead, in the shape of a St. Andrew cross, and the frontal bone laid bare; a wound an inch long at the angle of the right eye, and affecting that organ; a wound an inch and a half long under the right eye, and running toward the upper part of the nose; a wound an inch and three-quarters in length under the right ear; a two-inch wound under the chin; a cut three and a half inches long on the outside of the right leg, between the knee and the ankle; an immense bruise on the left side of the abdomen; a severe bruise on the right side of the abdomen; another under the right nipple, and still another in the upper part of the right side of the chest. Besides these there were a number of contusions on the thighs and back. The surgeon also discovered that there were seven ribs broken, four on the right side and three on the left. The wounds have all the appearance of having been produced by kicks with a heavy boot. The deceased was a woman of medium hight, and well proportioned. Her features show that she was a woman who was addicted to the use of intoxicating liquor.

It has been quite clearly shown that this unfortunate woman came to her death at the hands of her husband, who was also addicted to the use of intoxicating liquor. Their quarrels were a very ordinary sensation in the neighborhood, and the sounds of violence in their home were so common that neighbors did not think of interfering with them.

Here, then, were husband and wife, with a group of children, both of them accustomed to brutalize themselves with liquor, and become common brawlers—carrying on their evil way until finally the husband reduces his wife to a broken and lifeless body, bearing the print of his boot-heels—a helpless drunkard trampled to death by an infuriated drunkard, in the midst of their home and their children.

These are terrible things to think of. We would gladly avoid their contemplation and spare our readers the recital of them; but it is a common duty to bring them forward, that all may see again the demonizing power of strong drink, and shun it as they would a pestilence. Who can indulge with the thought of such events as the direct outcome of indulgence? Let the evil, then, be clearly recognized in all its hideousness, until the one who is disposed to trifle with the evil, or to court its consequences, shall turn from it in horror. There is only one way to be absolutely free from danger, and that is to avoid it; pass not by it; turn from it and flee away, as is the Scriptural injunction.

Discovery of Mont Blanc.—Mont. Blanc, the highest of the Alps, is, strange to say, a modern discovery. At least, no mention is made of this colossus of European peaks in any itinerary, or in any literary work whatever till recent times. M. Charles Durier, in his work "Le Mont Blanc," says: "This mountain rises in the center of the most populous and civilized states of Europe; it is, in fact, the axis around which European civilization has revolved and still does revolve; its hight is considerable; it dominates everything in its vicinity, and, to make its appearance more striking on the background of the blue sky, its summit, though placed in a favored, temperate latitude, is ever covered with a mantle of snow. And yet, during 20 centuries, no historian, no traveler, no *savant*, no poet names it, or so much as alludes to it. As the sun describes his daily track, that peak throws its shadow upon at least three countries possessing different languages, but still it was profoundly ignored." The same author informs us of a map of the region round about Mont Blanc, published in the second half of the 16th century, but which gives no hint as to the existence of the mountain, which, nevertheless, is visible from all sides at distances of 60 leagues. —*Popular Science Monthly.*

Unfortunate Lives.—An unfortunate life is one of the leading causes of both physical and moral disease. One might write an entire volume upon this subject. Numerous examples of the effects of an unhappy life may be observed every day. Every child knows of them. An unhappy life is like dust in the machinery of a clock. It makes it go badly—even prevents it from going at all. But, when the dust has been removed, it goes once more as well as ever. When we are fortunate and happy, we are as sound as a fish in the water. An unhappy, unfortunate life prevents those changes from going on in the system which health requires—prevents good digestion, good circulation and a comfortable action of the nervous system. If we wish to be healthy, we should endeavor to make our lives successful and happy.

The Asteroids.—The number of the known members of the small planets is now 225. Palisa, of Vienna, discovered the lost one on April 19th.

Proverbial Wisdom on the Weather.

Much wisdom on all subjects pertaining to human life, and to the conditions and phenomena of nature, are concentrated into proverbs. Popular errors of experience and observation also find their way into apothegms, and yet it cannot be doubted that the majority of proverbial sayings contain an element of living truth, as gained by the eye or the mind. They are the concentrated wisdom of the ages, and are found in all languages, and have descended from the earliest times.

The aggregation of conditions and phenomena known as "the weather" has occupied the minds and tongues of men, probably, since the very wet year which floated Noah to the top of Ararat, and the centuries of observation have given a host of weather proverbs and proverbial data for prognostication. It has occurred to Gen. Hazen, Chief Officer U. S. Signal Service, to collect as many as possible of these proverbs and wise sayings, that they may be classified and compared, and the weight of testimony in them compared with the facts of modern meteorological observation. It is a happy idea to collect this concentrated wisdom from a world of observers, and it seems likely that much interesting and valuable testimony on weather behavior may be gained. In order to secure this information, Gen. Hazen has issued a circular, arranged so that proverbs of different kinds may be stated by his correspondents under proper heads. We trust his effort to collect them may receive the co-operation of the weather-wise. On this coast, where conditions are so different from those which prevail in the older proverb-making countries, it is found that much of the old wisdom is folly; but if one is disposed to research, and has the opportunity to pierce the darkness of the aborigines, or to glean the wisdom of the early white settlers, perhaps something true to our conditions may be drawn out.

That our readers may perceive the nature of the inquiry to be made and the scope thereof, we shall quote the headings under which Gen. Hazen asks responses. If any reader will favor us with his proverbial treasures, we will see that they are duly forwarded to Gen. Hazen at Washington. It is desired that the origin of any proverb may be given with it when possible:

1. Proverbs relating to the sun.
2. Proverbs relating to the moon. (New moon, change of moon, halo around the moon, influence of moon on agricultural operations, change of moon on days of week, etc.)
3. Proverbs relating to stars and meteors.
4. Proverbs relating to rainbows.
5. Proverbs relating to mist and fog.
6. Proverbs relating to dew.
7. Proverbs relating to clouds.
8. Proverbs relating to frost.
9. Proverbs relating to snow.
10. Proverbs relating to rain. (Morning, midnight, rain from particular quarter, rain during squalls.)
11. Proverbs relating to thunder and lightning. (First thunder in the year, thunder from the west, north, east, south; lightning, west, north, northwest, south, southwest and east.)
12. Proverbs relating to winds. (Day, night, morning, evening, wind and rain, wind preceding fair weather, cold winds, direction of winds, north wind, northeast wind, northwest wind, south wind, east wind, west winds, wet wind, veering winds, backing winds.)
13. Prognostics from the actions of animals. (Bats, oxen, cats, dogs, goats, hares, rabbits, horses, mice, moles, pigs, rats, sheep, weasels, wolves, frogs.)
14. Prognostics from birds. (Blackbirds, cranes, cuckoos, ducks, finches, fowls, chickens, geese, guinea-fowl, gulls, kingfishers, kites, larks, migratory birds, owls, peacocks, pigeons, quails, robins, rooks, snipe, sparrows, swallows, swans, thrushes, wild geese, woodpeckers, wrens.)
15. Prognostics from fish. (Carp, dolphin, pike, porpoise, trout, shad, herring, mackerel, cod, blue-fish, lobsters, crabs.)
16. Prognostics from reptiles. (Frogs, glow-worms, leeches, snails, snakes, toads, worms.)
17. Prognostics from insects. (Ants, bees, beetles, crickets, flies, gnats, lady-birds, spiders, wasps.)
18. Prognostics from trees, plants, etc. (Brambles, brooms, chickweed, clover, colt's-foot, dandelions, ferns, fir cones, hawthorn, marigolds, mushrooms, oaks, onions, pear, apple, roses, seaweed, sensitive plants, thistles, walnuts, wood sorrel, chaff, leaves, etc.)
19. Prognostics of the weather, drawn from various objects. (Chairs, tables cracked before rain, etc., coals burning brightly, corn, ditches, doors, dust, lamps, rheumatism, salt, seed, sign-boards, smoke, soup, sound, strings, toothache, walls.)
20. Proverbs relating to days of the week. (Weather and agricultural rules.)
21. Proverbs relating to each month of the year. (January, February, March, etc.)
22. Proverbs relating to the seasons of the year. (Spring, autumn, etc.)
23. Proverbs of weather relating to the year.
24. Proverbs of weather and popular sayings relating thereto, not included in the answers to the above questions.

Mrs. Garfield's Silk Dress.—A few days ago the U. S. Women's Silk Culture Association presented Mrs. Garfield with the first fruits of their labors in establishing the new industry. The token of their esteem and sympathy was an elegant black brocade silk, inclosed in an ebony box lined with lavender satin. Accompanying the gift was a letter of presentation on lavender satin, stitched with old-gold sewing silk. The silk, which had been reeled, spun, dyed and woven into the brocade fabric, is an entirely American product in material, design and finish, as well as in the spirit of the gift. The association begged the acceptance of it as an offering from women, with the sincere hope for the personal encouragement of the work, in which President Garfield had been so much interested. The cocoons were raised by silk growers in the following States: Pennsylvania, Delaware, New Jersey, South Carolina, North Carolina, Tennessee, Missouri, Alabama, Kansas, Georgia and Nebraska. Mrs. Garfield acknowledged the receipt of the silk in a grateful letter to the president of the association.

THE OIL PALM OF AFRICA (Elais Guineensis)

Domestic Misery.—No unhappiness in life is equal to unhappiness at home. All other personal miseries can be better borne than the terrible misfortune of domestic disunion, and none so completely demoralizes the nature. The anguish of disease itself is modified, ameliorated, even rendered blessed, by the tender touch, the dear presence of the sympathetic beloved; and loss of fortune is not loss of happiness where family love is left. But the want of that love is not to be supplied by anything else on earth. Health, fortune, success, nothing has its full savor when the home is unhappy; and the greatest triumphs out of doors are of no avail to cheer the sinking heart when the misery within has to be encountered.

Contagion of Goodness.—We hear a great deal about contagious diseases and the necessity of avoiding exposure to them, which is entirely reasonable; but we hear little of the contagion of health and the importance of securing it. Yet, although not so immediately apparent, the eventual effect of the one is, perhaps, nearly as powerful as that of the other. If there are poisonous emanations from the sick bed of the fever patient which we cannot inhale without peril, so there are wholesome influences from the vigorous and healthy which we cannot receive without increasing the vitality of our own system. Perhaps it may some day be regarded as essential a part of physical culture to court the one as to avoid the other.

Inventor of the Saw.—Pliny tells us that Dædalus invented the saw. The earliest sawmill of which we have mention was built at Madeira in 1420.

The Oil Palm of Africa.

We give on this page a picture of a plant which is most highly esteemed by the natives of various parts of the "dark continent," as it produces much to serve their immediate needs, and also affords them a commercial article which returns them much revenue. It is the oil palm (*Elais guineensis*).

It grows best in shady places, and attains the hight of 15 to 16 ft. The fruit resembles the stone of the date. When ripe, this nut is heated by fermentation, and then coarsely pulverized in hollow cylinders, by which its oily matter is separated. It is then macerated in hot water, when the oil gradually collects on the surface, and cooling, concretes into a thick, unctuous cake, of a light lemon color, with little or no taste, but having a rich perfume. At the ordinary temperature of the air it is not a fluid oil. At 69° it begins to be slightly opaque; at 62° it is of the consistence of honey; at 45° it is proportionably thicker, but still retains a degree of softness. It is heavier than most of the other expressed oils. The quantity of oil in these nuts is very considerable, one gallon of nuts usually producing a quart of oil. This oil is used as butter by the natives of the Gold Coast, entering into all their culinary preparations; and, when eaten fresh, is a delicate and wholesome article of diet, differing as much from the palm oil imported into England as fresh butter does from that which is rancid. It is employed in this country to make a soap, which bears the name of palm soap; and also enters into the composition of other articles of perfumery.

The oil palm delights in a hot, moist climate, and would not succeed in this State, probably not even in greenhouses. The engraving represents rather a young tree. The palms of this species begin bearing when very young.

Topography and Rainfall.

Californians have abundant evidence to indicate the influence of diversities in the surface of the land upon the falling of rain. Within the borders of the State there are districts ranging all the way from almost perpetual dryness to copious drenching. Sometimes these districts are quite within sight of each other. For example, in the northern part of the State, in the vicinity of Mt. Shasta, there are valleys where the crops this year are suffering for water, while not far away there is far more moisture than any ordinary crop requires. Within the State there are regions where summer showers with thunder and lightning are frequent, and there are vast areas where these phenomena are never seen. The influence of wind and topography upon rainfall is one of the most interesting studies in meteorological science.

Professor E. Loomis has prepared, in aid of his studies of the laws affecting the amount of rainfall at different places, a graduated table of the average annual rainfall at more than 700 points, of which we find a review in the Germantown *Telegraph*. Of 204 stations at which the mean exceeds 75 inches (rising from this amount to 492.45 inches at Cherapunji, Assam,) some are elevated more than 2,000 ft. above the sea, and nearly all are within 100 or 200 miles of elevated mountains. Rain chiefly occurs when the wind from the ocean is blowing towards the mountains, and the extraordinary rainfall at most of them is probably due to the influence of the mountains, by which the wind is deflected upward to such hight that a considerable part of the contained vapor is condensed by the cold of elevation.

The cases in which the rainfall is excessively deficient are, on the other hand, those of places in which nothing exists that may cause an upward current of air. Another cause of deficient rainfall, frequently exemplified, is the descent of a current of air which has been forced up to a great hight and suffered condensation of its vapor, after it has crossed the mountain by the influence of which it has been raised, when its temperature rises and it becomes dry. Such effects are produced by the Rocky mountains on the plains east of them, and by the Himalayas on the desert of Gobi; and the operation of these two causes will assist in explaining most of the rainless districts of the globe.

Other influences modifying the amount of rainfall are the meeting of the northeast and southeast trade winds, which results in a great rain belt surrounding the globe; the irregular barometric depressions of the middle latitudes, indicating frequent storms; proximity to the ocean, especially when the prevalent wind comes from the sea; and the projection of capes and headlands into the ocean, which contribute to frequent rains. Uniformity in the direction of the winds throughout the year, such as prevails in the trade-wind regions, obstruction of the free movement of surface winds by mountains, remoteness from the ocean measured in the direction from which the prevalent wind proceeds, and high latitude tend to produce a dry climate. These principles do not seem to be fully borne out by the phenomena of rain on either side of the Alleghany mountains, but we have not yet systematic enough or careful enough observations to enable us to determine what is their real influence. Mt. Washington, in New Hampshire, exerts a marked influence. The mean annual precipitation there is 77 inches, while in the surrounding districts it is only 40 inches.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U. W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1,25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - September 1, 1882.

District Meetings.

The idea of holding district meetings is a good one, notwithstanding the fact that they may have many and serious drawbacks from being completely successful. A great many latent thoughts and opinions are brought to light at these meetings, examined, criticised and compared. Excellent ideas here shine with brilliancy, while worthless ones are consigned to oblivion. Here the different delegations exemplify respectively the quiet Lodge, the wrangling Lodge, the good-humored Lodge, the oratorical Lodge, the dramatic Lodge, the story-telling Lodge, etc., and the result will naturally be that all concerned are benefited.

But still such meetings have their little faults, and there is no doubt much room for improvement in making a district meeting all it should be. For instance, a meeting is held in a hall too small to accommodate all those present, even with one spoonful of air apiece. This is a serious error. Again, it is a serious error to have too much Lodge business before the meeting, as visiting brethren care nothing for this—they can see plenty of it in their own Lodges; besides, they come here more to exchange views, etc., and entertain and be entertained, than to see the business of any particular Lodge exemplified. Moreover, we must bear in mind that daylight puts an end to the evening, and everything should move briskly and crisply.

It would always be better, on these occasions, to have a select and well appointed programme prepared, and refreshments of some kind will always add to the enjoyability of the gathering, while the cost need be but nominal. We are not a free-lunch fiend, but simply suggest these things for the Good of the Order. The talkative member should reduce his words to a minimum, and the man with ideas should pare them to the core. The impromptu man should be prompt, and the funny man should not let his jokes hang fire. On the whole, be careful to entertain, and then it is easy to instruct. People can be lead where it is an impossibility to drive them.

Visiting Lodges.

In visiting the different Lodges of this city, one cannot fail to receive some particular impression from each Lodge in regard to the manner in which business is transacted. We find, respectively, the wrangling Lodge, the quiet Lodge, the oratorical Lodge, the dignified Lodge, the dramatic, the musical, the story-telling Lodge, the brief Lodge, the late Lodge, the big Lodge, the cosmopolitan, the mediocre, the aristocratic Lodge, the frigid Lodge, the indifferent Lodge and the warm, social, brotherly Lodge. The last kind is by far the most desirable Lodge to visit, but all will amply repay a visit. It is an excellent idea to have a Visiting Committee in each Lodge, also an Entertainment Committee.

A Few Observations and Ideas.

Lodge members in the A. O. U. W. may be divided into three classes: 1. Those who are initiated and never afterwards seen about the Lodge-room; 2. Those who dodge into the Lodge-room on assessment night and as quickly disappear; 3. Those who attend regularly, do the work, and enjoy the fraternal feature of the Order. We refer, of course, more particularly to our city Lodges. The third class is a very small minority. It should not be so. The fraternal feature must be attended to, or the A. O. U. W. will become a mere feelingless, unfriendly, old line insurance company. If the attendance of members is not half what it should be, the Order loses half its effectiveness. Many members say: "Why, you can't force us to attend. We join the Order only for the $2,000 insurance; you get our money, and ought not to grumble." We have good reasons to grumble, and grumble we will, till a better attendance is insured, or we will be under the necessity of taking more severe measures. This Order is charitable and fraternal, in that it furnishes cheap insurance and brotherly protection to its members in sickness and distress. This business must be attended to, and as a matter of benevolence or self-sacrifice. In order to have it attended to properly, there must be a proper attendance of members.

It is an impossibility for a dozen to transact the business of hundreds; besides, the stayaways are casting their burdens upon their fellow Workmen. We get their money it is true, but do they imagine that we get our $2,000 insurance free? Neither do we get paid for attending to the duties of Workmen. It is fraternity and protection that have framed the mighty system which now is spread from ocean to ocean. To practice these is, therefore, the duty, and solemn duty of every member. There is such a thing, however, as an abuse of the fraternal principle. As a member on a recent occasion remarked, "There is such a thing as too much fraternity;" this brother related that on a certain evening, he visited a certain Lodge, having with him a fine new silk umbrella; that during the evening, a certain other brother had grown so very fraternal as to remove Bro. No. 1's umbrella in a very brotherly manner, and substitute Bro. No. 2's ragged old cotton one, without a single whole whalebone in it! The night being very rainy, fraternal feeling, as a matter of course, ran high.

There are also men who make it a business to live fraudulently upon the charitableness of fraternal societies; but these are exceptional cases. The small amount of abuse to which the principle is subjected will not excuse us in endeavoring to do away with it altogether. The question now arises, what must we do in order to secure a reasonably large percentage of attendance? Some of our Lodges have attempted to answer this question by enrolling a vast number of members upon their books, hoping from so many to obtain at least a moderate attendance. This is to be deplored. Did the teacher of a public school endeavor to cover up the absence of certain pupils by going around drumming up new ones in order to keep his school full in appearance, we would put him down for a demagogue.

We believe that from 100 to 200 members are enough for any Lodge, and as much as one set of officers are capable of managing for the best interests of the Order in general. Again, it has been proposed to adopt compulsory measures to bring about the desired result; but, no doubt, the best way to compel members is to lead them. People will be lead when you have failed to drive them; but there are some that can be driven who do not lead well, and still others that will neither be lead nor driven; the latter class must be lead with caution and driven with force. Still, we believe that the less compulsion and the more inducement offered attend, the better it will be for all concerned.

The next question that occurs is, how are members to be lead into attending, and how far can compulsion be made available? The first part may be readily answered: Let the entertainment feature, the "Good of the Order," predominate in Lodge meetings; let the business of initation, etc., be gone through quickly. Poor reading, and slow, dragging, mumbling or stumbling remarks and recitation do more to retard the progress of business than everything else. In another portion of this paper will be seen an article entitled "Poor Elocution—Its Remedy," in which the author handles poor readers as they should be handled, without gloves, especially when they attempt to inflict whole audiences with their torturus utterances. As to how far compulsion can be made available in bringing about a fair attendance, let those who have framed the laws of the Order say; but we apprehend that there will be little use for compulsory measures if the first plan is put into operation; still there should be some means provided for compelling the attendance of chronic absentees, at least six times a year. A case has been related to us where a member had been absent from his Lodge so long that he had forgotten its name and location, although one of the most popular and prominent Lodges in San Francisco.

THE summary of the work of the entire Order to the 1st of August shows that $177,143.39 was paid out of the beneficiary fund, of which California paid $24,000; membership, 109,919.

Some Statistics.

We are frequently told that while the A. O. U. W. is a good institution, that it is doing a great and noble work, that its beneficence is covering it all over with glory, yet its system is radically wrong in that it does not grade its assessments according to age of the member at joining, and thereby a great wrong is being perpetrated on the younger members for the benefit of those of maturer years. We are pointed to the tables of life expectancy to prove how grossly in error we are, and gravely told that unless we change our system in this regard we shall soon "be bundled off to that undiscovered country from whose bourne no traveler ever returns." And we have answered that we are not satisfied with the table of expectancy when applied to organizations like ours. We do not believe they will properly apply. The facts we have been able to gather augment our doubts. Our members do not die in accordance with those tables, either singly or in the aggregate. They do not even approximate it. And the older we grow the further at variance with the tables does our experience become. Before us is the journal of proceedings of the last session of the Grand Lodge of Pennsylvania. The Order was founded in that State 14 years ago. It has been well managed in the mother jurisdiction, and the death rate has been remarkably steady. Unfortunately, for the purpose of showing the relative hazard according to age at admission, the record does not give us the number admitted at each age respectively. So, in the following table we have substituted the records of our own jurisdiction in this one particular as it stood Jan. 1, 1882, presuming that the ratio will not differ widely from that of Pennsylvania:

Age at Admission.	Number Died.	Number Admitted.	Age at Admission.	Number Died.	Number Admitted.
21	.....	168	37	4	620
22	.....	226	38	5	652
23	4	309	39	6	630
24	3	352	40	0	687
25	2	376	41	6	691
26	4	455	42	6	634
27	3	443	43	7	555
28	1	537	44	5	548
29	2	547	45	4	599
30	0	620	46	2	590
31	4	583	47	5	593
32	2	622	48	5	671
33	4	584	49	3	777
34	1	616	55	1	.....
35	1	597	57	1	.....
36	5	536	63	1	.....

A careful study of these figures, which, by the way, afford us facts as a basis from which to draw conclusions, instead of a fine-spun theory, will furnish food for abundance of thought. For instance, take the two extremes of present eligibility, and group the first six ages and the last six ages. There were 13 deaths out of 1,886 admissions, or 1 to 145 in the first group. In the last, 6 deaths out of 3,778 admissions, or 1 to 157—a very considerable per cent. in favor of the old fellows, and that too notwithstanding the fact that no deaths occurred in either the 21 or the 22 classes. In like manner if we group the figures by periods all the way down the list, we find the old members hold their own with the young ones in a manner that must be astonishing to the believer in the equity of the usual graded system. Three members died who joined the Order before the age limit was established. One joined at the age of 55; he was in the Order five years. One joined at the age of 57; he was in the Order 10 years. One joined at the age of 63; he was in the Order nine years. We have no means of even approximating the ratio of these ancient members to the others in the jurisdiction of Pennsylvania. But as the average time the three remained in the Order is eight years—about the full expectancy of membership in the Order—it is fair to presume that the hazard on these men of many years could not have been far greater than on those even below the middle age.

Now, if facts are good for anything, here is proof positive of the worthlessness of any of the tables of expectancy of life for the uses of a beneficiary society like the A. O. U. W. The jurisdiction of Pennsylvania has been in existence long enough to give a pretty sure indication of what the future will bring forth. Though the statistics of life insurance companies, or even other beneficial societies, should show a different result, it would prove nothing, for the conditions being different, a like result could not be expected to follow. And this leads us to say that all our efforts in the way of statistics to determine whether any system can be devised more equitable than our present one, should be confined to our own organization. When we accept a member, we want to know, as nearly as possible, the hazard we incur in his behalf. In other words, we want to know the probability of his dying while a member of the A. O. U. W. What that probability might be in some other organization is no earthly concern of ours. To determine such probability, there are other things far more necessary to know than age. Personal habits is a factor ten times more important; and so is occupation or family history. Of course we are discussing the question from the standpoint of our present age limits of eligibility. We stoutly maintain that a man of 50, hale and hearty, of the best of habits, the safest of occupations and of long-lived ancestry, is a better risk ten times over, than a man of 21 with all these conditions reversed, and no man of good common sense will have the temerity to dispute the proposition. Where, then, is the sense in advocating any system of graded assessments based on age alone? We can scarcely hold our patience to discuss a question embodying so much of folly and stupidity. And yet, there are many persons of good general abilities, who gravely and earnestly go about endeavoring to engraft just such a system on the A. O. U. W., right in the face of such facts as are herewith presented. They would have their pet theory put into our laws, even with the certainty that the theory is wrong. If the facts do not agree with the theory, so much the worse for the facts. Let them stand aside.

We trust we are not misunderstood. It is not claimed that a system of graded assessments might not be made that should operate more justly, as a rule, than so-called level assessments, but that we have any sufficient knowledge now by which such system could be formulated, we most emphatically deny. Moreover, we do not believe, from the light we have, that any new system can be formed, which, all things considered, will be so good as the one we now have. Any gain on the score of equity would be offset by complications and difficulties and dissatisfactions. Leave the timbers of the staunch old craft alone.

Poor Elocution—Its Remedy.

Why is it that we have so much poor reading in our Lodges? Answer: Mainly because poor readers do not know that they are poor readers. Did they know this fact, they would either not read at all, or would try and improve themselves. But poor readers do not, as a rule, try very much to improve, and the charitable inference is they are in blissful ignorance of their own lamentable deficiencies in this respect. This shows the importance of having the work rehearsed before as competent critics as the Lodge contains. And their criticisms should be kindly received.

One condition of good reading is a correct knowledge of the meaning of every word that is read. Another, the correct pronunciation of every word, or where there are several pronunciations of a word, to choose the best. Still another indispensable condition of good reading, is an understanding of the intent or meaning of every sentence that is read. We should know, too, who is addressed or spoken of, in every instance of personal reference. For instance, when the conductor calls on one party to assist another to rise, he should carefully and deliberately call on *the* party intended in the ritual. And what more proper, when he would enlist the attention of an initiate to the meaning and intent of of one of our indispensable spectacles, that it should be done in no boisterous, hurried and declamatory manner, or in a spirit of indifference or slip-shod style, but with a subdued, slow and distinct utterence, with natural pauses and impressive utterance?

There is, of course, a great difference in the natural capacities of readers. But the best natural capacity for reading can be very much improved by study, and where there is but little natural capacity and but little scholarship, there is more need for greatest diligence to learn to read our work well, and such brothers should not only tolerate, but should freely invite and gladly welcome aid, even in the shape of pungent criticism.

Again, no brother should excuse himself from doing his very best with his part, on the ground that it is short or unimportant. Short sentences are often of the most importance—sometimes in and of themselves, and sometimes because of their connection with other things.

A MEAN SWINDLER CONVICTED.—Charles Holman, alias R. M. Saunders, alias Miller, a dentist by profession, and residing with his wife and two children at 1037 Mission street, was convicted in Department 12, Friday, Aug. 11th, of swindling Eliza L. Berry, a Sacramento widow, out of $2,100, all the money she had in the world. The story of his swindle was published in full when he was arrested. In that month, by representing that he owned a ranch near Haywards and desired Mrs. Berry to act as housekeeper, he fleeced her out of her money, which she had received from the Workmen's society on the death of her husband. The jury rendered a verdict in five minutes. During the trial, it was shown that Holman has a bad record. He, on one occasion, swindled the Widow Vogt, of Lincoln, out of a death benefit of $1,800—for which he unluckily escaped detection. He has also been a convict in Oregon, and has committed numerous thefts and swindles, for which he has never been tried. Mrs. Berry has recovered all but $300 of her money.

THE Grand Recorder of the Oregon and Washington Territory jurisdiction states that up to the 15th of August 3,926 beneficiary certificates had been issued; membership in good standing, 3,324.

BURNS LODGE, No. 68, on Wednesday, Aug. 16th, called out its members to attend the funeral obsequies of the late wife of its Master Workman, Bro. C. C. Butt—a very graceful act,

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

In answer to frequent inquiries, it is well to say that no new edition of the digest has been issued, nor will there be any before another year. In our humble opinion, the Supreme Lodge made a great mistake in postponing so important a matter as the revision of the digest. As the Order grows older, the necessity of a full and comprehensive digest becomes more and more apparent and the call for such a work more and more pronounced. Their sale would have been very large, and the revenues no insignificant matter to the Supreme Lodge. But it is as it is, and we can do nothing but wait. The series of articles on our laws and usages, now running through the Watchman, will aid our members materially to understand the practical workings of our system in the absence of such a digest as we ought to have. Cut them out and preserve them in a scrap book, or otherwise in some convenient form, for future reference.

In the course of a few weeks we expect to be in receipt of a supply of the journal of proceedings of the Supreme Lodge at its last session, and will send a copy to each Lodge and jurisdiction.

The general condition of our Lodges is very good. The applications for this month will closely approximate the old-time figures.

The Situation in Iowa.

Since the Attorney-General of Iowa has reversed his former ruling as to the status of the Supreme Lodge in that State, a very considerable revulsion of sentiment seems to have taken place in the membership thereaway, and the loyal ranks are being rapidly swollen. Not a single death has occurred in their number, but we are assured that an assessment will much more than raise money enough to pay a loss when it shall come.

The seceders held a Grand Lodge session, recently, at Cedar Rapids, and after formally excommunicating the Supreme Lodge, proceeded to change the Ritual, signs, etc., of the Order. They also made provision to have their charter from the State amended. All this does not seem exactly consistent with the position these fellows have endeavored to maintain, but necessity knows no law, nor does it know consistency either. Legal proceedings have been commenced against them by the loyal Grand Lodge to recover the records and funds in their possession, which, it seems almost certain, will eventuate in a victory to the loyalists, and if so, that will end the fight, so far as all important matters are concerned, and end it as it ought to be ended. There is but one honorable way that we know of for a man or body of men to sever connection with a fraternal body, that all alike have sworn to uphold, and that is to step down and out, and then organize something else, if thought desirable. To attempt remaining in an organization in violation of its laws and the personal obligations of each and every violator is not honorable—to use no harsher expression. The Iowa malcontents will no doubt realize this fact some time or other.

The Assessments.

Many of our members feel, no doubt, the burden of assessments. As a rule, they are not wealthy, and every dollar has to them the full value of 100 cents. Some, in the hight of enthusiasm, have joined too many beneficial societies. They would be worth more, in a pecuniary sense, dead than alive. This condition of things is wrong. No man should impoverish himself and family while he lives that his beneficiaries may be wealthy when he shall die. It's overdoing the business. Few men are so poor that they cannot afford to belong to one society like the A. O. U. W. Many can afford to belong to two, and a few to more. But each should use a goodly amount of common sense in this society business, and not overload.

To carry $2,000 insurance on one's life cannot be expected for less than about $18 a year. Add to this Lodge dues, and then see if you can spare enough more to double or triple the sum. If not, be satisfied with the A. O. U. W. alone. Remember that $2,000 in clean coin is more than the average citizen is or ever will be worth. Make sure of that to leave behind when you go, but don't try to secure so much that all will be lost.

Beware, Brethren, good humor is priceless, and laughter-provoking discourse much to be desired, and the Lodge should have its portion of each, but there is no excuse for carrying it to the extreme, or in endeavoring to make up for a lack of wit or humor by a substitution of slang. It is wrong to do this and does not promote intelligent laughter by any means. We do not say that anything of this kind is going on anywhere, but we have our suspicions that fun is liable to be carried too far sometimes.

Monthly Reports.

The law provides for monthly reports from the Recorder of each Lodge to the Supreme or Grand Lodge. The object of these reports is, that the Supreme Recorder or Grand Recorder, as the case may be, may be able to keep a perfect record of the membership in each Lodge and their standing in the Order, so that his records in that regard may be exactly the same as those of the subordinate Lodges. The monthly report should be made up immediately after the close of the last meeting in the month, and at once sent forward.

The blank reports are put up in book form, with alternate sheets designated as "Original" and "Duplicate." The original is the one to forward from the Lodge, and the duplicate should be an exact copy thereof, and left in the book for future reference. The blanks provide for names, date of registering beneficiary certificate, date of conferring the M. W. degree, date of reinstatement, amount paid of arrears to the beneficiary fund, date of transfer of member by card, date of suspension, date of death, date of expulsion, date of final card, date of rejection. Then there are blank spaces to summarize the report so as to show the exact number of M. W.'s in good standing at the date of making the report.

For the benefit of Recorders we will endeavor to give full and explicit instructions in relation to filling out these reports, which, if followed, will always insure correct reports, and save a world of vexation and bother to all concerned:

1. Write only the names of such persons concerning whom some report is required to be made, but write them plainly and be careful to give the initials correctly. Sometimes two parties have names so exactly similar that it is almost impossible to tell which one is meant.

2. Always give the number of beneficiary certificate, if the same has been received by the Lodge. This is not only necessary for complete identification, but for convenience in finding the name on the register book.

3. The date of registering the beneficiary certificate should only be given when a member joins the Lodge. This date should be that on which the member receives the M. W. degree, except where a member joins by card. In such case, if by clearance (transfer) card in the same beneficiary jurisdiction, the date should be the date of election; if from another jurisdiction, the date of cancellation of the certificate; if by final card, the date of delivery of certificate in the Lodge.

4. The date of conferring the M. W. degree should only be given in the first report after the member has been made a Master Workman. That fact once put upon the records, fulfills all the requirements. Report names, number of beneficiary certificate and date of conferring the M. W. degree.

5. The date of reinstatement is the date on which the Lodge, by vote, reinstates a member. Report name, number of beneficary certificate and date of reinstatement, and amount of arrearages paid into the beneficiary fund. If the member has stood in suspension for three months or more, that is to say, three months and 20 days from the date of the first Lodge meeting night in the month in which he became delinquent, a re-examination and favorable report of the examining physician are a prerequisite for reinstatement. If suspended from the Order altogether, either for six months' delinquency on beneficiary assessments, Lodge dues, or as a penalty for some offense, the requirements are the same, except in the matter of degrees and fees, as in the case of a new member.

6. The arrearages paid into the beneficiary fund should not include any moneys paid on a pending assessment or assessments. Such are not arrearages. The principle is that on reinstatement a member should pay just the same amount that he would have paid had he remained in good standing, except in case of a member suspended from the Order, when, if the arrearages to the beneficiary fund are more than eight dollars, what is over that amount must be left out. Nothing is collected from such a brother on a pending assessment, but he must pay in one dollar to meet the first assessment-call after his reinstatement. To make the matter plain, supp se two assessments were levied on the first of the month; a member comes on the middle, or say 15th, to be reinstated, he owes for two months' arrearages, say three dollars, and that sum is so designated; he pays five dollars, two of which are for the two pending assessments, and these two dollars are to be treated just the same as payments by the other members who were not suspended. So we would report John Smith, beneficiary certificate No. 999; reinstated Aug. 15th; paid arrearages three dollars, and in manner as the blanks indicated.

7. Transfer by card does not occur till a member has been actually elected into another Lodge on his application for deposit of card, if in the same beneficiary jurisdiction, or election and cancellation of beneficiary certificate, if in a different beneficiary jurisdiction from that issuing the card. The date of transfer should be the date of election or cancellation of certificate, as the case may be. The granting of a clearance card should not be reported—it's only a privilege to join some other Lodge, which may be availed of or not just as the holder chooses. Report name, number of beneficiary certificate, date of transfer, and the Lodge from which the member came or to which he went.

8. Date of suspension may refer to one suspended for non-payment of an assessment or for complete suspension from the Order. In the latter case, make special note of the fact. Suspension for non-payment of assessment occurs on the fourth or last meeting night before the 28th day of the month in which an assessment is issued. If the Lodge fail to meet, the operation of the law is all the same. Those who do not pay to the Financier before that date should be reported suspended. If reinstated before the report is made, they should also be reported reinstated. Report name, number of beneficiary certificate and date of suspension. If suspended from the Order, give also cause.

9. In case of death, give name, number of beneficiary certificate and date. If a member dies out of standing, make no report of death.

10. Expulsion only occurs as a penalty on conviction for some offense. Don't report one who is suspended from the Order as expelled. Report name, number of beneficiary certificate and cause of expulsion.

11. The giving of a final card severs a member's connection with the Order entirely. Don't make the mistake of giving a clearance card for a final card, or *vice versa*. Report name, number of beneficiary certificate and date of final card.

12. In case of rejection for any cause, send Medical Examiner's report, if not already done. Report name and cause of rejection.

13. The summary blanks provide for giving the number of M. W.'s in good standing on the preceding report, and all additions for the month for which report is made. Foot these up. They also provide for all suspensions, deaths, expulsions, withdrawals from the Order and transfers out of the Lodge. Foot these up. Take the sum of the last from the sum of the first, and the difference will show the number in good standing.

A suspension from the Order should not be put in the summary if before reported, and still standing suspended for non-payment of assessments, because the member has already been once reckoned out of the number of M. W.'s in good standing, and this would count him out twice, and make an error of one.

Having once reported a member suspended, he should not again be reported until reinstated or suspended from the Order altogether.

Should We be Accurate and Exact in Our Work?

This may seem to the average mind a singular question; and yet, in view of the indifference manifested by so many of our brethren, officers and members, it becomes a somewhat pertinent inquiry. That the ritualistic work, written and unwritten, was devised for a purpose, is a fact which, with far too many, seems to be forgotten or willfully ignored, and its rendition has more the semblance of the disagreeable, carelessly-conned task of a school-boy, whose mind is all abroad with bat and ball and kite, than the really impressive and forcible lesson it is designed to be. A slipshod half-hearted method of giving the charge to a candidate disappoints him and reflects no credit upon the officer, whom he regards as his mentor and instructor in the new duties he is about to assume. An unfavorable impression in regard to the Order is thus often created, which could be easily avoided by a little study and preparation on the part of the officers whose duty it is to demonstrate the work of the Lodge. "What is worth doing at all is worth doing well" has been truly said. The officer who feels so little interest in the duties assigned to him, and which he has sworn faithfully to perform, as to willfully neglect the proper elocutionary effects of the simple task allotted to his station, and to commit his charge to memory, should promptly resign his position to some more zealous and ambitious brother. We have frequently heard expressions of disappointment from new members, who, while admiring the beauty of the lessons which had been expounded to them, felt keenly the lack of enthusiasm that characterized their rendition. There is a magnetic force in smoothly rounded sentences falling from seemingly impassioned lips which never fails to impress the listener with the importance of the instruction he is receiving. That this should be properly done necessitates the commital of the charge to memory, and a little study of the effect it is designed to produce upon the candidate. Few whom the Lodge deems worthy of occupying the various stations in its gift are so dull or uncultured as to be incapable of properly discharging the simple duties appertaining thereto.

Let there be an earnest effort made by all who have received these honors at the hands of their brethren to perform their duties in a manner creditable alike to themselves and the Lodge of which they are members, and we shall hear less complaint of the lack of interest manifested by so large a proportion of our membership. Brothers, strive to attain the topmost hights in the discharge of the tasks assigned to you, irksome though they sometimes be.

"Let thy feet fail not with weariness, for on the mountain tops the beauty and the majesty of earth, spread wide beneath, shall make thee to forget the steep and toilsome way."

The Royal Arcanum numbers 700 Councils and 38,000 members in the U. S.

In New Zealand.

A gentleman of Wellington, New Zealand, in the printing and publishing business at that place, writes to a friend in this city—a Workman and reader of the Watchman—who had sent the gentleman of Wellington copies of the Watchman and other pamphlets, as below given. The gentleman above referred to published a pamphlet in New Zealand entitled "Life Insurance; Does it Pay as an Investment?" which exhibits the true inwardness of that business there, and will apply to the same all the world over.

Dear Friend: — I am in receipt of yours of the 8th of April, and was glad to hear from you. The pamphlets and papers were not sufficiently addressed; you forgot to put the name of the town on, and had it not been that I am so well known, I would not have gotten them. The address was all right, but no town mentioned; but as there is no other printer of my name in any town in New Zealand, they brought the package to me. I am much pleased with them; they are just the things I wanted. I have not had time enough to read them properly yet; I just had a glance over them. The people have been harassed in this country with life insurance. The several offices have reaped a rich harvest, but the people are beginning to fight shy of them since the receipt of my pamphlet on the subject of "Life Insurance." Very few of the newspapers will say a word against the insurance companies, simply because they are large advertisers; therefore, they would say nothing. I printed 3,000 copies at my own expense, and wrote the matter for it. The general public are pleased with it, and say that it is quite true. I received many congratulations from the public, but very few from the newspapers. I have sent you by this mail 20 copies of the pamphlets for distribution among the Lodges of the A. O. U. W. I will be glad if you will send a copy to the Watchman and a copy to some of your leading journals. I may mention that all the fire insurance companies have formed a combination to raise the rate of insurance; they have doubled it. I was paying 25 shillings premium for every £100 I was insured for; now they want to charge £2 2s. 10d. for the same, and every person in the city is treated in the same proportion. I would not pay the premium, and therefore I am not insured for a penny. All the people of every position are interested in both life and other insurance companies, and if anyone attempts to raise his voice about the matter, he gets hounded down and set upon; so you see we are in a nice condition; in a word, the vitals are being eaten out of the country by a set of greedy men. Several meetings were gotten up in this city to try and bring about a better state of things, both as to life and fire insurance, but the friends and officers of the several companies packed the meeting and baffled it in its object. I intend to print a review of the way in which these matters are managed in this fine country.

When a new Lodge is petitioned for, old Lodges would do well to bear the following in mind, which is taken from an Eastern exchange: "The Constitution and laws of the Order prescribe what number of men is necessary to constitute a new Lodge, and whenever the requisite number is obtained, it is the duty of the Grand officers to institute the Lodge; and, while the law remains as it is, it is not a subject of adverse criticism by those who have any right to be considered loyal members of the A. O. U. W." Now, the question to be decided upon is simply this: Will the institution of a new Lodge injure the old Lodges? In the case of the late petitioners we answer, as we have said before, it would not; furthermore, the Order might very probably lose the entire number proposed for membership.

Business Announcements.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2,500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs one and a half miles from the center of the Redlands tract, and a depot will be established at once for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide. The cross streets are 60 ft. wide.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots. Within this town plat, at the crossing of Palm and Center avenues, is a circular public park, with a fountain in the center. This park will be improved by the proprietors of the tract. Above the town plat will be constructed a small reservoir, from which iron pipes will be laid to supply the town with water under pressure.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.

Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and watergates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have moved upon the tract are credited to Redlands, and the others to localities where they now reside:

Names.	Acres.

L. Jacobs, San Bernardino	24
Total sold	1,004

Judson & Brown (San Bernardino, P.O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast.

Restaurants, Saloons, etc

HOME-MADE BREAD
Fresh at 12 o'clock daily, at
WESTON'S, No. 9 Stockton Street.
PIES, CAKES, FANCY BISCUITS, Etc., Made fresh daily.

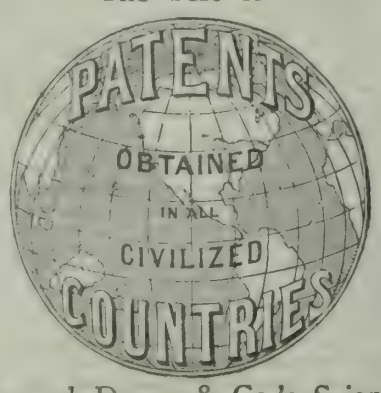
Wholesale and Retail Dealer in Fresh, Smoked and Salt Fish.
BAY CITY MARKET, STALLS NOS. 27 AND 29.
Telephone Connections. Goods Free to any part of the city



Good Land and Sure Crops.

There has been steady and tolerably rapid advancement made in the growth of a majority of the towns in Colusa, Butte, Tehama and Shasta counties. Especially is this so in the agricultural districts where the land produces at least fair crops in all seasons—wet or dry—as does the land on the Reading Ranch. Those looking for homes in California where diversified farming will pay every year; where wood and water are plenty and easy to be obtained, and other desirable advantages are to be had, should address the proprietor of the Reading Grant.

Some 14,000 out of 26,000 acres of the grant remain for sale at comparatively low rates, in quantities to suit purchasers, on easy terms. Prices range from $5 to $30 per acre. The tract is between two and three miles wide, with the Northern Division of the C. P. R. R. passing centrally through its entire length. Send postage stamp for free circulars containing information about Shasta County and these lands, to the proprietor of Reading Ranch.

EDWARD FRISBIE,
Anderson, Shasta County, Cal.

The best of

Through Dewey & Co.'s Scientific Press Patent Agency.
No. 252 Market Street. Elevator, 12 Front St., S. F.
Telephone No 668.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free. DEWEY & CO., PATENT AGENTS.

CIRCULARS OF INFORMATION FOR INVENTORS SENT FREE ON APPLICATION

GEO. H. STRONG. W. B. EWER. A. T. DEWEY

A GALVANOMETER FOR ELECTRIC LIGHT CURRENTS.—At a recent meeting of the Society of Telegraph Engineers and Electricians, England, a paper was read on a new galvanometer for measuring the most powerful electric light currents. The action of the instruments is based on the *nil* method of testing—that is to say, reducing the deflection on the scale to *nil* by means of adjustments. The galvanometer consists of an astatic needle placed within two independent circuits, one a coil of long, fine wire, and the other a coil of short and very thick wire, which, in fact, is a stout hoop of brass in some forms of the apparatus. Through the short, thick coil, the electric lighting current to be measured is passed, and through the long, fine coil is passed the current from a single-standard Daniell cell. Resistance is included in the latter circuit until the two currents balance each other by differential action on the needle, and the deflection of the latter is reduced to *nil*. Then, by means of a constant or multiplier found for the instrument in question by experiment, the strength of the powerful current in amperes can be obtained.

THE DETERMINATION OF SULPHUR IN PYRITES.—A process affording an accurate and expeditious means of determining the quantity of sulphur in pyrites consists in the following modification of the usual potassium chlorate method: A small amount of finely-ground pyrites—half a gram, for example—is mixed in a large platinum capsule with the well-known mixture of six parts sodium carbonate and one part potassium chlorate. The mixing is effected with a platinum spatula, and is then made more complete by gentle rubbing with an agate pestle fixed to a wooden handle. The whole is then fused over the blast lamp and treated with water. The solution so obtained is poured into a beaker containing an excess of hydrochloric acid, and is finally filtered. To the heated filtrate hot barium chloride is added, and a gentle heat is then applied, until the liquid above the precipitate has become clear. The burnt ores in sulphuric acid works have been for a long time assayed for sulphur by this process, which has, in every case, given satisfactory results.

MIXTURE OF GASES BY DIFFUSION.—The fact that gases do not mix very rapidly by diffusion alone may be strikingly illustrated by placing a strip of white paper, moistened with acetate of lead solution, inside a tall glass-stoppered cylinder, so that when the latter is inverted the paper extends from the bottom (which now forms the upper end) not more than one-third of the total length of the cylinder. A solution of sulphureted hydrogen in water is then placed in the hollow stopper of the cylinder, and the stopper is inserted loosely into its place. After about 10 or 15 minutes the production of sulphide of lead on the white paper shows that the sulphureted hydrogen has risen two-thirds of the hight of the cylinder. Papers moistened with starch, iodide of potassium and chlorine water may respectively replace the lead acetate paper and the sulphureted hydrogen water.

GLASS VENEERS.—Boston has an invention of what is known as glass veneers. Underneath a plate of glass is a substance made in exact imitation of the grain of wood—oak, mahogany, rosewood, maple, etc.—and the whole attached to the article of furniture, either as a panel top or otherwise. The effect thus produced is beautiful in the extreme, surpassing any polish of the natural wood that it is possible to produce. But perhaps one of the most important features attending the glass veneers is the great variety of uses to which they are applicable. For paneling, dado work, top of center or side tables, mantels, office furniture and even doors, the glass veneers are most admirably adapted. Among other articles, a small round table veneered in imitation of a costly variegated marble was beautiful in the extreme.

THE MECHANICAL EQUIVALENT OF HEAT.—Signori Cantoni and Gerosi have determined the mechanical equivalent of heat, by allowing a mass of mercury to fall from a hight and suddenly checking it at known distances, and measuring the increase of temperature at each distance. The mean results obtained agree closely with those obtained by Dr. Joule.

Second-hand barrels bought and sold.

Country Orders Promptly attended to.

PRINTERS, AUTHORS, INVENTORS, PATENTEES, BUILDERS, MANUFACTURERS, MACHINISTS, MERCHANTS, and other trades-people can have satisfactory Engravings and Electrotypes made at moderate prices by the S. F. ENGRAVING CO., No. 405 KEARNY ST. Send photographs, sketches, drawings, models or samples for estimates. Map and Woodcut Engravings enlarged or reduced by the aid of photography, at less than one-half the cost of the originals and in short time. Photo-relief, Zincograph and other improved methods employed.

BUY LAND

Where you can get a crop every year; where you will make something every season; where you are sure of having a crop when prices are high; where you have a healthy place to live; where you can raise semi-tropical as well as other fruits; where you can raise a diversity of grain and vegetables and get a good price for them. Go and see the old Reading Grant (in the upper Sacramento Valley), and you will find such land for sale in sub-divisions to suit purchasers—at reasonable rates and on easy terms. Send stamp for map and circular to EDWARD FRISBIE, proprietor, (on the Grant), Anderson, Shasta Co., Cal.

Mining and Scientific Press.

THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

12—ANCH

The Situation in Iowa.

The separation of the old Grand Lodge of Iowa was occasioned by its refusal to make an assessment of 10 cents per member to meet the demands of relief call, No. 1, issued by the Supreme Lodge Relief Board for the relief of Indiana. And now the new Grand Master calls upon the members of the Order in Iowa to pay the assessment. As the question is brought before the various Lodges, a number of interesting and intricate questions arise. As an example, the action of Des Moines Lodge may be given :

The question being upon the response to the call of Grand Master Graham, a motion was made to appropriate the amount called for. This motion was voted down, the majority of the membership of that Lodge being in sympathy with the Grand Lodge of Iowa. The Master Workman of the Lodge and the minority of the members, including the Receiver and the Trustees, agree with the Supreme Lodge. They withdrew and organized in another hall, but claim to be the original Lodge, retaining its name and number, as well as the funds. The charter, records, furniture and hall remain in possession of the majority. Injunctions have been issued against the minority, restraining them from using the funds of the Lodge, and it is threatened that proceedings will be taken to expel them from the Lodge.

It seems that divisions like this are occurring in many of the Lodges throughout the State, and in all of them the question will arise, which is the legal Lodge? To which do we owe allegiance? It is natural that the feeling should run pretty high, and each side is becoming more bitter against the other, but it is a deplorable state of affairs. The Order will be dragged through the courts of Iowa in every conceivable shape, not only at great expense to the members, but to the great disadvantage of the Order in that State and elsewhere.

We have no doubt, however—not the slightest—of the ultimate outcome. It will be this: Those who adhere to the Supreme Lodge will be finally victorious. The best reason in the world for this is that the United Workmen is a great fraternal Order, doing its work of charity and protection from a sense of moral obligation, and not from compulsion. Every member of the Order who holds true to the Supreme Lodge feels absolutely certain that it will be true to him. His insurance is great, because the faith of the whole Order is pledged to him. The technicalities of State courts will not be resorted to for the purpose of swindling his heirs out of their rights. And in whatever portion of America he may hold membership, he knows also that the whole Order—not a mere local body—stands pledged to make good the amount of insurance.—*Kansas Workman.*

A Startling Occurrence.

We take the following from the *Pacific Overseer*, an A. O. U. W. Journal, published at Portland, Oregon: "We presume our readers have read in the newspapers the particulars of the shooting of Jack Downen on the 13th inst. by T. S. Roadman, a Past Master Workman. Mr. Roadman's connection with the Order may render some additional particulars with reference to the sad occurrence of interest to our readers. To this end, we interviewed Mr. W—, of Portland Lodge, in this city, who made the following statement: 'The news of the tragedy conveyed the impression that the killing was entirely without adequate provocation; but I thought, from my knowledge of Mr. Roadman, the impression was not a correct one. Subsequent news, received by telegraph, printed in the *Oregonian* on the 15th, shows that Roadman was not entirely in the wrong. It appears that Roadman only fired the fatal shot after he had been knocked down, was in danger of great bodily injury, if not of his life, and wholly in Downen's power. He had also warned Downen not to strike him. I became acquainted with Mr. Roadman about four years ago and at the time, he was a law student in the office of Judge Willis; he was a quiet, honorable man, with no vicious habits, so far as I know. No young man in Roseburg enjoyed the confidence and esteem of the people more than Roadman. His mind was clear and strong on subjects, and in all his discussions he seldom could avoid coloring his arguments with the moral view. I am not positive, but I think that Roadman was a member of the M. E. church South. If it is true he acquired the habit of drinking and gambling after receiving the $2,000 from the A. O. U. W. on the death of his brother, it was certainly a most astonishing downfall from noble and promising manhood. I think, however, when the matter comes up for trial it will result in Roadman's acquittal. If this is not the outcome, then the crime was committed when his brain was inflamed with drink.'

"The above statement shows that liquor and gambling caused the killing, and we call upon the young men of our Order to heed the terrible warning."

Bro. David Woerner, N. W. Cor. of Main and Harrison streets, makes an exhibit at the pavilion in the line of cooperage that seems to be the perfection of this art. He is one of the reliable and leading coopers of the coast.

Fidelity Lodge, No. 136, had a very nice impromptu entertainment at the meeting of Wednesday, August 23d. Music, recitations and short addresses were the order of the evening.

The enterprising firm of Bailey, Badgley & Co., of Stockton, have had a very successful year in their line of business—as importers and jobbers in agricultural implements, hardware, etc. It might be expected, as they not only keep in stock all goods in their line, but are the agents for the following celebrated and meritorious line of goods: J. I. Case and Woods headers, McCormick Harvesting Machine Co.'s binders, reapers and mowers, the LaBelle freight, farm and header wagons, Althouse vaneless windmills, Minnesota chief thrashers, engine and horse powers, San Leandro, Buford and Stockton gang and sulky plows, and State agents for the celebrated American hay carrier and elevator. It is a tribute and recommendation to our Order that in every position of this State the leading active business men of all the large cities in our jurisdiction are members of our grand fraternity.

Bro. B. F. Wellington, importer and dealer in seeds, 425 Washington street, makes the best exhibit at the pavilion in the line of a Perfect hatcher and egg food, of any one exhibitor. The complete success shown by his experiment in hatching out his brood of chicks ahead of all others was noticeable. Persons wishing to try his improved egg food will have their money refunded if it does not prove satisfactory.

Messrs. Murphy, Adams & Co., of the Continental coffee and spice mills, keep constantly on hand a full line of spices, herbs, baking powder, flavoring extracts, chocolate, coffee, green and ground. Brethren will find it to their interest, as well as pleasure, to give this popular firm a call at 406 Sansome street.

Evening dress suits for special occasions furnished at Mr. J. Cooper's tailoring establishment, Palace Hotel block.

Agents Now Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to our business. Apply soon, or address this office, giving address, age, experience and reference.

DEWEY & CO., Publishers,
No. 252 Market St., S. F.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the Watchman's progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tell whether the Watchman has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the Watchman family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the Watchman.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Frank P. Latson & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery Street, under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc, and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

Mansion House.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

A Turned Leaf will point out the article supposed to be of special interest to persons receiving sample copies of this paper.

The finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

GOLDEN GATE FAIR.

Speed Programme for 1882.

$10,000 IN STAKES AND PRIZES.

FIRST DAY—Monday, Sept. 4.

THE HARDENING OF VULCANIZED INDIA-RUBBER.—In the opinion of Mr. W. H. Hempel, the hardening of vulcanized india-rubber which takes place with piping and other rubber goods after having been in use for a short time, is caused by the gradual evaporation of the solvent liquids contained in the rubber, and introduced during the process of vulcanization. Mr. Hempel has made experiments for a number of years in order to find a method of preserving the india-rubber, and he now finds that keeping the articles in an atmosphere saturated with vapors of the solvent answers the purpose. India-rubber stoppers, tubing, etc., which still possess their elasticity, are to be kept in vessels containing a dish of petroleum. The use of wooden boxes is objectionable; air-tight vessels alone being sufficient to preserve the india-rubber for any length of time. Exposure to light should be avoided as much as possible. Old and hard india-rubber may be softened again by subjecting it to the action of vapors of bisulphide of carbon. As soon as the article has become soft, it should be removed from the bisulphide of carbon atmosphere, and kept in the above way. Hard stoppers can easily be made fit for use again in this manner, but it is said that the properties of tubing cannot well be restored.

PROGRESS IN MICROSCOPY.—Two microscopes, called the "Jumbo" and the "Midget," formed an interesting exhibit at a recent meeting of a London society. The former instrument, probably made about half a century ago, was 4½ ft. high and weighed 125 lbs., while the "Midget," fully equipped for work, had a total hight of only four inches, and weighed but a few ounces. Six of such microscopes as the smaller one could be inclosed in the eye-piece of the larger.

GLASS FOR TABLE TOPS.—A new use for glass has recently been developed in its substitution for marble tops of tables and dressing cases. A Pittsburg firm has turned out slabs of glass that are said to be a perfect imitation of the latter material, while they admit of decorations of various designs, both in form and color.

EXPLOSION OF A BILLIARD BALL.—Recently, says the Evansville, Penn., *Journal*, as a colored man was cleaning up in Hick's billiard saloon, he was startled by a loud report, as if a musket had been discharged in the room. The report was followed by the falling of small pieces of ivory (?) all over the room. An examination revealed the fact that one of the billiard balls had exploded and broken into fragments. It was in the billiard rack, and no one near it. Several gentlemen were called in, among whom was the agent of composition pool and billiard balls. He said he never before heard of such an occurrence. For fully five minutes after the explosion the room was pervaded with a strong smell of camphor. The use of camphor, it will be recollected, is largely employed in the manufacture of composition billiard balls.

ELECTRICITY IN CHINA WARE MANUFACTURE.—A beginning has recently been made with the utilization of electricity for clearing China paste prior to baking it. It is a known thing that there are oftentimes black specks on the surface of china ware, which greatly take off from its value, sometimes as much as 40%. Of course, it is in the manufacturer's interest to obviate this drawback. The specks alluded to arise from the presence of diminutive particles of iron, and these, it has now been found, can be removed with a magnet. Two large French manufactories have already been fitted up for that purpose. On an average, the electro-magnetic machines used extract from seven to eight lbs. of iron from 100,000 lbs. of china earth that are submitted to them.

SOME French chemists have succeeded in obtaining oxalic acid from the waste of shoemakers' and saddlers' shops, and others where leather is used; also from woolen rags, horn, hair, etc. For this purpose these residues are treated with one part of sulphuric acid and four of water, and the mass thus obtained is subjected to the action of one part of nitric acid and three of water, at a temperature of about 80° Cent. From the digestion of this oxalic acid is easily extracted.

The Pacific Rural Press.

[Established in San Francisco in 1870.]

This is the leading farming journal on the western half of the continent, and second to none in America. It is well printed and illustrated, weekly. Contains an unusual amount of fresh, original farm, household and family circle literature. Careful attention is paid to giving full and reliable weekly market reports. The following are among its ably conducted departments: Editorials on agricultural and other timely and important subjects of live interest to farmers and their families; agricultural, and other useful and ornamental illustrations; correspondence from various quarters of our new and rich developing fields of agriculture on the Pacific coast, embracing new hints and ideas from progressive men and women in all branches of rural industry; Horticulture; Floriculture; The Garden; The Home Circle; The Grange; Young Folks; Domestic Economy, Good Health; Entomological; Sheep and Wool; The Dairy; The Stock Yard; Poultry Yard; The Swine Yard; The Apiary; The Vineyard; Queries and Replies; New Inventions (and illustrations of new and improved machinery); Agricultural Notes; Items of General News, etc. Its columns are studiously filled with chaste, interesting, fresh and useful reading, devoid of questionable literature for old or young and fancifully alluring clap-trap advertisements. Send for sample copies.

DEWEY & CO., Publishers, S. F.

LOSS OF MEMORY BY THE AGED.—Mr. Winthrop has his mental faculties in full vigor. His Yorktown oration will be remembered as a proof of this. We have had two notable examples of the decay of memory in great men in the case of Mr. Adams and Mr. Emerson. There is a complete blank in Mr. Adams' mind often as regards the more immediate past, which made him an easy prey to the scoundrel who has just had five years' sentence in the State prison for swindling him. Mr. Emerson's lack of memory took another form. He could not remember the names, either of persons or things, when he undertook to converse; but this did not involve an incapacity for ordinary reasoning. There is a pleasant story showing that something of the element of humor remained with him during his time of difficulty in this respect. He was going out one day, and his daughter saw him searching for something to take with him. He could not name it. She mentioned two or three articles, to which he returned a negative. At length he turned to her with a twinkle in his eye, and said, "It is the thing that people take away." She at once brought him his umbrella, and all was right. Mr. Holmes, who is two years past 70, was asked the other day if he had this trouble about remembering. He replied, not at all, except possibly in the case of persons. This statement may readily be credited when it is remembered that he is active as a lecturer before the Massachusetts Medical College, and gives no less than 70 lectures in a season to his students.

FILTER PRESS FOR VOLATILE SUBSTANCES.—When volatile substances have to be filtered, M. A. L. G. Dehne prevents the loss which might take place, and the formation of noxious vapors, by placing the filter press in a circular grooved plate. The press is then covered with a dome, the bottom part of which fits into the groove, which is filled with a liquid. All inlet and outlet pipes pass through the plate.

DANGER FROM CARBON BISULPHIDE.—A fatal explosion recently occurred at Bradford, England, due to the escape of carbon bisulphide into the public sewer. It appears to have come from a grease works where it had been used in the extraction of oil from seeds.

FEEDING APPARATUS FOR STEAM BOILERS.—In supplying feed water to steam boilers, Mr. John Adams, of Watford, England, proposes to employ two feed or supply cisterns, one of which is open and placed above the boiler, and the other closed and adapted to resist considerable pressure. The open vessel is connected with the closed one, and the latter, in turn, with the boiler, by means of pipes, and when communication between the last two is shut off, the closed vessel may be readily filled, as required, from the open vessel. A pipe, issuing from the boiler to be fed, is provided with a three-way valve, or tap, and one of the passages connects the boiler with the closed feed chamber, while another runs from the latter to the open vessel. By means of this arrangement, steam may be admitted from the boiler to the closed vessel, and when communication is made between the bottom of the latter and the former, there will be a tendency to establish equilibrium, resulting in the feeding of the boiler. Steam may also be admitted from the closed chamber to the open one for the purpose of heating it before being used.

SCIENCE ON THE STAGE.—It is proposed to try a novel experiment at Paris, by producing a series of scientific dramas at one of the theaters, with the object of combining amusement with instruction. Three plays have already been provided, and their titles clearly indicate the direction in which the audience is to be instructed. The titles are: "Denis Pepin, or the Invention of Steam;" "Kepler, or Astronomy and the Astrologer," and "Gutenburg, or the Invention of Printing." The result of this new dramatic venture will be awaited with interest. Its success may be the inauguration of a new era in science teaching.

A LAS VEGAS, N. M., dispatch says: The New Mexico Central & Northern is the name of the latest railroad scheme. It has been organized under the laws of Michigan. The company is at present represented here by W. G. Corbin, who states that it is their intention to build a narrow-gauge road south from the southern terminus of the Denver & Rio Grande at El Moro to Trinidad, thence south through Long's canyon, Cimarron and Mora to Las Vegas, and thence to White Oaks.

THE PACIFIC RURAL PRESS,

AN ILLUSTRATED

AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.

Because it is the largest and best agricultural weekly west of the Rocky mountains

That Patrons may be reliably informed on the progress of the Order in this and other fields.

That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.

That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress.

That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns

That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements

That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information concerning subscription, etc., on application.

Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

Progressive and Substantial Patent Agency.

The SCIENTIFIC PRESS Patent Agency was established in 1860, and has ever since been the leading Patent Agency on this side of the continent. Thousands of patents have been secured through this old and reliable Agency; and, from personal experience, most of the leading inventors of this coast can testify their great satisfaction at the promptness and dispatch with which their business has been put through, and the best patent claims admissible obtained.

There are few solicitors of Patents in the United States who have been as largely, or so continuously and successfully engaged in the soliciting of patents.

As editors and publishers of leading scientific, mechanical and industrial newspapers for the past 20 years on this coast, Dewey & Co. have superior facilities for acquiring and giving information upon all subjects of discovery, whether in the line of the farmer, the miner, the manufacturer, the mechanic or the scientific inventor.

Their files of illustrated, scientific and mechanical publications afford an encyclopædia of useful knowledge pertaining to the development of all branches of business upon this coast for many years past.

Their library of books on home and foreign patent laws; United States and Foreign Patent Office Reports; mechanical, industrial, and scientific text books, encyclopædias, etc., is one of the most complete for reference in patent matters, in the United States outside of Washington.

Here an inventor can secure a knowledge of the State of the art, in any particular class he wishes to investigate and improve in, that will greatly aid him in his work of inventing.

They also mail (free, on receipt of postage stamp) a reliable pamphlet containing valuable information for inventors and patentees.

Geo. H. Strong, W. B. Ewer and A. T. Dewey comprise the firm of Dewey & Co., Patent Solicitors. Their Patent Agency is favorably located and connected with the MINING AND SCIENTIFIC PRESS and the PACIFIC RURAL PRESS offices, at No. 252 Market St., S. F., journals that are well known among the ably conducted and widely circulated progressive American weeklies of the day.

This paper is printed with Ink furnished by Chas. Eneu Johnson & Co., 509 South 10th St., Philadelphia & 59 Gold St., N. Y. Agent for Pacific Coast—Joseph H. Dorety 527 Commercial St., S. F.

Patent Agency.

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

ELECTROTYPE SPECIMEN.

The accompanying card of H. S. Crocker & Co., is a perfect miniature copy of their large holiday circular. It was reduced by our photo-relief process at small expense. It appears here about one-tenth (1-10th) of its original size, an exact simile and perfect in its detail. We cannot always reduce engravings or cards (without redrawing) to so great an extent, and yet have them print well. Most newspaper, book and circular engravings and prints however can be photographed from ¼ to ½ size and still print well. The less fine the lines, or type, are, the greater the reduction they will bear. All kinds of photo-relief, wood and zinc engraving, drawing and designing done in the most artistic and economic style. Send for samples and estimates. Orders may be addressed to this paper, or to the

District Meeting.

Among the multitude of events that have passed and still are passing away into the dim retrospect of years, and being written on the pages of history, bright, glorious, immortal to the honor of the Ancient Order, one of the most completely successful that we have ever had the pleasure of chronicling, was the district meeting held by District Deputy Egleston, on Friday evening, September 1st, 1882, with Yerba Buena Lodge, No. 14.

The attendance, though not unusually large, was comfortable. A great many different Lodges were represented, and the amount of entertaining and instructive talent present was surprising. The Grand Master and Deputy Grand Master were in attendance during a portion of the evening, and communications from other Grand Officers and Gov. Perkins were read, expressing regrets that the authors could not attend.

The J. W. degree was conferred upon one candidate, after which further Lodge business was postponed on motion, and Grand Master Barnes introduced. He spoke of being unwell, having contracted chills and fever through his lengthy travels, and came here only at the urgent request of his Deputy that he might see this his work. He recalled, with pleasure, the meeting, on August 21st, with California, No. 1, to celebrate the seventh anniversary of the introduction of the Order in this State; paid a fitting tribute to Fraternity, and compared the A. O. U. W. to the electric light of the 19th century, concluding with a beautiful poem. Deputy Grand Master Loud was then introduced and spoke briefly. Bro. Purdy, P. M. W., of Yerba Buena, was then called on for a song, which he gave in good style. District Deputy Thompson was next introduced, and spoke at some length. Bros. Russel and Belcher, of Yerba Buena, then sang a duet, "Larboard Watch," and were applauded long and loud. A brother, Past Master of Bernal, then made a few remarks, after which Bro. Egleston began his famous address, which lasted about three-quarters of an hour, and we can truthfully say that it was the most eloquent, digestive and nicotian address that we have ever indulged in. It was in three parts—the introduction, the banquet and the cigars—and Bro. Egleston held his listeners in marked attention from beginning to close. Coffee, cake and sandwiches and cigars having had their comforting influence on the audience, Bro. Fay was called on for a song and responded in a beautiful manner. Bro. Lamont then recited "The Scout," and delivered it with marked impressiveness. Past Master Severance was next called on, and, in course of an eloquent speech, told some highly-amusing stories, creating uproarious good humor.

Past Master Reading, whose angelic features had appeared upon the scene just in season to close over a comforting quantity of coffee, and cake, and sandwich, and cigars, was now called on, and endeavored to tell some "bigger ones." A short intermission was then taken, during which the cigars were again passed around, and Bro. Frank B. May, P. M. W., entertained the members with instrumental music. The next feature of the evening was the recitation of "Lochiel's Warning," by Bros. E. V. Thompson and A. V. Thompson—father and son, both P. M. W.'s of Noe Valley Lodge, the only instance of the kind in the State. The dialogue was dramatically and effectively rendered. Bro. Jephson, of Sts. John Lodge, then recited "Please Pull the Bell," and won well-merited applause. Bro. May, of Unity Lodge, Portland, Oregon, was next called on, and made a few remarks. The hour getting close to 12 o'clock, and there being a rule of the Order that meetings must open and close on the same day, after listening to a short anecdote from Bro. R. T. Delano, P. M. W. of Bernal, the Lodge granted Bro. Egleston permission to smoke two cigars at once, and after a hearty invitation from Bro. Egleston to visit Yerba Buena at any time, the meeting adjourned, it being unanimously agreed that the meeting could not have been any better than it was.

INTEMPERANCE IN EATING.—Volumes are written every year upon the subject of intemperance, referring always to the excessive use of intoxicating liquors, but nobody thinks of intemperance in eating. We believe one hundredfold more misery and distress is caused by eating too much than by drinking too much, and that we pay more assessments on brothers that have eaten themselves to death, than those who drank themselves to death.

SELECT KNIGHTS.—The fifth annual session of the Grand Legion, Select Knights, A. O. U. W., of New York, convened in the Hodge Opera house, Lockport, N. Y., Tuesday morning, September 5, 1882.

The Coquita Palm.

The Coquita palm *(Jubœa spectabilis)* is a Chilean species, but is also cultivated in New Granada and other parts of South America. It affords the *Miel de-Palmo*, or palmy honey, so much esteemed and used throughout that country. The beautiful trees are felled in great numbers yearly, and their graceful crowns of feathery leaves lopped away, to catch the sap running from the wound. By cutting a thin slice from the end every day, the flow is kept up for several months. A good tree will yield 90 gallons. The sap is boiled down to the consistency of treacle, and used instead of sugar. The small nuts which the tree bears are also edible, and are exported in considerable quantities. The Chileans let their cows and oxen do the husking in a peculiar manner, as follows: The cattle are very fond of the green husks, and being allowed to feed upon them, swallow the nuts whole. Afterward, when chewing the cud, they eject the nuts, which are found in small heaps, entirely free from husks, in places where the animals ruminate.

THE COQUITA PALM—Jubaea Spectabilis.

PER CAPITA TAX.—The Kansas *Workman* says our per capita tax is 90 cents a year. Not so bad as that, brother Workman; 60 cents is the figure.

Ideas.

Lodge members in general, as well as all other human beings, have a peculiar fondness for hearing themselves talk, and in nine cases out of ten, though we are eloquent as the angels, we will please the majority of mankind more by listening than by talking. It is related that a certain member of the Order, who hitherto had been a silent observer, partly on account of his natural modesty, and partly because a certain ring or clique, which, by the way, seems to be a selfish feature of a great many Lodges, had monopolized all the talking in defiance both of parliamentary decorum and common etiquette, one evening, when a motion had been made, arose, and abruptly remarked "I second the motion!" This member was heard afterwards to say that this meeting was the most interesting and enjoyable the Lodge hed held for many a day.

It is of little importance how much instruction is to be gained in the Lodge-room, and what a good work we are supporting by going to Lodge regularly every meeting; it is not in human nature for one to be a contented and continual recipient of dry precepts, or a humble slave to "ancient rite and ceremony." Learning must be made attractive, and ceremony a relief, not a task. Therefore, should the Lodge work be prompt, rapid and dignified, while the entertainment feature should never be neglected. Furthermore, it is a great mistake that the business of talking should be confined to a so-called "ring" of three or four. *Docendo discimus* applies to all members; by telling, or teaching, we learn, and each should be entitled to express himself, and even invited to do so. If parliamentary decorum were followed, no member would have a right to speak half a dozen times on the same question.

The district meeting held with Yerba Buena Lodge, on Friday evening, Sept. 1st, seems to have been carried out in exact accord to our ideas, and we believe a more entertaining and instructive meeting could not have been planned and carried out with less expense and more success than this one.

It is getting to be the season of numerous anniversary parties, a few notices of which we give in this issue. We are always pleased to receive detailed accounts of these parties, with Lodge history, if practicable.

NONSENSE IN THE LODGE.—The less nonsense tolerated in the Lodge, the better for the furtherence of the principles of the Order. When the Lodge opens, all business shou'd move earnestly and seriously, and it is th duty of the Master Workman to crush instantly and irresistably, every attempt to make light of any business being transacted, at least until Good of the Order is reached, when nonsense often forms a part of the regular business. There is a time for work and a time for play, and those Lodges that do their work thoroughly and earnestly, and then find time to enjoy a social entertainment, always have enjoyable and instructive meetings, a large attendance, and are in every way the most prosperous. But those Lodges that attempt to fool away business hours in sickly attempts to create laughter by treating serious questions lightly, that consequently never know what they have done, if they ever do get through a meeting, that have a conceited idea that by doing the work of the Lodge in this half-and-half style the meeting is made hugely entertaining, invariably have a small attendance, consisting generally of the principal actors in the burlesque, keep late hours, and have dull, uninteresting and uninstructive meetings.

OUR PAPER.—As a rule, fraternal papers have rather lean picking, insomuch that the greater number of them die of sheer starvation. It ought not to be so, we belive all will agree, but somehow it is. Even the WATCHMAN, which has probably the largest circulation of any paper in the Order, is not a mine of wealth to its publishers.

Home Miscellany.

Wild Flowers.

I stood tiptoe upon a little hill;
The air was cooling and so very still,
That the sweet buds, which, with a modest pride,
Fell droopingly in slanting curve aside;
Their scanty-leaved and finely tapering stems
Had not yet lost their starry diadems,
Caught from the early sobbings of the morn.
The clouds were pure and white as flocks new shorn,
And fresh from the clear brook; sweetly they slept
On the blue fields of heaven, and then there crept
A little noiseless noise among the leaves,
Born of the very sigh that silence heaves;
For not the faintest motion could be seen
Of all the shades that slanted o'er the green.
There was wide wandering for the greediest eye
To peer about upon variety;
Far round the horizon's crystal air to skim,
And trace the dwindled edgings of its brim;
To picture out the quaint and curious bending
Of a fresh woodland alley never ending;
Or, by the bowery clefts and leafy shelves,
Guess where the jaunty streams refresh themselves.
I gazed awhile, and felt as light and free
As though the farning wings of Mercury
Had play'd upon my heels; I was light-hearted,
And many pleasures to my vision started;
So I straightway began to pluck a posy
Of luxuries bright, milky, soft and rosy.
A bush of May flowers with the bees about them—
Ah, sure no tasteful nook could be without them—
And let a lush laburnum oversweep them,
And let long grass grow round the roots, to keep them
Moist, cool and green, and shade the violets,
That they may bind the moss in leafy nets.
A filbert-edge with wild-brier overtwined,
And clumps of woodbine taking the soft wind
Upon their summer thrones; there, too, should be
The frequent checker of a youngling tree,
That, with a score of bright-green brethren, shoots
From the quaint mossiness of aged roots;
Round which is heard a spring head of clear waters,
Prattling so wildly of its lovely naughters,
The spreading blue-bells; it may haply mourn
That such fair clusters should be rudely torn
From their fresh beds and scattered thoughtlessly,
By infant hands left on the path to die.
Open afresh your round of starry folds,
Ye ardent marigolds!
Dry up the moisture from your golden lids,
For great Apollo bids
That in these days your praises should be sung
On many harps, which he has lately strung;
And when again your dewiness he kisses,
Tell him, I have you in my world of blisses;
So, haply, when I rove in some far vale,
His mighty voice may come upon the gale.
Here are sweet-peas, on tiptoe for a flight,
With wings of gentle flush o'er delicate white,
And taper fingers catching at all things,
To bind them all about with tiny rings.
What next? A turf of evening primroses,
O'er which the mind may hover till it dozes;
O'er which it well might take a pleasant sleep,
But that 'tis ever startled by the leap
Of buds into ripe flowers.

—*John Keats.*

Woman's Rights and Wrongs—Suffrage.

In my last communication on this subject, I advanced the position that the only effectual remedy for woman's legal wrongs is to be sought in a constitutional recognition of equality of rights, irrespective of sex. The ballot is the specific resorted to by the national and State governments in the treatment of men's wrongs. Its practical efficiency has justified the faith of our revolutionary fathers, who taught that with the ballot in his hand the citizen is assured of ultimate justice. In harmony with this teaching is the fact that every concession of self-governing rights has strengthened the Government and exalted the nation.

Class legislation, a marked feature in the early history of our Government, has gradually given way to laws of general application, in the interests of men. In the interests of women, class legislation, in the effort to secure to her justice without the ballot, has become more apparent as a rule, with the effect of increased demand and need for the ballot.

Most of the old States adopted property qualifications, which practically disfranchised large numbers of worthy but poor men, and as the growth of the country developed new industries, whole classes of workers found their interests unrepresented in legislation. With the slogan which the fathers had bequeathed to us, "Taxation without representation is tyranny," they procured the repeal of these laws in State after State.

In 1840, or thereabout, a real-estate property qualification in Rhode Island, which disfranchised more than half the citizens of the State—merchants, mechanics and employes, renters and not owners of real estate—originated what is known as the Dorr rebellion, which found its quietus in extended suffrage.

The three-fifths vote conceded to the slave States by the national Constitution, as a guarantee against encroachments of the free States on slavery, culminated, at last, in a sectional rebellion, which, happily for humanity, compelled the liberation of the slaves, and substituted for the national school of oppression the free schools of freemen. Even then, an amendment of the national Constitution, recognizing equality of rights, irrespective of color, was found necessary for the protection of the freed men in the enjoyment of equal legal rights under the State governments. The adoption of a Fifteenth Amendment swept away the color-line and invested all male citizens with the right of suffrage.

Our history as a nation commends the ballot as an educational power, energizing and elevating men of all races, conditions and colors. The suffrage granted to women in school affairs by 12 States, and political suffrage conceded to the women of Wyoming, furnish no exception to this claim—only make more apparent the benefits of extended suffrage, as securing greater purity and efficiency in official administration.

To a government, the perpetuity of whose institutions rests, not in numbers or wealth, but in the virtue and intelligence of the people, it is of first importance to utilize that virtue and intelligence in the support of its institutions. The acknowledged influence of women on private and public morals has established the high grade of her morality, as also her superior intelligence in the application of both moral and political power to the ends of good government, viz., justice, purity and a wise benevolence. The use of the ballot in her hands is not doubtful. What she has accomplished by her influence without the ballot gives unmistakable assurance of what she will do with it—an assurance that has arrayed against woman suffrage every individual and every "ring" flattening on the vices and weaknesses of a frail humanity, from the Liquor Dealers' Association, that resolves against it in convention, to the petty saloon-keeper, who muddles the brain of the father, filches the children's bread and paupers mother-love. To all these classes, woman suffrage appears as a "Daniel come to judgment."

The records of our last half century acknowledge woman's work as initiator or nurse of every humane movement challenging political support. The persistent efforts by associations, petitions, lectures, personal appeals and the press, which first made possible the enactment of laws restraining the liquor traffic, have culminated in the adoption of prohibitory constitutional amendments by Kansas and Iowa, and a most hopeful preparation in several other States to follow their example. Kansas, which was first to adopt prohibition, reached this result through a local-option law of some 13 years standing. Under this law, to obtain a license required the written consent of a majority of the inhabitants, women included. From the operation of this law, the first and second-class cities had been exempted, to save it from defeat or repeal by their heavy anti-temperance delegations in the Legislature. The result of the experiment in the rural districts was the growth of a sentiment and the increase of an immigration that revolutionized the cities, and won a majority for prohibition of this crime and poverty-manufacturing traffic.

I might instance woman's influence in various reformatory and industrial, as well as educational directions, but space forbids.

Our criminal statistics are eminently suggestive. Take three States of at least average morality. Indiana prisons contain 1,480 male and 44 female convicts; Illinois, 1,682 male and 22 female convicts; Ohio, 1,532 male and 19 female convicts; add to these 100 male and one female conviction—the ratio given by the police statistics of our large cities—and we have 4,794 male to 86 female convicts, as an approximate representation of the comparative immorality of the sexes, and an equally correct showing of their comparative character for good citizenship. In the face of such testimony, the worldly and the heavenly wisdom, that give the ballot to all men and deny it to women, is on a par with that of the miner, who, in separating mineral ore should gather up the lead and thrust aside the silver and the gold.

In view of all these facts, it can be no flight of a vain imagination to assume that, when the present minority of virtuous, intelligent, humanity-loving men shall be reinforced at the ballot box, by the enfranchised virtue, intelligence and mother-love of the actual majority of women hostile to the liquor traffic, devoted to the homes, to the schools and to the reclamation of the victims of lust and greed of unlawful gain—a sublime glory and a fuller measure of peace and prosperity will bless us as a people.

We are often told that women do not need the ballot; that they can be secured in the enjoyment of equal legal rights through male representation, and the amendments of laws affecting our interests since 1847, are cited in proof. But our experience takes into account the evasions, subterfuges, instability and crudeness of State legislation, which we can only reach, if reach at all, by indirection. Add to this the weightier considerations of time, energy and money expended in the years of anxiety through which the mother heart has borne sneers, rebuffs and gallant denials of justice in a crusade for rights, which, with all its successes, leaves her powerless still in law, and in fact a serf—owing unconsidered personal service to a sovereign whose crown is a crown matrimonial, in virtue of which he controls her person, disposes of her earnings, and owns her clothing and her babies! And this in a country and under a Government that boasts of the absolute freedom of its citizens and of its institutions, of which marriage, as the nursery institute, should hold the guaranties of every virtue essential to a "Government of the people, for the people, and by the people"—be in fact and in theory a union of equals in law. Under this government women are courted (as were the slaves) to increase a male representation that has made and sustains laws to their detriment. As wives, mothers and widows, this representation holds us subject to a class legislation which lessens our means and influence for good, and embitters the sweetest fountains of love and duty. As women—single or married—it challenges our antagonism for its injustice, and stirs our contempt for the petty meanness of a policy that degrades the manhood, shames the womanhood, and defeats the happiest ends of wise government.

Does this arraignment strike the friendly reader as too severe? It is so only in the seeming impossibility of being deserved. The facts which prove its truthfulness—and which are patent in every community—justify any severity of speech necessary to rouse the dormant conscience, or pride where conscience is lacking, to "do justly, love mercy," and get off its high heels. A people is to be judged by the laws it tolerates. Individuals composing a government are as justly rated by the duties they omit, as by the duties they perform. For it is through the omission of individual duty by better men that worse men, banded together for wrong, secure the majority vote that writes, "weighed in the balance and found wanting" on the legislative walls of every State in the Union, and over the judge's bench in every judicial district of the State. The silence of good men is golden only to transgressors. As "dumb bells" they may answer a purpose in the moral gymnasium, if one has the courage to grasp them.

Ah, me! Why should Bro. B. pickle a rod for his own shoulders? But life is too precious and too short—for me, at least—to spare the rod at the risk of weakening my plea in behalf of justice and humanity. He is "astounded at the world's ignorance," and justly concerned for its enlightenment, while I am more astounded that he should be on such good terms with his own as to make it an excuse for shirking his responsibility as a citizen to inform himself in all the duties of citizenship. If there is a seeming malice in my arraignment of himself personally, the friends must place it to the account of wounded pride, that having taken him through a regular course of woman's rights and wrongs, he still pleads ignorance of the "obnoxious laws," which it has been my painful duty to ventilate. With so apt a scholar, the failure is presumed to be in the teacher.

A plea of ignorance is of no avail in the courts, except to abate the rigor of a penalty in case of an evident lack of intelligence; and with reason in a country where the sources of information are so cheap and abounding that any man, if he choose, can make acquaintance with his rights and duties as a member of society and of the body politic. When he takes his freeman's oath, he assumes obligations to every person in the community amenable to the laws, or who may suffer or be profited by them—to cast a righteous vote, though it be with the minority, for only by such individual action can there be any majority power of good in authority.

But, alas, it is indifference that is the criminal power behind the ignorance; or its supposed dryness and insipidity as compared with other literature, that prevents men and women from the study of the noblest of all secular lore—the laws by which civilization marks its upward progress.—*Mrs. C. I. H. Nichols in Rural Press.*

What is a Tear?

The principal element of a tear is water; this water, upon dissolution, contains a few hundredth parts of the substance called mucus, and a small portion of salt, of soda, of phosphate of lime, and of phosphate of soda. It is the salt and the soda that give to tears that peculiar savor, which earned for tears the peculiar epithet of "salt" at the hands of the Greek poets, and that of "bitter" at ours; "salt" is, however, the more correct term of the two. When a tear dries, the water evaporates, and leaves behind it a deposit of the saline ingredients; these amalgamate, and, as seen through the microscope, array themselves along crossed lines, which look like diminutive fish bones. Tears are secreted by a gland called the "lachrymal gland," which is situated above the eyeball, and underneath the upper eyelid on the side nearest the temple. Six or seven exceedingly fine channels flow from it on the under surface of the eyelid, discharging their contents a little above the delicate cartilage which supports the lid. It is these channels or canals that carry the tears into the eye. But tears do not flow only at certain moments and under certain circumstances, as might be supposed; their flow is continuous; all day and all night, although less abundantly during sleep; they trickle softly from their slender sluices, and spread glistening over the surface of the pupil and eyeball, giving them that bright enamel and limpid look which is one of the characteristic signs of health. It is the ceaseless movement and contraction of the eyelids that effect the regular spreading of the tears, and the flow of these has need to be constantly renewed in the way just mentioned, because tears not only evaporate after a few seconds, but also are carried away through two little drains called "lachrymal points," and situated in the corner of the eye near the nose. Thus all tears, after leaving the eyelids, flow into the nostrils, and if the reader will assure himself of this, he has only to notice, unpoetic as the fact may be, that a person after crying much is always obliged to make a two-fold use of his or her pocket-handkerchief.—*Chamber's Journal.*

"Don't you have any schools here?" "Had a kind of school here last chowder season, but the teacher was too willing." "How so?" "Oh, some of the blue fishers asked him if he taught that the world was round or square, and he said, seein' he was out of a job, he'd teach her round or square—just as the school board wanted it teached. Said it was immaterial."

Asking for Woman Suffrage.—The Kansas Republican Convention, held at Topeka, Aug. 10th, adopted a resolution asking the next Legislature to pass a law allowing woman suffrage. The vote stood 234 to 129.

Charles Reade's True Woman.

Reade, in fact, invented the true woman; that is to say, he was the first who found her. There have been plenty of sweet and charming women in stories—the patient, loving Amelia; the bouncing country girl, Sophie Western; the graceful and *gracieuses* ladies of Scott; the pretty dummies of Dickens; the insipid sweetnesses of Thackeray; the proper middle-class (or upper-class) girl of Trollope; the conventional girl of the better lady novelists. There have also been disagreeable girls, especially the bad-style, detestable girl of the "worser" lady novelists; but Reade—the *trouvere*—has found the real woman. You will meet her on every page of all his novels. What is she? My friends, Columbus' egg was not simpler. She is just exactly like a man, like ourselves, but with certain womanly tendencies. Like ourselves, she ardently desires love. She knows that it is the best—the absolutely best—thing the world has to give; that we are all born for love, man and woman alike; that to lack this consummate and supreme blessing is to lose the best part of life. Since she desires above all things to be wooed, and is forbidden to woo on her own account, she conceals her own thoughts; yet, from her own experience in hiding, she is quick at reading the thoughts of others. She is satisfied with nothing less than what she herself gives, which is all herself. Her reserve leads her, in the lower natures, to deceit and falsehood. Her devotion, which is part of her nature, leads her—also in the lower natures—to suspicion and jealousy. She is always in the house, and therefore her mind is apt to run in narrow grooves. The prodigality and wastefulness of men are things beyond her understanding or patience. She is unversed in affairs, and therefore comprehends nothing of compromise. She is generally ill-educated, and therefore is incapable of forming a judgment. Hence, she is carried away by every wind of doctrine; as, for instance, in matters ecclesiastical, knowing nothing of the early church or its history, she believes the poor, little, ritualist curate, who knows, indeed, no more than herself; or, in art, where, for want of a standard, she is led astray by every fad and fashion of the day, and worships sad-faced flatnesses with rapture; or, in dress, where, her taste being uncultivated, she puts on whatever is most hideous and unbecoming, provided it is worn by everybody else.

This is the woman whom Charles Reade presents to us. She is not, at all events, insipid; no real women are. If she is artificial, he shows the real woman beneath. What he loves most is the woman whom fashion has not spoiled—the true, genuine woman, with her natural passion, her jealousy, her devotion, her love of admiration, her fidelity, her righteous wrath, her maternal ferocity, her narrow faith, her shrewdness, even her audacity of falsehood when that can serve her purpose, and her perfect abnegation of self.—*Gentleman's Magazine.*

A New Floor Covering.—A new and desirable papier mache process for covering floors is described as follows: The floor is thoroughly cleaned. The holes and cracks are then filled with paper putty, made by soaking newspapers in a paste made of wheat flour, water and ground alum, as follows: To one pound of flour add three quarts of water and a tablepoonful of ground alum, and mix thoroughly. The floor is then coated with this paste, and then a thickness of manila or hardware paper is put on. If two layers are desired, a second covering of manila paper is put on. This is allowed to dry thoroughly. The manila paper is then covered with paste, and a layer of wall paper of any style or design desired is put on. After allowing this to throughly dry it is covered with two or more coats of sizing, made by dissolving one-half pound of white glue in two quarts of hot water. After allowing this to dry, the surface is given one coat of "hard oil-finish varnish," which comes and is bought already prepared. This is allowed to dry thoroughly, when the floor is ready for use. The process is represented to be durable and cheap, and besides taking the place of matting, carpet, oil-cloths or other like covering, makes the floor air tight, and can be washed or scrubbed.

Double Time-keeping.—An invention has just been patented by which the time of two distinct places, at whatever distance situated, can be simultaneously marked on the face of a watch or other timepiece without interfering with the fixed time which it is desired to keep, or necessitating the moving of the hands of the piece. This invention consists in two supplemental movable rims, working independently of the fixed dial and of each other. The inner rim is divided into hour sections, the outer one into minutes. Two tiny wheels, projecting slightly from the metal bezel which holds the crystal in position, enable the wearer to bring the hour and minute at which he wishes to set these movable dials exactly opposite the hour or fraction of hour and minute, respectively, then and there indicated by the hands of the fixed dial. By this simple device, two different times are kept at the option of the wearer. These supplemental dials may also be used for the recording of engagements, and for a variety of other purposes.

Ups and Downs.—Swell (recognizing old chum selling matches at the street corner): "Hello, old fellow, what are you up to?" Indigens (ruefully): "Well, Reginald, I think it's more like what I'm down to! What do you think?"—*Judy.*

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

I am composed of 22 letters, and am a fact:
My, 9, 6, 22 is a kitchen vessel;
My 7, 17, 8 is a familiar salutation;
My 19, 3, 15, 21, 2 is a term applied to counterfeit money;
My 11, 5, 20, 12 is to close;
My 11, 13, 18 is a transgression of divine law;
My 18, 10, 4 is to sever;
My 14, 17, 7 is to reflect or ponder upon carefully;
My 1 is first in truth and trust, but last in their fruit.

UNCLE CLAUDE.

Syllable Puzzles.

1. An interjection; lofty; a vowel; whole, one of the United States.
2. A vowel; a beam of light; an insect; an article; whole, a country of Asia.

AUNT SARAH.

Double Acrostic.

1. A Swiss lake.
2. A Chinese river.
3. Minute particles of mineral matter.
4. A memorandum.
5. An aquatic animal.

The initials spelt downward form the name of a mythological king; the finals, spelt upward, his kingdom.

OLD JOE.

Hidden American Names.

1. My pain exists no longer.
2. I will ride on the Pacific railway until Dennis meets me.
3. Ere long, fellows, we must part.

Syncopations.

1. Syncopate a small particle and leave intellect.
2. Syncopate a part of a fowl and leave a covering.
3. Syncopate a tool and leave to contend.
4. Syncopate to think and leave to draw.
5. Syncopate mirth and leave species.

JERRY.

Hints to Girls.

Girls who have taste and industry can make their humble rooms abodes of beauty at very little cost, if they are so disposed. We have read of a Connecticut girl who, by exercising her own innate good taste, has achieved a charming room at comparatively small expense, esthetic enough to please the most fastidious person. The floor, painted by her own hands, is a dark walnut shade, partly covered by a large rug made of cheap ingrain carpet in a small pattern of cream and olive, bordered by a broad band of plain olive felt. The inexpensive wall paper is pale olive, flecked with pink, finished by a narrow olive freize terminating at the corners with a cluster of four tiny pink fans. One window has an undesirable outlook, and she painted the window panes in bright water colors, following a pretty traced pattern, which gives a bit of stained glass, quite effective in the pretty room. The other window is draped gracefully with long full folds of sprigged muslin, depending from rings on a plain pine roll, to be replaced in the winter with a heavier curtain of olive canton flannel. The furniture is light wood, and a lamp with a rosy transparency stands on a five-o'clock tea table of unvarnished wood, and sends a soft light over the room, which also contains book-shelves of pine, a couple of second-hand easy-chairs, and a small dry-goods box for shoes, covered by her own hands with pink and olive cretonne. A large clothes-horse, on which she pasted the story of Cinderella in Walter Crane's pictures over olive paper, shuts off the bedstead and wash-stand from view. The toilet accessories, set off with fresh sprigged muslin over a pink lining, are a pink and white wash-bowl and a large pitcher of the quaint shape that comes now in the cheaper grades of china; a second-hand wardrobe, draped with a portiere of olive canton flannel, contains the unesthetic dustpan, brooms and other homely articles necessary to neatness and comfort; all trifles of that description bought at the five-cent counters. A pretty willow rocking-chair, ornamented with olive and pink ribbon, and a knitted hassock to match; the two latter are Christmas gifts, and stand on the rug. On the olive-draped mantel are grandma's Nankin teapot, two tall silver candlesticks and a large ginger-jar, not decorated and spoiled with gummed-on pictures, but left in its pristine blue-and-white beauty, filled with white daisies, gathered on afternoon walks.

Two or three photographs of good subjects, that are better than chromos and cost less, hang on the wall and complete the pretty refuge of this proud and industrious girl, who is self-respecting enough to earn her own living rather than be dependent upon her rich relations. She says she cannot go away on vacations, dress in fine clothes or indulge in any pleasures, and she thinks she is entitled to her pretty room, the one rest and luxury she possesses, furnished with her own earnings.

Many of our girl readers have no doubt made themselves just as pretty rooms. We shall be glad to receive letters describing them and the materials used in their decoration.

"UNCLE JOHN," said little Emily, "do you know that a baby that was fed on elephant's milk gained 20 pounds in one week?" "Nonsense; impossible!" exclaimed Uncle John, and then he asked, "Whose baby was it?" "It was the elephant's," said little Emily.

Household Hints

HOME-MADE SAUCES.—Home-made sauces help to keep the grocery bill small, and they may be as appetizing, and even more so than anything we can buy, if made with due thought. A piquant horse-radish sauce is a very good relish with roast beef or with fish. Take two teaspoonfuls of made mustard, two of white sugar, a little salt, and vinegar enough to make the sauce of the proper quality; pour this over a teacupful of grated horse-radish root. Excellent tomato sauce is made by peeling and cutting in small pieces a dozen large, ripe and juicy tomatoes; add six small, green peppers and two medium-sized onions; chop these very fine, stir in a coffee-cupful of vinegar, two or three teaspoonfuls of brown sugar, a heaping tablespoonful of salt (more if your taste demands it), a teaspoonful each of ginger, cloves, allspice and cinnamon; stew the tomatoes and all the ingredients but sugar and vinegar for an hour and a half slowly; add sugar and vinegar five minutes before taking from the fire. Another tomato sauce is made of a peck of ripe tomatoes, two onions, half a dozen red peppers, half a pint of salt, two tablespoonfuls of black pepper, two of mace, two of ginger and two of allspice and cloves mixed. Cut the tomatoes and onions in pieces and boil for two hours; when cold stir in a pint of vinegar. This is a sour sauce, and it keeps well. Then there are delicious catsups of tomatoes and of cucumbers; these are a little more trouble to make, as they must be strained and carefully bottled; but they are so satisfactory that the trouble does not count for much, after all.

CLEAR BROWN SOUP.—For four quarts of soup, cut in half-inch dice two pounds of lean beef, from the neck or leg; in the bottom of the soup pot put a tablespoonful of drippings, or butter, and set the pot over the fire until the fat is smoking hot; then put the beef in the pot, and stir it occasionally, until it is quite brown. When it is brown, pour in with it four quarts of boiling water; season it with two teaspoonfuls of salt and a small pinch of cayenne pepper, and let it boil very slowly for two hours; then cut up in half-inch pieces half a cupful each of onions and green celery stalks, and one cupful each of carrots and turnips. Put two tablespoonfuls of sugar and one of butter in a saucepan, and set it over the fire until they begin to brown; then add the vegetables, cut up as already directed, and stir them about with the butter and sugar until they are brown; put them into the soup, using a cupful of it to rinse all the browned butter and sugar off the saucepan in which the vegetables have been prepared; see that the seasoning is palatable, and continue cooking it until the vegetables are tender, removing any scum which may arise. If this soup is carefully prepared, it will be of a clear, light brown color and good flavor.

QUEEN'S PUDDING.—One pint of fine-sifted bread crumbs, one quart of milk, one cup of sugar, the yelks of four eggs, a piece of butter the size of an egg; bake until done (but do not allow it to become watery), and spread with a layer of jelly. Whip the whites of the eggs to a stiff froth with five tablespoonfuls of sugar and juice of one lemon; spread on the top and brown lightly. This is good with or without sauce. It is very good cold, served with rich cream.

CLEANSING DISHES.—Baking plates and pudding dishes that have been used for a long time need a thorough cleansing occasionally. To do this, put them in a kettle of water in which you have put a spoonful of wood ashes to one quart of water. Let them boil in this for an hour, and if any grease has been absorbed through cracks in the glazing it will be removed, and pie-crust baked on a plate thus cleaned will be sweet and not unwholesome.

SUCCOTASH.—Take a pint of shelled lima beans (green), wash, cover with hot water, let stand five minutes, pour off, place over fire in hot water, and boil 15 minutes; have ready corn from six good-sized ears, and add to beans; boil half an hour, add salt, pepper and two tablespoonfuls of butter. Be careful in cutting down corn not to cut too deep; better not cut deep enough and then scrape; after corn is added, watch carefully to keep from scorching.

APPLE FRITTERS.—These make a cheap and delicious dessert. Prepare a batter as for griddle cakes—that is, a thin batter made of flour and sweet milk and baking powder, or flour, sour milk and soda; then stir in apples, which you have chopped fine, the quantity depending on your taste. Fry them as you would griddle cakes, and serve with a syrup made of melted white sugar. If you wish, you may bake them in patty pans instead of frying them.

RASPBERRY SHRUB.—Raspberry shrub, when made with red raspberries, is a pleasant drink. Put the berries in a jar, and pour enough vinegar over them to cover them. Let them stand for two or three hours, then heat them thoroughly without letting them boil long; strain them, and to one pint of juice add one pint of sugar; scald this juice and skim it carefully; when cold, seal in bottles. It is ready for use in a few weeks

Health Column.

Uncooked Dried Fruit.

Being born with a frail constitution, and having had to study closely the laws of health in order to keep off sickness and hold possession of my body, I naturally have become very much interested in "Good Health," and always look for the arrival of your journal to see what new ideas are there presented, and you must excuse me if finding there ideas advanced or assertions made that have been proved to my certain knowledge by more than one, yes, many persons, to be decidedly erroneous. I feel compelled to pen a few lines pointing out the mistake, even if some M. D. should have read it to some sanitary association perhaps, without ever making any test of the question. I allude now to the assertion made by Dr. E. M. Hunt, in issue of August 26th, that dried fruits, as prunes, raisins, apples, etc., are unfit to eat unless well cooked; for a few of us who have tried the experiment of living entirely on such fruit during the past winter with only the addition of a little grain, has demonstrated the fact that such food is not only more easily digested in the uncooked than in the cooked state, but the system is better sustained, and more than one case of dyspepsia of long standing been cured by the use of uncooked in the place of cooked food. My own experience of ten months in that line has been most remarkable. Concerning it, you published one or two letters some months ago, since which time I have continued to improve in health, strength and happiness, and though loss of weight for the first eight months (until from 132 I was reduced to 124 lbs.) was experienced, the last two months there has been a continued gain, so that yesterday the scales showed 134 lbs., or a gain of two pounds on my previous weight, which may be accounted for in part by not working quite so hard, for during the long days of June and July daylight seldom found me in bed; and though every hour until dark was put in to the best advantage and more than double the amount of work performed than I had been able to do for years before. The system responded so well to the demands made upon it that the word "tired," came near losing a place in my vocabulary, and with peans of praise going up from my heart for the discovery, I have felt like a new man, and old friends say, look years younger. Other families are or have adopted the grainia diet with good results. So let M. D. look out for his trade, though no doubt there will be plenty who will prefer to live for the gratification of old appetites, with its ever recurring spells of sickness, and depend upon M. D. and patent pills rather than learn the way which, though it may require some self-denial to begin with, will end in giving them a new life, continued health, and more gastric pleasure than they ever had before. I would that all might be, what doubtless God designed, all the time healthy, happy and joyous as the birds around us.—*Isaac B. Rumford, Bakersfield, Cal., in Rural Press.*

THE human hand is so beautifully formed, it has so fine a sensibility, that sensibility governs its motions so correctly, every effort of the will is answered so instantly, as if the hand itself were the seat of that will; its actions are so free, so powerful, and yet so delicate, that it seems to possess a quality instinct in itself, and we use it as we draw our breath, unconsciously, and have lost all recollection of the feeble and ill-directed efforts of its first exercise, by which it has been perfected. In the hand are 29 bones, from the mechanism of which result strength, mobility and elasticity. On the length, strength, free lateral motion and perfect mobility of the thumb, depends the power of the hand, its strength being equal to that of all the fingers. Without the fleshy ball of the thumb, the power of the fingers would avail nothing; and accordingly, the large ball formed by the muscles of the thumb is the distinguished character of the human hand.

EFFECT OF SUGAR ON THE GASTRIC JUICE.—Sugar has been denounced by modern chemists as a substance, the effects of which on dyspeptics are deplorable. A writer in the *Medicin Practicien*, however, does not partake of these fears. He cites the case of a dyspeptic doctor, who, for 20 years, had a terror of sugar, but who now consumes three and three-fourths ounces of sugar daily, without inconvenience. Entering the field of experiment in this direction, he found that a dog ate 80 grains of sugar with 200 of other food, and six hours afterwards its stomach showed but little food; the mucous lining of the stomach was red and highly congested, and the congestion of the liver was notable. An animal opened after eating 200 grains of food and no sugar, showed 90 to 100 grains of food undigested. Sugar, then, favors the secretion of the gastric juice.

INDICATIONS OF HAIR.—It is said that the story of Sampson has misled people into believing that abundant hair is a sign of physical or mental strength. Madhouses and idiot asylums prove the contrary. Esau, who was so easily duped out of his birthright, was hairy; the mighty Cæsar was bald. "Long-haired men are generally weak and fanatical, and men with scant hair are philosophers, soldiers and statesmen of the world."

Worth Knowing.

THE VALUE OF A CLEAN MOUTH.—Dr. Ambler, dental surgeon, says that one of the simplest means of preserving the teeth consists in cleanliness of the mouth. The first thing after rising in the morning, or from a meal, should be to cleanse the mouth thoroughly with tepid water. It is the custom in some parts of England and France, to rinse the mouth with warm aromatic water after eating. It is well to remember that this precaution not only tends to keep the teeth clean, but to clear the voice of those about to sing or converse. In cleansing the teeth three times a day, regularly, the formation of tartar is not only prevented, but such particles of food and such other extraneous matters as lodge about and adhere to them, causing irritation and inflammation, are by this means removed. The fermentation of vegetable substances in the mouth produces, indirectly, sulphuric acid, animal and nitrogenous substances producing nitric acid. These vitiate the fluids of the mouth and help the teeth on too certain decay.

TO MEASURE HIGHTS.—The hypsometer is the name of a useful little instrument for measuring hights of walls, timber, trees and spouting, and therefore valuable to surveyors, builders and artisans. The plan is to take a triangle, composed of three slats, similar to the carpenter's angle, and on each end of the longer side place a small sight vane; suspend from the lower side a metal ball to keep this side horizontal, and construct a handle, with a circle at its upper end, in which the triangle can rest and move, and by which it will slide into the proper position by the weight of the ball. Take the instrument by the handle and move backward until the two sights are brought into line with the top of the building or other object. The hight will be found by adding the distance of the operator from the building to the hight of the eye above the ground.

DEADENING SOUNDS.—The following plan for deadening floors is reported to have been made the subject of a recent patent. It is exceedingly simple, and not materially unlike plans that have been before proposed in this journal. A three by six inch plank is directed to be inserted between each joist, two inches from the bottom of the joists, and projecting four inches beneath them. The ceiling boards are nailed to these intermediate planks, and the space between is filled with sawdust to within one inch of the joists. By this mode of construction, the sound is said to be so effectually deadened, that the most vigorous hammering from above cannot be heard in the story beneath.

THE accumulation of coal dust in the air of mines is said to be effectively prevented by sprinkling considerable quantities of common salt through the workings. The dust, which is usually raised in clouds and floats in the air, is thus kept down the same as damp sand. Salt is used systematically, in quantities of about one ton for every 500 yards of six feet of roadway, once every week for the first month, and once a month afterward, is said to render the working in fiery seems a pleasure and profit, instead of being an abomination to the person working in the mine.

HOW TO UTILIZE SOAP SCRAPS.—A correspondent has been trying to utilize the small pieces of the various kinds of soap which have been gathered in the household, after having become too small for ordinary use. He says: "I have grated and heated to a thick consistency in a pail immersed in boiling water; but it will not harden when cold." Heat the mass in a copper kettle, with constant stirring until it becomes pasty, then pour out into a wooden box, and let the mass cool; then cut into cakes of convenient size.

RUBBER packing may be made steam and air-tight by being brushed over with a solution of powdered rosin in 10 times its weight of strong water of ammonia. At first this solution is a viscid, sticky mass, which, however, after three or four weeks becomes thinner and fit for use. The liquid sticks easily to rubber, as well as to wood and metal. It hardens as soon as the ammonia evaporates, and becomes perfectly impervious to liquids.

ROTARY FILES.—A Connecticut mechanic has made a trial of rotary files for finishing planed surfaces. He is of the opinion that quicker and truer work can be done with these than with hand files, and that the surface is in better shape for truing with the shaper. His experiments have been confined to the planer, but he believes that his device may be properly and economically adapted to the lathe and milling machine.

LEATHER WASTE.—The clippings of the sole leather in New England shoe factories were formerly regarded as worthless, and the smell of their burning was a peculiarity of such towns as Lynn and Salem. These scraps are now stamped into buttons for clothes, and fancy tack-heads for upholstery, and the long-familiar odor is missed.

BRONZE MIXTURE.—H. H. Vivian adds antimony to the mixture for bronze. One mixture is 93.81 parts copper, 5.95 tin, and 0.24 antimony. For a bronze for shaft bearings the proportions are 83 parts copper, 15.5 tin, and 1.5 antimony.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "Good of the Order."

Golden Gate, 8.

This Lodge having on its roll about a convenient number of 160 members, has not been putting forth any extraordinary efforts to secure candidates or create a boom, but at the meeting on Thursday, August 31st, determined to celebrate its anniversary, the 20th of September, with a literary and musical entertainment, together with a social dance and banquet, at Ixora hall, 737 Mission street.

Yerba Buena, 14.

Yerba Buena Lodge, No. 14, at its meeting on Sept. 8th, Friday evening, conferred the M. W. degree on one candidate, and received one application for membership. At this meeting, also, Brother Joseph E. Selleck, Jr., was installed as Receiver of the Lodge for the balance of the term. Yerba Buena is one of the most successful Lodges in this city; pays sick and funeral benefits, and has a fund on hand for that purpose of over $4,000.

Unity, 27.

Unity Lodge is flourishing, and held its quarterly social meeting on Tuesday evening, Sept. 12th, which consisted of songs by Bro. Perkins, Organist of the Lodge, and member of Spartan, 36, and Bro. Martin, Financier, and remarks by Bros. Block, Pommer, and Bro. Mizell, the wandering Arab of Valley. At the meeting of Sept. 5th, 11 candidates were initiated in the J. W. degree, making about 26 received to membership during the present term. The Lodge now numbers 275 members. The degree nights are the 1st and 4th Tuesday nights.

Valley, 30.

The visit of the Grand officers to Valley Lodge, No. 30, last Wednesday evening, Sept. 6th, was the occasion of a great gathering of the membership that filled the spacious hall of this subordinate. Many of the founders of this immense Lodge were present, among them Bros. McLeod, Lyon, Buchanan, Loud, Camp, Lyle, Hoeber, and others. At 8:30 the following Grand officers entered and were welcomed by Master Workman Wells: William H. Barnes, G. M. W.; David McClure, G. O.; H. G. Pratt, G. Recorder; W. J. McKay, Deputy of District No. 2; J. D. Thompson, Deputy of No. 4; George Turner, of Harmony, No. 9; E. F. Loud, D. G. M. The J. W. degree was well conferred on seven candidates by the officers of Valley, after which, under the head of "Good of the Order," remarks were made by the visitors, and by Past Masters W. B. Lyon, Henry Hoeber, George A. Case, E. M. Reading and J. G. Mysell. It was a meeting replete with interest, and looked like one of the old-time gatherings of No. 30. Nearly $400 was received during the evening, by Financier Camp, for dues, etc., and a draft drawn for the September assessment showed 886 Master Workmen in good standing. Clay W. Taylor, P. G. M., of Shasta, was in the city last week.

Magnolia, 41.

Magnolia, without a doubt, is now second to no Lodge in this State. This is a sweeping assertion, but the careful observer will find it to be true. With over $5,000 in her treasury, 222 members, an excellent staff of officers, the entertainment feature lately introduced into the Lodge, and a consequent large attendance, she may with pleasure look back upon her past and say, "It is well." At the meeting on Monday evening a very enjoyable time was had. Brothers Osborn, Hughes and Hodgdon entertained the large audience of members present—the chairs being nearly all filled—with several songs each, while Bro. H. C. Eastman favored them with a recitation. Five candidates were initiated in the M. W. degree, and an entertainment committee was appointed. Magnolia has our hearty sympathy and co-operation.

Spartan, 36.

Spartan Lodge has had a gradual and perceptible increase of membership during the past term, and deserves her prosperity in every way. For of all the Lodges in this city none better repay the visitor than this one. It is one of the social, hospitable, brotherly Lodges, from which one will never emerge half-convinced that he must have been in a refrigerator. Nor is it one of those which the stranger might mistake for a band of howling Apaches. It is just Spartan Lodge, and to appreciate Spartan Lodge, one should visit it, as visitors are always welcome. The officers take great pride in doing their work efficiently. The Lodge has a literary and musical entertainment under "Good of the Order," having an entertainment committee standing for one month, and also a visiting committee. When there is a double assessment, one is paid from the general fund. Twelve new members have been received during the last quarter.

Myrtle, 42.

Myrtle Lodge, No. 42, will hold one of its quarterly socials at Pythian Castle, 913 Market street, on Saturday evening, September 30. This Lodge has 168 members in good standing, and during the last quarter has had 12 applications.

Washington, 60.

We regret to have to announce the sudden death of Bro. M. Morgenstern, Master Workman of Washington Lodge, No. 60, which occurred on Thursday morning, August 31st. The brother was ailing but a short time previously, and nothing serious was expected, yet on the morning stated he threw up his hands and fell back dead. Apoplexy is said to have been the cause. On the 7th, resolutions of respect were passed, which we publish in another portion of this issue. This Lodge has now 198 members in good standing.

At the meeting of Thursday evening, Sept. 14, 1882, it was expected that Deputy Fish would be in attendance to install the newly elected Foreman and Overseer, together with the succeeding M. W., which was occassioned by the death of its late Master Workman, Morgenstern. Foreman H. J. Maack succeeded to the chair of Master Workman, Bro. J. Rosenberg, Overseer, being elected to the Foreman's chair, and Bro. J. S. Gregory to the Overseer's chair. Deputy Fish not appearing, the installation will probably take place in the future.

Keystone, 64.

Although Keystone has been organized some four years, it has only had one death among its members until last week, when the second one occurred—Stephen Smith, a resident of Oakland. His funeral was attended by the brethren of the Lodge.

Burns, 68.

Burns Lodge now has 187 members in good standing, and has had eight initiations during the last quarter—four applications now on the table. This Lodge now meets on Thursday evenings. Bro. C. C. Butt is Master Workman.

Sts. John, 73.

District Deputy Fish was called upon to install two new officers for Sts. John Lodge, No. 73, on Thursday evening, August 31st. Master Workman Samuel T. Fletcher having resigned his position, Foreman H. S. Gray assumed his office, and Bro. Thomas Patton was elected Foreman, and Bro. Henry Blair Overseer. The ceremony of installation was very neatly performed by the Deputy.

Olympic, 127.

At the meeting of Tuesday evening, August 29th, Olympic Lodge concluded to make arrangements to remove from their present quarters, in Shiel's building, 32 O'Farrell street, and go into Washington hall, 35 Eddy street. The new hall is a large and commodious one, well ventilated and tastily furnished. The Lodge visited the hall in a body after the meeting was over, and expressed themselves unanimously as being well pleased with the prospective new quarters. On Tuesday evening, Sept. 5th, the Lodge met, for the first time, in its new hall, a large attendance being the result, and a long session. The Lodge rescinded its action whereby degrees are conferred only on the 1st, 3d and 5th Tuesdays, also, its action in regard to the Degree of Honor. The matter now stands in *statu quo*. The Picnic Committee, having done nothing to speak of, was honorably discharged, and an Entertainment Committee appointed to arrange a programme for a Degree of Honor social.

A brief meeting was held on Tuesday evening, Sept. 12, 1882, at which the Entertainment Committee appointed at the last meeting, consisting of Bros. Holland, Dixon and Daering, reported its intention of having an ice-cream entertainment on Tuesday evening, Sept. 19th. Olympic Lodge will therefore receive her friends next Tuesday evening, at her new hall, 35 Eddy street. A splendid time is looked forward to.

Bay View, 159.

At the meeting of this Lodge on Friday evening, September 1st, a new Recorder was elected to fill the vacancy occasioned by the resignation of Bro. J. Sloan. The new Recorder is Bro. Edw. E. Mealey. This Lodge now has about 65 members.

Friendship, 179.

Friendship, 179, has now 100 members in good standing. Bro. Bernard Sherry is the newly elected M. W., and Bro. R. B. Kittredge, Recorder.

Magnolia, 6, D. of H.

A very pleasant social was given at Champion hall last Tuesday evening, Aug. 29th, by the members of Magnolia Lodge, D. of H., A. O. U. W. The musical and literary programme was admirably planned and rendered, and was as follows, dancing intervening between songs and recitations: Instrumental music (violin and piano), by members of Parkman's band; humorous reading, Wm. Vinter; recitation, Miss Juliette Levy; song (and encore), Mrs. Thomas Williams; song (and encore), Miss Belle Kendall; song (and encore), A. P. Black. The serving of refreshments and social converse closed the evening.

Aurora, D. of H.

Aurora Lodge, Degree of Honor, met Tuesday evening. Olympic Lodge, having tendered them the use of their new hall on the 1st and 3d Tuesdays, the Lodge decided to change its time of meeting to the 1st and 3d Tuesdays in each month. They will hereafter meet on these nights, in the hall of Olympic Lodge, 35 Eddy street.

Oakland Lodge Locals.

Entertainment of Occidental, No. 6.

Occidental Lodge, No. 6, which meets in Kohler's hall, West Oakland, on Friday evenings, gave a musical and literary entertainment, banquet and dance Wednesday evening, August 30th, which we had the pleasure of attending, and which, we are pleased to say, was one of the most interesting and enjoyable occasions that we have noted in the local line for some time. Opening remarks were made by Bro. J. F. Hammer, M. W., which were feeling and appropriate; Bro. Eitel was then introduced, and in a brief and lucid manner alluded to the history and objects of the A. O. U. W., stating that he had witnessed the growth of the Order from 143 to 15,000 members. Mr. and Mrs. Albee then sang a duet in excellent manner, and receiving an encore, gave another selection; then followed a comic recitation, "The Mad Frenchman," Master Mourhan; instrumental solo, Miss T. Hall; recitation, Miss Mary Munce; piano duet, Mr. and Miss Hammer; Bro. Clemn then rendered some excellent music on that queen of musical instruments, the zither, being heartily encored; vocal solo, with guitar and piano accompaniment, Mrs. Fields; flute solo, Bro. Hoppe, who was recalled; this was followed by an instrumental solo by Miss Reed, after which a few minutes of social converse were had, and the programme was resumed by Bro. Munce in an address to the children, concluding with a recitation, and being recalled, he recited another selection; piano solo, Miss Rosa Fields; Miss Sarah Whelan then sang "Kathleen Mavourneen," receiving a hearty recall; comic recitation, Robert Munce, recalled; piano solo, Miss Sarah Blakie; flute and zither duet, Messrs. Hoppe and Clemn, received a rousing encore; piano solo, Miss Webb; song, Miss Jennie Stevens, very well rendered; original poem recited by Bro. Hammer; song, duet, Mr. and Mrs. Albee; closing remarks, Bro. Hammer. Coffee, cake and sandwiches were then passed around, and fraternity mingling with social converse and excellent viands, spoke well for itself and the enterprise of the members of Occidental, No. 6. After the lunch had been disposed of to the satisfaction of all, a dance was organized, and the lovers of this graceful art spent several hours in delightful enjoyment. This Lodge is in a very prosperous condition, financially and otherwise, having 172 members and over $1,500 in their treasury, paying $10 per week sick benefits, besides.

Occidental Lodge, No. 6, of Oakland, had a very pleasant meeting Friday night, Sept. 1st, and enjoyed an interesting and eloquent address from Past Master E. M. Reading, of Fidelity Lodge, of this city. Bro. Reading was followed by District Deputy J. J. Shultz, of District No. 1, whose interest and energy in the Order has been productive of much good and prosperity, not only in his own district, but elsewhere. Occidental Lodge is in a flourishing condition.

Not Probable.

It is now charged that the parties in Iowa's Grand Lodge who were instrumental in bringing about their withdrawal from the Order, were paid emissaries of the regular life companies, and have brought all this trouble upon us that they might advance their own personal interest. We trust the report is false, but if true, State's prison is too good a place for such traitors.—*Fraternal Censor.*

We venture the assertion that there is very little truth in the report above alluded to, for the sole reason that no honorable life insurance company would engage in such dirty business, and those that are not would likely be too shrewd to fool their money away in such an unpromising enterprise. They put the spare funds at their command to a more profitable use. But we cannot, for the life of us, see why it is less honorable to do as did the Iowa conspirators, for the sake of a good fat fee, than for half a dollar, or because of personal ambition or personal spite. In either case, a solemn obligation taken before God and man had to be violated, and conscience (if any there were) stultified. Where the temptation to do wrong is of such magnitude and character that the strongest man can scarcely stand against it, there is some excuse for him who yields, but to become a perjurer and traitor for mere nothing, is so utterly mean, inexcusable and wicked, that the guilty should never more find a place among decent people. Such a one is about as fair a specimen of humanity totally depraved, as we may ever hope or fear to see.

But we think the A. O. U. W. has erred—erred on the side of mercy. It would have been better for the Order, had the laws been more strictly and vigorously enforced. We have but one penalty for wrong-doers at our command—that of forcing them out of our company. The laws of the land fully recognize this right, and we cannot afford either to surrender it or suffer it to fall into contempt. Hereafter, let us trust that no offender will be allowed to remain in the Order to contaminate the rest by his pestilential presence.

THE Select Knights scored one in their favor by suspending all members belonging to the rebellious jurisdiction of Iowa, in accordance with a law of the organization which requires good standing in the A. O. U. W. as a prerequisite to good standing in the Select Knights. As a result, the loyal Knights have gone in a rush to the standard of the new Grand Lodge. This act has done much to dispel the prejudice against the organization that has very generally existed.

WE give in this issue the full text of an address promulgated by Cherokee Lodge, 197, of Iowa, to members of the Order in Iowa and Workmen in general. This Lodge clung to the old Grand Lodge, the seceders of Iowa, as long as they could conscientiously do so, and this was no longer than it took them to understand the true situation. The address is a succinct statement of their reasons for withdrawing from the old Grand Lodge and going over to the new.

At Last in Line.

We have been looking for a long time to see the quota of New York credited to her on Relief Call No. 2, and at last it seems we shall not have much longer to wait.

The spirit of insubordination that culminated in Iowa, and resulted in the suspension of her Grand Lodge, and the organization of another from the shattered fragments of the recalcitrant jurisdiction, permeated to a considerable extent the great jurisdiction of New York, but time has convinced the brethren thereaway of the error of their ways, as appears from the call below, which, with much satisfaction, we give entire,

OFFICE OF GRAND MASTER WORKMAN.
ALBANY, N. Y.,
September 1, 1882.

To the Subordinate Lodges, and Members of the Grand Jurisdiction of New York, A. O. U. W.:—In issuing Relief Call No. 2, I deem it advisable to ask the attention of the Order in this jurisdiction to the following brief statement of facts:

Upon assuming the duties of Grand Master Workman, I obligated myself, to the best of my ability, to see that the laws enacted for the government of the Order were properly executed.

Section 3 of the act incorporating the Grand Lodge of this State provides that it shall be lawful for us to create and disburse a fund to pay losses for the relief of members and their families, of Lodges established by other Grand Lodges, working under and subordinate to a Supreme Lodge, under such regulations as may be adopted by this Grand Lodge.

At the Lockport session, in February, 1881, the Grand Lodge adopted the law as published in the amendment to the Constitution of the Grand Lodge, on page 2, which law provides for the creation of a Relief Board with power to examine into all cases of emergency arising from an excess of assessments in any fiscal year, as therein fixed for the several jurisdictions, and under the provisions of the law to call upon the various Grand Master Workmen for such portion of the relief fund as may be necessary.

The Supreme Lodge Relief Board, some time since, certified to me that the separate beneficiary jurisdiction of Indiana had exceeded her maximum assessment for the fiscal year ending January 1, 1882, and had 13 death claims in excess of those paid by her 20 assessments, and therefore needed $26,000 with which to pay the same. They also certified that the Supreme Lodge jurisdiction had exceeded her maximum assessment of 24 for the same time, and had 10 death losses unpaid, requiring the sum of $20,000 with which to pay the same.

Believing that the call, as made at that time, was not "right and proper under the circumstances"—an opinion held also by my official colleagues, as I found upon consultation with them—we proceeded to obtain fuller information, sufficient to warrant the levying of an assessment in accordance with the usual rules and regulations governing the assessments in this jurisdiction. A statement of the deaths, amounts collected and disbursed, and other necessary information connected therewith, in the jurisdiction named, was then furnished us, and subsequently, at the Supreme Lodge session, other information was given, and corrections made by the Supreme Lodge Relief Board, so satisfactory to our Supreme Lodge Representatives and officers from the State in attendance thereat, that I determined to issue this call. I consider that in doing so I am executing the law as made by the Grand Lodge of this State, which it is clearly my duty to carry out, when satisfied that the facts warrant the issuing of an assessment.

An assessment, therefore, of 50 cents upon each member of the Order in this Grand jurisdiction, in good standing March 1, 1882, is hereby made. Such amount may be paid out of your general fund, and such course is probably advisable, if it be not now on hand in your relief fund collected under Relief Call No 1.

In conclusion, I may say that my official colleagues have been freely consulted upon this subject, and the issuing of this call meets their approval almost unanimously. Of one thing you may rest assured, that not one dollar of your money will be used for any purpose that we do not consider strictly just and proper, and in accordance with the law.

Fraternally yours, in C. H. and P.
JOHN J. ACKER, G. M. W.
J. G. ARMSTONG, G. R.

N. B.—Notice of Relief Call No. 2, must only be served on members who were Master Workmen March 1, 1882.

THE way they do it in New York to secure a better attendance at Lodge meetings, is by a written pledge, in which each signer pledges himself to attend a certain number of times each year.—*Pacific Overseer.*

Another good way, and perhaps the best and most just, is for the officers of slimly-attended Lodges to vote themselves good fair salaries to properly compensate them for attending to the business in which all have an equal interest and should bear an equal share of the burdens. If men are unwilling to attend and assist in the Lodge work, they should be willing to pay somebody else for doing it. Generally, however, they are not, but if they know they must do the one thing or the other, they will, in most cases, do the former.

Cherokee Lodge, No. 197, Iowa.

To Officers and Members of Other Lodges of Like Order in Iowa:—DEAR BRETHREN: Our Lodge has waited long and patiently, hoping for a harmonious settlement of the questions at issue between the Grand Lodge of Iowa and the Supreme Lodge. We could not believe that a permanent separation would take place. We felt sure that time and reflection would show a path by which the disagreeing brethren could honorably come once more into harmonious action. We have clung to our old Grand Lodge faithfully, in this hope, until now. We sent our delegate to the recent session at Cedar Rapids, expecting that some attempt at reconciliation would be made. We have hoped in vain; and now we feel as a Lodge that our course is plain. We have all taken the obligation as Master Workmen, in which we pledged fidelity to the subordinate Lodge, the Grand Lodge, and the Supreme Lodge. We intend to keep our pledges. To this end we have, this day (July 31st), voted, without a dissenting voice, to transfer our allegiance from the seceded Grand Lodge to the only authorized and lawfully-established Grand Lodge, loyal to the Supreme Lodge, A. O. U. W. To us the reasons for such a step seem plain:

First. No other course seems right, and in accordance with our obligations.

Second. We do not believe in either rebellion or secession, so long as we have fair representation. Any brethren who desire can withdraw from the Order, but while they remain, we hold them bound to obey its laws. If the Supreme Lodge has adopted any unwise measures, the remedy lies in discussion, not in rebellion.

Third. We want the fellowship and sympathy of the Order in other States. We may, some of us, some day, remove from Iowa. Wherever we go, we want to be faithful, honorable Workmen, entitled to associate with all the brethren of our honored fraternity.

Fourth. The patience and forbearance of the Supreme Lodge and the new Grand Lodge, and their kindly invitations to fellowship, seem to us to show a right spirit, strongly in contrast with the self-assertion and bitterness of those who have led away the seceding faction.

Fifth. We believe that safety is with the right, and feel sure that time will justify our step. We believe the Supreme Lodge will be in existence long after we have passed away. The fate of this Independent Order is an unsolved problem.

Sixth. We therefore publish these views, which we hold unanimously, hoping that others may see the fairness of them and may be moved by them to take like action, until the A. O. U. W. of Iowa shall stand stronger than ever, rallying around their old standard.

"If anyone pulls down that flag, shoot him on the spot."

By order of the Lodge,

J. B. CHASE,
F. E. WHITMORE, } Committee.
R. BUCHANAN,

In New York.

In a recent number of the *Fraternal Censor*, Bro. Leroy Andrus unmasks one of the influences at work in New York against the payment of Relief Call No. 2. The Orders in that State have been placed well into the hands of the harpies of Albany. It is notorious in New York State that Albany owes its continued existence to the robbery of the canals and life insurance companies. The investigations of the Legislative Committee last winter showed how millions of the money of the policy holders of life insurance companies had been stolen by the system of the office of the Insurance Commissioner and receivership. I, myself, know of one company officially pronounced by the commission and judge of the court as but $50,000 in arrears, and the management eulogized for its economy and honesty. This paragon of New York life insurance companies was put in the hands of one of Albany's political nabobs in 1877, and has within eight months paid a 15% dividend on a valuation over one-third less than the actual cash premiums paid in by policy holders.

To do this has required the absorption of over a million of dollars. It is the influence of these immense steals that is attempting to divide and destroy the beneficial societies in New York State. They have no reserves to steal, and those controlling affairs at the legislative center want none of them.

Let the brethren of New York, with such men as Leroy Andrus, E. M. Clark and a host of others arise! Let them *compel* the Grand officers to do their duty.

The example of Iowa is before them; the law will be enforced in New York as well as elsewhere, or I much mistake the significance of the session of the Supreme Lodge at Cincinnati. Leaders of loyalty and obedience, such as they, should not wait for coercion; they should lead to the right, and leave even the highest officer to fall, as fall he must, wrapped in the noisome embrace of the monster wrong—he whose right arm is disobedience, and left arm violated obligations, and whose tongue bears false testimony to the brethren.—*Cor. Protector.*

TO CANDY FRUIT.—One pound of white sugar, and as little water as possible; let it boil down, and skim it until it is perfectly clear and thick; have whatever fruit you desire to candy, and dip each piece in the hot syrup, then spread them on a dish and they will soon become hard.

The Impostor.

All societies find difficulty in guarding their portals and preventing doubtful characters from entering their inner courts.

It is almost impossible to conduct business, on this side of the grave, without making mistakes. Hence we find, that, in spite of the utmost vigilance on the part of the authorities, men who are not paragons of honesty, gain admission into select circles and mingle with those who are morally and mentally their superiors. Cunning may prove for a time more than a match for merit. A similar evil has existed from time immemorial.

To-day we have this evil in our midst—an evil that is felt especially in benevolent societies. It is perplexing to analyze the motives that lead some men to join a purely benevolent society.

Love of honor, greed of gain, or some selfish end to serve, may be at the root of the matter—motives that are radically faulty, and at variance with the first principles of our Order. There are some, however, who, by their conduct soon after admission, prove their unfitness for fellowship with any body of upright men. These leeches (or loafers, as they are aptly called), trade upon the kindness of their brethren.

They shun every means of earning a living, and move from place to place with the same doleful story, existing by their wits, and preying upon unsuspecting people.

As a rule, their race is soon run, for notices of this kind are sent to the various Lodges: "Joseph Pluckem has been a costly member of our Lodge; he is always sick or shamming inability to work. Through good feeling to his wife and family, aid has been given from Lodge funds and private resources, far beyond his just claims. We hear that he is again abroad, 'seeking whom he may devour,' and we hereby caution the Lodges against his wily tongue and deceptive manner."

The Indian on the warpath with his paint and feathers is not more wily in his way in this type of a moral and social parasite in achieving his purpose.

Then note the result. Is he thankful for mercies received? Generally he regards himself as a badly used man.

Born in adversity, he seems to be carried through life by the ebb-tide of misfortune. So his painful story would make us believe. But look into him, and we find a hollow hypocritical characte, as thankless as he is contemptible.

Wherever Odd Fellowship plants its standard, it has this character to contend against, and it behooves all trusty members to brand and eject him without delay. Innocent and even astute men will say, "that every caution is taken to prevent improper candidates from being initiated into the secrets and fellowship of the Order." Very true. But lately a smart young fellow entered the detective force in a certain country—a force noted for its almost superhuman insight and foresight. He was lauded to the skies, but he suddenly decamped, to the surprise of his superior officers. He had robbed those who were set to catch robbers. Last year an official, high in the church, levanted with a large sum of money, and caused a great scandal in ecclesiastical circles. No one thought that he was a wolf in sheep's clothing. The members of a Lodge, not too rich, have occasion to lament the departure of one of their number who escaped with the funds entrusted to his care. Instances without number can be adduced to prove the uncertainty of everything but death. So we close by calling attention to the main character of this sketch, the impostor, and call upon all faithful Odd Fellows to hunt him from their midst, and then shun him as they would a leper.—*New Age.*

THE RELIEF LAW.—At the last session of the Supreme Lodge, the S. M. W. said, concerning the relief law: "This law, during the year, has been subjected to a crucial test, and, in consequence, many imperfections have manifested themselves. The intention of this amendment to our Constitution was a noble one, and it is quite evident, to my mind, that it should be continued in force. In the meantime, however, I believe that changes can, with good reason, be made, notably in Section 3, relative to the maximum rate of assessments, and in Section 10, concerning the penalties. This matter is earnestly recommended to your careful consideration."

A BLOCK of coal four feet wide, four feet high and 10 ft. long, weighing 12,900 lbs., was taken on a flat car to the Denver exposition to be exhibited. It was taken from a coal mine in Utah owned by the Denver & Rio Grande railroad company, who are now building a road from Salt Lake City east, to intersect their line to the Rio Grande. This company is at war with the Union Pacific, and rather than patronize or accept a favor from that road, they send the coal, which was mined a few hundred miles of Denver, north on the Utah Central to Ogden; thence west, on the Central Pacific, to Lathrop, California; thence south to Yuma and east to New Mexico, on the Southern Pacific; and thence north, on their own road, to Denver.

PROF. MARIA MITCHELL, the astronomer of Vassar, has reached her 63d year. She has almost perfect health, and is as vigorous as ever.

Science and Agriculture.

There has been great progress during the last few years in the application of the scientific method of investigation to agricultural practices and materials. Probably as much has been done in five years to systematize agricultural study in this country as has been accomplished in all its previous history. Almost all branches of husbandry are bringing their unsolved problems to the feet of the scientific investigator, and asking him to apply his experimentation and investigation to discover hidden causes, by the removal of which unfavorable effects may be obviated or favorable results secured. The State governments at the East are doing something to give the farmer the advantages of scientific inquiry, and the establishment of several experiment stations is on record. It is also a pleasant fact that rich men, with a taste for agricultural pursuits, are now spending their money for systematic investigations by skilled observers, rather than indulging in hap-hazard expenditure in theoretical farming, for which rich merchants and professional men were so noted a few years ago. For example, there is Lawson Valentine, of New York city. Instead of going into wild and expensive indulgence in impossible cultures on his fine farm in Orange county, New York, he has equipped a private experimental station, and has employed a corps of trained observers to watch and record the results of well-directed experimentation. There is no doubt at all that the studies at Houghton farm will be of service to the agriculture of the whole country, because the publication of the results there attained will bring them to the knowledge of farmers all over the country, and the truth ascertained will be applied everywhere as the need for it arises. Even the old race of "fancy farmers" did some good, even if they did make most ridiculous investments and attempt impossible things, but the benefits they bestowed upon the industry will be found small when compared with the results of the better system of agricultural patronage which many of our rich men are now extending. The working farmer often has not time nor spending money to carry on many investigations which he knows would teach him useful things, but he is quite glad to possess the results when they are reached by a careful systematic inquiry which yields trustworthy facts.

Another direction in which gratifying progress is being made, is by the association of leading agricultural investigators, for a comparison of results and counsel on doubtful points. It was a mark of agricultural progress when the American Association for the Advancement of Science gave birth to a new society, the special field of which was agricultural science. At the meeting held last month at Montreal, there was an excellent attendance and valuable discussion of practical questions. To show what important considerations are being presented, we quote the objects of the association, as set forth at the last meeting by the President:

First—To encourage the formation, co-operation and support of agricultural experimental stations.

Second—To try to ascertain what experiments in agriculture are most needed, and indicate methods of conducting them.

Third—To discover and define the best methods for uniform standards in the analysis of soils, fertilizers and vegetable products.

Fourth—To discover and define the best methods of stamping out parasites and contagious diseases of all domestic animals.

Fifth—To discover and systematize the principles of stock breeding.

Sixth—To endeavor to find the best combination of foods for growing or fattening animals in various parts.

Seventh—To make discoveries and extend the application of science in dairying.

Eighth—To experiment on fish culture.

Ninth—To investigate insects which are injurious or beneficial in agriculture, and discover improved remedies for those injurious.

Tenth—To learn and point out the best methods for testing each kind of agricultural seeds, and to ascertain their vitality and purity.

Eleventh—To make investigations in vegetable physiology, especially with reference to learning how to keep plants in a healthy and productive condition.

Twelfth—To study the fungi which infest cultivated plants and point out remedies.

Thirteenth—To advance the subject of improving the breeding of plants for seed.

Fourteenth—To encourage agricultural surveys in the States and the nation, and to discover improved modes of conducting them.

Fifteenth—To encourage agricultural education.

Sixteenth—To encourage the collecting and improved methods of arranging and presenting statistics in agriculture.

Such a programme is certainly worthy the approval of the practical farmer. Many are now anxious to know just the things which the above category includes. We trust the present tendency in agricultural investigation may go steadily forward until many of the dark places in the industry are fully illumined.

GONE TO REST.—Valentine L. Orndorff, better known as "Tip," died in San Francisco on Friday last of consumption. Deceased was an old and favorably known man in nearly every mining camp on the Pacific coast, he and his brother Jim being among the Nevada pioneers. About a year ago, he came to Tombstone, accompanying Con. Cutler, thence into Sonora. Thinking his health sufficiently improved, he returned to San Francisco, remaining there until his death. Many an old-timer, whose toilsome journey along life's rugged pathway has been smoothed by the kindly cheer, free heart and open hand of "Tip" Orndorff, will drop a tear to his memory. May he rest in peace.—*Tombstone Republican.*

Domestic.

CREAM TAPIOCA.—Soak three tablespoonfuls of tapioca in water over night; put the tapioca in a quart of boiling milk and boil half an hour; beat the yelks of four eggs with a cup of sugar, add three tablespoonfuls of prepared cocoanut or freshly-grated cocoanut; stir in and boil 10 minutes longer; pour into a pudding dish; beat the whites of the four eggs to a stiff froth; stir in three tablespoons of sugar; put this over the top, sprinkle cocoanut over it and brown slightly.

PLUM TART.—Stone some plums and stew them for an hour with plenty of sugar and half a tumblerful of water. Make a short paste with the white of one and the yelks of three eggs, an ounce of butter, an ounce of sugar, a pinch of salt, a little water and flour. Roll it out to the thickness of a penny piece, line a mold with it, uniting the joints with white of egg, fill it with rice and bake it. When done, remove the rice, put in the stewed fruit, and serve.

TOMATO CATSUP.—Skin one peck of ripe tomatoes; put into a kettle and boil them, then strain through a sieve. Return to the kettle, take off the scum that rises, then add one teacup of brown sugar, one-third of a teacupful of salt, a dessertspoonful of cloves, the same of cayenne pepper, and cook till quite thick, then add one and a half pints of vinegar. Keep well stirred toward the last.

A DAINTY DISH.—A dish to be served with cake and berries is made by grating a fresh cocoanut, beating the whites of five eggs to a stiff froth, adding two large spoonfuls of sugar and a pint of thick, sweet cream, and beating this also till it is very light.

A MOUNTAIN OF MINERAL.—Manuel Fontez has been, for the last two years, prospecting in Salmon River mountains, in the range between Middle and South Fork, where the Sheep-eater Indians were hunted in 1879, and captured late in the fall of that year by Lieut. Farrow's command. Manuel was with Bernard's supply command, and from observations, pronounced it a rich quartz country. Since that season, he has put in all his time, during the season that the mountains are accessible, prospecting for quartz. He found a great deal of rich float, but was not able to strike onto a lead, or at least, onto one that he was fully satisfied with, until a short time ago. The lead that he has struck lies over the mountain west of Loon creek, and is said to be a mountain of galena, carrying a large per cent. of silver. We have seen specimens of the ore sent in here to Mr. John Earley, who is a partner in this find, and it looks as well as the Bullion, Idahoan, or any of the Wood River ores. Mr. Earley left last week to visit the mine.—*Idaho Statesman.*

WHAT YOUNG MEMBERS CAN DO.—Some members of the Grange, especially the younger ones, do not attempt to do anything in the Grange, because they think they cannot stand up and make a half-hour's speech. But there is something everyone can do. If you cannot make a speech, perhaps you can tell of something you have seen. Perhaps you have read a little item in the paper that pleased or amused you. Well, bring it and read it to the Grange. Perhaps you have heard a piece of news in which all would be interested; tell it to the Grange. It is not always the ones who make the big speeches in the Granges who are of the most value, but the ones who are always doing some little thing for the benefit of others.—*Dirigo Rural.*

STARCH AND SUGAR FROM SEAWEED.—Mr. Alexander, of St. Ives, is said to have succeeded, after numerous experiments, in extracting from seaweed a composition like that of starch and sugar, which, it is said, is well adapted for the economical manufacture of certain articles of commerce, such as imitation leather and transparent substances. The seaweed, previously washed in pure water or in water impregnated with a little lime or potash, is dried and then pulverized according to its variety and introduced into a conical boiler. A bath of hot water or jet of steam is allowed to act upon it and extract a soluble substance, and the residue, on cooling, assumes a gelatinous consistency.

ACTINIUM.—A year or more since, a gate post that had been painted with so-called zinc-white, was noticed to appear black all day, gray in the twilight and white during the night. Mr. T. L. Phipson was led to investigate this singular chameleon property of the paint, and after much research has shown the cause to exist in a new metal, which has been named actinium, on account of its peculiar actinic effects. It is found in zinc ores, and resembles zinc.

"MOTHER," said little Ned, one morning after having fallen out of bed, "I think I know why I fell out of bed last night. It was because I slept too near where I got in." Musing a little while, as if in doubt whether he had given the right explanation, he added: "No, that wasn't the reason; it was because I slept too near where I fell out."

PAPA: "That picture shows the story of Prometheus and the vulture that fed on his liver. Every day the vulture devoured it, and every night it grew for him to eat it again." Sympathetic child: "Poor dear old vulture! How sick he must have been of liver every day!"

THERE is a dog in Georgia that weighs only 15 ounces. Whenever he gets lost his owner knows that he is inside of a pound.

Combustion Without Flame.

Solid carbon can be burned without flame and will evolve an intense heat, but it is not generally known that gases can also be consumed without flame. If a coil of fine platinum wire be put in the wick of a spirit lamp, and the lamp lighted, the platinum wire will become red-hot. If the flame be now blown out, the wire will continue to glow by the combustion of the spirit vapor, much as the wick of a candle glows after the flame is extinguished. Mr. Fletcher, of Warrington, has developed the principle involved with very remarkable results, burning ordinary coal-gas without flame, and producing an enormously high temperature. He gave practical illustrations of the process at the *soiree* of the Society of Chemical Industry, at Owen's College. Taking a ball of iron wire about three pounds in weight, Mr. Fletcher placed it on a slab of fire-clay, and directing a blow-pipe flame on it for a few seconds, he suddenly blew the flame out. The temperature increased so rapidly that in a few seconds the wrought iron fused and ran into drops, and this temperature was steadily maintained. The room was darkened, but the closest examination did not show a trace of flame, although the fact that the gas was burning was proved by repeatedly relighting and extinguishing it. The same experiment was repeated in another form by directing the flameless heat into a small fire-clay chamber, in which a refractory clay crucible, made especially for nickel melting, was partially fused and worked into a ball like soft putty, the sides of the fire-clay chamber being at the same time fused. The heat was so tremendous that the blow-pipe laboratory, which was given up to Mr. Fletcher for the evening, was much too hot to be agreeable, in spite of open windows and ventilators. It is certain that such temperatures as obtained by Mr. Fletcher without flame have never previously been obtained with the fuel used, which was nothing more than an ordinary gas supplied through a quarter-inch pipe, assisted by an air blast. Mr. Fletcher's views on the subject are very simple. "Flame is not a necessity in chemical combinations and does not exist in the combination of say, platinum and tin, which evolves a tremendous heat, nor does it exist, so far as he has been able to detect, in the explosion of gun-cotton, provided the gun-cotton contains nothing but what in itself is sufficient to form a perfect combination. The flameless combustion is simply a succession of almost silent explosions; there is a subdued roar always present, but it is steady and continuous." The increase of temperature corresponding with the reduction of the size of a flame is well known. Mr. Fletcher has only carried it a little farther and reduced the flame to nothing, carrying the known theory to its mathematical conclusion, thereby proving its correctness. We need hardly point out that the process may yet play a very important part in the arts.—*London Engineer.*

More about Lunar Clouds.—Mr. J. G. Jackson, of Hockessin, in a letter to the Wilmington, Del., *News*, under date of July 18, 1882, says: Last evening (July 17th) I again saw the "feathery mist of cloud on the moon," lying just over the westerly edge of the "Mare Clausum," against the "Promontorium Agarum" the same as I first observed it on May 19th, and which was noted in several papers. Being fully confirmed in the impressions then had of the extent and importance of the phenomenon, as indicative of the present physical condition of the moon, the fact of her atmosphere, etc., I marvel much that it has not been observed and noted elsewhere ere this. My notion is that this cloud forms by volcanic action at the place above stated, during the lunar night of every month, and can only be seen on one particular evening, about 48 hours after conjunction (new moon), just as the rays of the lunar morning sun, rising over the mountains of the promontory named, become sufficient to illuminate the mist, but not yet warm enough to dispel or evaporate it. The fact that the moon is then but a slender crescent, generally low in the haze of our horizon, seen but an hour or so before setting, must be the only reason why it has not been oftener witnessed. I missed it on account of cloudiness after new moon in June, and only caught it through the rifts of cloud last evening.

The Largest Wrought iron Columns.—The wrought iron columns made by the Phœnix Iron Works for the Albany bridge are said to be the largest ever made. Each is composed of eight segments, the iron of which is one and nine-sixteenths inches thick. Each column requires 894 steel rivets, and the weight complete is 18 806 lbs. The square inches of section are 104. The eight columns, therefore, contain 150,448 lbs. of metal and 7,152 rivets.

Tomato Toast.—Run a quart of stewed ripe tomatoes through a colander, place in a porcelain stew-pan, season with butter, pepper and salt and sugar to taste; cut slices of bread thin, brown on both sides, butter and lay on a platter, and just as the bell rings for tea on Sunday add a pint of good sweet cream to the stewed tomatoes, and pour them over the toast.

Acid-proof Cement.—Make a concentrated solution of silicate of soda, and form a paste with powdered glass. It will be found invaluable in the operations of the laboratory where a luting is required to resist the action of acid fumes.

Go to the Fairs!

The term "Fair" may not always be the most appropriate one for the autumn shows. Exhibition is a better word, but far less frequently used. Not only should the farmer go to the fair, but he ought to take his family with him. The going, simply, is not enough. All members of the household should make it a point to take something to exhibit. One of the boys may take a fine colt, and if it is his own, there will be all the more pride in obtaining a prize. Another son may have a yoke of steers that he has trained for the exhibition. As for the girls, there are a thousand different things that can be made with the needle that will grace the walls of the "woman's pavillion," or the rooms of the household department. Even so common a thing as bread may be baked with special care, and will attract much attention. Then there are the garden vegetables, potatoes—a new kind, perhaps—pumpkins, squashes, etc., and the products of the farm and orchard. It is not wise to leave all these things at home, and then criticise the exhibition because you can say: "We have better things at home." To go and take things to the fair is not enough. The exhibition should become a school at which all exhibitors and visitors make a study of the implements, cattle, poultry, fruit, grain, etc., that are there. A farmer may owe his success in growing some crop to the knowledge gained at a town fair. The farmer that has a real pride in the farm will take great interest in the local fair, and will exhibit the best products of farm life in the boys and girls, who are interested exhibitors at the fairs. The day at the fair should be a social one, every one making it a point to meet many neighbors and others with a pleasant word. It is a place for asking and answering questions, and the person who goes through the exhibition without opening his mouth is certainly not getting all the good that is within his reach. It is our advice that all go to the fair—all take something to show, and all find out as much as possible about all the various exhibits that are made by others. In this way the day at the fair will be a most profitable one. It may be that a premium will not be taken by every one, but the prize money is only a small part of the value that an exhibitor may receive from a fair, that has been used as a means for a better understanding of the products of the farm, garden and household.—*American Agriculturist for September.*

Singular Property in Steel.—It is well known that a steel that is very flexible when cold often breaks at the blue annealing temperature. It has generally been considered that the purer the iron is the less subject it becomes to this defect; but the workmen of the Ural mountains, who use iron of remarkable purity, have often observed the same fact. Mr. Adamson has found that the metal becomes powdery at a temperature between 260° and 370° C., (500° and 698° Fah.), or the temperature at which willow twigs take fire. This phenomenon seems to explain a large number of accidents, as for example, the breaking of tires under the action of brakes and the fracture of riveted molds and of machine arbors which become heated by friction.—*Ann. du Gen. Civ.*

Heavy Modern Machinery.—A mass of melted iron of a ton weight was unknown before the Christian era. Now those in cast iron up to 150 tons, in wrought iron to 40 tons, and in steel or bronze to 25 tons, are made in any desired form, and turned or bored with the most perfect accuracy. Two years ago I saw the largest lathe in England, which swings 22 ft., and will take in a shaft 45 ft. long. Six months ago I saw one in this country which swings 80 ft., and will take in a shaft of 50 ft. There are planers which will plane iron 50 ft. in length; others of 18 ft. in width; others of 14 ft. in hight, taking off metal shavings of two and a half inches in width and a quarter thick.—*Hon. W. J. McAlpine.*

A Wounded Veteran.—The average Washington claim-agent is not a man to be disturbed by any scruples of conscience. "You say you were wounded during the late war?" "That's what I said," returned the applicant for a pension. "Do you remember what year it was?" "In 1864, I think." "Where were you wounded?" "In the wrist." "Was it a minnie ball?" "Not exactly. Her name was Minnie, but it was a corset-bone that wounded me." "All right," exclaimed the agent, "we'll call it a bayonet stab." And to-day the corset-scarred veteran is occupying a lucrative place on Uncle Sam's pension roll.

Mrs. Brown.—"Dear me, Mrs. Jones, are those tall young ladies really yours? I had no idea you had daughters grown up." Mrs. Jones (who is still possessed of considerable personal attraction)—"Oh, yes! I was married at 15, you know." "And is that young gentleman really your son?" Mrs. Brown (who is also possessed of ditto)—"Yes—a—I was married at 12."

White Mountain Cake.—One cup of sugar, one-half cup of butter, one-half cup of sweet milk, one-half cup of corn starch, one cup of flour, the whites of six eggs, a little vanilla, two teaspoonfuls of baking powder. Bake in layers. Frosting for above: Take the whites of five eggs, twenty tablespoons sifted sugar beaten very light; a little vanilla. Spread between layers and outside of cake.

Digestion of Food.

Dr. E. M. Hunt, of Metuchen, N. J., in a paper read before the Sanitary Association, thus generalizes the facts of digestion:

"Food should pass into the stomach in a finely divided state. The rapidity with which digestion is performed depends upon the various circumstances. Strong emotion, as anger or grief, will retard it; moderate exercise hastens it, and thus the state of both body and mind influences it. A usual meal is generally digested in a healthy person in from three to five hours. A mixture of food is not especially objectionable, except as by variety it encourages the appetite, and often leads us to consume more than is needful. Animal food is digested more quickly than vegetable, and solid food more speedily than soups. Oily food is more quickly appropriated by the system than muscular fiber, when agreeing with the stomach. Uncooked oil is more digestible than cooked. Cream and butter are the purest of oils. Boiled meats are the most digestible, roasted next, broiled and fried the least so.

Bulk is necessary to digestion. The people of cold climates, who live much on fat meats, mix crude matters—sometimes even sawdust—with them, and thus find them more readily digested. Milk is among the most nutritious and digestible of foods. It is considered constipating, but the chief reason is that it is almost entirely taken up by the system, and no residue left. With the same exertion, we need richer food in cold weather than in warm. Never eat between meals, unless extra exertion or exposure require it, and then select hearty and quickly digestible food.

As a rule, ripe fruits or vegetables are more digestible than green, and green fruit stewed more digestible than when eaten in the raw state. Smoked meats are less digestible than fresh; and of smoked or salted meats, the inner portion is more easily digested than the outer part. The inner part is preserved as much by the saltpeter and the exclusion of the air as by the salting and smoking process, and is in a state more allied to preserved fresh meat. Dried fruits, as prunes, raisins, apples, etc., are unfit to eat unless well cooked, and all unbroken seeds are indigestible. Alcoholic stimuli, or condiments of any kind, are not necessary in healthy conditions of the stomach.

Making Belts.—A mechanic gives the following directions for managing belts. He says: "I have for the last 25 years, on every Saturday evening, turned the inner side of my engine-belt outside, let the engine run slowly, and washed the belt well with warm water and soda, applied with cotton waste. Next I take a piece of sheet-metal and scrape the belt well, then wash with clean warm water and dry off. I collect the waste oil from the shafting and apply as much of it to the belt as possible. The washing must be done as quickly as possible, so as not to dissolve the glued parts. I let the belt stand on the pulleys till Monday, then give another scraping and turn the belt as before. I keep the pulleys very clean. I have long been surprised at the economy I have effected with very little trouble. I have not bought a new belt for the last 10 years. There is an engine near me 14 inches by 36 inches (mine is 12 inches by 36 inches). I have nearly double the shafting and belt, and my neighbor cannot run with less than 38 lbs. of steam when all the belts are on the loose pulleys. Mine will run at full speed with five pounds."

Restoring Faded Ink.—A valuable discovery has been recently made, whereby the faded ink on old parchments may be so restored as to render the writing perfectly legible. The process consists in moistening the paper with water and then passing over the lines in writing a brush which has been dipped in a solution of sulphide of ammonia. The writing will immediately appear quite dark in color, and this color, in the case of parchment, it will preserve. Records which were treated in this way in the Germanic Museum in Nuremburg, 10 years ago, are still in the same condition as immediately after the application of the process. On paper, however, the color gradually fades again; but it may be restored at pleasure by the application of the sulphide. The explanation of the action of this substance is very simple; the iron which enters into the composition of the ink is transformed by the reaction into the black sulphide.

Potash Salts and Alum from Feldspar.—A recent procedure for manufacturing salts of potash and alum from feldspar consists in treating the pulverized mineral with sulphuric acid and fluorspar. The hydrofluoric acid liberated by the action of the sulphuric acid on the flour-spar, decomposes the silicate, and the potassa and alumina set free combine with the excess of sulphuric acid to form sulphates. It is only necessary, when the action is complete, to add a certain quantity of water, and then to decant off the supernatent liquid, when the alum will crystallize out. Large quantities of alum are at present manufactured in this manner.

Family Confusion.—An old darkey was endeavoring to explain his unfortunate condition: "You see," remarked he, "it was in dis way, as far as I can remember. Fust, my fadder died, and my mudder married agin, and den my mudder died, and den my fadder married agin, and somehow I doesn't seem to have no parents at all, nor no home, nor nuffin."

Primitive and Modern Inventions.

While it is true that the tendency is, or should be, from complex machinery to simpler forms, the fact still remains that all varieties of labor-saving machinery of the present day are large compared with the primitive forms. We do not mean by this that they are unwieldy or difficult to manage, but one is apt to be struck with the comparative increase of size in modern machines, when placed by the side of the implements originally used for the same purposes.

The primitive form of grinding grain was with the pestle and mortar. Compare this with the ponderous millstones of the present day, and the disparity is very great indeed. The tendency of invention is to simplify and lighten. It will certainly bear it in the case of the millstone. The thrashing machine is another instance. A full-grown machine is from 12 to 18 ft. long and from five to eight feet high, many of them requiring 10 horses with a suitable power to operate. The primitive implement was simply two pieces of hard wood joined together loosely, one of them being used as a handle, while the other was impelled against the scattered straw. The sewing machine of 20 years ago was a clumsy affair compared with the present neat and light machines; still, the iron in any of the present-day machines would make 30,000 needles used in hand work. The planer is a machine of three or four tons weight, and a giant beside the little plane.

So many others might be mentioned, all of large structure, gradually being lessened, so that we may expect a time in the near future when perfected machines will again more nearly approach the size originally used, and be endowed with the vigor and capacity of those in use.

Edge-Tools.

All cutting and piercing edge-tools operate on the principle of the wedge. A brad-awl furnishes an example which all can readily understand. The cutting edge of the awl severs the fibers of wood as the instrument enters, and the particles are compressed into a smaller compass, in the same manner as when a piece of wood is separated by a wedge. A chisel is a wedge in one sense; and an ax, drawing knife, or jack-knife is also a wedge. When a keen-edged razor is made to clip a hair or to remove a man's beard, it operates on the principle of the wedge.

Every intelligent mechanic understands that when a wedge is dressed out smoothly, it may be driven in with much less force than if its surface were left jagged and rough. The same idea holds good with respect to edge-tools. If the cutting edge be ground and whet to as fine an edge as may be practicable with a fine-gritted whet-stone, and if the surface back of the cutting edge be ground smooth and true, and polished neatly, so that one can discern the color of his eyes by means of the polished surface, the tool will enter whatever is to be cut by the application of much less force than if the surfaces were left as rough as they usually are when the tool leaves the grindstone. All edge-tools, such as axes, chisels and planes, that are operated with a *crushing* instead of a *drawing* stroke, should be polished neatly clear to the cutting edge, to facilitate their entrance into the substance to be cut.

The passivity of iron has been studied under new conditions by M. Bibart, who considers that it is not produced by a layer of insoluble sub-nitrate, as some physicists have thought, since the previous action of nitric acid is not necessary. Still less is it due to a formation of bioxide of nitrogen. It is produced by any cause which tends to oxidize iron, and destroyed by any cause which tends to deoxidize it. It is due, then, either to a layer of oxide or a layer of oxygen. The oxides formed on the surface may preserve it by their very presence, furnishing a sort of unattackable varnish, or they may preserve it like platinum, liberating, on the denuded parts, a protective layer of oxygen. The passivity of iron from contact of platinum seems to be produced at first by the platinum layer of oxygen condensed on a simple surface (a simple shock destroys it). But by degrees a layer of oxide is formed, and the iron then loses its passivity much less readily than before.

Effects of Compression on the Hardness of Steel.—Mr. Lan reports that at the works of Saint Jacques, at Montlucon, France, the method of compressing cast steel has been applied on a large scale. The process consists of submitting the molten metal to the action of a hydraulic press which can exert a pressure of from about 15,000 to 22,000 pounds per square inch, the pressure being kept up until the ingot has solidified and cooled. The result of this method is similar to that obtained by M. Clemandot's process, a brief account of which was given a short time since. It is said that numerous analyses, made with a view of ascertaining the quantity of carbon, have shown that the quantity of combined carbon in proportion to the total quantity of carbon is greater in the compressed than in the ordinary steel.

In a suburban town lives a relative of that immortal Mrs. Malaprop. The other evening a caller asked if Mr. —— was at home and could be seen. "I think not," was the reply, "I believe my husband has expired for the night."

The air of London during a fog is found to contain a large excess of carbonic acid over the normal proportion.

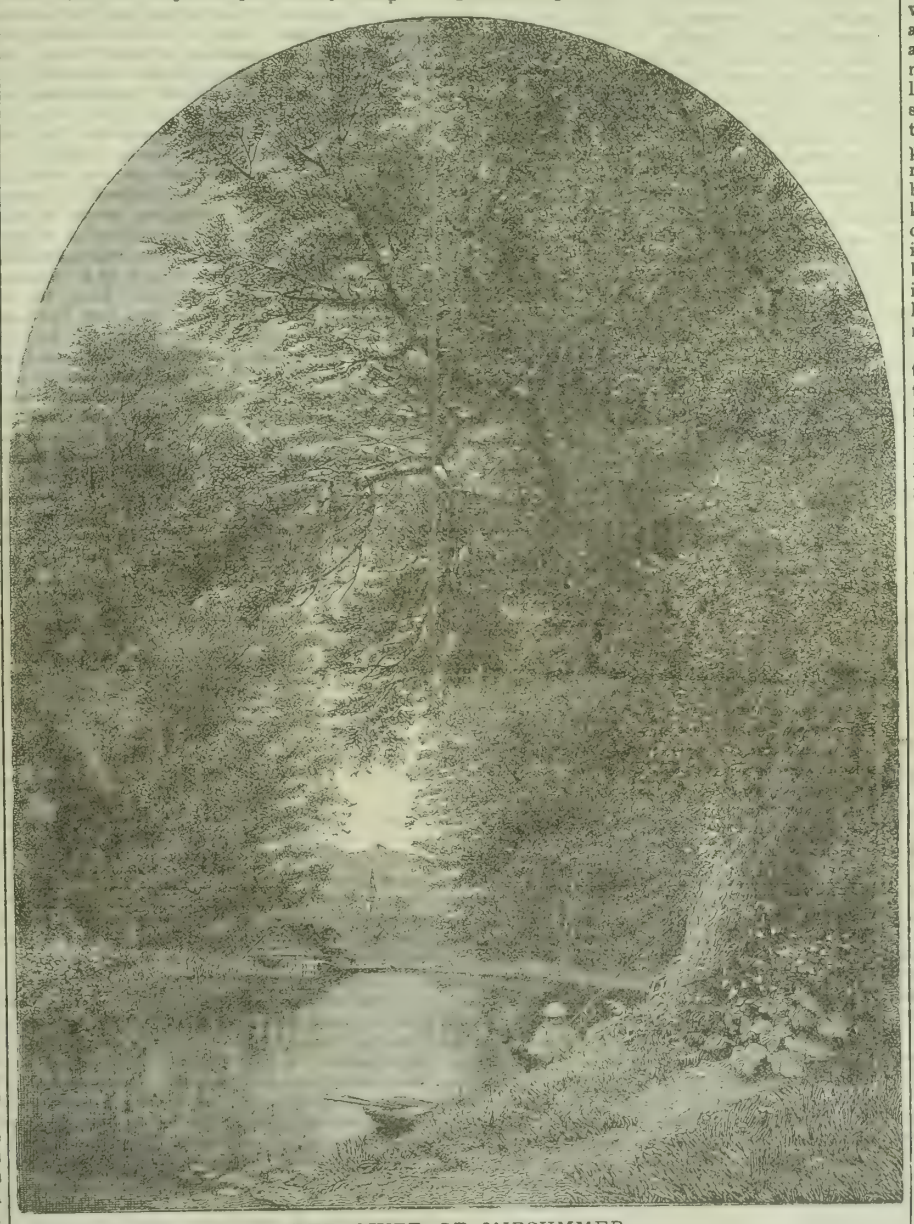
Hemp Culture in Yucatan.

A correspondent of the *Textile Record* gives some interesting information concerning the culture of hemp in Yucatan. It is one of the largest and, also, speaking comparatively, one of the poorest of the 27 States of the Mexican republic. It does not export either silver or gold. Its rich coast lands, where a fine quality of sugar-cane is perennial, are scarcely made use of at all. Its grain product is not sufficient for the home supply, and a considerable import trade goes on in wheat and corn. Its population in 1880 was officially estimated at but 302,000, and its landed property was assessed for taxation at $2,763,641. And yet this out-of-the-way fraction of Mexico has built up for itself a spirited trade in henequin, its one important product, that already has caused one railroad to be built; that is causing, at the present time, the construction of several others; and that rapidly is making the country rich instead of poor.

Henequin is propagated from cuttings about 18 inches high, which are set in rows 10 ft. asunder and two or three feet from plant to plant. The period of cultivation is about six years. After this period has passed, the leaves may be cut twice a year for 20 years, each cutting yielding about 15 leaves. Preparation of the fiber for market is simple and rapid. The leaves are cut in the morning; the fleshy part is removed and the fiber cleaned by a wheel which drags or beats them through a narrow opening; the cleaned fiber is dried for two hours in the sun, and is then baled and is ready for shipment.

The essence of the henequin trade is its certain and abundant profit. The fiber costs the planter, by the time that he has it in the bale, about two-thirds of a cent per pound. The freight charge per pound by steamer to New York is three-quarters of a cent. Adding commissions and incidental expenses, the total charge on each pound sold is close upon one and a half cents, and the selling price per pound is from five to seven cents. With profits such as these to be had from hemp, it is not surprising that the cane culture is neglected, and that wheat and corn are imported.

The State Bag Factory.



The reporters of the daily papers are giving due attention to the State bag factory at San Quentin, and readers are duly assured of the full success of the enterprise. The building cost $45,000, the machinery $105,000, and the whole was put in complete running order for $184,000, and with the balance of the appropriation 480 tons of jute were purchased. Now at San Quentin State prison cloth is woven daily by the convicts, with a few freemen as superintendents, sufficient to make 7,200 grain bags, and these have been sold at 8½ and 9 cents per bag. The demand for them cannot be supplied. And these bags have not been disposed of to traders, but directly to farmers. The first lot was sold at 8½c., mainly to Arizona, because they were not in quality up to the standard, but now the price is 9 cents—and it will not be raised, for this institution is not a speculative one. It was established to give work to prisoners, and to supply a public need. There can be no more corners in grain bags, for the 8,000 bags a day, which henceforth will be turned out of San Quentin, will be sufficient to prevent the speculators from venturing on such dangerous course, hence the price of bags will be kept at the lowest rate, and all this will inure to the great benefit of the farmers. These San Quentin bags have been examined by experts and pronounced of a superior quality. The Warden, Judge Ames, is not, however, in his jute factory confined to grain bags, as he weaves cloth for hop packing, for ore bags, for wool sacks, etc., and makes twine to sew them with. This is probably the best investment that the State ever made. It is practicable and profitable—first, in making the prisoners earn their living, and second, by furnishing the farmers with good bags at a just price, and thus preventing the dealers from charging them unconscionable rates.

Formation of Coal from Marine Algæ.—The theory that the immense deposits of coal so widely distributed over the earth, had their origin in immense depositions of marine algæ, in contradistinction the notion that they originated from accumulations of terrestrial plants, is now gradually meeting with acceptance by geologists. Prof. Reinsch has made this subject a special study, and strongly confirms the marine origin of the great coal deposits. The theory that coal has been formed by the depositions of marine algæ, originated with the late Prof. Frederich Mohr, an eminent chemist and geologist, who advanced it in his interesting work entitled the "Geschichte der Erde," which appeared in the year 1866, and in which he supports this view of the origin of coal with many ingenious arguments, inferences and facts, many of which have since been confirmed. The luxuriance of these forms of submarine vegetation in many portions of the oceans surpasses belief. At the present time, the Southern hemisphere appears to be the region in which they grow most luxuriantly, though they are widely distributed everywhere. They are especially abundant near the equatorial regions of the southern oceans.

Beside the River.

We give herewith a quiet riverside scene appropriate to the hight of the summer season through which we are now passing. The angler has chosen a charming spot for his sport and meditation. We will suppose that he is of philosophic mind and is enjoying his situation, thinking such thoughts as the following, which we find in "Halcyon Days," a new book, by Wilson Flagg:

I never look upon a clear stream of narrow dimensions, without thinking of the thousand beautiful scenes it must visit in its blue course through the hills and plains. What a life of perpetual delight must be led by the gentle river goddess, as she is wafted up and down the stream in her shallop of reeds! Now coursing along under banks sprinkled over with honeysuckles, while their fragrance follows the current of the stream, to entice the bees and other insects to their fragrant flower-cups; then passing through a pleasant forest, where she is regaled by the terebinthine odor of pines mingled with that of flowering lindens, whose branches resound all day with the hum of insects and the warbling of birds. Every green bank offers to her hand a profusion of wild strawberries, and every rocky declivity hangs its

THE QUIET OF MIDSUMMER.

brambles over the stream, and tempts her with delicate clusters of raspberries and other delicious fruits. How, if she takes pleasure in the happiness of human beings, must she be charmed by witnessing the plenty which is everywhere diffused by the crystal waters of her own stream, the countless farms rendered fertile and productive through its agency, the numerous mill seats that derive their power from its falls and rapids, and gather the industrious inhabitants in smiling hamlets upon its banks! A river, when pursuing its winding course along the plain, alternately appearing and disappearing among the hills and woods, suggests the idea of a pleasant journey, and is peculiarly emblematical of human progress. It always seems to me that it must conduct one to some happier region, and that if I traced it to its source, I should be led into the very temple of the Naiads!

With the pleasant forms of water are associated nearly all the pleasant images of rural life. To one who is tired of his busy employments in the city, a rural retreat is like a cool breeze to the traveler in a sultry desert. A little arbor that overlooks a river, a lake, or an arm of the sea, derives its charms almost wholly from the water, which is at the same time the symbol of peace and plenty, and the mirror of heaven. A hermitage by the side of a stream affords a secret retreat, still more delightful from its fancied association with pious seclusion from the world. Every flower that looks up to us from the green, mossy turf, every bird that warbles in the neighboring copse, and every insect that hums in the herbage at our feet has a soothing influence that, for a season, dispels every care and every feverish excitement. Then do we feel that nature only has power to administer that solace which is balm to the soul when one is vexed with care and weary of men.

Animal Chemistry.

How seldom do we give a thought to the organization of the "house we live in," or the manner in which it is strengthened and undermined. We seem to think that it can take care of itself exactly as well without our aid as with it, and better too, perhaps. We don't reflect that, after all, we are mere animal, chemical machines, and that various substances combined in the human stomach present the same phenomena that they would in the receivers of a chemist's laboratory. For example, we see it stated that without lime the secretion of milk fails; "the bones and teeth become soft or are arrested in their development; without soda, no bile can be formed; without phosphorus and magnesia, the nervous tissues loose their energy, and the impaired condition of the brain is evinced by loss of memory, frightful headaches and impending paralysis. Ghastly paleness, prostration, faintness and coldness attend the lack of carbon; deprived of sulphur, the hair would rapidly cease to grow, and the absence of iron is marked by lividity, disordered digestion, passive dropsy and other symptoms of an anæmic or chlorotic character. The food we receive daily furnishes the natural source of these elementary substances, and serves during health to repair the waste of these matters, through the skin, kidneys and other excretories, consequent upon the voluntary and vegetable functions of the economy. Hence the equilibrium is preserved. Inordinate use of particular organs induces a disproportionate consumption of their substance, and hence of the elements from which this substance is formed. Excesses in watching, thought and muscular effort, for example, by overtaxing the brain and muscular fiber, render these tissues rapidly effete, and therefore cause an exaggerated demand for their peculiar pabulum, as phosphorus and iron."

Sparring for Health.—Sparring is a healthful exercise for both sexes, provided it is not overdone. Few exercises cultivate courage and firmness like it. Practiced each day long enough to open the lungs thoroughly two or three times, might be useful in schools. A live opponent is not needed, though such a one is better. A bag of suitable weight and hight makes a very good dumb boxer. Four or five minutes at a time are sufficient.—*Herald of Health.*

Speed vs. Wear in Machinery.

Some men believe, or act as if they believe, that no machinery should be run to its real, full capacity, lest it should require important repairs after a time. This would be only another way of saying that machinery is made merely for the purpose of being kept all the time in fine order, regardless of any work it may do, whereas, the truer thing is to run a machine for all it is fairly worth, and when it is worn down or worn out, then to repair it or to get a new one. It may be claimed, and with some showing of truth, that a uniform low speed is the most profitable for any machine which is constantly employed, a speed so moderate that little or no repair need be made from month to month. It is more likely to be true, however, in the majority of cases, that the greater profit will lie in the fastest speed that the material under treatment will permit, quite regardless of the repair of the machinery.

The experience of leading railroads is quite to the point in this particular, for, there are cases in which the call for new locomotives has been equal to one in about every four or five days, this requirement being due, not alone to the amount of business, or to its probable early increase, but rather to the gradual wearing out of the older engines. The railroads find that their locomotives pay them best, on the whole, when they are kept continuously at work, day and night, on long runs, even though they may and do wear out fast. Obviously enough, this method of working the locomotives must have led long ago to a diligent and most painstaking study of the elements of locomotive construction, in order that the materials, and ways of putting the parts together, shall be such as to resist this wear and tear as completely as possible. In this last particular, it is interesting to know that the American locomotive may safely challenge comparison with its contemporaries in any part of the world, and if this can truly be said of the locomotive, in the face of the trying work it must do, it ought not to be any less true of other kinds of machinery, whatever may be the service required of them.

How far this suggestion of driving a machine to its utmost, regardless in a certain sense of the repairs it will eventually require, will commend itself to the average mill owner, each man must judge for himself, but the general principle has been so often proved true in all lines of manufacture, that it cannot safely be ignored by anyone. One further suggestion is worth while, as based upon actual experience. Some may claim that a faster speed will entail so much greater labor on the man who looks out for the working of each machine, that he cannot keep all the little ins and outs sharp to their work. In other words, he ought to have more pay or an additional helper of some kind, for it is certainly true, and the statement will bear repeating, that increase of production is the chief element in an increase of profit, and that, too, in the face of any probable increase whatever in the need or cost of repair.

Some mill owners have demonstrated all this to their full satisfaction. Some have tried to, but have failed, but the presumption of success is still in favor of a very large fraction of the mills at the present day.—*P. Barnes in Industrial World.*

Cars Passing Curves.—A late Danish invention is intended to prevent the wheels of cars from grinding when passing sharp curves. The axle is divided in the center, the end of one-half having a hollow, and that of the other a corresponding projection, somewhat like a ball-and-socket joint. The desired stiffness is imparted by a tube which surrounds the axle, and extending between the naves of the wheel, bears against gun-metal collars. At the center, between the tube and the axle, is a gun-metal bearing in which the axle can revolve. The wheels act in such a manner that in running along a straight track, both they and the axle turn together as in an ordinary pair of wheels, but on passing round a curve, the axle slips in its joint, so that the wheel on the inner radius of the curve is retarded, and the outer wheel accelerated in proportion to the sharpness of the curve, with the result of securing greater smoothness of travel in the vehicle and less tear and wear of the tire and the rail.

Propagation of Heat in Crystalline Minerals and Schistose Rocks. M. Jannettaz has found, in a series of experiments, that the propagation of heat in crystalline minerals depends upon the cleavage, taking place less readily in the direction of a normal to the plain of cleavage than in a direction parallel to it. This distinction, however, does not apply to pseudo-cleavages, or in other words, to the lamellar structure resembling cleavage, observed in some minerals; for example, sahlite. In experiments with various rocks, M. Jannettaz has shown that true stratification is without influence on the propagation of heat, but that in schistose rocks (when the schistosity is due to lateral pressure), it takes place more readily in a direction parallel than in one perpendicular to the plane of schistosity.

Steel Nails.—A machine has just been put in operation in Pittsburgh which cuts nails from steel wire. Mr. Taylor, an English mechanic, is the inventor, and the funds for the construction of the machine were furnished by Pittsburgh men. It is claimed for the invention that it can cut steel nails at the rate of 15,000 to 40,000 per hour, and the nails produced are much superior in strength to the ordinary kind.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞ For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

San Francisco, September 15, 1882.

Will the Order Live?

To the question that forms the caption of this article, we answer, yes, but not always. Nothing created or organized by the head or brain of man can endure forever. But the foundation principle, upon which our Order is builded, will never die while humanity exists. Fraternity is just as much a part of humanity as the living soul, and while the latter exists, the former will exist also. Fraternity begets benevolence—the one is the corollary of the other. So, though the A. O. U. W., as a distinctive society, may some time perish, something else imbued with the same vital principle, and having substantially the same ends in view, will rise up to fill its place. Suppose the Order should die to-morrow, the world would still be much the better because the Order had existed. It has swindled nobody; it has honestly paid out what it has received, and owes no one anything. The beneficiaries of those who have died have been promptly paid, and those who still live have had value received in the protection the Order has afforded. It has made glad the waste places, dried the widow's tears, and hushed the cry of the orphan. It has preserved the homes of the people, and forestalled poverty and crime by its beneficence. Aye, more, it has begotten sons and daughters who have vied with the parent society in good works, insomuch that millions arise to call them blessed. We are proud of the A. O. U. W. We believe its days will be many, and its good acts and influences as the sands of the sea in numbers.

"Watchman, What of the Night?"

With this issue, the PACIFIC STATES WATCHMAN begins the fourth year of its brilliant career as the successor to the *Golden Gate Sentinel*, formerly published in Oakland by Messrs. W. F. Price and W. N. Glenn. Through storm and sunshine, prosperity and adversity, this journal has held its own, and while we believe that it can be made more and more interesting and beneficial, as the great fraternity of whose principles and welfare it is the promulgator, progresses in importance, yet we can confidently affirms that no other fraternal paper in the world can be compared with it to advantage, in regard either to circulation or quality or quantity of reading matter. Once, the dark clouds of distress hung threatening over the future of this the official paper of the Order in California. But, thanks to Charity, Hope and Fraternity, the horizon is again bright as noonday on the golden shore in summer.

OLYMPIC, 127.—This Lodge is delighted with its new hall, 35 Eddy street, and is now one of the most prosperous in the city, taking into consideration the Degree of Honor feature, new hall, and everything, picnic committee barred.

Suspensions.

Suspensions in the Order are of two kinds, that is to say, suspension of the member, and suspension of certain rights and privileges the member holds, by reason of his membership.

Suspension of the member may occur by reason of non-payment of assessments for the beneficiary fund for the period of six months after first delinquent, that is, six months and 20 days from date of first Lodge meeting night in the month in which the first assessment was levied, and on which the member was delinquent. We wish to be explicit in this matter, for it is of the utmost importance. Suppose an assessment to be levied in the Lodge Jan. 3d. Twenty days from that date, or on the 23d, it is delinquent, and any member having failed to pay, stands suspended, or rather his rights in connection with the beneficiary fund stand suspended, for in reality the member is not suspended, but may vote, hold office or perform any other act in connection with the Order that any other member can. It is the duty of the Financier to report all such suspensions at once to the Lodge when they occur, which is on the third Lodge meeting night after the issuance of the assessment notice, or, in other words, on the fourth Lodge meeting night in the month, and the duty of the Recorder to enter the same in the certificate register book, affixing the date thereto, but if this duty for any reason be not performed, the suspension takes place all the same under the operation of the law. It will be observed that this law is framed on the presumption that the Lodge holds weekly meetings. But as this cannot always be, and as Lodge meeting nights are subject to change, it is further provided that assessment notices shall in any case be issued by the Financier, bearing date not later than the eighth day of the month, and that suspensions can in no case be later than the 28th day of the same month. But in any event, six months from the date of the suspension, the member being still delinquent on assessments, is suspended from the Order, and all his rights of whatever nature and kind invalidated.

Suspension of the member may also occur by reason of non-payment of dues. This is a privilege given to the Lodge in order to enforce payment of dues. In this jurisdiction, delinquency of dues for six months renders the member liable to suspension, but in some others it is twelve months. In case of dues, a declaration of suspension by the Master of the Lodge is necessary to give it effect, but not so in case of six months' delinquency of assessments, though it is better that it be done so as to make certain that it is a matter of record. A member may also be suspended as a penalty for some offense of which he has been duly tried and convicted.

The suspension of a member's rights, or a portion of them, occurs, as before seen, when delinquent on one assessment. If his Lodge dues are kept paid up, so he does not become delinquent for more than three months' dues, he loses no more till six months' delinquency on assessments has occurred, when he is out of the Order altogether. But, if the dues also remain delinquent for three months, then the member loses, in addition to his right to participate in the beneficiary fund, the right to vote and to hold office, and though his rights in regard to the beneficiary fund are reinstated, and he be in arrears for three months' dues, he cannot legally vote or hold office.

The suspension of a member is known to our law as "suspension from the Order," and no matter how done, has the same effect; and reinstatement can only be effected in the manner the law provides for members suspended from the Order, except in case a member is suspended for less than six months for some penal offense, when he may be reinstated on the same conditions as one under partial suspension for non-payment of assessments for the same period of time.

The effect of the law in relation to suspensions may be summarized as follows:

Suspension for non-payment of an assessment invalidates the right of the member to participate in the beneficiary fund, but no other right till the expiration of six months from delinquency, when the member is out of the Order altogether.

Three months' delinquency for dues invalidates the member's right to vote or hold office, and six months' delinquency from dues (in this jurisdiction), renders the member liable to suspension from the Order, even if all his assessments are paid up in either case.

Suspension, as a penalty inflicted by the Lodge, no matter for what period, suspends all a member's rights during the time fixed.

No assessment notice should be sent to a member whose rights stand suspended as to the beneficiary fund.

TOO MANY.—Don't belong to so many beneficial societies that you will be worth far more dead than alive, and don't make yourself poor all your life that you may die rich. First provide a decent and comfortable living for yourself and family as you go along. Then, according to your ability, provide something for your family when you are gone, so they may beat off the wolf of want from the door, but don't overdo the business. There is, or ought to be, reason in all things.

The A. O. U. W. in Colorado.

Fraternal Visit to Standard, 3, Denver.

The spirit of brotherly love and fraternity that binds every member of the A. O. U. W. together, is as broad and deep as love itself. The stranger in a strange land, if it be his privilege to claim relationship as a brother Workman, may often find it to his advantage to make his identity known. During a visit which we recently made to Denver, a number of the prominent members of the A. O. U. W. were called upon. Inquiries made, concerning the state of the Order in the Centennial State, and particularly in the city of Denver, resulted in convincing us that things were moving along successfully there.

Like the majority of states, Colorado has a great number of Lodges of a secret and fraternal nature. The A. O. U. W. is represented by about ten subordinate Lodges, all of which give assurance of considerable activity. At this time we shall speak more particularly of Standard, No. 3, of Denver, promising something in the future for the others.

The project of uniting Colorado, New Mexico and Arizona, and forming a new district for a Grand Lodge, is just now uppermost in the considerations of the Order at this point. Some little opposition is manifesting, and the scheme may be defeated. The Colorado Workmen see the necessity of organizing a Grand Lodge, but their opposition comes from the fact that Arizona, as a part of the district, is somewhat objectionable to them, their preference being for Wyoming. The leading opposition to this movement comes from the Denver Lodges. The main objection raised is that Arizona is too far removed from Colorado, which should, by virtue of its influence and population, be the central and controlling State. The population of Arizona being scattered, the successful operations of the new Grand Lodge would, in a measure, be compromised and hindered. Then, the expense of bringing delegates from that Territory as far as Colorado would, of necessity, be very heavy. To defray the expenses of three delegates coming from Tucson would require the outlay of more funds than the proposed Grand Lodge would have at command. Unless the district is changed in some particular, it is the opinion at Denver that the scheme will be unsuccessful.

The Lodges of Colorado are on the increase, and for the short time that they have been established, are making commendable progress. Their financial standing is good, and they are all accumulating some money with which to do good in the future.

The enrollment of Standard is about 60 at present, although additions are being made, and an increase of interest manifest. Standard is at present the most active Lodge of the A. O. U. W. in Denver. Although it was under something of a cloud some time ago, it is now more promising than ever before. Fraternal societies, and in fact all organized bodies of men, have different stages of advancement in their history. We have yet to find the first organization of this kind that has always maintained the same vigor and activity which characterized it at its birth. There are periods when a spirit of indifference is prevalent. But in the majority of cases, a revival of the old spirit is sure to follow, unless an irreparable breach has caused the lethargy. And so was it with Standard. It has brightened and shows the most promising signs of life for its future career.

No better illustration of the life of the Order can be given than lies in the fact that all of Standard's members are prompt and willing in their payments, although, at times, these have been somewhat burdensome. Standard Lodge, of Denver, has never suspended a member; and it has given considerable relief at various times.

In its history it is proud in pointing to the fact that by its beneficence one member was started in business, and has been so successful that he now supports his family without any assistance. It has never lost a member by death, and points to this fact with not a little thankfulness. All of the members are occupying honorable positions in society, and many of Standard's membership are leaders in intelligence and enterprise in the thriving and beautiful city of Denver. In fact there is not a black sheep in the fold. The meetings of Standard are held on the first and third Wednesdays of each month in a beautifully-furnished hall. The "Lodge home" of Standard is as fine as any in the city, and the members feel no little pride in making this a boast.

While there is so much of encouragement in the present status and prospects of Standard and the sister Lodges of Denver, yet we are convinced that the A. O. U. W. has not attained the power and position there which its worth would suggest. A city located as Denver is, with a rapidly increasing population, already numbering about 60,000, there should at least be 500 members. The organization of the Grand Lodge, and the circulation of outside Lodge information, and the broader acquaintance with the *modus operandi* and success of the Order in other States, will undoubtedly materially assist the work of building up the Order in Colorado. We are under special obligations to Mr. D. Kline, M. W. of Standard, and Mr. Thomas White, Supreme Deputy, for favors shown us while in the city. The WATCHMAN regards with considerable interest the workings of the Order in Colorado and every other State, and our new friends there are interesting themselves in securing for this journal a wide and general circulation among the members. The A. O. U. W. of the coast, and the entire country, may expect to hear favorable reports in the future from Standard Lodge, No. 3, of Denver.

The Fraternal Societies of California.

There is at present an unusual and feverish activity among the Fraternal Societies of this State, which is certain to be followed by a corresponding depression, and this depression will undoubtedly do more injury to the genuine cause than all the "booms" will do to improve its apparent condition. Let those who are high in office seek not so much to excite abnormal growth, as to strengthen the foundation upon which they are building, and to season thoroughly the material of which the structure is to be composed, else, ere the work be finished, instead of growing to completion, an ornament and necessity to man, it crack and crumble to the earth from which it sprung, a reproach to its architect, and a reflection upon the whole profession. The following table will show, in round numbers, the relative condition of the various societies of importance in the State:

Table Showing Relative Strength of the Different Fraternal Societies.

ORDER.	LODGES.	MEMBERS
Odd Fellows	270	22,000
Workmen	220	15,000
Masons	220	13,000
Ind. Chosen Friends	65	5,700
Knights of Pythias	66	5,000
Knights of Honor	52	4,300
Legion of Honor	90	4,000
Chosen Friends		3,500
Patriotic Sons	24	2,500
Red Men	26	1,600
Foresters	16	1,500
Druids	29	1,500
Native Sons	11	650
Total Members		80,250

That these societies, comprising over 80,250 members, are doing a vast amount of good work cannot be denied as it is the basis upon which they are organized, and if they fail in their mission, it is owing to defective management, and in particular to a desire to make a noise and a show, rather than quiet, but useful improvement.

RELIEF COMMITTEE.—At the last meeting of the Relief Committee, $35 was donated to a member that he might return to his home in Kansas, being in needy circumstances. A brother of Unity Lodge in this city, who was in distress, was assisted to the amount of $25. A short time ago, another brother, an entire stranger in this city and State, a member of Industry Lodge, No. 68, New York State, who recently came here with his family, and settled up on the Sacramento. Fire and disease and death having overtaken him and his family, he became entirely destitute, with not even clothes of his own on his back. The committee took his case in hand, furnished him and his family with suitable clothing, procured employment for him in Fresno at $40 per month, paid his expenses thither, and furnished him with $15 in cash. Here is charity for you—plain, business-like and substantial. A member of Mt. Diablo Lodge, who was sick a long time, was sent to Tombstone, Arizona, where he obtained employment. Bro. C. W. Nevin has been elected to fill the vacancy occasioned by the resignation of Bro. Winehill.

DISTRICT MEETING AT BERKELEY.—The district meeting held at Berkeley on August 26th, with University Lodge, No. 88, was well attended by the members of Berkeley, University, Hearts of Oak, Temple, and other Lodges. The M. W. degree was conferred by the officers of No. 88 in a most creditable manner, after which addresses were made by Grand Master Barnes, Grand Recorder Platt, D. G. Master Loud, and P. M. W.'s Payn, Burns, Corder, Palmer, and others. A collation was served, and the time agreeably used until "the last train." Deputy Hahn and the Lodges of his district have reason to be pleased with the success of their meeting on the 26th, and with the energy and enthusiasm manifested in the mission and prosperity of the Order in this locality. A pleasant feature of the evening was a grateful speech from a brother of another jurisdiction, who had been sick and received the kindly attention of the Berkeley members in many ways, and, as soon as restored to health, had come to return the pecuniary assistance they had afforded, and to thank them for their fraternal visits and sympathy in his day of trial.

LODGE INFLUENCE.—The elevating tendency of a handsomely furnished Lodge-room is worthy of remark. It is a fact that has been noticed in more than one instance. Perhaps the Lodge-room has surroundings that are superior to a man's home. You will notice that he comes to the meeting dressed just as he left his work—hair unkempt, clothes soiled. After a meeting or two you will commence to notice a change. His hair will be combed and boots blacked. Later on a clean collar will appear, and soon you will find him dressed just as he is when attending church, and if, perchance, he never has attended, the elevating surroundings of the Lodge-room will give such tone to his character that, to his already increasing virtues, church-going will be added.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

When a Medical Examiner's report comes into your Lodge, recommending an applicant for membership, don't wait to hear the report of an investigating committee on his case, but send the paper at once to this office, and generally it can be gotten back to you before next Lodge meeting. There is said to be luck in leisure, but as luck rarely makes a person rich or gives any other good result, we think it the better way to pin our faith to celerity and promptitude.

The reinstatements for the month of August were about the same in number as the suspensions. This is unusual, and the more so from the fact that two double assessments were issued in succession. Either the backbone of the brotherhood is strengthening up, or times must have greatly improved. Possibly a little of both may have produced the gratifying result.

The Grand Master has not been well since his return from the East. There is a limit to human endurance, and he well-nigh reached it. It is a source of much gratification, however, that recently his health is rapidly improving, so that he begins to look and act like himself again.

It is now the 15th of the month, and some 40 Lodges have not sent in their monthly reports for August. Good brothers, this will never do. We must have the reports, and promptly on the first of the month, as near as may be.

A Lodge that takes the Watchman has really no excuse for not understanding the most important provisions of our laws, and really there seems little excuse for a Lodge that fails to take the Watchman. Take it, brethren.

Our certificate members have run up to almost 17,500. We have just about 15,000. M. W.'s in good standing. We have lost by death 328, and 2,500 from other causes—more than six to one.

Don't forget the requirements of the new laws in relation to reinstatements. No member can hereafter be reinstated without a vote of the Lodge in his favor, no matter if suspended but a day.

Anniversaries.

Golden Gate Lodge, No. 8, will give their anniversary party at Ixora hall, 737 Mission St., on Wednesday evening, Sept. 20, 1882. The music will be furnished by the hall company.

Mission Lodge, No. 56, will celebrate its fourth anniversary at Washington hall, Mission San Jose, on Wednesday evening, Sept. 27th. An address will be delivered by the Grand Master, and other exercises will make it attractive to the large number who have been invited to attend.

Harmony Lodge, No. 9, holds its fifth anniversary at I. O. B. B. hall, on Thursday evening, Sept. 28th. This old and enterprising subordinate will make the evening pleasant to its guests.

The fourth anniversary of Silver Spray Lodge, No. 3, D. of H., will take place at Ixora hall, on Friday evening, Sept. 15th. The entertainments of this Lodge have always been so pleasant and attractive in their character that they are sure to have a full house and a good time.

It is understood that Fidelity Lodge, No. 136, which comes off in the early part of October, will be celebrated by a grand banquet, at the Baldwin hotel.

We take pleasure in acknowledging the receipt of a complimentary ticket to the fourth anniversary ball of Mission Lodge, No. 56, to be given in Washington hall, Mission San Jose, Wednesday, Sept. 27, 1882.

Olympic Lodge will celebrate its anniversary at Washington hall, 35 Eddy street, with an ice-cream entertainment and social time, on Tuesday evening, Sept. 19, 1882.

The pay roll of the last session of the Supreme Lodge, Knights of Honor (125,000 members) was over $14,000. That of the Supreme Council of the Royal Arcanum (35,000 members), $5,786. That of the Supreme Lodge, Ancient Order of United Workmen (105,000 members), $5 775.

We clip the above from an exchange, and it contains facts worthy of consideration. We believe no organization of similar character is so economically managed as the A. O. U. W., and certainly there is none of equal membership so prompt in the transaction of its business and the payment of its death losses. This comes of its republican form of government, in which regard it stands alone.

The Grand Recorder of Oregon and Washington, Bro. R. Newcomb, is in the city visiting his mother. He gives a good report of the condition of the Order in his jurisdiction.

A Fearful Record.

Below we give the assessment list, issued by the Supreme Lodge for Sept. 1st inst. It is a text and a sermon in itself:

Assessments Nos. 13 and 14.

Death No. 60.—To be paid from surplus. Bro. John F. Morefield, of Alamo Lodge, No. 13, Texarkana, Texas, who died on the 12th day of July, 1882, of "accident," falling of a brick wall. Aged 25 years. Joined the Order May 27, 1881.

Death No. 61.—To be paid from surplus. Bro. William G. Sauer, of Antiquity Lodge, No. 30, Louisville, Kentucky, who died on the 11th day of July, 1882, of "stricture of the eurethra and disease of the kidneys." Aged 45 years. Joined the Order January 22, 1877.

Death No. 62.—Assessment No. 13. Bro. Leopold Reinauer, of Eureka Lodge, No. 41, Cincinnati, Ohio, who died on the 13th day of July, 1882, of "chronic bronchitis and kidney disease." Aged 52 years. Joined the Order February 2, 1875.

Death No. 63.—To be paid from surplus. Bro. Joseph Hoesslie, of Cynthiana Lodge, No. 33, Cynthiana, Kentucky, who died on the 18th day of July, 1882, of "hepatitis and gangrene of leg." Aged 41 years. Joined the Order December 8, 1875.

Death No. 64.—To be paid from surplus. Bro. Domnick Dignan, of Ontario Lodge, No. 1, Park City, Utah, who died on the 1st day of August, 1882, of "pneumonia." Aged 37 years. Joined the Order February 18, 1882

Death No. 65.—To be paid from surplus. Bro. A. B. Newhall. Sr., held card from the Grand Lodge of Kentucky, Louisville, Kentucky, who died on the 24th day of July, 1882, of "ilio-collitis." Aged 54 years. Joined the Order May 5, 1877.

Death No. 66.—Assessment No. 14. Bro. Andrew Unruh, of Kentucky Lodge, No. 7, Louisville, Kentucky, who died on the 29th day of July, 1882, of "consumption." Aged 51 years. Joined the Order September 7, 1877.

Death No. 67.—To be paid from surplus. Brother Charles Kaiper, of Teutionia Lodge, No. 26, Covington, Kentucky, who died on the 24th day of July, 1882, of "dropsy of the heart." Aged 49 years. Joined the Order January 26, 1875.

Death No. 68.—To be paid from surplus. Brother William Limberg, of Teutona Lodge, No. 26, Covington, Kentucky, who died on the 1st day of August, 1882, of "typhoid fever." Aged 44 years. Joined the Order August 24, 1875.

Death No. 69.—To be paid from surplus. Brother George Siering, of Humboldt Lodge, No. 4, Cincinnati, Ohio, who died on the 27th day of July, 1872, of "softening of the brain." Aged 43 years. Joined the Order March 24, 1874.

Death No. 70.—To be paid from surplus. Brother Isaac Sibernagel, of Queen City Lodge, No. 5, Cincinnati, Ohio, who died on the 5th day of August, 1882, of "inflammation of the bladder." Aged 69 years. Joined the Order January, 1869.

Death No. 71.—To be paid from surplus. Bro. John Ehni, of Guttenberg Lodge 58, Toledo, Ohio, who died on the 12th day of August, 1882, of "Typhoid Cerebral Disease." Aged 42 years. Joined the Order March 16, 1876.

Death No. 72.—To be paid from surplus. Bro. Thos. Muth, of Capitol Lodge, No. 56, Columbus, Ohio, who died on the 27th day of July, 1882, of "Acute Pericarditis." Aged 35 years. Joined the Order March 17, 1882.

Death No. 73.—To be paid from surplus. Bro. Conrad Kuntz, of Herman Lodge, No. 15, Cincinnati, Ohio, who died on the 8th day of July, 1882, of "Cirrhosis of the Liver." Aged 53 years. Joined the Order September 30, 1875.

It will be observed, that out of the 14 deaths, Ohio furnishes 6, Kentucky 6, Texas 1, Utah 1. The nativity may be divided thus; Germans, 11; other nationalities, 3. Of diseases, 9 may be fairly chargeable to excessive beer.

Some time since, the Watchman expressed the opinion that the Order was losing more members from beer than from all other drinks combined, and here we have a striking confirmation of our position. Moreover, because of the effects of beer, we see how it is that our German fellow citizens are becoming so short-lived, and such hazardous risks for beneficial organizations. If our records, alone, presented such a damaging array of facts, we might admit the possibility of their not being entirely conclusive, but the records of all other like societies make the same fearful showing.

We do not claim, nor believe, that beer, in very moderate quantities, is injurious, as a rule, but taken in such quantities as is common with beer drinkers, it breeds a host of diseases that as certainly do their dreadful work, as that the sun rises and sets. No person who drinks on an average more than three glasses of beer a day, ought to be admitted into a beneficiary organization. Even that amount, no doubt, will shorten a man's life many years.

Heated Plaster of Paris. — It has lately been discovered that plaster of Paris, when heated to 500° C., acquires true hydraulic properties, and, when mixed with a due quantity of water, will, at the expiration of about three days, set into a white, semi-transparent mass of great beauty.

Rejection of Candidates.

The Grand Lodge of Missouri has had a system of medical supervision with a Grand Medical Examiner that has been in operation for two years. The system is identical with that of the Supreme Lodge, and antedates it about a year. The Grand Medical Examiner says in his report:

Like all new and sweeping innovations leading to great reforms, the operation of the law was at first somewhat inharmonious, and there were many and loud imprecations against the barrier that arrested the stream of bad risks which had begun to pour in upon us as a deluge, and which for a time had threatened the very life and perpetuity of our Grand Brotherhood of Benevolence.

Things, however, soon adjusted themselves, and when it was found out that the law would be enforced to the very letter, in spite of covert evasions and open defiance, the influx of bad material, from which we had suffered so long, was diverted away from us and drifted into new channels.

The result of my two years' work shows that there have been 160 rejections, saving to the Grand Lodge, I feel confident, in the near future, over a quarter of a million of dollars, or, in round figures, the sum of $320,000.

The reasons for rejection were as follows: Hemmorrhage of lungs, 11; daily drinkers, 9; hereditary consumption, 52; over age, 10; bronchitis, 14; abcess of lung, 1; asthma, 10; saloon-keepers, 4; heart disease, 19; scrofula, 4; syphilis, 2; stricture (traumatic), 1; irregular habits, 1; hernia and fistula, 2; lung disease, not hereditary, 7; intemperate use of coffee, causing nervous trouble (two quarts of strong coffee daily), 1; dropsy, 1; paralysis, 1; cystitis, 1.

The list of deaths reported at the last session of the Grand Lodge showed that out of 29 deaths, 40% were from hereditary causes. The list this year shows that deaths from hereditary causes have been less than 24%, a gain of 16% in the short space of only two years. This fact is the only argument needed to show that the present system of examination, if it had been adopted at first, would have saved an amount that can hardly be computed.

The death register shows that, according to the number of men belonging to the Order in the several vocations, the most dangerous occupations have been saloon-keeping, tobacco business and practicing medicine.

Resolutions of Respect.

[In Memoriam.]

At a regular meeting held by Washington Lodge, No. 60, A. O. U. W., on the 7th day of September, 1882, the following preamble and resolution of condolence were offered by Bro. Meininger:

Whereas, It has pleased the Almighty Father of the universe to take from our midst our worthy Master Workman, Meyer Morgenstern; and,

Whereas, In view of the loss this Lodge has sustained by the decease of so worthy a brother, and by the still heavier loss sustained by those that were nearest and dearest to him; therefore, be it

Resolved, That it is but a just tribute to the memory of the departed to say that, in regretting his removal from our midst, we mourn for one who was in every way worthy of our highest respect and regard, an active member of this Lodge, whose utmost endeavors were exerted for the good and welfare of our beloved Order, a good husband and an exemplary father, a friend and companion who was dear to us all

Resolved, That we sincerely condole with the family of the deceased on the dispensation with which it has pleased Divine Providence to afflict them, and commend them for consolation to Him who orders all things for the best, and whose chastisements are meant in mercy.

Resolved, That this heartfelt testimonial of sympathy and sorrow be spread on the minute book of this Lodge, that the charter be draped in mourning, and an engrossed copy thereof be forwarded to the bereaved family.

Election of Officers, A. O. U. W.

Colusa, 66. — A. B. Alderman, M. W.; J. C. White, F.; O. R. Mason, O; Oscar Robinson, Rdr.; A. M. Pearsall, Fin.; J. T. Rich, Rvr.; Wm. Remley, G.; J. H. Jones, I. W.; J. D. McNary, O. W. Members, 90.

Princeton, 201.—J. B. Hankenson, M. W.; A. Klemmer, F.; James Hart, O.; M. W. Henon, Rdr.; Nelson Butler, Fin.; T. B. Eagle, Rvr.; Thomas Green, G; T. B. Eagle, Med. Ex. Members, 51.

Willows, 115.—Wm. Johnson, M. W.; A. G. Hite, F.; O. R. Coghlan, O; H. Sutherland, Rdr.; G. A. Gutman, Fin.; Samuel Culver, Rvr.; J. M. Deadman, G.; P. P. Brooks, I. W.; P. O. Eibe, O. W.; Drs. Wilson and Calhoun, Med. Exs. Members, 40.

Wheatland, 54.—R. D Jasper, M. W.; W. H. Niemeyer, F.; C. D. Waddell, O.; T. E Bevan, Rdr.; F. W. Davenport, Fin.; N. C. Niemeyer, Rvr.; J. F. Braun, G.; James Logan, I. W.; J. A. Stewart, O. W.; L. Melton, Med. Ex. Members, 39.

In Court.—A case is now pending in the courts which is of great importance to all fraternal societies, as it involves the question whether the funds of a subordinate Lodge belong to the Lodge itself, or to the Supreme Lodge or some superior tribunal. The suit in question will be brought by the Old Order of Chosen Friends against the Independent Order for $3 800, which was paid into the Grand Council of the latter Order from subordinate Lodges, and from funds accumulated while in the Old Order.

Payment of Assessments.

One of the propositions which came before the Supreme Lodge at the last session was to make members get a new medical certificate if they were suspended for non-payment of assessments. The proposition came from the Subordinate Lodges of Tennessee. Although it was not adopted by the Supreme Lodge, the proposition is worthy of perusal by Workmen, the reasons for its non-adoption being, as stated by the Committee on Laws and Supervision, that the subject matter had already been voted on. The resolutions were as follows:

Whereas, The time granted to members to pay assessments, Article VIII., Section 10, Supreme Constitution, allowing members three months from the 28th day of each month, in which to pay up assessments, is, and has been, working to the injury of the Order.

We, therefore, respectfully submit to your honorable body, and instruct our delegates to urge the following amendment to the Supreme Lodge Constitution:

That Article VIII, Section 10, be so amended as to read: "Any member failing to pay the amount of his assessment within 40 days from the date of such notice, issued by the Grand or Supreme Recorders, shall stand suspended from the Order, and shall be reinstated only upon complying with the following conditions: He shall obtain a Medical Examiner's certificate, and upon application to the Lodge, shall pay the amount of the assessment on which he was suspended, and all deaths that occur up to the time of suspension and reinstatement, and one assessment in advance."

We believe, by the adoption of the above, cause of litigation would be obviated, and the Supreme and Grand Recorder be enabled to make more satisfactory reports, and not have from 400 to 500 suspended members continually on their book, and the members at large would soon realize the great benefit to be derived from prompt payments, and soon the Order would be in a more flourishing condition than ever before.

In Memoriam.—The late Bro. Mayer Morgenstern, M. W. of Washington Lodge, No. 60, was well known among secret societies. He took a great interest in establishing Lodges and looking to their welfare. He was a member of the I. O. O. F., A. O. U. W., K. of H. and B'nai B'rith, in all of which he held the highest offices, being a fluent and eloquent speaker, and well versed in parliamentary law. He was the father of four children, who are all well brought up, no expense having been spared by him to give them all necessary education. In short, he was a good man, genial and kind to all.

Silent Forces.—Let each brother do his share for the advancement of the glorious principles of the A. O. U. W. Perhaps you may not realize what you are doing, but the silent prayer of the widow who has been left alone in this world, maybe with helpless children, ascends to Him, the kind Father of us all, in grateful acknowledgement of the act that made her the recipient of the Order's bounty. Such satisfaction as this will compensate any man, and he will have the pleasure of knowing that he has done his duty.

Select Knights.—Bro. L. W. Ray, Recorder of Triumph Lodge, No. 180, is receiving names, and about organizing a Legion of Select Knights of the A. O. U. W. This Order is composed of Master Workmen in good standing, under 51 years of age, and found healthy. The new Legion proposes to work under a charter from the Supreme Legion, until a Grand body is established in the State. The Order guarantees the payment of $2,000 on the death of each member, $500 of which will be paid to any member who becomes disabled or unfit to earn a livelihood.

Business Announcements.

Commission Merchants, Dalton & Gray, S. F.
Cigar Manufacturer, Wm Helmuth, S. F.
Commission Merchants, W. C. Price & Co., S. F.
Monarch Stomach Bitters, Williams & Co., Cincinnati, O.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation etc., to the publishers of this paper.

PALMER'S,

726, 728 and 730 Market Street, S. F.

Kid Gloves a Specialty.

FURNITURE.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2,500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs one and a half miles from the center of the Redlands tract, and a depot will be established at once for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide. The cross streets are 60 ft. wide.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots. Within this town plat, at the crossing of Palm and Center avenues, is a circular public park, with a fountain in the center. This park will be improved by the proprietors of the tract. Above the town plat will be constructed a small reservoir, from which iron pipes will be laid to supply the town with water under pressure.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.

Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and water-gates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have mo ed upon the tract are credited to Redlands, and the others to localities where they now reside:

Names.	Acres.
J. G. Cockshutt, Redlands	20
C. W. Kidder, Redlands	10
J. F. Welsh, Redlands	20
B. W. Brown, Redlands	10
Israel Beal, Redlands	10
C. E. Tuesdell, Redlands	20
R. B. Mortou & Co., Redlands	30
C. A. Smith, Redlands	10
O. W Smith, Redlands	10

J. T. Ford, San Bernardino	20
T. S. Ingham, San Bernardino	10
L. Jacobs, San Bernardino	20
Total sold	1,004

Judson & Brown (San Bernardino, P.O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast.

Restaurants, etc.

HOME-MADE BREAD
Fresh at 12 o'clock daily, at
WESTON'S, No. 9 Stockton Street.
PIES, CAKES, FANCY BISCUITS, Etc.,

Good Land and Sure Crops.

There has been steady and tolerably rapid advancement made in the growth of a majority of the towns in Colusa, Butte, Tehama and Shasta counties. Especially is this so in the agricultural districts where the land produces at least fair crops in all seasons—wet or dry—as does the land on the Reading Ranch. Those looking for homes in California where diversified farming will pay every year; where wood and water are plenty and easy to be obtained, and other desirable advantages are to be had, should address the proprietor of the Reading Grant.

Some 14,000 out of 26,000 acres of the grant remain for sale at comparatively low rates, in quantities to suit purchasers, on easy terms. Prices range from $5 to $30 per acre. The tract is between two and three miles wide, with the Northern Division of the C. P. R. R. passing centrally through its entire length. Send postage stamp for free circulars containing information about Shasta County and these lands, to the proprietor of Reading Ranch. EDWARD FRISBIE,
Anderson, Shasta County, Cal.

The best of

Through Dewey & Co.'s Scientific Press Patent Agency.
No. 252 Market Street. Elevator, 12 Front St., S. F.
Telephone No 658.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free. DEWEY & CO., PATENT AGENTS.

THE PACIFIC RURAL PRESS,

AN ILLUSTRATED.

AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.

Because it is the largest and best agricultural weekly west of the Rocky mountains

That Patrons may be reliably informed on the progress of the Order in this and other fields.

That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.

That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress.

That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.

That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements.

That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information consubscription, etc., on application.

Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

The Saving of Coal in Blast Furnaces.

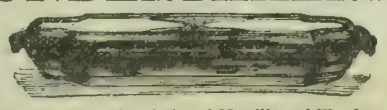
It is surprising to note how the consumption of coal in blast furnaces has been economized during the last 20 or 30 years. At one time, the iron masters paid but little attention to the item of expenditure for fuel, and the smelting of iron was attended with great waste of coal, and only of late years has their attention been directed to the best means of diminishing the cost of iron in this particular. This is remarkably illustrated by the extent to which fuel is now economized by English iron manufacturers. According to Mr. Mushet, nearly 10 tons of coal were used in 1796 for the production of one ton of pig iron, and in 1826 it required at least eight tons for the smelting of the same amount. This enormous quantity was reduced to 70 cwt. in 1864, and now the quantity used by the Cleveland iron makers is only 42 cwt. A great deal depends, of course, upon the quality of the ore to be smelted, for the higher its metallic richness, the less fuel is required; as, for instance, the hematites of Cumberland and Lancashire, which possess a very high percentage of iron, in 1866 required only 32 cwt. of coke, which, since then, has been reduced to 24 cwt. per ton, while some other ores cannot be smelted with less than 50 cwt. of coal per ton of pig.

This remarkable economy of fuel is due in great measure to the improvements in the furnaces, which instead of being open as formerly, are now close-topped for the utilization of the gases. A good deal also depends upon the quality of coal used, though in some instances this is not taken into consideration. In South Wales, where there is good smelting coal, and the ore yields an average of about 30 per cent., the consumption of fuel is equal to 42 cwt. per ton of pig, while in Durham and Northumberland, where the ore is not as good, and the coal by no means superior, 48 cwt. per ton is required.

The consumption of fuel at Coalbrookdale, in Shropshire, the oldest iron district in England, is the highest known in the manufacture of iron, it exceeding 50 cwt. per ton, but many of the furnaces are of the old type; while the coal used is not particularly good. In Lincolnshire more attention has been paid to economy, and in the close-topped furnaces the quantity of Durham coke required is 24 cwt. per ton, and sometimes even less than that, but of South Yorkshire coke, 30 cwt. is required.

The north of England has taken the lead in the introduction of all economical appliances, and Mr. Gjers has estimated that in the Cleveland district, the economy of coke, consequent upon the increased heat of the blast, has been equal to 10 cwt. per ton of iron produced, and a like saving has been made by the enlargement of the furnaces. The returns at the English Mining Record office show that last year the total saving of coal in the manufacture of iron in England amounted to 4,607,550 tons.

The economy of fuel in the manufacture of iron has by no means attained its ultimate limit, but will be increased as a greater temperature of the lining and pressure of the blast is secured. These remarkable changes all seem to be going in the direction of lessening the requirement for coal, but the increased consumption due to the development of manufactures and the needs for domestic use in all civilized countries, removes all danger that the saving of fuel made in the manufacture of iron, will in any way interfere with the coal trade.—*Mining Herald.*



ABOUT POURING TEA. — The *House-keeper* says: There is more to be learned about pouring out tea and coffee than most ladies are willing to believe. If these decoctions are made at the table—which is by far the best way—they require experience, judgment and exactness; if they are brought on the table ready made, it still requires judgment so to apportion them that they shall prove sufficient in quantity for the family party, and that the elder members shall have the stronger cups. Often persons pour out tea who, not being at all aware that the first cup is the weakest, and that the tea grows stronger as you proceed, bestow the poorest cup upon the greatest stranger, and give the strongest to a very young member of the family, who would have been better without any. Where several cups of equal strength are wanted, you should pour a little into each, and then the strength will be apportioned properly.

78—TULARE. J. W. TREADWELL.	Tulare, Tulare Co.	Saturday C. F. HALL.
79—VISALIA. V. D. KNUPP.	Visalia, Tulare Co.	Tuesday THOS. CREIGHTON.
80—SACRAMENTO. D. M. BLANK.	Sacramento. Sacramento Co.	Tuesday G. B. KATZENSTEIN.
81—JUSTICE. ALONZO COONS.	Bakersfield, Kern Co.	Monday F. S. WALLACE.
82—SANTA ANA. JAS. A. WAITE.	Santa Ana, Los Angeles Co.	Tuesday GEO. E. FREEMAN.
83—LINCOLN. E. O. MATTHEWS.	Lincoln, Placer Co.	1st & 4th Tuesday J. E. YOUNG.
84—SILVER STAR. W. A. SWITZER.	Downey City, Los Angeles Co.	Monday S. W BURKE.
85—ANAHEIM. A. E. WHITE	Anaheim, Los Angeles Co.	Monday C. W. MOORES.
86—SAN PABLO. DAVID JACOB.	San Pablo, Contra Costa Co.	Saturday OTERO RUMRILL.
87—DURHAM. J. S. HENDERSON.	Durham, Butte Co.	Saturday I. H. LOOBY.
88—UNIVERSITY. JOHN SQUIRES.	Berkeley, Alameda Co.	Saturday JONATHAN J. WRIGHT.
89—ELMIRA. WM. GEORGE.	Elmira, Solano Co.	Saturday J. H BARRETT.
90—CARQUINEZ. HENRY ROCK.	Martinez, Contra Costa Co.	Thursday F. WILLIAMS.
91—MT. DIABLO. T. E. MIDDLETON.	Walnut Creek, Contra Costa Co	Friday E. S. MOORE.
92—POINT of TIMBER Pt. of Timber, G. W. T. CARTER.	Contra Costa Co.	1st & 4th Sat'day J. A. SALTS.
93—RELIANCE. WM. T. RALPH.	Alvarado, Alameda Co.	1st & 4th Wednesday E. A. ANDERSON.
94—BENICIA. E. F. SOULE.	Benicia, Solano Co.	Tuesday J. BINNINGTON.
95—PLACER. G. L. THRELKELD.	Newcastle, Placer Co.	Monday A. G. ABBOTT.
96—SAN BENITO. J. H. DRAIN.	Hollister, San Benito Co	Friday FRED. SPERBER.
97—COVENANT. A. HINKLE.	Auburn, Placer Co.	Wednesday F. M. HOFFMAN.
98—MONTEREY. A. ABREGO.	Monterey, Monterey Co.	Tuesday W. J. POWLE
99—COLFAX. P. H. MAGINN.	Colfax, Placer Co.	M. LOBNER.
100—GUARDIAN. J. E. KNOTT.	Dutch Flat, Placer Co.	Tuesday J. E. PREWITT.
102—BIGGS. E. H. GALE.	Biggs Station, Butte Co.	Wednesday C. C. SPENCE.
104—HIGHLAND. A. M. STOKES.	Grass Valley, Nevada Co.	Tuesday M. P. STONE.
105—MOUNTAIN. J. P. MOODY.	Truckee, Nevada Co.	Tuesday A. O. PORTER.
106—KERN RIVER. N. P. PETERSON.	Kernville, Kern County.	1st & 4th Saturday J. B. BATZ.
107—BRIDGEPORT. P. B. BROWN.	N. San Juan, Nevada Co.	Friday A. J. TIFFANY.
108—LODI. C. W. ELKINS.	Lodi, San Joaquin Co.	Wednesday T. L. JONES.
109—FOLSOM. F. C. DURANT.	Folsom Sacramento Co.	Wednesday H. L. HASTINGS.
110—ELK GROVE. J. C. TURLEY.	Elk Grove, Sacramento Co.	W. E. EVERSON.
111—BAY CITY. GEO. H. SHAW.	Eureka, Humboldt Co.	Wednesday WM. S. RIDDELL.
112—EMPIRE. W. S. URMY.	Modesto, Stanislaus Co.	Monday HENRY LEWIS.
113—GALT. W. F. BREWSTER.	Galt Station, Sacramento Co.	Thursday J. M. SMITH.
114—BUTTE. JOHN HILL.	Meridian, Sutter Co.	Monday W. C. SMITH.
115—WILLOWS. WM. JOHNSON.	Willows, Colusa Co.	Monday H. SUTHERLAND.
116—G. ISLAND. M. STINCHFIELD.	Grand Island, Colusa Co.	Thursday A. N. ROLLINS.
117—CONFIDENCE. H. C. CROWDER.	Williams, Colusa Co.	Wednesday E. P. NATHAN.
118—EL DORADO. W. R SELKIRK.	Placerville, El Dorado Co.	Thursday H. B. TURMAN.
119—SMARTSVILLE. R. W. TIFFT.	Smartsville, Yuba Co.	Tuesday JAS. KERGAN.
120—RIVERSIDE. JOHN TAYLOR.	Compton, Los Angeles Co.	Saturday J. J. MORTON.
121—GEORGETOWN LEWIS BRYANT.	Georgetown, El Dorado Co.	1st & 4th Tuesday B. J. DAINS.
122—CAMPTONVILLE. O. N. MORROW.	Camptonville, Yuba Co.	1st & 4th Sat. RICHARD BROWN.
123—DOWNIEVILLE. J. T. MASON.	Downieville, Sierra Co.	Friday H. STRANGE.
124—FOREST. PEARSON RADER.	Forest City, Sierra Co.	Monday G. H. SHEPHERD.
125—SIERRA CITY. JOS. GIUROVICH.	Sierra City, Sierra Co.	Tuesday J. W. KANE.
126—EXCELSIOR. J. F. JENNESS.	San Francisco. Mayberry hall, Miss'n st	Thursday A. T. RUTHRAUFF
127—OLYMPIC. F. W. ROSSBACH.	San Francisco. 32 O'Farrell st	Tuesday R. H ORTON.
128—MUD SPRINGS. T G. WORTH.	El Dorado, El Dorado Co.	Saturday J. A. FISHER.
129—QUINCY. L. F. CATE.	Quincy, Plumas Co.	1st & 4th Wednesday T. L. HAGGARD.
130—WILMINGTON. N DE JAUSSERAND.	Wilmington, Los Angeles Co.	Saturday J. F. C. JOHNSON.
131—BANNER. JOHN GILMAN.	Plymouth, Amador Co.	Wednesday J. STEINMETZ.
132—PLUMAS. W. D. FLETCHER.	Greenville, Plumas Co.	1st & 4th Monday T. W. MCPHERSON.
133—AMADOR. O. M. GILES.	Amador City, Amador Co.	Tuesday J. A. GREENWOOD.
134—LAUREL. E. S. TALBOT.	Susanville, Lassen Co.	Tuesday T. B. SANDERS.
135—LAKE. T. J. GLASCOCK.	Janesville, Lassen Co.	Thursday P. B. BRONSON.
136—FIDELITY. C. E. WILSON.	San Francisco 318 Post st	Wednesday C. E. BRINSMADE.
137—SPENCEVILLE. W. K. SCOTT.	Spence[illegible]e, Nevada Co.	Saturday G. A. BROCK.
138—JACKSON. A. Z. BALES.	Jackson, Amador Co.	Thursday W. H. BURNES.
139—SNOW. R. SUTHERLAND.	Gibsonville, Sierra Co.	THOS. HUMPHREYS.
140—BALD MOUNTAIN. S. S. RUSSELL.	La Porte, Plumas Co.	1st & 4th Tuesdays HENRY MAURER.
141—IONE VALLEY. W. A BENNETT.	Ione Valley, Amador Co.	Wednesday G. H. DUNLAP.
142—SHARON. A. J. KRUMLE.	Brownsville, Yuba Co.	Mondays S. KINSEY.
143—BODIE. T A. STEPHENS.	Bodie, Mono Co.	Tuesday L. N. SNYDER.
144—GOLDEN STAR. WM. LIVERSEDGE.	Volcano, Amador Co.	Thursday F. I. STEWARD.
145—MERIDIAN. D. G. WHITING.	San Bernardino. Masonic Hall.	Wednesday G. W. HARBINSON.
146—NICOLAUS. D. R. REDFIELD.	Nicolaus, Sutter Co.	Saturday. J. W. LEE.
147—KNIGHT'S. WM. HANNEY.	Grafton, Yolo Co.	Monday. J. S. KEITH.
148—CHARITY. C. L. CHASE.	San Andreas, Calaveras Co.	Friday J. F. TREAT.
150—CAPAY. A. L. MCCLOUD.	Capay, Yolo Co.	H. C. DUNCAN.
151—PASADENA. L. C. WINSTON.	Pasadena, Los Angeles Co.	Thursday. F. H. HEYDENREICH.
152—CASTORIA. T. B. WALKER.	Lathrop, San Joaquin Co.	Saturday J. W. EBY.
154—MANZANITA. J. P. ZIPH.	Forest Hill, Placer Co.	Saturday. G. W. SIMPSON.
155—HALF MOON BAY. ANDREW OSTERMAN.	Spanishtown, San Mateo Co.	Monday F. VALLADAO.
156—MAIN TOP. C. T. MORGAN.	Michigan Bluffs. Placer Co.	Wednesday. MAX FIEDLER.
157—SUGAR LOAF. FRED. I. ADGE.	Iowa Hill. Placer Co.	1st & 4th Saturdays W. H. BISSETT.
158—SUTTER CREEK. H. LEHMAN.	Sutter Creek Amador Co.	Saturday J. H. GILES.
159—BAY VIEW. THOS. CURRAN.	S. San Francisco, Cor R. R. & 7th Ave.	Friday E. E. MEALEY.
160—SAN DIEGO. H. T. CHRISTIAN.	San Diego. San Diego Co.	J. W. WESCOTT.
161—WEAVER. W. S. LOWDEN.	Weaverville, Trinity Co.	1st & 4th Friday. W. F. JENKANS.
163—SYCAMORE. M. H. LOVELACE.	Lemoore, Tulare Co.	1st & 4th Tuesday. W. B. FINLEY.
164—GRANGEVILLE. E. K. HURLBURT.	Grangeville, Tulare Co.	J. J. DOYLE.
165—ASHLER. FRED BRYANT.	Alameda, Alameda Co.	Tuesday. A. CHEMINANT
166—CRESCENT. GEO. COOPER.	Cacheville, Yolo Co.	Thursday. J. W. CANNELL.
167—LINDEN. F. SHELTON.	Linden San Joaquin Co.	Monday. W. FERGUSON.
168—PUEBLO. P. N. STOFEN.	Sonoma, Sonoma Co.	1st & 4th Tuesday. J. P. FULLER.
169—NEWARK. WM. H. NESMITH.	Newark, Alameda Co.	Monday. D. G. BUTLER.
170—MAXWELL. W. E. ROBE.	Maxwell, Colusa Co.	Tesduay. ROSS HANNA.
171—YOSEMITE. W. J. BROWN.	Fresno. Fresno Co.	Tuesday. LOUIS E. PRUSSO.
172—SANTA BARBARA. ISRAEL MILLER.	Santa Barbara. Santa Barbara Co.	L. D. LILLEY.
173—VENTURA. H. D. LEY.	San Buenaventura. Ventura Co.	Monday. A. I. WAGNER.
174—MEMORIAL. F. A. BROOKS	San Francisco, 32 O'Farrell St.	Monday. HERMAN SCHAFFNER.
175—WEST END. MYRON H. HACKETT.	Holtz Hall. Alameda.	Monday H. C. BALLHEIMER.
176—KLAMATH. A. E. PAINE.	Yreka. Siskiyou Co.	1st & 4th Friday. WM. DUENKEL.
177—ETNA. J. M. SINGLE	Etna. Siskiyou Co.	C. W. NUTTING.
178—FORT JONES. J. B. MACK.	Fort Jones. Siskiyou Co.	Monday. EDWIN S. CULVER.
179—FRIENDSHIP. BERNARD SHERRY.	32 O'Farrell St. San Francisco	Thursday R. B. KITTREDGE.
180—TRIUMPH. GEO. WHITE.	San Francisco. Red Men's Hall.	Tuesday T. W. RAY.
181—HILL'S FERRY. J. L. CRITTENDEN.	Hill's Ferry. Stanislaus Co.	1st & 4th Tuesdays C. F. MILLER.
182—TURLOCK. H. C. RUSSELL.	Turlock. Stanislaus Co.	Saturday. J. L. BROWN.
183—DEL NORTE. WM. H. JETER.	Crescent City, Del Norte Co.	Tuesday O. CURTIS.
184—BLUE CANYON. J. F. BOLDON.	BlueCanyon, Placer Co.	Saturday. P. HANSON.
185—NOE VALLEY. J. J. WHITE.	Edward's Hall, San Francisco.	Tuesday E. H. WATSON.
186—WAHTOGA. W. J. BROWN.	Centerville, Fresno Co.	Friday. L. S. PRUSSEAU.
187—TEHAMA J KARMALENSKI.	Tehama, Tehama Co.	1st & 4th Monday. A. M. GEDNEY.
188—EL MONTE. J. W. FRYER.	El Monte. Los Angeles Co.	Saturday. LOUIS MELZER.
189—HANFORD. J W. RAMSEY.	Hanford, Tulare Co.	Monday J. A. HILL.
190—CHALLENGE M. B. AMBROSE.	Lockeford, San Joaquin Co.	Tuesday. J. G. THOMPSON.
191—SO'N CALIFORNIA. GEO. A. TOWNSEND.	Los Angeles, Los Angeles Co.	C. A. BASKERVILLE.
192—SAN MATEO. MICHAEL BROWN.	San Mateo, San Mateo Co.	Saturday. J. J. BROWN.
193—LOS BANOS. B. F. DAVIS.	Central Point, Merced Co.	1st and 4th Friday G. T. WILKINS.
194—HIGUERA. CHAS L. WOODS.	San Luis Obispo, San Luis Obispo Co.	R. POLLARD.
195—TRINITY WM. VOLMERS.	Trinity Center, Trinity Co.	Thursday H. BRINCARD.
196—ROCKLIN G. W. ROWLAND.	Rocklin, Placer Co.	Wednesday. H. E. STAFFORD.
197—SONORA C. H BURDEN.	Sonora, Tuolumne Co.	Monday. WM. HARTVIG.
198—OAKDALE. O. H. WIARD.	Oakdale. Stanislaus Co.	Thursday. E. J. PEREZ.
199—PORTERVILLE. O. E. GIBBONS.	Porterville. Tulare Co.	S. W. GILLIAM.
200—NAVARRO. EUGENE PEEPLES.	Navarro. Mendocino Co.	Saturday. WM. T. WALLACE.
201—PRINCETON. J. B. HANKENSON.	Princeton. Colusa Co.	Wednesday M. W. HENON.
202—NELSON. W. S. MITCHELL.	Nelson. Butte Co.	Saturday. S J. BRITTON.
203—COLOMA. JOS H. THOMAS.	Coloma El Dorado.	Wednesday. [M. J. ALLHOFF.
204—EDEN. H. W. MEEK.	San Lorenzo, Alameda Co.	Saturday. HENRY DOPMAN.
205—HONCUT. C. SPILLMAN.	Honcut, Butte Co.	Saturday. V. E. BURDICK.
206—BUTTE CITY. W. P. CRAIG.	Butte City, Sutter Co.	Saturday. J. H. STURCKE.
207—WESTPORT. E F. MATTHEWS	Westport, Mendocino Co.	Thursday. O. A. ROSS.
208—VALLEY VIEW. A. BARTEAU.	Selma. Fresno Co.	1st & 4th Saturday. E. H. TUCKER.
209—COLLEGE CITY. W. H. RHARDON.	College City, Colusa Co.,	Monday JAS. C. KEITH.
210—SOMERSVILLE. CHAS. COURTWRIGHT.	Somersville, Contra Costa Co.	Friday. JOHN TIERNEY.
211—LOOKOUT. C. A. MCCASH	Lookout, Modoc Co.	Monday D. N. BROWN.
212—OLIVE. G. W. MCCABE.	San Luis Obispo. San Luis Obispo Co.	Wednesday CHAS. H. WOODS.
213—NORTH STAR. JAS. L. BECKSTED.	Smith's River, Del Norte Co.	Tuesday O. V. WALLACE.
214 SAN FERNANDO. H C. HUBBARD	San Fernando,	Saturday. EL HAMMOND
215—DUNNIGAN. G. F. MCDONALD.	Dunnigan, Yolo Co.	Thursday. J. F. DILLON.
216—ANCHOR. W. H. CUNNINGHAM.	Lower Lake, Lake Co.	W. J. MASTERSON.
217—MURPHEYS. HARRY S. BLOOD.	Murpheys, Calaveras Co.	R. B. MALLET.
218—NEWHALL. JOHN B. MORRISON.	Newhall, Los Angeles Co.	A. L. MCPHERSON.
219—LOS ALAMOS. ELLERY D. PERKINS.	Los Alamos, Santa Barbara Co.	JNO. A. PURKISS.
220—OLIVER, R. V. P. DAY	Middleton, Lake Co.	J. SEVERIO.

SUBORDINATE LODGES.

NAME OF LODGE. MASTER WORKMAN.	TOWN AND COUNTY. PLACE OF MEETING.	EVE OF MEETING. RECORDER'S NAME.
1—ALPHA. W. E. TAYLOR.	Eureka, Eureka Co.	Tuesday I. C. C. WHITMORE.
2—GOLD HILL. ALEX. TAIT.	Gold Hill, Masonic Hall.	Wednesday. GEO. W. HALL.
3—STOREY. DENNIS KEHOE.	Virginia City, Storey Co.	Friday P. J. DUNN.
4—ORMSBY. JAS McGREGOR.	Carson City, Ormsby Co.	2d & 4th Tuesday WM. MUNDELL.
5—NEVADA. F. MCRAE.	Reno, Washoe Co. Cong. Church.	1st & 3d Monday JAS. T. DAVIS
6—RIVER. W. A. RULISON.	Dayton, Lyon Co.	Saturday J. A. BONHAM.
8—LUCILLE. R. B. DAVIES.	Sutro, Lyon Co.	Monday ROBERT ROWLAND.
9—ST. JAMES. J. H. MACMILLAN.	Winnemucca, Humboldt Co.	Tuesday CHAS. J. CURRIER.
10—VICTORY. F. W. DUNN.	Battle Mountain, Lander Co.	J. P. COPE.
11—HOPE. J. S. HAMMOND, M. D.	Austin, Lander Co.	1st & 3d Wednesday. CHAS. LUND.
12—ANCHOR. S. B. HANDS.	Mason Valley, Esmeralda

Chaff.

When a man chooses a mate, she frequently turns out to be the master.

France used 30,000 barrels of cider in making wines last year, but a French bottle of cider with a cobweb twisted around it will always catch the American wine bibber.

Land can be bought in some parts of South Australia for $4.50 a square mile, but by the time a stranger becomes acclimated there he has no use for a plot larger than six feet by three.

A trade journal gives directions for "preserving harness." Preserved harness may be considered very palatable by those who like that sort of thing, but we don't want a bit in our mouth,

"Just taste that tea," said old Hyson to his better-half, at the supper table the other evening. "Well," there doesn't seem to be anything the matter with it. I can't taste anything." "Neither can I, and that's what I'm growling at."

A convict says he was sent to prison for being dishonest, and yet he is compelled every day to cut out pieces of pasteboard, which are put between the soles of the cheap shoes made there and palmed off on the innocent public as leather.

A gentleman made a rockery in front of his house, in which he planted some beautiful ferns, and having put up the following notice, found it more efficient and less expensive than spring guns or man-traps: "Beware! scolopendrums and polypodiums are kept here."

"My frens," said the officiating clergyman at the marriage of two colored persons, near Cincinnati, a few Sundays ago, "my frens, it am a serious thing to get married, 'specially when bofe the parties is orphans an' haint got no parients to fall back on, as am de present case."

"What sort of a servant have you now?" inquired a lady of a friend she was visiting. "Oh, splendid!" she replied. "He's a Chinaman, and is so methodical in his habits that I know just what he is doing at any hour in the day. He is now probably putting away the dishes and tidying up the kitchen. Come and see if I'm right. She led the way to the kitchen, quietly opened the door, and there, in the middle of the floor, sat John Chinaman washing his feet in the dish pan.

Working Clothes.—Men and women are obliged to labor; they must dress according to their work, and that is as it should be. Men are not expected to milk cows in a mauve-colored summer suit, French kid boots and a "pancake" hat. Oh, no! Neither is he expected to sit down at table in the same clothing he has worn in the stable, thereby making himself offensive to all lovers of cleanliness, and setting an example his sons will be quite apt to follow. Neither would we have the wife and mother look like a harlequin on dress parade. If she has dirty work to do, she can wear a neat print dress, have a large apron which is easily removed, and it costs but a trifle to put a white linen color around the neck and a ruffle or cuffs in the sleeves, and these trifling additions brighten a plain face, and make the wearer much more presentable and attractive. The woman who heeds little details in dress will never be under the humiliating necessity of making worse than useless excuses when surprised by strangers, for she is always dressed for company. Is not mother prettier, looks younger, and really seems more agreeable when tidily dressed than when she looked as if robed for a beggars' masquerade?

There are many young women entering their life-long partnership, and we would earnestly urge upon them the necessity of giving attention to this important matter. Observe all the little courtesies and delicate attentions so precious during the days of courtship, and never permit them to be laid aside because he for whom they were practiced is now a daily companion, who shares her aims in life, and should share her burdens instead of ignoring them.

Vibration of the Ground Produced by Railway Trains.—Professor H. M. Paul has communicated to the Seismological Society of Japan some notes on the effect of railway trains in transmitting vibrations through the ground. A box, holding about 20 lbs. of mercury thickened by amalgamation with tin, was placed upon a heavy plank screwed to the top of a post sunk 4½ ft. into the ground. Images reflected in the surface of the mercury were observed by a telescope, as in meridian observations. An express train passing at a distance of one-third of a mile, set the surface of the mercury in confused vibration for two or three minutes. Professor Paul has also found that a one-horse vehicle passing along a graveled road, 400 or 500 ft. distant, caused a temporary agitation of the mercury whenever the wheels struck a small stone.

Astronomical Expectations.—When the sun, the earth and Mars come again into line with the earth in the center, at the next opposition of Mars, on the 31st of January, 1884, some of the great telescopes that are now being built will be in successful operation. With these increased facilities for a nearer view, we may hope to learn something more tangible concerning the curious movements that are taking place on a planet whose real features are more nearly within the power of the human eye to grasp than those of any member of the solar family.

Patents and Inventions.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in Dewey & Co.'s Scientific Press Patent Agency, 252 Market St., S. F.

For the Week Ending August 29, 1882.

263,452.—Inhaler for Powders—John R. Adams, Oakland, Cal.
263,468.—Fire Escape—Jacob Bloomer, Boise City, Idaho Ter.
263 385.—Boot—Thos. H. Buckingham, S F.
263,493.—Miners' Lamp—Bernard Dobbas, Greenwood, Cal.
263,412.—Illuminating Basements—P. H. Jackson, S. F.
263,540.—Calendering Machine—E. Landry, S. F.
263,541.—Skirt Protecting Coat—Katharine S. Lathrop, S. F.
263,414.—Ironing Board—W. W. Lemon, Collegeville, Cal.
263,415.—Coupling—S. Lightburne, Jr., S. F.
263,557.—Fumigating Machine—John McDermott, S. F., Cal
263,573—Rotary Engine—John Patten, S. F.
263,429.—Hydraulic Dredge—H. L. Pike and A. W. Ferguson, Astoria, Oregon.
263,579—Laying Artificial Stone or Concrete Pavements—E. L. Ransome, S. F.
263 435.—Tongue Support—D Shelton, Santa Rosa, Cal.
263,436.—Candlestick—Chas. E. Sherman and L. Sachse Havilah, Cal.
263,667.—Music Stand and Cane—John G. Roberts, Morey, Nev.
263,406.—Submerged Pump—L. Herbert, Hicksville, Cal.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Scientific Press American and Foreign Patent Agency, the following are worthy of special mention:

Hydraulic Dredger.—Henry L. Pike and Albert W. Ferguson, Astoria, Oregon. This is an apparatus for dredging in harbors or rivers, and it consists of a pneumatic and hydraulic tank having nozzles which are so placed that they will discharge a current or currents of water forcibly downward from the bottom when pressure is applied. The upper part of the tank is provided with an air chamber, and a flexible pipe has one end opening into the tank, while the other is led forward to a vessel by which the tank is towed from place to place. Upon this vessel are two sets of pumps, one for air, and the other for water. Each of these pumps is connected with the flexible hose, and a suitable valve or cock enables the operator to use either at will. When the tank is to be moved, air is forced in to float it. When it arrives at the place to be dredged, water is admitted (the air escaping), and it settles upon the bottom or bar, being ballasted for the purpose. The air connections being then shut off, and that with the water pumps opened, the pressure forces the water out through the nozzles in the bottom and loosens the mud, so that it will be carried away by the current.

Music Stand and Walking Cane.—John G. Roberts, Morey, Nye Co., Nevada. Dated Aug. 29, 1882. No. 263,667. This invention relates to a combined music stand and walking cane; and consists of a tripod of folding legs with a central standard, all of which, when closed, are secured by a peculiar ferule. The standard is vertically adjustable, and has a crooked or curved end, with a guide support for its back. The rack consists of a central piece tapering to its base and provided with a swinging sustaining leg or brace. To its top are pivoted certain strips or bars, to which others are pivoted to form the rack. To its base are pivoted the folding trough pieces with extension pieces to adjust their width. The strips are adapted to fold upon the central piece, and the trough pieces to fold over both, forming a neat and portable bar. The central piece of the rack is adapted to fit into and be sustained by the guide support upon the back of the main standard. The object of the invention is to provide a portable music rack and stand, which, when being carried, may be made to serve the purpose of a walking cane.

Coupling.—Stafford Lightburne, Jr., S. F. No. 263,415. Dated Aug. 29, 1882. This invention relates to a device or attachment which is especially useful for making a water-tight connection with the smooth ends of pipes, bibs, basin cock, and which is so constructed that it will fit pipes of different sizes. It consists of a peculiarly shaped elastic joint-former, which is enclosed in a case. The case is so formed as to slip upon the end of the pipe or cock, and is secured there by a set screw or other suitable device. The lower end of this case is provided with any suitable coupling for making connection with filters or other connections, and its end is grooved or recessed to receive the edge of the elastic packing so as to give more spring, and preserve the shape of packing to make a tight joint with the opposite coupling end.

Candlestick.—Chas. E. Sherman and Louis Sachse, Havelah, Kern Co., Cal. No. 263,436. Dated August 29, 1882. This invention relates to certain improvements in candlesticks, and it consists of a suitable base having an elastic candle support fixed upon it, this support being formed of wires or strips of metal bent in such a manner that the candle is, as it were, suspended between them. In connection with the device is employed a self-adjusting shade or reflector, which will maintain its position relative to the candle as the latter becomes shorter by burning.

Method of Illuminating Basements.—Peter H. Jackson, S. F., No. 263,412. Dated Aug. 29, 1882. Mr. Jackson, who is an inventor who has obained a number of patents from the Government, now devises a method of illuminating basements by means of glazed tiles, and the method of fixing and supporting the framework in which they are set, so that tighter joints may be made, the danger of warping the casting overcome, and a stronger, neater and cheaper joint provided. This adds another to Mr. Jackson's inventions in the line of improving basements of buildings.

Boot.—Thos. H. Buckingham, of Buckingham & Hecht, S. F. No. 263,385. Dated Aug. 29, 1882. This improvement in boots consists in the fastening of certain parts and their combination to form the upper of a boot. The object is economy in the cutting and simplicity in construction, with strength and comfort.

Spreading of rails under high temperature is a source of danger, of the magnitude of which travelers know little. When the ends of the rails are too close, as they are very apt to be when laid by the usual rule-of-thumb way, in cold weather, they are certain to press against each other and bulge out the track into a sort of double-wave line in summer. Spikes will not cure the difficulty. Indeed, the less strain placed upon spikes, the better for everybody. Here is the remedy for spreading which one now forever silent was about to put into practical shape and patent, but which may be here given free: No track for a railroad should be laid without a constant consultation of the thermometer, and the application of gauges properly regulated for temperature. That is the general idea, the force of which will at once be seen by every railroad engineer. Inventors may find in this hint something valuable. A reliance on spikes against spreading might be shown to be nonsense by a little boy who had received his first lesson on "expansion" of bodies. The absence of spikes, though, may show that the rails had spread, and that the inspection was negligent.—*New York Times.*

Sharpening Saws.—Many good saws have been spoiled by persons attempting to sharpen them without sufficient knowledge of how to do it. A file should be run along the edge of the teeth until they range evenly, after which the blade should be laid on a smooth, leaden surface, and a moderate rap given on every alternate tooth by means of a square, steel punch and a hammer, turning the blade then on the other side, and repeating the process, taking care to see that the teeth are equally set. This done, the teeth may be sharpened by the file, beginning at the handle end of the saw blade. The file should form, with the saw blade, about two-thirds of a miter angle, and be held at an opposite inclination for every alternate tooth, each tooth being brought to a good, sharp point. In good tools the quality of the steel is alike throughout. It is desirable to observe, in purchasing tools, that they be rather too hard than soft, as the temper will become reduced by wearing.

Alcohol from Acorns.—It is said that alcohol, equal to that made from grain, can be produced from acorns. The acorns are freed from the shell and ground finely; then they are mashed with malt and allowed to ferment. Acorns contain about 20% of starch and 18% of gluten. They would be a valuable article for human food if it were not for the tannic acid (about three per cent.) which they contain. Vast quantities which go to waste every year, where hogs are not fed in the woods, might be gathered by boys and converted into alcohol for use in the arts, thus freeing an equivalent amount of grain for use as food. Or some young student of practical chemistry might make a good thing for himself and for the world by devising an economical process of separating the starch, gluten and tannic acid, the last for technical uses and the others for food.

The New Route to Montana.—The completion of the Northern Pacific railroad to a point 550 miles east of Portland, Oregon, furnishes shippers from San Francisco an unbroken line of transportation to western and middle Montana. Heretofore the only route from the Pacific coast has been from San Francisco via the Central Pacific and the Utah Northern railroad; but the latter road belongs to the Union Pacific railroad company, which has made freights from Ogden north, on Pacific coast products, prohibitory, with a view to favoring Eastern shippers, to whom special rates have been granted. The new route, via Portland, is rapidly being extended eastward, there being over 7,000 men at work.

Onions from Egypt.—There have been imported into New York, recently, from Egypt 10,000 barrels of onions. This is said to be the first importation from that region; the gardens of the Bermudas and Portugal having hitherto supplied the deficiencies of our home fields. The Egyptian onions are said to keep better and longer than those of more western countries, giving them especial value in ship supplies for long voyages. The Egyptian onion business is not as good as it was a few months ago.

The Union Pacific has now about 4,000 miles of railway. It expects to complete 500 miles during the present year.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the Watchman's progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tel whether the Watchman has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the Watchman family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the Watchman.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Our Agents.

Our Friends can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. McGrew—Santa Clara county.
M. P Owen—Santa Cruz county.
J. W. A. Wright—Merced, Tulare and Kern counties.
Jared C. Hoag—California.
B. W. Crowell—San Luis Obispo and Santa Barbara counties..
T. E. Thornton—Sonoma Co.
H. H. McDonald—Solano and Yolo counties.
C. B. Huse—San Joaquin and Amador counties.
J. J Bartell—Sacramento and Solano counties.
L. L. Woodmansee—Napa county.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Officers and members of the A. O. U. W. receiving a complimentary number of the Watchman with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

Do Not Delay.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the Watchman. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

Frank P. Latson & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery Street, under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc., and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

The finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies the best trade in this city.

How to Stop this Paper.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*

Mansion House.—First-class in every respect, and reasonable prices. When you visit Stockton stop at the Mansion House. Free Coach to the house.

NEW ARTIFICIAL WOOD.—A German inventor has recently patented a new method for obtaining objects of irregular forms from an artificial, woody mass, which consists of cellulose, starch, meal and sawdust. He makes this material as follows: Ordinary commercial cellulose, reduced to pulp in water, is placed over a fine sieve, to deprive it of the water, after which three parts' weight of starch, two parts of meal (either wheat or corn) are added, and the whole thoroughly mixed. This mixture is boiled for one hour in a water bath, which converts the mass into a kind of glue, which is then mixed with an equal quantity of sawdust. This mass is rolled into plates and left to dry in a hot room. When dry it is ready for use. These sheets are pressed into any desired form by the use of iron or steel molds, heated to about 120° C., and under a pressure of about 700 kilos per square centimeter. Under that degree of heat the mass becomes viscid, and fills every part of the mold. The pressed object is taken out of the mold, and, after cooling, resembles wood, hard and elastic, becoming bone hard after a time. It can be treated like wood, worked with a chisel, sawed or filed, and be colored, polished or glued. It can also be veneered. In order to prevent objects made of this woody mass from expanding or drawing, the mass may be rendered more plastic by adding pipe-clay in the manufacture. Coloring matter may also be added to the mass. A very good, but of course inferior article, may be made by increasing the percentage of sawdust.

TO FASTEN KNIVES OR FORKS INTO HANDLES.—A material for fastening knives or forks into their handles when they have become loosened by use, is a much-needed article. The best cement for this purpose consists of one pound of colophony (purchasable at the druggist's), and 8 ounces of sulphur, which are to be melted together, and either kept in bars or reduced to powder. One part of the powder is to be mixed with half a part of iron filings, fine sand, or brick dust, and the cavity of the handle is then to be filled with this mixture. The stem of the knife or fork is then to be heated and inserted into the cavity; and when cold it will be found fixed in its place with great tenacity.

WEAR OF RAILS IN TUNNELS.—We have, on a former occasion, given a brief account of the rapid destruction of rails in tunnels due to the action of sand used to insure the requisite friction between the driving wheels of the engine and the rails. It will be interesting in this connection to notice the remarks made by M. Poisot before the Societe de l'Industrie Minerale, France, upon the working of locomotives in the Mazenay mines, the great difficulty in the way of their satisfactory working arising from the wheels slipping on the rails, which were always greasy, owing to the smoke and moisture in the galleries. In some parts only half speed could be attained, and in others the wheels slipped continually, notwithstanding that the rails were well sprinkled with fine dried sand. On one occasion the joint of a blow-off cock having broken, a jet of steam escaped and was driven on to the surface of the rails. It was found that during the two days that the engine worked before the fault was remedied, no slipping took place. In consequence of this the blow-off pipes on the different locomotives were so arranged as to discharge directly upon the rails, and highly satisfactory results were obtained in this manner. M. Poisot thinks that a method of obviating the excessive wear of rails in tunnels has thus been accidentally discovered.

ANCIENT BRIDGE BUILDING.—The marked feature of ancient bridge building was the thickness of the piers. The famous old bridge at Verona had a pier 39 ft. thick, though only 11 ft. high. In old London bridge the piers were so enormously thick that the available waterway at low water was less than one-fourth of the width of river spanned by the bridge. The London *Builder* thinks that the modern tendency is to make the piers too light. Of late years, no country in Europe has seen more remarkable bridge work than Italy. Signor Mosca's bridge over the Dora, at Turin, is a masterpiece of construction.

A GOOD cement for mending glass may be made by dissolving fine glue in strong acetic acid to form a thin paste.

Progressive and Substantial Patent Agency.

The SCIENTIFIC PRESS Patent Agency was established in 1860, and has ever since been the leading Patent Agency on this side of the continent. Thousands of patents have been secured through this old and reliable Agency; and, rom personal experience, most of the leading inventors of this coast can testify their great satisfaction at the promptness and dispatch with which their business has been put through, and the best patent claims admissible obtained.

There are few solicitors of Patents in the United States who have been as largely, or so continuously and successfully engaged in the soliciting of patents.

As editors and publishers of leading scientific, mechanical and industrial newspapers for the past 20 years on this coast, Dewey & Co. have superior facilities for acquiring and giving information upon all subjects of discovery, whether in the line of the farmer, the miner, the manufacturer, the mechanic or the scientific inventor.

Their files of illustrated, scientific and mechanical publications afford an encyclopædia of useful knowledge pertaining to the development of all branches of business upon this coast for many years past.

Their library of books on home and foreign patent laws; United States and Foreign Patent Office Reports; mechanical, industrial, and scientific text books, encyclopædias, etc., is one of the most complete for reference in patent matters, in the United States outside of Washington.

Here an inventor can secure a knowledge of the State of the art, in any particular class he wishes to investigate and improve in, that will greatly aid him in his work of inventing.

They also mail (free, on receipt of postage stamp) a reliable pamphlet containing valuable information for inventors and patentees.

Geo. H. Strong, W. B. Ewer and A. T. Dewey comprise the firm of Dewey & Co., Patent Solicitors. Their Patent Agency is favorably located and connected with the MINING AND SCIENTIFIC PRESS and the PACIFIC RURAL PRESS offices, at No. 252 Market St., S. F., journals that are well known among the ably conducted and widely circulated progressive American weeklies of the day.

CALIFORNIA VOLCANIC WATER CO.

Mining and Scientific Press.

THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

DEWEY & CO., Publishers.

No. 252 Market St., San Francisco, Cal

Canvassing Agents.

We want several canvassing agents who will make their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

Recovery from Hydrophobia.

A case of recovery from an attack of hydrophobia was related to the Academie de Medicine at the meeting of June 13, 1882, by M. G. Denis-Dumont, of Caen. The patient was a man, 38 years of age, of strong constitution and previous good health, who was bitten on April 16th, on the forearm, by a rabid dog, which had bitten the same day a woman and two children. The woman died of hydrophobia on May 20th, and the news of the death profoundly impressed the patient, who became restless, anxious, affected with extraordinary thirst, and complained of sore throat and of difficulty in swallowing. He refused all drink which was offered him, manifested a tendency to bite persons and objects around him, and presented convulsive attacks of the character so frequently met with in hydrophobia. He was taken to the hospital on May 23d, and none of the medical men in attendance had any doubt that he was suffering from hydrophobia. The treatment employed consisted in hypodermic injections of a centigram of pilocarpine, which caused an abundant diaphoresis and salivation. At the same time a draft was given of two drams of bromide of potassium, four drams of chloral hydrate, and an ounce of syrup of codeia (whether at a single dose or in divided doses, the report does not state). The symptoms presented a rapid amelioration, and on the 30th of May had entirely ceased. It seems open to question whether or not the case was one of genuine hydrophobia. When the symptoms commence with mental disturbance, distinctly excited by such intense apprehension of the disease as is excited by the news of the death of another person bitten at the same time, the case cannot be regarded as affording conclusive evidence on the therapeutical question. M. Bouley, however, announced his intention of communicating to the Academie at the next meeting, another case of hydrophobia in which recovery followed the use of pilocarpine.—*Lancet.*

A "CLOTURE."—Liberal landlord: "What are you doing in my stack yard?" Irish tramp (engaged in mending his clothes): "I was just a gatherin' in me rints, sorr." (The squire drops the subject and retires.)—*Punch.*

A NEW FORM OF BRIDGE SUPPORT.—A novel bridge support has been proposed by Mr. J. F. Smith, of Leicester, England. Bridges, according to his views, shall consist of iron or steel cylinders of any reasonable diameter, made up of plates riveted to rolled-iron or steel ribs, the strength being sufficient to carry any weight required. The lower half of the cylinder or inverted portion of the arch supports the upper half, and has a continuous bearing on the bed of the river along its entire length, the larger the cylinders the more stable the bridge. These cylinders may be riveted up in a dry dock, a portion of the ends covered with movable plates floated in position and sunk. Some trouble would naturally be caused by irregularities of the river bed, and in such cases suitable preparatory operations would have to be performed. For small water-courses under turnpike and other roads, Mr. Smith says these bridges may be riveted up on the spot, rolled in, covered over, and the bridge is made without any piling, diverting water-course, building foundations and arches or, other trouble and expenses usual in the old style of building bridges. Where railroads are to be formed over frequently flooded or boggy land, a number of these cylinders laid side by side will, it is claimed, save railway companies the enormou, cost of foundations.

AN ELECTRICAL APPARATUS is said to have been constructed by a priest of Ravenna, which can be set in operation by simply pressing a button, and by which the doors of a large building can be instantaneously opened. The apparatus was tried during the last week of April at the Alighiri theatre in Ravenna, with the most satisfactory result. All the nine doors opened simultaneously, as if through some spiritual agency. The inventor hopes to improve his apparatus, so that, should a fire break out on the stage of a theatre, the rise of temperature would itself set the machinery in motion.

WOOL growing and spinning in Russia is almost universal, being as much, if not more, of a home industry than a factory business. Almost every peasant keeps a few sheep, the wool of which seldom enters commerce, but is spun and consumed at home.

DEWEY & CO.'S
Scientific Press  Patent Agency.
(ESTABLISHED 1860.)
Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

Bear River.

The scene herewith given will remind many a pioneer, who entered this State by way of the Henness Pass route, of the then beautiful river whose head waters they encountered near the summit, and whose increased volume they again met with at the crossing of Steep Hollow creek, near Cold Springs. Bear river was then a beautiful stream, clear and limpid, coursing along a comparatively shallow canyon, often widening out into considerable valleys, covered with a luxurious growth of trees, underbrush and grass. It is one of these localities that our artist has chosen for his subject.

But men came here to mine—to dig from the pebbly beds and many banks of her rivers the glittering gold of California—with their picks and shovels, with their rockers and sluices, the rivers soon lost their charm. When nothing but beauty and loveliness was found, muddy waters and scarred banks began to appear. As time wore on, and the rivers and their banks became exhausted, the intervening hills were attacked, washed into the rivers and from thence, by the floods of winter, carried to the quiet valleys below. The Little Giant, with its tremendous power, loosened the foundations of the hills, and sand rock and blue gravel cemented together, were washed down to destroy the valley farms and desolate the homes of a prosperous people.

SCENE NEAR THE HEADWATERS OF BEAR RIVER.

In view of the ruin of the river by the miners it is interesting to read an account written long before the beginning of mining. Edwin Bryant, in 1847, wrote his book "What I Saw in California," giving an account of Bear river in its best estate. He said: "Bear river, where we struck and forded it, is about 50 yards in breadth, with a rapid current of limpid water, foaming over a bed so unequal and rocky that it was difficult, if not dangerous, to the limbs of our mules while fording it. The margin of the stream is thinly timbered with cottonwood and small willows. The fertile bottom, as we proceeded down it, varying in width from a mile and a half to one-eighths of a mile, is well covered with grass of an excellent quality, and I noticed in addition to the wild geranium and several other flowers in bloom, the wild flax, sometimes covering a half acre or more with its modest blue blossoms. I also observed strawberry vines among the grass in the Bear river bottom."

This picture of a lovely river flowing through a fertile field as Bear river was in the early days, is in marked contrast to the desolation which now marks its course.

Home Miscellany.

Go Away.

With a bumpy swish and a curdled roar,
Sweet Mary's churn goes drumming;
Young Reuben leans on the low half-door,
And hopes that the butter is coming:
Then signs and signs and drops his eyes
What words can his feelings utter?
"Oh, drop me down in the churn," he cries,
"And make me into butter!"
She rests her hands, and gazing stands
At sound of his words' vagary;
Then plies the staff with a lightsome laugh—
"Oh, go away!" says Mary.
If a maiden's word means aught, they say,
The opposite sense is in it;
So Reuben finds in her "Go away!"
A "Just come in a minute."
"I hope," says he, "I may make so free,'
With a grin and a nervous stutter.
"My answer should be to your ears," says she,
"If I could but leave the butter."
His arm on the shelf that holds the delf,
He looks across the dairy;
"Shall I go to her side? Shall I dare her pride?"
"Oh, go away!" says Mary.
He takes the hint, and he takes a kiss,
With fears and inward quaking
She does not take what he takes amiss,
Nor think it an awful "taking."
The heart of the boy is wild with joy;
He has won her—his bird, his fairy.
"I'll go outright for the ring to-night!"
"Oh, go away!" says Mary.

Aunt Keziah's Story.

I own a comfortable homestead in San Leandro, the house standing back from a wide, shady street, and a fruit orchard running toward the foothills, and there niece Letitia lived with me up to the day she was married.

Niece Letitia, if I did bring her up myself, was as pretty and smart a young woman as the county held—a trim little body, with a surprising dignity, considering her smallness, curly hair twisting around her forehead, brown eyes, and a very cute decided little way with her. As sensible a girl and womanly as ever I see in the sixty odd years of my life.

But I calculate that sense don't count when the counting day comes, and niece Letitia ended by marrying Barstow Brown, the telegraph operator, from Oakland. I didn't take kindly to him, myself, I'm free to own. I'm counted a smart woman, with a pretty good opinion on most things, but he beat me, Barstow Brown did. I'd come to look for amiableness and easy going, along with blue eyes and yellow hair in a man. My poor John had blue eyes, and the land knows what he'd adone without a wife that could manage for him. But lightning could come out of Barstow Brown's eyes, real, blue, forked lightning, and his square chin looked as sot—well, as sot as Tamalpais down by the bay, and no woman likely'd go to move *it*. Then he was so nigh perfection, folks would e'en a'most hate him outright. There wasn't a thing he couldn't do—dancing, fiddling, singing, painting and what not. Forin' languages, too, he managed to make out he knew most of 'em. Then his clothes had such a way of fitting him, no matter if 'twas only the blue flannel shirt and old trowsers he went shooting in, that threw all the boys of our neighborhood out of comparison.

A smart young man, oh yes, a very smart young man, but some way he held his head too high for me. I own it made me mad, for I like to hold my own with any man, and he had an air of superiority that even I couldn't stand up against. And sometimes I thought the glint in his eye and the sotness in his chin didn't argy well for his wife, if she looked for soft dealing.

But niece Letitia, she thought he was a god come out of a fable, and as I make it a pint always to have my own way, so I had to approve it all, for niece Letitia, for all her winningness, up to then, had always, somehow, seemed to carry out her own intentions.

But law! I knowed how 'twould be, and so 'twas from the beginning. He just sot her aside. Niece Letitia, she said as how there wouldn't be no wine to her wedding, for it went agin her principles. And Barstow Brown never said a word, but when the wedding breakfast came, and some friends of his, along with her'n, around the table, he just beckoned to Tiny Minnican with his finger—Tiny, she was helping—"Tiny, bring me a couple of bottles from that champagne basket in the milk-room." And that settled it.

So it was when niece Letitia said she couldn't bear to board in the hotel, but she'd stay to the old home, if he'd ruther, till he rented a house for her, or some rooms. No, he'd ruther board, though that she begged him not. But no word he said, till one day when they was going riding, and then he run back and said in a hurry, but amazingly cool, "Aunt Keziah, the dray'll come for our things at three o'clock, and I wish you 'nd Tiny 'd see Mrs. Brown's be all there—Mrs. Brown and me, we're going to move to the Estudillo house for the present;" and not a word to her, but just driv her there when they was done a-riding.

Sometimes I looked in niece Letitia's quiet eyes and wondered how 'twould end; for what with his city friends, and his Sunday fishing excursions, and his trips to town and one thing and another, to me it begun to look like neglect.

A considerable spell after, sister Elizabeth, down in Maine, was left a widow and destitute, with five little boys, and as I'm not a woman to shirk my duty when it's put before me, and though I hadn't been 20 mile before in 20 year, I packed my trunk and went down to the State of Maine to look after sister Elizabeth. I was gone a considerable time, and the long and short of it was just what I was afraid 'twould be—I brought her and the boys back to the homestead. And niece Letitia I found, in a very pleasant cottage, furnished to her taste, not so very far from the old house. A little proud and distant she 'd been, when first she was married, but now she was herself again, and told me over every word of what had been happening to her all along, as confiding as she was when she was a baby, till I had to rub my nose pretty hard with my silver spectacle case, that was my poor John's, to keep from having to out with my handkerchief and wipe the spectacles themselves.

But I never thought as how niece Letitia could be so sly and wicked as she was a few weeks afterwards, in one little remark I heard her make. I was to her house in the afternoon when old Mis' Clayton called, and went pekin' around, as her custom is.

"And to think," ses she, "that you 've got a house after all, and I always thought you and Mr. Brown differed so about housekeeping, now, and some other things, mebbe, hey?"

"So we did, p'raps," ses niece Letitia, cheerful like, "but then we're good Christian folks, after all, and the 'Piscopal minister reconciled us long ago."

"Well, it's a marcy to have one's husband convarted," ses Miss Clayton, "and I hev noticed he 'companies you to church, now."

And I just looked at my niece Letitia and knowed the demureness of her, all but the little laugh in her eye.

"Oh, yes!" thinks I to myself, "a great deal he did to reconcile you, sure enough." For my niece had told me all about it, and it was just this way:

Mr. St. John, the new minister, when he come to town, wasn't by no means the favoritest minister San Leandro ever had. It was his appearance that was against him, for he was a great tall, thin man, as awkward as a booby. What little hair he had was black, and stood up straight on top of his high, narrer head. He hadn't no beard, and his mouth was fearful large. He had great knuckles to his hands, and his eyes was always red from reading so much at night. He didn't get on very fast with the women, only but niece Letitia. She took a liking to him after a fashion, and after all, he had a pleasant voice and led in the singing, and she belonged to the choir. Mebbe it wasn't onnatural niece Letitia should take considerable interest in church matters, not having a great deal to do at home, seeing she boarded, and her husband away all his extra time. So she took hold with the Sunday-school and one thing and another, and the minister give her the name of a great worker for Zion. But somehow it never got mentioned to Barstow Brown at all, or he forgot about the new minister. But one Sunday night he got home ruther early from a jaunt he'd been to the fish ranch, and took himself to bed at the Estudilla house. A little later, the new minister, good man (for he *was* a good man, the new minister was), walked home with niece Letitia from evening service, and sot down for a call in Barstow Brown's sitting-room.

When he was gone, Letitia, she found what made her quake, I'll be bound, for I know she *was* afraid of her husband in those days. And there was Mr. Barstow Brown, riz up on the floor, and a-walking up and down, with a black-looking face, and his features all a-working as you never see, and just his long nightgown on, as he came out of bed.

"Come here, Letty," ses he, agitated, and talking with a hoarse, low voice. "Come here," ses he, and he brought his hand down heavy on her shoulder. "I won't ask you no questions, my girl, but I've been facing this thing half an hour, while you was talking 'tother side of that door, to a strange man. A strange man that talks to you about deep love prompted his profession, Lettie, and he hadn't no wish to turn his feet back," and Barstow Brown groaned. "I dodn't ask you no question," ses he, vehement like, "perhaps you don't love me no more, and perhaps I've been a fool, but that 's all over now. Make your choice this instant, and you shall leave me now, to-night, this moment, and go to him for good and all; or else give him up forever."

"Go to the minister for good and all!" ses niece Letitia, "poor man, what would he say?"

And when she told him he hadn't no cause for jealousy, he took her in his arms and kissed her as he had never done before.

It 's plain to be seen that Barstow Brown wouldn't never had made no kind of a husband for my niece Letitiia, if he hadn't found out he could be jealous of his wife; and a very good thing it was, to my notion, that the new minister reconciled 'em.—*M. L. W. C., in Rural Press, Aug. 26, 1882.*

A NEW nurse maid had been engaged for the family of John Leech. On her appearing in the nursery, she was thus addressed by Master Leech: "Nurse, papa says I am one of those children that can only be managed by kindness, and I'll trouble you to fetch some sponge cake and oranges at once."

THE President of the Bergh Society of Massachusetts tells some Boston men, who are getting up a fox hunt, that he will prosecute every one who takes part in it.

Hints to Home-Makers.

The House in the Middle of the Lot.

Well, I suppose you are satisfied now? Well pleased now you have been very particular in locating this house in the very center of the lot? Spent much time in particularizing? Well, you should be satisfied, for you have a perfect right to do as you please with your own. After this, the coach-house must be built, and, as it is necessary that the latter should indicate the wealth of the proprietor, this stable must come into the center, too, as near as possible. There are some other very necessary places to erect, but this place we will put away at some distance from the house; but in order that all persons visiting the house or otherwise should not mistake its character, we will have a walk leading from the front door directly to it, and to make it more effective, we will be sure to put an arbor over it, covered with some delicious grape. This is economy—true economy.

Now that we have placed the house and stable in the middle of the lot, we will go to work and lay out the garden. This can easily be done, for, having finished the arrangements of the house inside, the outside is of comparatively no consequence, so we plant the trees and flowers ourself. But before planting, we will lay out the carriage road and walks. Let us see: The house being in the center of the grounds compels me to have the drive straight, or nearly so. It would look much better, I think, if the drive was on the curve, but there is no room for a curved road now, the house being in the center of the grounds, so the drive must be a straight drive. Well, this don't matter much, although it would look much better if I had it the other way, but the house is in the center of the lot and prevents it. Walks and everything else follow suit. Planting it will cover this little defect up, so that we need not mind this blemish. Mr. A will tell us what kind of trees to plant, so we shall be all right in this respect. So we will go over to him and inquire, for he has just completed his planting and will know thoroughly what we want. So to him we go, and see for ourselves, and get pretty similar trees, etc., as Mr. A. has got. After a while we finish, and we sit down and contemplate our beautiful home.

A few years pass away, and trees, shrubs and flowers have grown prodigiously, and we find out that mistake of placing the house in the middle of the lot, for its consequences are manifold. We find that we planted too large a variety of trees, and planted them too close to the drive, and also the same trouble in connection with the walks, and consequently had to cut the lower branches off the pyramidal trees in order to get by them—trim them up, in fact, like liberty-poles surrounding drive and walks. With all this cutting and trimming, we found that John could hardly drive out from the stable through this road for trees, and now we see the turpentine running out and down the trees from the knots, dried and crystallized white pitch, and finally wish the nasty looking things were all out of the way; and further, they are so large that they cover up everything else, and consequently we think we shall cut them down and plant something else more suitable, especially if we can sell this place to buy another, when we will avoid placing the house in the middle of the lot and planting the place up incongruously.—*John Ellis, in Rural Press.*

Pomegranate Drink.

Any delicately flavored fruit juice may be taken as a basis, but that of white currants or grapes is especially to be preferred. A sufficient quantity of the freshly-expressed white currant, or other juice, is first to be raised quickly to the boiling point and maintained at 212° Fahr., for three or four minutes, after which it should be covered over and allowed to cool, after having been diluted with from one to two volumes—according to its strength and degree of acidity—of water previously boiled. To each quart of this liquid from 6 to 12 pomegranates should be allowed, which must be carefully denuded of their outer covering with the aid of a silver or bone knife, as iron in any form should not be allowed to come in contact with this fruit. Placing the fruity portions upon a porcelain colander, or a coarse piece of canvas, the pectinaceous juice may be readily disengaged from the seeds without breaking the latter, by means of a fluted wooden "butter-pat," or other suitable utensil, a little water being permitted to drop upon the seed-mass during the latter part of the operation; the whole of the pomegranate juice thus obtained is then strained and added to the fruit liquor before mentioned; about a quart of the cleansed seeds and rind are next slightly crushed and boiled or infused for a short time, hard spring water being employed, by preference, for this purpose. Simple syrup, sufficient to sweeten the fruit liquor moderately, having been added to the same, enough of the rind decoction is stirred in to impart a distinct, but not overpowering bitter, flavor to the whole.

This pomegranate drink is an eminently wholesome one, possessing great powers as a tonic and febrifuge, and when properly made, it will keep for days with all its properties unimpaired.—*Monthly Magazine.*

Marriage.

Children should not marry. A young woman cannot be in any sense prepared for this union under 21; 25 is better. She is not mentally or physically developed before this. Solemn duties, cares, and responsibilities await her, to meet which she needs large development, mature judgment, good calculation, domestic training, and knowledge of men and things. Girls of 16 and 18 cannot have these. They do not know whom they really like or dislike—who and what will meet their necessities—until matured themselves.

Young women should not be so impressed with the duty, privilege, and eclat of marriage as to rush into the relation without due thought, time, and acquaintance. You cannot over-estimate the importance of a thorough knowledge of the man whom you design to marry. Uprightness, fixedness of principle, and unselfish and generous disposition, with good business abilities, should be regarded as indispensable. If a young man is a good son and brother, he will make a kind husband, provided you do your part.

Do not be won by trifles. A handsome face, a fine figure, a noble bearing may be desired, but they constitute a small part of what you really need.

Neither is it wise to aspire far above your present station in life, as this would give rise to solicitude lest you fail to adapt yourself to your changed circumstances.

Marriage should not be entered upon without a knowledge of its physiological laws, else much domestic misery may be expected. Neither should it be sought for worldly gain or position.

I would also suggest that those graces and charms which won a lover's heart be still kept for the husband. Never consider it too much trouble to dress tastefully, and in your best, for your husband's eye. Give him freely of those graceful and pleasant surprises which will make him happy, if you expect a continuance of those lover-like attentions from him. Hide all the disagreeables in person, toilet and home, and keep the best for love. Such a course would be likely to make a good man of a bad one, if anything would.

Consider, also, that marriage is for life—"till death do us part"—the laws of man to the contrary. "What God hath joined together, let no man put asunder," is the clarion voice of Him who ordained marriage. Alas! how many turn the solemn edict into a farcical jest. Where is the voice to reach every home, in protest of the shame, disgrace, ruin and outrage of so fatal a wrench as divorce? Its unhallowed license should be hissed out of this world. Therefore, look well before you leap, young ladies, and "suffer not trifles to win thy love."

PARCHMENT.—Parchment is made of skins of sheep and lambs, though that kind which is used for the head of drums is said to be made of goat skins. Vellum is a finer, smoother, white kind of parchment, made of the skin of young calves. The mode of preparation is first to take off the hair or wool, then to steep the skin in lime, and afterward to stretch it very firmly on a wooden frame. When thus fixed, it is scraped with a blunt-iron tool, wetted and rubbed with chalk and pumice stone, and these scrapings and rubbings are repeated several times on each side of the skin till it is fit for use. Parchment was employed in very ancient times, and it is curious that from about the seventh to the tenth century, it was beautiful, white and good, but that in later times a very inferior, dirty-looking kind of parchment came into use, which has the appearance of being much older than the good. The reason for this is supposed to be that the writers in these latter centuries used to prepare their own parchment, while at an earlier date it was a curious art, only possessed by the manufacturers. Parchment was sometimes so rare and scarce, that greatnumbers of the older manuscripts were erased with pumice stone, or the ink washed out with some chemical substance, in order that they might be used again for writing upon.

A NEW MILK TESTER.—A newly invented instrument, by Professor Heeren, for the purpose of testing milk, seems to work well. It is named the "pioscope," and consists of a disk of black vulcanized india-rubber, having in its middle a very flat circular depression. A few drops of milk well mixed are put in the hollow, and covered with a plate of glass painted with six shades of color, radiating from a small uncolored circular spot in the middle. The colors range from white gray to deep bluish gray. The layer of milk is seen through the uncolored spot in the center, and its color can thus be compared with the radiating colors, and its quality is judged according to the color with which it coincides. Thus, the richest color stands for cream, the next for very rich milk, and then follow normal, inferior, poor and very poor.

COL. PERCY VERGER was complaining confidentially to Hostetter McGinnis of the frequency with which his mother-in-law paid him visits—that she came to see him four or five times a year. "My wife's mother," responded McGinnis, "has visited me only once in the last five or six years. The last time she came to see me was when I was first married, five years ago." "Lucky man! When is she going to visit you again?" "How can I tell? She has not got through with her first visit yet—but I can't see where the luck comes in."

For our Boys and Girls.

Our Puzzle Box.

Cross-word Enigma.

My first is in street, but not in road;
My second is in cart, but not in load;
My third is in lamp, but not in light;
My fourth is in wrong, but not in right;
My fifth is in cold, but not in hot;
My sixth is in kettle, but not in pot;
My seventh is in yes, but not in not;
My whole is the name of a celebrated explorer.

MARK.

Hidden Word Square.

1. Jerry cut a halter which he found into several pieces.
2. Iota means a small part.
3. There was a name neatly cut upon the slab.
4. The procession then slowly advanced.

NETTIE.

Decapitations.

1. Behead to pant and leave a serpent.
2. Behead a wooden case and leave a domestic animal.
3. Behead insects of a certain species and leave a disease of children.
4. Behead a stream of water and leave a bird.

Fractional Puzzle.

Two-fifths of table, three-fifths of smoke, one-sixth of carpet, one-fifth of chair, one-fifth of stove, two-fifths of paper, combined, forms a gaseous substance found in every part of the globe.

JERRY.

Transpositions.

1. Transpose an animal and make the rise of water.
2. Transpose an irregular verb and make a tool.
3. Transpose a masculine name and make the abode of a wild beast.
4. Transpose a drinking vessel and make a resinous substance.
5. Transpose depraved and make to abide.

Nellie and the Moose.

Nellie lived in the country, several miles from any village, and as it was 40 years ago, that part of the country in which her father's farm was situated was not so thickly settled as it now is. Her home was in the beautiful Black River valley, that most picturesque region of Northern New York.

One evening Nellie was standing at the window, watching the falling snow-flakes, when she saw a group enter the gate and come toward the house until they stopped before the door.

The group consisted of three men and a mammoth animal, of a kind that Nellie had never before seen. At first she thought it was an immense ox, but a glance at the huge branched antlers and thick muffled neck, showed her that her guess was an incorrect one.

"What is it?" said Nellie's father, stepping to the door, while Nellie's mother, brothers and herself crowded timidly out, "a deer, isn't it?"

"No," replied one of the men, "not a reindeer, though some call them moose-deer, but a moose."

The animal was startled at the sight of so many people, and plunged about so that it required all the strength of the three men to hold him.

As soon as he was quieted, one of the men explained that he had been captured 20 miles east of the river, and that they were taking him to Utica, and would be glad to have the farmer keep them over night.

Nellie's father hesitated, for it was not easy to provide accommodations for such an unusual visitor, but realizing the condition of the roads, and that many miles might have to be traveled before another place could be found, he said he would "fix it some way."

So after much ado, the large wood-house was converted into a bed-room, a supply of straw thrown in, and the guest invited to retire. It was with great difficulty that he was persuaded to accept the invitation, as he evidently preferred to take the overland route to his favorite haunts, but at last he was secured and left to enjoy his solitary meal of browse, which the men had brought in huge bundles upon their shoulders.

The three men were hunters, and the stories they told of adventures in the forests were very thrilling, and far more interesting to Nellie and her brothers than the brightest of fairy tales.

When at last Nellie laid her head on her pillow, it was so filled with visions of glaring eyes and prowling forms, that it was utterly impossible to coax sleep to visit her eyes. At last, she grew so tired of lying awake, that she arose softly and stole from the room. The house was very dark, and she could hardly find her way down the long stairs and out through the dining-room and kitchen.

As she passed her mother's door she heard her mother say, "Who's that," but she kept so very quiet, that her father said, "Oh, it's only the moose thrashing around," so she passed on and stealthily opened the wood-house door.

There, in a bright patch of moonlight stood the moose.

Nellie was frightened, and was about to run back when the animal gave a little stamp with his hoofs, and said very pleasantly, "Come right along, little girl; it has been many a day since I have seen so pretty a face as yours."

Nellie blushed, for a compliment from a moose is a rare thing, and she felt immensely flattered.

The animal stamped again and said, "Can you tell me where the men who brought me here have gone?"

Nellie replied that they were asleep, and inquired if the moose would like anything.

"Alas!" replied he, "there's" but one thing I desire, and that is freedom."

Then he told her of his forest home where the birds sang in the trees in summer, and the rabbits darted in and out of the bushes, and where the browze was tender and green, and the wild animals roamed at will through the leafy shades, and were like one vast happy family. "But," said he, "I must now belong to what men call a circus. No more happy strolls by the water's edge, but instead, I must ride about in a dismal cage, and be looked at by vulgar men and women. A friend of mine was once in a circus and escaped; he told me these things."

Nellie wiped her eyes in sympathy, and the moose shook off a tear from his brown cheek as he continued:

"Then I shall be trained to perform for the people, and they'll pierce me with sharp spears if I rebel, and perhaps I, a moose from the famous Moosehead lake, will be placed side by side with a cage of monkeys!"

Nellie wondered how he knew anything of monkeys, but said nothing, for the moose, coming as near her as his chains would permit, said in a plaintive voice: "You have heard my story; now, will not the sweetest of little girls allow me to escape? If you will open the door and unfasten the chain, I can be far away before my cruel captors know it, and I will tell all my friends of the brave little girl you are, and they will be your friends forever."

Nellie hesitated. She knew it was wrong, but she was very much afraid to refuse; besides, she did really pity him, so she softly lifted the bar which held the door fast and was about to try to unfasten the chain, when a loud, rumbling noise broke on her ears. The whole house seemed falling, and as the moose dashed out of the open door she screamed and—awoke.

She was lying in her own little bed and all around was darkness, but through the house she could hear the sound of wild, confused questions, and the tread of many feet about the different rooms.

She sprang up and ran down stairs to her mother's room. "Oh, is he gone mamma?" cried she. "I did not mean to let him go, but I was so afraid, and they were going to punch him and make him sit with the monkeys—"

"Why, Nellie, what are you saying?" cried her mother in amazement. "The moose is all right, only he pulled the wood-pile over onto him."

Health Column.

Light and Near-Sightedness.

Professor Pickering, of Harvard Observatory, points out in *Nature* that the color of gaslight has nothing to do with its painful effect upon the eyes of students and others. To test this question, he had a tin lamp shade constructed, consisting of a tube six inches in diameter by eight in length. One end was closed by a reflector, and the other by a piece of very light blue glass. Two holes were made in the sides, through which passed the glass chimney of an argand gas-burner. By experimenting with a shadow photometer, a position was found where the light received on a book was of the same intensity and very similar color to that from a window in the daytime at a distance of about six feet. A few minutes reading, however, was sufficient to convince him that the new light was far more trying to the eyes than an ordinary gas flame would be, the ill effects being due to the intense heat thrown down by the reflector. And this, he thinks, is the source of the whole trouble in the ordinary gas-burner. The heat radiated by the flame, the heated chimney and shade, and reflected from the printed page and all other white paper lying on the table, dries the eyes, the lids, the forehead and temples. Temporary relief may be found by bathing the face and eyes in water, but it is only temporary. The hot, dry air from the lamp is also harmful, and no doubt contributes its share of injury to the vision. These evils may both in part be remedied by placing a pane of glass so as to intercept the rays about the lamp before they strike on the book or the face; but it must be placed at such a distance from the lamp as not itself to become heated.

The hotter the flame the whiter it is, and the more light is thrown off in proportion to the heat. Hence, oculists are recommending lights as the students' and moderator lamps, which burn with a small, hot and very brilliant flame, as compared with that furnished by the argand and fish-tail burners. Statistics, said Professor Pickering, show how alarmingly prevalent near-sightedness has become of late among students. Hence anything which will tend in the future to prevent this widespread defect will be a boon to mankind. He had great hopes of the electric light in this respect. In it there was the maximum of light with minimum of heat. The ever-varying intensity was an objection, but he thought we might look forward to the success of the light from the incandescent carbon strip, in the near future, as a remedy for "the most widespread evil that afflicts the human vision."

Household Hints

GREEN CORN.—A novel way to serve green corn, and one which is pronounced a notable addition to the house-wife's bill of fare, is as follows: Take one dozen ears of tender corn, choosing ears that are nearly of the same size and those of medium size; grate them; then add one quart of sweet milk, in which you have stirred till free from lumps three tablespoonfuls of flour, a quarter of a pound of butter, or a piece as large as an egg will do; four eggs, whites and yelks beaten together, with pepper and salt to your taste, are all the ingredients called for; butter a large earthen pudding dish, and bake this mixture for one hour; this will be long enough if the oven is hot when the dish is put in. This is to be served with meat and potatoes as a vegetable, though with the addition of sugar, and with a rich sauce, it takes the place of a pudding.

PEACH MERINGUE.—Put on to boil a quart of milk omitting half a cup with which to moisten two tablespoonfuls of corn-starch; when the milk boils, add the moistened corn-starch. Stir constantly until thick, then remove from the fire; add one tablespoonful of butter, and allow the mixture to cool; then beat in the yelks of three eggs till the mixture seems light and creamy; add half a cup of powdered sugar. Cover the bottom of a well-buttered baking dish with two or three layers of rich, juicy peaches, pared, halved and stoned; sprinkle over three tablespoonfuls of powdered sugar; pour over the custard carefully, and bake 20 minutes, then spread with the light-beaten whites well sweetened, and return to the oven till a light brown. To be eaten cold with rich cream.

PEACH PUDDING.—A delicious peach pudding is made by putting enough whole peaches (with the skins removed, of course) in a pudding dish and pouring over them two cups of water. Cover the dish, and set in a hot oven. When the peaches are soft, take the dish from the oven, drain off the juice, and let it stand until it is cool, then add to it a pint of sweet milk, four eggs well beaten, a small cup of flour with a teaspoonful of baking powder mixed with it, stirred in so gradually and carefully as not to be at all lumpy, a tablepoonful of melted butter, a little salt and a cup of sugar; beat them all together for three or four minutes, then pour over the peaches, set the dish in the oven, bake until the top is a rich brown.

PEACH MANGOES.—Take one peck of large Morris white peaches, or large firm yellow free stone peaches, and cover them with brine for 24 hours. Take them out and remove the seed by making a slit in the side and partially opening the peach, then throw them back into the brine and let them remain another 24 hours. Drain them, wipe dry inside and outside, and fill them with the following mixture: One pint of chopped onions, a teaspoonful of chopped green ginger, half an ounce of celery seed, one ounce of white mustard seed, half an ounce of turmeric, and one ounce of black mustard seed. Tie a string around each peach, pack them in a strong jar, and cover them with cold vinegar, adding a tablespoonful of oil, head of garlic, and a tablespoonful of sugar. Ready for use in three weeks.

BREADING.—The "breading" of any article, consists of simply rolling its moist surface in sifted bread crumbs or cracker dust; if the crumbs are unlikely to stick, the article is next dipped into beaten egg, and then again rolled in crumbs. The crumbs should always be sifted so that they may be of one size, and as fine as possible, or they will be apt to fall off during frying. They are made by drying stale bread, rolling it fine, and sifting it through a fine sieve; the coarser crumbs may again be rolled and sifted, or kept for stuffing or puddings. Crackers can be rolled in the same way; cracker dust is sold ready for use.

FRIED BREAST OF MUTTON.—Boil a breast of mutton, according to the directions for boiling meat, until it is tender enough to permit the bones to be pulled out; lay it between two platters, under a weight, until it is quite cold; then roll it in bread crumbs and fry it whole in a dripping-pan large enough to hold it flat, in sufficient smoking-hot fat to cover it; or cut it in small pieces, before breading it, and fry it in an ordinary frying-kettle. Fried onions or tomatoes may be used to garnish this dish.

ROAST VEAL.—Before putting a roast of veal in the oven cover the upper side of it with thin slices of bacon. Unless you have tried this you will be surprised to find what a delicate flavor and rich brown color will be imparted to the otherwise almost tasteless meat. The gravy will be greatly improved, and the dressing also, if the knuckle is stuffed.

TO SWEETEN BUTTER.—Butter that has become strong may be sweetened so that it can be used for cooking purposes, as follows: Add a handful of salt and a teaspoonful of soda to two or three pounds of butter; let come to a boil; pour into a crock and set in a cold place. Take off the top, careful not to disturb the settlings.

RAGOUT OF COLD BEEF AND VEGETABLES.—Cut cold beef in inch squares, brown it in hot drippings, sprinkle it with flour and let it brown, cover it with boiling water, and season it with salt and pepper; add to it any cold vegetables cut in similar pieces, beat them, and serve the stew.

Worth Knowing.

ROSEWOOD has been the leading wood to veneer piano-fortes for the past 30 or 40 years. The best comes from Rio Janeiro, some of which is very rich, but varies considerably in different places where it is cut. Bahia rosewood is generally longer, heavier and harder to work, but some of it is handsomely cross-figured. As people generally demand dark-colored rosewood, it has led to staining the light wood very often, which may be known when legs, arms, etc., of furniture and piano-fortes look unnaturally dark. At one time, we used to cut rosewood veneers in ribbons to veneer picture frames, but they soon imitated rosewood to such pertection by staining that the demand for rosewood veneers for picture frames ceased altogether. It is impossible to imitate mahogany, by staining, so as to deceive or to mend bad places in the wood, as is done in other kinds of wood. So says the *Furniture Trade Review.*

SOMETHING FOR THE LADIES.—Science has made a discovery of a new method of bleaching white goods. It is as simple as it is said to be efficacious, and is vouched for by German chemists. It consists in dissolving one part oil and turpentine in three parts strong alcohol, and placing a tablespoonful of the mixture in the water for the last rinsing. The clothes are to be immersed in this, well wrung out and placed in the open air to dry—not in a room. The bleaching action of the oil of turpentine consists in its changing oxygen into ozone, when exposed to the light, and in this process the turpentine disappears, leaving no trace behind. It is so simple as to warrant one or more trials.

GLASS VENEER.—A Boston genius has invented glass veneers. Underneath a plate of glass, is a substance made in exact imitation of the grain of wood, oak, mahogany, rosewood, maple, etc., and the whole attached to the article of furniture, either as a panel, top, or otherwise. The effect thus produced is said to be beautiful in the extreme, surpassing any polish of the natural wood that it is possible to produce. One of the most important features attending these glass veneers, is the great variety of uses to which they are applicable. They are adapted for paneling, dado work, top of center or side tables, mantles, office furniture and even doors.—*Ex.*

A NEW process for preserving wood has been invented in France by M. Jacques. He first impregnates the timber thoroughly with a simple solution of soap, mixed with an acid—preferably phenic acid. This causes the fermentation in a few days, within the wood, of a fatty acid, which is insoluble in water, and impregnates the remotest fibers. The reaction of the acid on the soap does not take place until a portion of the water has evaporated. It is claimed that more perfect impregnation can be had in this way than with creosote, and there is no danger of the washing out of the preservative from the exposed surfaces, as when subphate of copper is used.

TO FRESHEN SALT FISH.—Many persons who are in the habit of freshening mackerel or salt fish never dream that there is a right and a wrong way to do it. Any person who has seen the process of evaporation going on at the salt works knows that the salt falls to the bottom. Just so it is in the pan where your mackerel or white fish lie soaking; and, as it lies with the skin down, the salt will fall to the skin, and there remain. When, if placed with the flesh side down, the salt falls to the bottom of the pan, and the fish comes out freshened as it should be. In the other case it is nearly as salt as when put in.

NEW BELTING MATERIAL.—A machine belting made of woven camel hair, or a hair known as camel hair, is being manufactured and used in cotton mills in Manchester, England. A test of a belt of this material, 6 inches wide and 0.27 thick, showed a breaking strain of 9 181 lbs., with an extension at the rate of 2 68% at 1,200 lbs., 5 % at 2,400 lbs., 6.60% at 3,600 lbs., and 13.07% at 4,800 lbs. It is said that this belt slips less on pulleys, does not deteriorate to anything like the extent of driving belts of vegetable fiber, and is thoroughly waterproof, and not affected by variations in temperature.

MR. G. WEISS, of Mulheim, has patented in in Germany a new method for manufacturing driving belts with sailcloth. The sailcloth, woven in the ordinary breadth, is folded two, three, four, and even eight folds, according to the breadth required for the belt and for its strength. The folded cloth is then sewed and covered with other cloth of the same material, which is also sewed across so that the seam comes between those underneath. By this outside covering and sewing, the belts are said to be stronger and more durable, as the inside seams are protected.

COATING WOOD WITH STONE.—The following is a German recipe for coating wood with a substance as hard as stone: 40 parts of chalk, 50 of resin and 4 of linseed oil, melted together; to this should be added 1 part of oxide of copper, and afterwards 1 part of sulphuric acid. This last ingredient must be added carefully. The mixture, while hot, is applied with a brush.

San Francisco Lodge Locals.

Recorders are invited to correspond Lodges may also find suitable reading here for "Good of the Order."

Aurora, 8, D. of H.

The following circular has been forwarded to each member of Olympic Lodge, through a committee appointed for the purpose by that Lodge:

DEAR SIR AND BRO.:—In our Order there are two prominent features, one of a pecuniary nature, the other fraternal. We will only consider the lattor at present. It has been the aim of this Lodge to encourage a social feeling among the members, and for that purpose Aurora Lodge, No. 8, Degree of Honor, was instituted. It is composed of members of this Lodge, and their wives, daughters, mothers and sisters. Its monthly social gatherings have been so largely attended that Olympic Lodge has been compelled to seek more commodious quarters, and has therefore engaged one of the finest halls in the city, located at No. 35 Eddy street.

After a short session of Olimpic, on the first and third Tuesday evenings in each month, the Degree of Honor holds its sessions, and has inaugurated a series of public receptions on the first Tuesday evening of each month, at which time they will endeavor to make the evening as entertaining as possible. Enclosed you will find a blank application, by means of which you will please endeavor to introduce a candidate for membership. Respectfully,

E. HALLAND, Chairman of Committee.

Unity, 27.

Bro. A. Montgomery, P. M. W. of Unity, 27, was lately presented with one of the finest Past Master's badges we have seen. It is of the regular pattern, with enameled colors and heavy plate gold, and hand-wrought square rim. On the back are engraved these words: "Presented to A. Montgomery, P. M. W., by the members of Unity Lodge, No. 27, A. O. U. W., 1882." Bro. I. D. Martin, Fin., made the presentation speech, recounting in an interesting and happy manner, the long-continued and faithful services of Bro. Montgomery, and in the name of Unity Lodge, handed him this token of their respect and esteem. Bro. Montgomery was visibly affected, and apparently surprised, and his speech on this auspicious occasion was simply an expression of heartfelt thanks. Unity, No. 27, is marching steadily ahead in good work and increase of membership, recruited from the active business men of this city. Their meetings are largely attended, and, although some of their debates are quite spirited, they never carry their feelings beyond the threshold of the Lodge-room door. On Tuesday evening, September 27th, nine candidates received the M. W. degree, and the work was done in a creditable manner, and the candidates were alike creditable to this growing Lodge. They now number over 250 members, and at the end of last month not one member was suspended for assessments. It was moved and carried that it was the sense of Unity Lodge that their Financier receive no moneys for dues or assessments outside of the Lodge-room. As this was the last meeting night in the month, the Financier announced, as usual, no delinquents on assessments or dues. Under the head "Good of the Order," several brethren made acceptable speeches, and the Organist, Bro. George F. Perkins, sang a song that was received with much favor, and closed a pleasant and profitable evening to all.

Fidelity, 136

On Thursday evening, September 21st, members of Occidental Lodge, of Oakland, to the number of 46, paid a fraternal visit to Fidelity Lodge, of this city. The visitors came over on the 7 o'clock boat, and entered the Lodge in a body, being welcomed by the Master Workman of Fidelity, C. E. Wilson. The following programme was then carried out; Piano solo, Bro. Seibe; recitation, Bro. Reed; song, Bro. Eitel, of Occidental; reading, Bro. Simms; song, Bro. Stewart; remarks and poem, District Deputy Schultz, of Occidental; music on the harmonica, Bro. Curtis, of Fidelity, recalled; remarks, Bro. Smith, Past Master of Fidelity. An intermission followed, in which the cigars were passed around and social converse had, after which the programme was resumed. Remarks and anecdotes, Bro. Munce, of Occidental; recitation, Bro. Young; remarks, District Deputy Thompson; piano solo, Bro. Seibe; remarks, Bro. Perry, of Occidental; recitation, Bro. Farley, of Fidelity; remarks and recitation, Bro. Hammer, M. W. of Occidental.

Memorial, 174.

Memorial Lodge, No. 174, assisted at the funeral of their late brother, George E. Gerlach, on Thursday last, in conjunction with the Knights of Pythias and San Francisco Scheutzen Verein, of all of which the deceased was a member.

On Monday evening, Sept. 25th, the degree of M. W. was conferred on one candidate. Bro. Frank S. Polland, District Deputy, was in attendance, and a spirited and friendly debate was had on the question, whether the Lodge should pay one or more assessments for delinquent members. After a careful and full statement of the matter and question in issue, it was resolved that the Lodge pay only the assessments levied in one month. A feature of their by-laws is that on the death of a brother, an assessment of 50 cents is levied on each member, and only those who are present at the funeral can be excused from this fine. A committee was appointed to draft resolutions of respect, and that the Lodge be draped in mourning for 30 days.

Lodge Locals.

Magnolia, 6, D. of H., San Jose.

Magnolia Lodge, No. 6, D. of H., San Jose, recently sustained the loss, by death, of a beloved sister, Eva Vinter. As set forth in the resolutions of respect passed by Magnolia Lodge, she was just touching the threshold of lovely womanhood, with the bow of promise radiant in her youthful sky, and her cheek mantled high with the flush of hope.

Stockton, 23.

The fire on our altar is burning brightly in the prosperous city of Stockton. During the District Agricultural fair week, we visited the brethren in their fine Lodge-room. Owing to the many attractions of fair week, the attendance was not large. The chief officers being absent, their worthy and efficient P. M. W., G. Lissenden, presided, and conferred the M. W. degree on two candidates, leading citizens of Stockton, in a very creditable manner. One petition received and one admitted by card. There were several visiting brethren present, and a season of sociality and congratulations indulged in that made the evening a very pleasant and profitable one. Visiting and sojourning brethren in Stockton should always attend the A. O. U. W. meetings, and enjoy the best evening of the week.

Mt. Hamilton, 43, San Jose.

We had the pleasure of visiting the brethren of Mt. Hamilton Lodge, at San Jose, on Wednesday evening, September 28th. It being fair week, there was rather a small attendance, but, as usual, there was work on hand. The M. W. degree was conferred on one candidate, each officer being at his post and rendering the work, without the ritual, letter perfect, not a skip or mistake being noticeable in any one of the officers. The efficient Master Workman, Bro. Wm. Vinter, has lately lost a daughter of typhoid fever, Miss Eva Vinter, a young lady loved by all, and a member of Magnolia Lodge, D. of H. His son, who is a member of Mt. Hamilton, is now convalescent, and has passed the crisis with the same disease. As in most of our Lodges, it was noticeable and commendable to see the painstaking care of members who had neglected to pay their assessments for the current month. It was a really enjoyable meeting.

Vesper, 62, Livermore.

Vesper Lodge, No. 62, of Livermore, will hold an anniversary social at Independent hall, on Friday evening, October 20th. The programme will consist of addresses and vocal and instrumental music. The social will be participated in by the members of the Lodge and their families and friends.

Resolutions of Respect.

"IN MEMORIAM."

HALL OF KEYSTONE LODGE, No. 64, A. O. U. W.,
OAKLAND, CAL., September 12, 1882.

To the Master Workman, Officers and Members of Keystone Lodge, No. 64, A. O. U. W.—BROTHERS: Your special committee, appointed to draft resolutions of respect to the memory of our late brother, Stephen H Smith, beg leave to report as follows:

WHEREAS, It has pleased the Great Author of our being to remove from our midst our late brother, Stephen H. Smith, and,

WHEREAS; It is but just that a fitting recognition of his many endearing traits should be had; therefore, be it

Resolved, By Keystone Lodge, No. 64, A. O. U. W., that, while we bow with humble submission to the will of the Most High, we do not the less mourn for our brother, who, while yet in the meridian of life, has been taken from us.

Resolved, That it is but a just tribute to the memory of the departed to say that, in regretting his removal from our midst, we mourn for one who was in every way worthy of our respect and regard.

Resolved, That, in the death of Stephen H. Smith, this Lodge laments the loss of a brother who was ever ready to proffer the hand of aid and the voice of sympathy to the needy and distressed of our fraternity; an active member of this Lodge, whose utmost endeavors were exerted for its welfare and prosperity; a friend and companion who was dear to us all, and a citizen whose upright life was a standard of emulation to his fellows.

Resolved, That we deeply sympathize with his bereaved wife and brothers, whose circle is broken by the loss of a good and sacrificing husband and brother. May they obtain consolation from Him, our maker, who alone can comfort those bowed down in grief and sorrow.

Resolved, That, as a mark of respect to our deceased brother, the charter of this Lodge be draped in mourning for 30 days; that a copy of this preamble and resolutions be forwarded to the family of deceased; also be spread upon the records of this Lodge, and that a copy be furnished the PACIFIC STATES WATCHMAN for publication.

CHAS. E. ALDEN,
ROBERT GAY,
HENRY MORETON, } Com.

THE Order now numbers about 111,000 members in the United States and Canada. We are even with the Knights of Pythias numerically, and rank fourth among American fraternal societies. The Knights of Honor are about 15,000 ahead of us, and the Legion of Honor a long way behind. In California our Order ranks second, the Odd Fellows being 7,000 ahead, and the Masons 2,000 behind. In another portion of this paper will be seen the estimated membership of the various Orders, both in the United States and in California.

AN interesting and successful district meeting was held with Franklin Lodge, No. 44, on Friday evening, by District Deputy Poland.

Select Knights.

At the last session of the Supreme Lodge, Rep. Forde, of Kansas, presented the following resolution, which was adopted by a small majority:

WHEREAS, There has been instituted within the United States an organization known as the "Select Knights of the A. O. U. W.;" and,

WHEREAS, None but Master Workmen in good standing in our Order are eligible to membership in said organization; and,

WHEREAS, Good standing in the "Select Knights of the A. O. U. W." is made contingent upon good standing as a Master Workman in our Order; and,

WHEREAS, The said organization is a great help to us as an Order in inducing young men to join our Order; therefore, be it

Resolved, That this Supreme Lodge recognize in the Select Knights of the A. O. U. W. an agency for good in our Order, and we wish for it continued prosperity.

Report of Committee on Medical Examinations.

At the last session of the Supreme Lodge, Supreme Foreman Fish presented the following report from the Committee on Medical Examinations, which was adopted:

CINCINNATI, O., June 9, 1882.

To the Officers and Members of the Supreme Lodge, A. O. U. W.:—Your Committee to which was referred various documents from Reps. Osmond and Askew have had the same under consideration, and beg leave to submit the following report:

Item 1. In the matter of Document No. 13, referring to chemical analysis of the urine, we deem it unnecessary to subject every candidate of the Subordinate Lodges to this additional expense; but would recommend that when the probability of kidney disease exists in the applicant, or has appeared in his ancestors, the medical blank should call for examination of urine.

Item 2. In the matter of Document No. 15, we would recommend that Section 5, Article X, Supreme Lodge Constitution, be amended by inserting after the word "same" in the fifth line, "if approved," and adding as a new section to be known as "Section 6., viz., 'Whenever the Supreme or Grand Medical Examiner shall disapprove the examination of an applicant, he shall place the same on file in his office and notify the Lodge forwarding the same of his action thereon.'"

Respectfully submitted,
M. W. FISH.
HUGH DOHERTY,
FRANK J. MOSES.

A Costly Lesson.

A death occurred last month which "points a moral" that all should heed, and members of the Order especially will do well to learn the impressive lesson it conveys. A man doing business on Main street, near Second, was a member in good standing of the A. O. U. W., the Knights of Honor, and the Senior Class of the Golden Rule, his certificates calling for $2,000 in each Order, or an aggregate of $6,000. This was quite a snug sum to leave to his family, and would have given them a good capital to go into business on in case of his death; in fact, would have been such a start for them as would have substantially secured their success.

But one day a smooth-tongued and plausible agent of a life-insurance company got into his confidence, and persuaded him to withdraw from all three of the Orders, and take a policy in the company. The deluded man found the cost so great that he took a policy for only $1,500, but was induced by the agent to believe that a claim on the company for this amount was worth more than all the claims that could be piled up against the Orders.

The result may easily be anticipated. Last week, only a short time after making the change in his insurance, the man died, after a brief illness, and the widow and children are left with a policy of $1,500, which, it is not impossible, it will cost them something to collect, if they get it at all, instead of the $6,000 they would have had if the deceased had retained his membership a little while longer, which he could have done at the cost of only a few dollars. His folly in failing to do so has caused a clear loss of $4,500 to his family.

This is only a sample case of many. Scarcely a week passes but we hear of similar cases. Yet people do not seem to learn anything from the experience of others, and when anything of that kind occurs in their own experience, it is, of course, too late to be of any benefit to them or to their families.—*Knights' Journal.*

WE hope that officers and members of Lodges in the State will continue to send the WATCHMAN accounts of any festivities, entertainments or special meetings held in their respective localities. We invite all who love the Order to write us frequently, for such communications are always acceptable, and will be used in some form. We cannot have reporters everywhere very well, and must depend to some extent on friends of the WATCHMAN to help us out with occasional letters.

THE Ancient Order of United Workmen is the best of all Mutual Aid Societies, and will remain so. Its plan of organization is well considered, its aims noble, and it must continually become stronger and more popular.

The Collapse of the Knights of the Golden Rule.

We judge from published statements recently made by officers of the Knights of the Golden Rule in this city that the Order is about to repair to the graveyard, where its predecessor and parent, the Independent Order of Mutual Aid, lies buried. It does not seem possible for a society which has become as embarrassed as this organization seems to be, and in addition is torn by dissentions in its own ranks, can long survive. It follows its parent to an untimely grave, because of inherited defects in its constitution and want of proper protection against the weather, or, in other words, because its plan was defective, and proper care was not exercised in admitting new members.

We may enlarge on this a little. The weak spot in the plan was the provision for the repayment to the beneficiary of all assessments paid by the deceased. It is not possible for a society to live long and carry out its promise to give something for nothing. If a man wants insurance he must pay for it, and it is nonsense for him to expect that he can keep insured and get back all he pays. It would be worse than the problem about the nails in the horse's shoe, that Sam Weller so pathetically alludes to. We believe that it is only a question of time for the failure of every Order which attempts to do such a preposterous thing as to promise to return all assessments paid by the assured.

Then the Medical Examiners of the K. G. R. must have been grossly neglectful of their duties to have admitted so many imperfect lives. If this was not true, why was the death rate so unprecedentedly large that the Order is swamped at once when it finds that it has the multitude of losses to pay. The society was designed to build up specially in the South, and its greatest membership is in the States south of the Ohio. The result cannot increase the confidence felt in this part of our country, as far as its healthfulness is concerned.

We cannot condemn too much the concealment which, apparently by the connivance of the principal officers, was practiced on the membership. No Order ought to fear the truth, for it can only thrive when nothing is hid from the light. In the K. G. R. this weighty truth seems to have been lost sight of, and the consequences are sad enough.

We are sorry for the misfortunes of this Order, for it will throw a certain amount of discredit upon the other Mutual Aid organizations of the country. The old-line insurance companies will be quick to take advantage of the opportunity thus afforded to point a moral to our disadvantage. But there are good Orders which must live for a long time, for a century or more, if they continue to be honestly conducted. Among these latter is the Ancient Order of United Workmen, whose foundations are rock and whose structure has been wisely builded. It will and must endure when other flimsy edifices have been swept away.—*Overseer.*

SOME of our exchanges seem to take a great fancy for the Select Knights; one, in particular, says the "Select Knights is an auxiliary association of the A. O. U. W., and at the last session of the Supreme Lodge received the full endorsement of that body as an agency for the good of the A. O. U. W." The facts in the case are that the Supreme Lodge gave them a "slap-in-the-face" recognition. The resolutions, taken all together, amounted to nothing but a mere matter of courtesy; to speak plainly, it was none of the Supreme Lodge's business, but, as a matter of politeness, that body endorsed the resolutions, simply recognizing them to be in existence as an agency for the good of the Order, by a bare majority of 86 to 61.

IT will create no great amount of wonder in our minds if there is considerable indignation in the ranks of the American Legion of Honor at the way in which the Supreme Council have appropriated to themselves such unheard of salaries. The Supreme Commander and Secretary are to receive $3,000 a year, hereafter, and the Supreme Treasurer, $2,500, and the members of the various committees, from $100 to $400 each; the Trustees, $500 each. The office of Attorney to the Supreme Council was created, and salaried at $600.

IT is certainly a bad proceeding to let the Medical Examiner's blank fall into the hands of applicants. If the applicant is intent on fraud, which it is about the whole and only duty of the Medical Examiner to prevent, the Examiner's form is just the thing over which the would be member wants to "cast his eagle eye." If the applicant is a healthy man, he need have no fears of being confused or embarrassed by a medical examination.

BRO. G. W. MAXON, of Pride of Butte Lodge, No. 69, who is general agent of General Bidwell, and was in charge of the exhibit of the Chico ranch, at the State fair, and Stockton District fair, made for himself a host of friends by his urbane and courteous manner to the thousands of visitors who called to see this meritorious display of cereals, fruits and vegetables.

SPARTAN LODGE had one of their uproarious good times on Friday evening. If members of the Order desire to witness the workings of a model Lodge, let them drop into Spartan Lodge some evening.

Birth of Life Insurance.

Life insurance had its birth in the year 1706, and was ushered into existence in the city of London, England. A social insurance association was organized, and received the name of the Amicable Life Insurance Society. Its plan was to insure old and young, sick and well, at a uniform rate and entrance money. Its plans being defective, it perished in 1708. In 1731, the Recorder of the city of Paris, France, formed a company for the purpose of conducting a life-insurance society. It was christened with great pomp and splendor, characteristically, "The First Memento Mori, La Belle, France." The French Assembly did not believe in death money, and, with the usual consistency of the date, decreed the company unlawful, and the same disbanded in 1732. One year later the insurance contagion had wended its way to the German empire. In the city of Frankfort an association was formed for conducting a life insurance business, managed by a select committee, who were known as directors. As long as the directors were honest and faithful the association prospered, but as this was in the days of reliance upon men's word and memory, without a system of books or accounts, and as time elapsed, at a called meeting of the directors, the balance-sheet taken from the memory of the directors was so disastrous to the financiers of the company that it failed. The first insurance association in the United States was formed in Philadelphia. It was chartered it 1752, and was known as the "Contributionship of Philadelphia." Its plans were mutual, and had for their object the aid of its members in case of loss by fire. Following the organization of the first fire-insurance company, the city of Brotherly Love gave birth to the first life-insurance organization in 1769, under the cognomen of the "Corporation of Insurance on the Life of the Clergy," being a limited institution for insurance on the lives of clerical gentlemen. This institution is still in existence, and it may, therefore, be said that the first successful life-insurance company was established in the United States.—*Cor. K. of H. Standard.*

MEMBERSHIP.—The following table will show the membership, in round numbers, of the most important fraternal societies of the United States and Territories:

Masons	560,000
Odd Fellows	460,000
Knights of Honor	125,000
Knights of Pythias	111,000
Workmen	111,000
Legion of Honor	52,000
Royal Arcanum	38,000
Red Men	29,500
Chosen Friends	20,000
Druids	13,000
Foresters	11,000

The following will show the membership of the fraternal societies of California:

ORDER.	LODGES.	MEMBERS
Odd Fellows	270	22,000
Workmen	220	15,000
Masons	220	13,000
Ind. Chosen Friends	65	5,600
Knights of Pythias	66	5,000
Knights of Honor	52	4,360
Legion of Honor	90	4,000
Chosen Friends		3,500
Patriotic Sons	24	2,500
Red Men	26	1,600
Foresters	16	1,500
Druids	29	1,500
Native Sons	11	650
Total Members		80,150

A LIBRARY.—Among the declared objects of the Order is "to maintain a library, where practicable." So far as we have heard, no Lodge in this State has yet undertaken this part of their work, but Girard Lodge, No. 10, proposes to take the lead. In this Lodge there is a committee on entertainment. At a recent meeting this committee announced as a subject for discussion, "Can We Start a Library?" Several brothers agreed to speak on the subject. The result was that, at the conclusion of the talk, a committee was appointed to devise a plan to start a library for Lodge use. The plan agreed upon is this: At a stated time each member of the Lodge will contribute one book, which are to be put upon the shelves, making a start of 85 books, and at the meeting when this is done pledges will be asked of the members to contribute a certain number of books per year. The library will be under the control of a library committee, and will be exchanged only on Lodge nights. Such a library can be conducted without becoming a burden, and can be made a very useful part of the Lodge's work.—*Kansas Workman.*

NEW YORK.—All the secret societies of New York which pay weekly, sick or death benefits, now see the necessity of standing by each other and working for the repeal of the obnoxious and ruinous insurance law passed at the last session of the New York Legislature at the instance of the old-line insurance companies. Unless this law is repealed, the effect will be to wipe out all the fraternal societies in the State. The Orders in the other States should be on their guard.—*Kansas Workman.*

PROVIDENT WORKMEN.—An inquiry into the primary objects of the Ancient Order of United Workmen has revealed the gratifying fact that they are first, mutual insurance against poverty and want of the family of a member in case of his death, and second, but only incidentally, social improvement and pleasure. How much a feeling of security against future pecuniary ills has to do with the happiness of every person, it is not necessary to point out.

The Mechanics' Institute Fair.

Few persons appreciate what such exhibitions do for the community. It is not a mere matter of amusement, or one of advertisement that is accomplished. The city and the State are benefited in equal degree. It shows what the workers are doing, and what they have done. It shows that there are men among us who can do the skilled work that is done elsewhere, and do it as well, too. It illustrates what can be done in the way of manufactures, even in a comparatively new manufacturing region. We are shown a variety of products which would do no discredit to a community much older than ours. In a practical manner is brought before us the ways and means in which so many of the people among whom we live occupy their hands and earn their daily bread, for the results of this labor are here.

In some respects, the fair of this year excelled its predecessors. In one very important particular was this noticeable, and one illustration will suffice. The machinery department, which has always been a prominent feature of these exhibitions, has always contained more or less imported articles, but this year, nearly everything displayed was of home manufacture. It is unnecessary to go into details, but the fact remains that this important department was an illustration of what can be done in the line of mechanics. It was by no means large or very full, but most of what was shown we made ourselves, which is much more satisfactory to reflect upon than if the machinery had been four times as plentiful, and all imported.

The public should recognize and appreciate the fact that the managers of these exhibitions are doing really a service of value to the entire community in carrying them on. As to the exhibitions themselves, the words of a prominent speaker of this city in referring to them are worthy of repetition: "Such exhibitions, and the increasing interest taken in them, evidence a growing improvement in the tastes and morals of the people. It is a favorable omen when so many citizens find substantial pleasure in such an entertainment. There was a gigantic structure in the heart of imperial Rome, erected for the entertainment of the people, but it was devoted to disgusting contests between savage men and beasts. Our crowds gather to admire, instead, the exquisite handiwork of labor and creations of thought. This is an encouraging illustration of the progress and improvement of the race. But we need not go so far back for evidence. Such spectacles are supplanting the boisterous and vulgar holidays and festivals which are fresh in the memory of many of us. There is an invigorating and inspiring hope and promise in this. We are prone to repine that in public and political affairs so little regard is paid to moral considerations. We are apt to complain that the prizes of life are not distributed according to merit. But the bottom fact is that all things move forward by a steady march, and that step by step we approach the perfect goal. 'The world is gray with morning light.' Such exhibitions ennoble our ideas of man and the nobility of his work. He is more than a moving machine. Witness the splendid fabrics of his head and hand, the implements and improvements for saving time and toil. As we see what human skill can evolve from dull wood and iron, it would seem as if man had acquired the power which the gods were fabled to have given Midas, to turn the dead wood and black metal to gold at his touch. We stared amazed before the creative power of the human mind. The wonderful contrivances, and curious mechanisms, and subtle combinations, are the proofs of his immortality. The inventor cannot be a mere machine. The architect must outlive his work. Christopher Wren must survive St. Paul's cathedral. An ingenious and powerful piece of mechanism is in itself a proof of the worth and superiority of mind, of its alliance with God, and its immortal and imperishable destiny. The great poem may lift us to a higher plane; but who can stand upon a platform when the iron horse, whose sinews are made of steel, and whose provender is fire, 'black cavalry of commerce, with steam-flecked flanks,' as the silver-tongued orator of Arizona described it, when he was so glad to see it opening up that sterile land to civilization and the day—who, I say, can see him thundering down the grade without having excited in him emotions of wonder akin to worship?"

GOOD TEMPLARS.—The Grand Lodge of this Order will meet in San Francisco on the 3d inst., at Laurel hall, Shiels' building, No. 32 O'Farrell street. From present indications, this will be one of the largest sessions ever held, and as the work to be performed is of a very important character, it is hoped the Lodges will send their ablest representative members. On Monday evening, the 2d, the Lodges of San Francisco will tender a reception to the members of the Grand Lodge at Dashaway hall, on Post street, which will doubtless be a very attractive affair. The headquarters of the Grand Lodge will be at the Baldwin hotel during the days it remains in session. Representatives and visitors should provide themselves with regalia, as the Grand Lodge will not furnish the same.

THE *Reporter's Journal*, a paper published in the interests of the seceding Grand Lodge of Iowa, pays the WATCHMAN a splendid compliment in its last issue.

The Spirit of the Order.

Exchanges furnish us with further evidence of the pleasant effect of recent social celebrations in several States, like those in Pennsylvania and California, where the families and friends of members have participated in the festivities of our Fraternity. It is gratifying to witness the increasing frequency of these celebrations, and it is worthy of special notice that wherever these kindly influences prevail, our beloved Order flourishes most.

The wives, daughters and "cousins" might well reprove the brethren who could prove lukewarm in support of an institution which thus practically teaches lessons of peace and good will.

True benevolence, the great animating principle of our Order, is manifested not alone by relieving the widows of deceased brethern—though that is in itself a blessed mission—but also by promoting friendly intercourse and generous sympathies between all classes of society.

The interests of the Order are the best promoted by rendering it attractive and satisfactory, not only to its members, but to the community; and this attraction and satisfaction can only be permanently produced by making its influence felt in promoting the spread of useful knowledge and showing practical evidences of humane and kindly sentiments.—*Wisconsin Advocate.*

A NEW DIRECT PROCESS.—Mr. J. C. Bromfield, of Brighton, has patented a new process for making iron and steel direct from the ore, and which, we are assured, has been spoken favorably of by no less an authority than Sir Henry Bessemer. Besides the main features of the direct transition from the ore to a high class of metal, either iron or steel, the sub-products, notably the furnace gases, are by this process saved and utilized. Mr. Bromfield grinds to powder coal or coal dust and iron ore, or "blue billy," in proportions varying in the nature of the materials; and, when much silica is present in the ore, he adds alumina with or without calcium oxide or carbonate of lime. At the same time he extracts a mucilage by hydraulic pressure from seaweed steamed in a close jacketed boiler. The powder and mucilage are internately mixed with Portland cement, carbonate of lime, magnesia lime, or calcium oxide, in proportions varying with the nature of the ore, and this mixture is formed into bricks by a powerful press. When dry, the bricks are coked in a retort, whereby their sulphur and phosphorus are driven off. The gases are led through a hydraulic main and utilized, either for maintaining the combustion or for illuminating purposes, in which case the by-products are also turned to account. After coking, the bricks are ready for the smelting furnace, and, as it is claimed, produce a high class of metal, from which practically the whole of the phosphorus and other injurious elements of the raw material have been expelled.—*Iron.*

MR. G. WEISS, of Mulheim, has patented in in Germany a new method for manufacturing driving belts with sailcloth. The sailcloth, woven in the ordinary breadth, is folded two, three, four, and even eight folds, according to the breadth required for the belt and for its strength. The folded cloth is then sewed and covered with other cloth of the same material, which isalso sewed across so that the seam comes between those underneath. By this outside covering and sewing, the belts are said to be stronger and more durable, as the inside seams are protected.

IN COURT.—A case is now pending in the courts which is of great importance to all fraternal societies, as it involves the question whether the funds of a subordinate Lodge belong to the Lodge itself, or to the Supreme Lodge or some superior tribunal. The suit in question will be brought by the Old Order of Chosen Friends against the Independent Order for $3,800, which was paid into the Grand Council of the latter Order from subordinate Lodges, and from funds accumulated while in the Old Order.

THERE is a secret Order in the Eastern States called the Sons of Columbia, numbering some 800,000 members, 80,000 of whom live in New York. Under the auspices of the Order, a line of passenger and freight boats have been put on the Hudson river, with merely nominal rates, to test the question as to how low rates can be charged, and yet prove remunerative. Judge Jerre Black and Ben. Butler are attorneys for the company.

THE Ohio jurisdiction has suffered from excessive beer drinkers and saloon keepers. The new Medical Examiner of that jurisdiction evidently knows what his office demands of him, and is making strenuous efforts to guard the welfare of the Order there. He says that Medical Examiners have good reason, and ought, almost without exception, to reject the two above classes.

NOE VALLEY LODGE, No. 185, will move to their new hall, situated on the northwest corner of 24th and Church streets, on the 1st of October, and they have invited the Lodges of district No. 4 to meet with them on the 10th. All members of the Order are also cordially invited to be present.

Spontaneous Combustion.

The growing frequency of fires, which can be referred to nothing but spontaneous combustion, has set the insurance companies, and many other parties, quite on the *qui vive* to search out, as far as possible, the many conditions under which such occurrences may take place. Among others, we note below two conditions, which, until recently, were scarcely thought of.

Spontaneous Combustion of Lampblack.

Lampblack, if packed in a leaky cask, when freshly papered, condenses the atmospheric gas on its surface, which, owing to the porous nature of the substance, is very large in proportion to its weight. In condensation, the gases give out a certain amount of heat, which, under favorable circumstances, is sufficient to cause the ignition of any very inflammable substance accidentally present, and this, by combining with the condensed oxygen, liberates heat enough to cause the ignition of the vegetable black, which, when once started, soon spreads, until the contents of the cask become red-hot. The spontaneous ignition is not infrequent in many large carriage factories, and builders' shops have been destroyed solely from this cause. So well is it known now, that various devices are adopted to obviate the chances of disaster. A large London firm packs the lampblack in half-pound packages, done up in brown paper, and then packed in casks. The use of printed paper would insure ignition from the absorption of the oil in the printing ink by the lampblack, generating gas which would speedily produce ignition.

One among many instances of well-attested cases of spontaneous ignition occurred at a large carriage works at Grantham, England, in a shop far away from fire, or the chances of a spark. The paint-shop, says the *English Mechanic*, was gradually illuminated on a mild summer's evening during daylight. It was noticed through the workshop windows, and seen to be a tub of loose lampblack consuming the cask. It was easily carried out onto the grass to finish its work. It was thought that, being near the grinding-paint stone, some oil had been splashed into it, or an oily rag had been dropped into the lampblack. The secret was soon found out by the pallet knife being among the ashes of the cask, having been carelessly dropped in with some wet paint on it, or even without wet paint—the dry, oily paints which accumulated on the blade, near the handle, would be sufficient to cause ignition. It is not the large quantity of oil, but the small quantity, which is the cause of it. This is so well known that some coach-makers, when they receive lampblack, put it into a sound cask, and pour enough linseed oil into it to saturate the whole.—*Exchange.*

Spontaneous Combustion in the Process of Drying.

A recent fire on the premises of William S. Slater, in Rhode Island, which did some injury to his mills, brings into conspicuous notice the spontaneous combustion of yarn dyed certain colors while not fully recovered from the operation of the dry-room. The statement is made by Edward Atkinson, that during the past four years the several mutual companies of New England have suffered a loss of more than $300,000 from spontaneous combustion of dyed cotton goods in dry-houses or finishing departments. Some heavy losses have occurred from this cause where aniline, cutch, logwood, iron and other common substances have been used for dyeing, without the use of oil of any kind.

There are several colors produced in calico print works and dye-houses which are sources of danger from combustion. They are the colors developed after the materials have been applied to cloth or yarn by chemical reactions in the tissues, with the production of heat, and also by the aid of heat applied to the fabrics in the aging boxes and chambers. Spontaneous combustion in black, brown, slate, and pearl-dyed woven fabrics and yarn is frequent. The conditions under which fires have occurred seem to have been where cloth or yarn recently dyed or dried over dyeing cans has been rolled or piled hot or slightly damp, either of which conditions is hazardous as regards spontaneous combustion.

Some time since, Edward Atkinson suggested the following precautions to be observed by members of the company of which he is president: Provision should be made for a thorough cooling and drying of the fabrics before folding, rolling, or piling in bunches; dyed fabrics must not be allowed to remain in compact masses in an unfinished state over night, but have them starched, cooled, and finished as quickly as possible; dyed goods or yarn should not be piled in large quantities, but spread over a sufficient surface to permit them to cool readily; a suitable place of deposit, as nearly fire-proof as it can be made, should be provided for keeping goods over night that are liable to spontaneous combustion, if such keeping cannot be avoided.—*Manufacturer and Builder.*

KEEP your WATCHMANS on file and have them bound. They contain much valuable information. As a champion of the pioneer co-operative insurance organization, one of the outgrowths of the present century, and as an expounder of the true principles of the Order, it cannot be over estimated.

BAY VIEW LODGE paid a fraternal visit to Golden Gate Lodge on Thursday evening. An enjoyable time was had.

New Friction Gear for Wire Ropes.

The rapid wear and tear of steel-wire ropes for winding at mines, has always been a constant source of complaint, being due, in a great measure, to the sudden checking of the movement by the use of friction clips, especially when there is a heavy strain upon the ropes. Since the latter are by no means cheap, it is important to treat them in such a manner as to keep them in working order as long as possible, and the preservation of wire ropes has, consequently, long been a momentous matter for the consideration of mine owners and mechanical engineers.

An invention has, however, recently been patented, which promises to be of considerable value to all interested. It relates to improvement in brakes for steel, wire and other ropes, and is of more than ordinary interest to those using them. The invention is designed to check the rope without any of the severe punishment caused by hard compression or attrition, and without sensible wearing friction on the rope. For this purpose a brake is fixed, not on the rope itself, but on mechanism connected with V pulleys, round which the rope is twined, forming a figure 8. The friction on the pulley is so great, by reason of the turn round each pully given to the rope, that no appreciable relative motion can take place between the two. As the brake, however, is applied on the axles of the pulleys, or rather on brake-wheels on these, or on one of the axles, whatever friction is expended on stopping the rope, is spent on the brake-block or the belt and brake-wheel, and not on the rope.

The apparatus is simple and effectual. Upon the overhanging ends of two shafts, having bearings in a stout frame, four pulleys are placed, two on each shaft, connected by spur-gearing. On the other ends of the shafts are placed two brake-wheels with a single brake-strap, so arranged that a man, by means of a lever, can put a sufficiently powerful strain on the brake-strap, so as to give the brake the requisite power. Upon one of the shafts is a worm-wheel, or first wheel of other train of gearing, and a clutch, so arranged that the gearing can be connected with the shaft at a moment's notice.

The rope is passed from a reel through a guiding eye on to one of the other pulleys, around which it passes. It is then wound around the other outer pulley in the opposite direction, then around the opposite inner pulley, the direction being the same as in the first instance, and finally around the remaining pulley in the same direction as round the second pulley. The brake can be applied gradually or suddenly without any more friction or severe compression on the rope. By putting the clutch into gear, the apparatus becomes a winch, and, the brake being thrown out of action, the rope hauled in. In lowering heavy weights the brake can be applied, the clutch thrown out of gear, and the descent regulated with the greatest nicety by hand-pressure on the brake-lever. The apparatus is no more severe on the rope when the brake is applied than at other times, excepting, of course, the increased tensile strain necessarily entailed when the lowering of a heavy weight is checked, and while in other winding apparatus, there is the riding of one turn over the other, to the great injury of the rope.

Employment of Iron in the Arts.

Iron is employed in the arts in three conditions: 1. In that of cast iron; 2. in that of wrought iron; 3. in that of steel. The 1st and 3d of these substances consists of iron combined with carbon; in cast iron with more carbon than in steel. Wrought iron is the metal nominally without combined carbon, but it is rarely obtained in practice so pure as to be absolutely devoid of a small proportion of carbon. When the molten stream of iron comes from the furnace, it is not in a state fit for the forger or the maker of steel. For this purpose it requires to be refined—that is, to have its carbon burnt away in a furnace called a finery, and, still further, in the process technically called puddling. Intense heat and atmospheric air form the means by which the superfluous carbon is discharged, and the iron left in a comparatively pure state. The further process of the metal is simple enough. It is submitted, while yet incandescent, to the operation of enormous hammers, which knead it into a tenacious mass. This is then taken to rolling machines, which reduce it to the requisite size and shape, whether of bars or sheets. For the production of steel, a still further series of processes become necessary. Cast steel is produced by melting the bars of blistered steel in crucibles of fire-clay and then pouring the fluid metal into ingot molds.

DESERT LANDS.—The General Land Office at Washington has made the following ruling: "Lands which produce wild grass, but not in sufficient quantity to pay for cutting as hay, are desert lands, and may be entered as such; but when the character of the land is such that a crop of hay may be produced without irrigation, such land is not subject to desert entry."

A COUNTERFEIT silver half-dollar, made of babbit metal and glass, has been received by the Treasury Department at Washington.

THE Connecticut Supreme Court of Error has decided that women are eligible to admission as attorneys, and their sex is no bar.

Medicine Taking.

After more than 30 years of medical practice, I am fully convinced that the masses take much more medicine than is needful. I will go further, claiming that an utter disuse would be less dangerous to society—an extreme we need not adopt—than the present, reckless employment of all sorts of drugs, with but little thought or care about the nature of the drugs used. While there are a few ultraists who ignore all drugs, as they oppose all existing customs, from a mere love of oddity, it may be, there is a strong probability that enough and more than enough of "patent medicines," etc., will be taken, at least, till the whole community shall learn that "an ounce of prevention is worth a pound of cure."

Many "give the reins to their passions and appetites," with the delusive idea that they can do just as they please, indulge all of the appetites, like the swine, or worse. Encouraged by the quacks who say, "Eat what you please while taking this marvelous medicine," they may not know any better, and then expect to escape the just penalty of their sins of gluttony, etc., by taking medicine.

Though medical treatment may modify diseases, mitigate human sufferings, doing the best that can be done under the circumstances, the evils of wrong doing cannot be wholly obliterated. The Bible statement, "The soul that sinneth shall die," might have the same significance when applied to the body. Like the laws of the "Medes and Persians," those of the body never change, are never abrogated, and know no forgiveness. The "pound of flesh" must be granted, since no one can put "coals of fire in the bosom, and not be burned."

It is not the mission of drugs to abrogate God's laws of the body, but to co-operate with the recuperative forces of that body in the removal of existing evils, after the penal authority has asserted its sanctions, to deter from future violations of the sacred conditions of health and vigor, for a moral effect. Prevention is not only easier than cure, but far safer and more economical. The intelligent and honest physician orders drugs when he thinks it right and proper to do so, and then the patient should unhesitatingly take them, or discharge the doctor. The less honorable man sometimes orders them when not needed, simply because of the pressure brought to bear, well knowing that the ignorant will discharge him, and get one who will heed the whims of the sick, thinking it preferable to give some inert medicine rather than give place to a reckless and unprincipled quack.

But the great danger in medicine-taking is the popular custom of taking any nostrum that may chance to be advertised (printers' ink sells anything), neither knowing the nature of the disease nor the compound offered for sale. There is a recklessness in this matter which we do not practice in other respects. Most of this class of empirics know enough of the human system to give some of the symptoms usual in almost all diseases; so that all may find something to resemble their symptoms, and then give one trial, at least.

All should know that medicines, vegetable as well as mineral, are poisonous, at least in their more concentrated forms. As such, they should be employed with the same care that we use other poisons. It would be no more foolish for one to enter a drug store with a prescription from a reliable physician, and then, in the dark, take the contents, in part, of the first bottle reached, than to swallow the various nostrums offered for sale at the groceries, wrapped in an abundance of recommendations, which may be purchased at the small price of one dollar a dozen. It is a matter of but little importance that these nostrums are pronounced "purely vegetable," even if true, since the most poisonous substances in the world are of vegetable origin. Metallic substances, used for medicines, are more objectionable on account of the difficulty in eliminating them from the system, than from their simple, poisonous character.

I repeat, it is injudicious to take medicines at random. It is far safer to do nothing, trusting to nature's wonderful and gracious efforts—always in the right direction—than to "leap in the dark," taking, we know not what, or for what. If human health is of any value, it is of sufficient worth to justify care, intelligence, and seeking advice from those who are supposed to be well-informed in such matters, on the same principle that a "wise builder" has a plan, seeks good materials and good workmen.—*Dr. J. A. Hannaford.*

NEW APPLICATION FOR ULCERS, ETC.—Medical practitioners are employing a new application for ulcers, sores, etc. They take a hundred parts of plaster of Paris, finely powdered, and coal tar from one to three parts, and mix in a mortar; add olive oil enough to reduce the mixture to the consistency of ointment, and preserve it for use in a close vessel. The mixture is of a dark brown color, and has a bituminous smell. If applied to an ulcer, or running sores of any kind, no matter how offensive, it not only absorbs pus and destroys its fetid smell, but also dispenses with the necessity of employing lint. The oil binds the powder, without dissolving it, so that the compound retains its absorbing quality when placed in contact with a suppurating sore, and it never dries sufficiently to become inconvenient to the patient by its hardness.

THE damage by the floods in Italy and Austria is 2,000,000 florins.

Honesty in Building.

Honesty is, perhaps, more abused than that of any other ethical or intellectual virtue. It is applied as a cloak of ignorance, as the apology for bad manners, or even for worse purposes. The man who, without regard to time, place or company, gratifies his vanity in blurting out his crude notions on any possible subject, is too often called an honest fellow. In fact, he is only so ill-bred and so ignorant as to be supposed incapable of deceit. That may be so, or not. We have known cases—and no doubt some will recur to the memories of most of our readers—in which a man may be held to have purposely adopted the disguise of incivility, have lived for years under the title of "Honest Tom Speakforth," and at length, generally too late for human retribution, has been discovered to have left behind him only an unexplained deficit, or sometimes an equally unexplained family of children. The honesty which causes this kind of pitying, or even of affectionate regard, is simply that, so far as it exists at all, of not telling lies, or rather of not putting matters in such a light as may be most agreeable to the sympathies of others. This kind of honesty is sometimes applied to building. A man will declaim against the importance of stucco, and will give you hideous brick work in place of it. "Honest brick and mortar," he calls it. But he omits to mention two points. One, that the imperfections of English stucco are mainly due the very rude and imperfect way in which we treat our lime. Those who are most familiar with the use made of this material in Italy, from scagola work to the preparation for fresco painting, will be aware that this is the case. Secondly, while there is a real beauty in brick work, it requires so much care in the selection of clay, and in the making, burning and laying of bricks to insure it, that noble brick work is almost a lost art in England. Our honest friend, therefore, only gives the cheapest and and meanest material that comes to hand, and excuses that slovenliness of his work by calling it "honest."—*The Builder.*

Chaff.

A BOSTON lecturer astonished his audience by bringing down his fist on the table and shouting: "Where is the religiosity of the anthropoid quadrumana?" If he thinks we have got it he can search us. We never saw it in the world.

THE horse has been spoken of as the noble animal; but the instantaneous photographs which have been made of him threaten to bring him into well-merited contempt. You can't respect an animal which looks like a kangaroo with a broken back.

A LITTLE six-year-old boy went into the country visiting. About the first thing he got was a bowl of bread and milk. He tasted it, and then hesitated a moment, when his mother asked if he didn't like it, to which he replied, smacking his lips: "Yes, ma'am. I was only wishing that our milkman in town would keep a cow."

RATHER a funny bull was that made recently by a member of Parliament, in discussing the question of trial by jury in Ireland. Becoming excited, he exclaimed: "With trial by jury have I lived, and, by the blessing of God, with trial by jury I will die."

AN ignorant Yorkshireman, having occasion to go to France, was surprised on his arrival to hear the men speaking French, the women speaking French and the children jabbering away in the same tongue. In the hight of the perplexity which this occasioned, he retired to his hotel, and was awakened in the morning by the cock crowing, whereupon he burst into wild exclamations of astonishment and delight, crying, "Thank goodness, there's English at last!"

A New and Cheap Method for Enameling Water Pipes.

Two inventors in Bohemia have patented a direct process for enameling cast-iron pipes, which can be applied to other hollow castings that are made with cores. It consists in simply covering the sand core with the enamel, and then pouring in the iron as usual. The heat of the melted iron fuses the enamel, and it attaches itself firmly to the iron, and detaches itself so completely from the sand, that the enamel is said to be all that can be desired for water pipes and other industrial purposes. In casting sinks, basins, urinals, etc., the enamel can be applied to the sand on that side of the mold which is to form the inside of the basin.

The composition of the new enamel is kept a secret, but is said to differ from the old form in the simplicity of its preparation and the extraordinary cheapness of the materials used, It is so cheap that it has found extensive use in many branches of industry.

In color this new enamel is gray. It will be useful for gas pipes as well as water pipes, because it will make the pipes absolutely tight by this glassy lining. It will be no less useful for soil pipes, which are always liable to corrosion from the gas they contain, but for conveying acid liquors, like mine water, and in chemical works, for sinks and waste pipes in chemical laboratories it should displace lead, glass, or terra-cotta.

THE westward-bound trains on a Georgia railroad have carried over one million watermelons this year to Western cities.

Spontaneous Combustion.

The growing frequency of fires, which can be referred to nothing but spontaneous combustion, has set the insurance companies, and many other parties, quite on the *qui vive* to search out, as far as possible, the many conditions under which such occurrences may take place. Among others, we note below two conditions, which, until recently, were scarcely thought of.

Spontaneous Combustion of Lampblack.

Lampblack, if packed in a leaky cask, when freshly papered, condenses the atmospheric gas on its surface, which, owing to the porous nature of the substance, is very large in proportion to its weight. In condensation, the gases give out a certain amount of heat, which, under favorable circumstances, is sufficient to cause the ignition of any very inflammable substance accidentally present, and this, by combining with the condensed oxygen, liberates heat enough to cause the ignition of the vegetable black, which, when once started, soon spreads, until the contents of the cask become red-hot. The spontaneous ignition is not infrequent in many large carriage factories, and builders' shops have been destroyed solely from this cause. So well is it known now, that various devices are adopted to obviate the chances of disaster. A large London firm packs the lampblack in half-pound packages, done up in brown paper, and then packed in casks. The use of printed paper would insure ignition from the absorption of the oil in the printing ink by the lampblack, generating gas which would speedily produce ignition.

One among many instances of well-attested cases of spontaneous ignition occurred at a large carriage works at Grantham, England, in a shop far away from fire, or the chances of a spark. The paint-shop, says the *English Mechanic*, was gradually illuminated on a mild summer's evening during daylight. It was noticed through the workshop windows, and seen to be a tub of loose lampblack consuming the cask. It was easily carried out onto the grass to finish its work. It was thought that, being near the grinding-paint stone, some oil had been splashed into it, or an oily rag had been dropped into the lampblack. The secret was soon found out by the pallet knife being among the ashes of the cask, having been carelessly dropped in with some wet paint on it, or even without wet paint—the dry, oily paints which accumulated on the blade, near the handle, would be sufficient to cause ignition. It is not the large quantity of oil, but the small quantity, which is the cause of it. This is so well known that some coach-makers, when they receive lampblack, put it into a sound cask, and pour enough linseed oil into it to saturate the whole.—*Exchange.*

Spontaneous Combustion in the Process of Drying

A recent fire on the premises of William S. Slater, in Rhode Island, which did some injury to his mills, brings into conspicuous notice the spontaneous combustion of yarn dyed certain colors while not fully recovered from the operation of the dry-room. The statement is made by Edward Atkinson, that during the past four years the several mutual companies of New England have suffered a loss of more than $300,000 from spontaneous combustion of dyed cotton goods in dry-houses or finishing departments. Some heavy losses have occurred from this cause where aniline, cutch, logwood, iron and other common substances have been used for dyeing, without the use of oil of any kind.

There are several colors produced in calico print works and dye-houses which are sources of danger from combustion. They are the colors developed after the materials have been applied to cloth or yarn by chemical reactions in the tissues, with the production of heat, and also by the aid of heat applied to the fabrics in the aging boxes and chambers. Spontaneous combustion in black, brown, slate, and pearl-dyed woven fabrics and yarn is frequent. The conditions under which fires have occurred seem to have been where cloth or yarn recently dyed or dried over dyeing cans has been rolled or piled hot or slightly damp, either of which conditions is hazardous as regards spontaneous combustion.

Some time since, Edward Atkinson suggested the following precautions to be observed by members of the company of which he is president: Provision should be made for a thorough cooling and drying of the fabrics before folding, rolling, or piling in bunches; dyed fabrics must not be allowed to remain in compact masses in an unfinished state over night, but have them starched, cooled, and finished as quickly as possible; dyed goods or yarn should not be piled in large quantities, but spread over a sufficient surface to permit them to cool readily; a suitable place of deposit, as nearly fire-proof as it can be made, should be provided for keeping goods over night that are liable to spontaneous combustion, if such keeping cannot be avoided.—*Manufacturer and Builder.*

ARCHÆOLOGICAL.—At the late Archæological Congress, held at Tiflis, Prof. Samokvasoff gave an account of his discoveries in the graves near Pyatigorsk. He excavated about 200 places of interment belonging to the stone, bronze and iron periods. In the larger graves, bronze implements were found with the stone ones. As there were in these graves, besides the bones of sheep, several split human bones not belonging to skeletons, he inferred that during the bronze period the people in that part of the Caucasus were man-eaters.

Igneous Meteors.

Observations on meteors, or shooting stars, reported by our readers last week, lead us to present some facts about these interesting bodies, accompanied by an engraving of a notable meteoric display like those which occasionally appear and fill the beholders with awe and admiration.

It is reported that on Wednesday night, August 9th, about 9 P. M., a remarkably brilliant meteor was observed by some of the guests at Highland springs, traversing the heavens in the near west. Its motion appeared exactly in a horizontal line and exceedingly rapid, leaving a brilliant and, as it were, a perfect line of fire in its track through the atmosphere. An unusual number of falling stars were also quite noticeable in the remarkably clear atmosphere of that region.

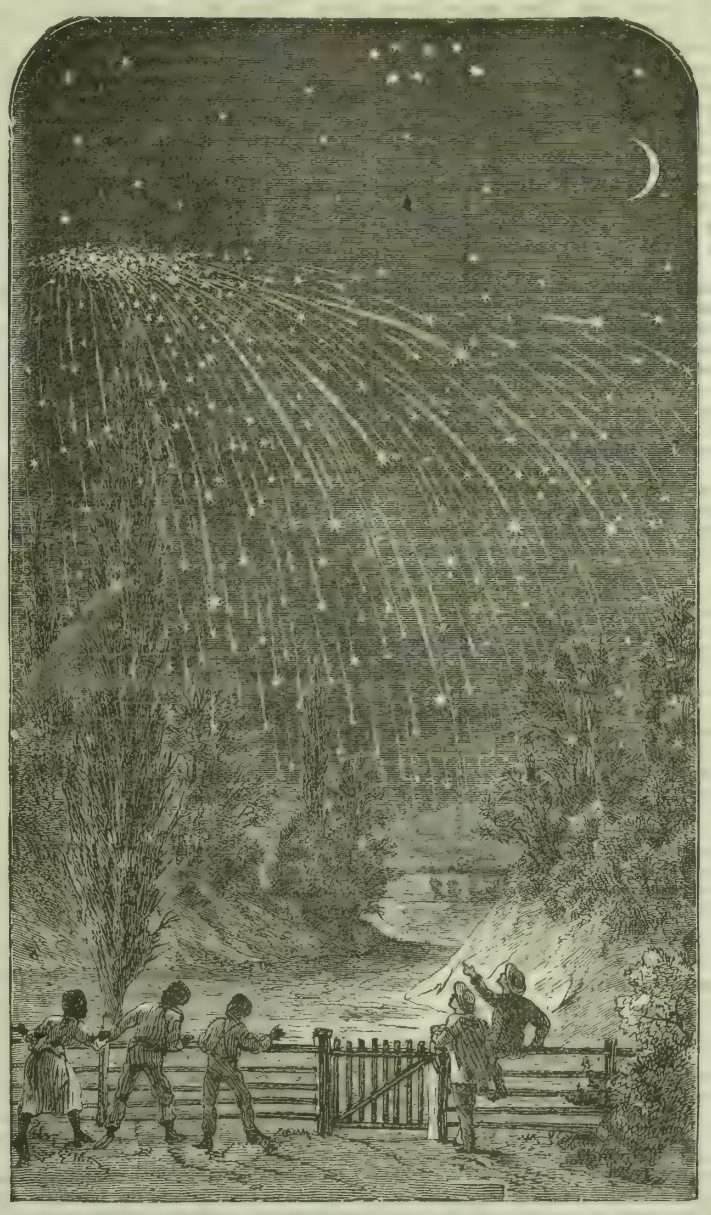
There are meteors of several kinds. The whirlwind and the tornado are termed aerial meteors; fogs, rain, snow, etc., are called aqueous meteors; rainbows, halos, etc., are luminous meteors, and lightning, auroras, etc., are electrical meteors. The bodies which are commonly called meteors are igneous meteors, and comprise shooting stars, aerolites, meteorites, etc. It is of the last class of meteors of which we would speak at this time.

Igneous meteors may be seen on any clear night, if one will watch patiently for them; but at stated times of the year they always occur in unusual numbers and brilliancy. One of these times is during the second week of August—generally about August 10th. They radiate from the constellation Perseus, which is adjacent to the Polar star. Another meteoric period is the second week in November of each year—generally from November 12th to 14th.

It has been determined that these meteors are not seen higher than about 100 miles from the earth's surface, nor nearer than 30 miles. The meteors and their trains have various colors—white, green, blue, scarlet, etc. The duration of the flight of a meteor is generally about one second, but the brighter ones may last several seconds. Sometimes a shooting star leaves behind it a cloud of phosphorescent light, sometimes of short duration, but sometimes visible for minutes, and rare cases have been reported in which the light remained an hour.

Meteors move with a velocity of from 8 to 40 miles per second, the average speed being about 30 miles, or 100 times that of a cannon ball. All the smaller meteors have a solid substance, sometimes of stony composition, sometimes of iron. Concerning the origin of meteors, Mr. Newton, in an article in *Johnson's Cyclopœdia*, says: We may regard the meteoroid as a small solid body describing its long elliptic orbit about the sun, like any comet. The number of such small bodies is so great that every day many millions of them come within 4,000 miles of the earth's center, the number being but little increased by the earth's attraction. They are entirely invisible until, at a hight of less than 100 miles from the ground, they enter air dense enough to resist their motion and create light. The air being compressible, an intense heat is developed directly in front of the body. The anterior surface is, in consequence, melted away, the melted matter being wiped off by the air. This streams back, forming in part the apparent flame and the train of the meteor. Its own firmer constitution prevents the meteorite from like condensation and internal heating, and it therefore proceeds many miles before it is entirely destroyed. Under favorable circumstances of velocity, chemical and mechanical constitution and size, the meteoroid is not entirely scattered, but, breaking up into fragments, comes to the ground in a shower of stones. These stones often show traces of the flow of melted matter, also evidences of successive fractures, and even the partially developed cracks which, with further action, would have become fractures. But for this action of the air in arresting and destroying the meteoroids, we should be intolerably pelted with them. The meteorites are all evidently fragments, not separate formations. They are in the heavens, to some extent at least, grouped in streams along the orbits of known comets, and hence have some common origin with them. The continuity of these streams, the double and multiple character of Biela's and other comets, and the steady diminution of comets in brilliancy at successive returns, seem to argue a continuous breaking up of the comet into fragments by some cause—probably by the sun's heat.

THE *Times* says it is understood the British Consul-General at Alexandria has been directed to inform the Khedive that no capital sentence passed on the Egyptian leaders must be carried out without the consent of Great Britain. Steps have been taken to obtain the services of a competent English barrister to defend Arabi Pasha and other leaders in the revolt.



THE Queen of England regards with satisfaction the fact that the tricycles which have been used by her grandchildren have helped their health.

A CONTRACT has been signed between the government of Portugal and Braam for laying a cable between Lisbon and the United States, touching at the Azores.

The Progress of Civilization.

The onward progress of civilization brings out these two points most conspicuously: 1. The world is getting too small for the material and scientific appliances of mankind. 2. History, science, art, etc., are getting too large for human capacity, meaning thereby for the general study of an individual. All who have lived in the country as children, can recollect how small was the area familiar to them; how great was the awe with which they ventured outside the precincts, and how their minds were exercised with the consideration of how boundless were the forests, wildernesses and spaces beyond. When they grew to manhood, the little space became contemptible. The area was enlarged to the national boundaries, traversed at railway and steamboat speed. So it has been with the world and the race. In olden days nations ventured but little beyond their limits. Travelers crawled over a few hundred miles along a path beset with dangers and difficulties, to return and boast of what they had done. To the mind of the people, the world was a limited space intersected by great and storm-tossed oceans. Now, that the world can be traversed in a few weeks, and a message can be sent round it in a few minutes. Even the sun has become but a slow coach. The storm-tossed oceans were our best highways, but they have given place in the race of competition to the land transit; and soon a trip into central Asia will be but the excursion of a few days. The impression of the globe now conveyed is that of littleness, a growing feeling of confinement and want of space—for after all, what now is 24,000 miles, and that is its utmost girth? If invention continues, this conquest of matter by mind, the feeling cannot fail to increase and to become more generally entertained.

As our mind grows big, and the world grows small, the capacity to grasp the creation increases, though this can never be anything to us but a fathomless well. That the earth should be but a dot in the heavens whirling round the sun, was incredible to people of the middle ages, while to us it appears but a small estate. To them it was so vast that they could not comprehend its insignificance in the universe; to us, as it begins to appear insignificant, we can comprehend its insignificance in creation. All this shows that the mind of man is enlarging; that the food on which it feeds is multiplying; and while that food, notwithstanding the greater mental comprehensiveness, has grown in bulk, to an extent not to be grasped, the globe itself decreases in bulk to the enlarged capacity, to an extent which is beginning to make it appear small.

DISPLAY OF IGNEOUS METEORS OR FALLING STARS.

Tracing the Soul.

Singular Experiments that go to Prove Remarkable Things.

The Berlin *Gegenwart*, of November 15, 1879, contains a report of some experiments made by Dunstmaier to test the accuracy of Jager's theory, that the soul of every man and animal is to be sought for in the characteristic odor exhaled in each case. Dunstmaier, who unites in his own person the physiologist and metaphysician, was, until these experiments convinced him of his error, an outspoken opponent of Jager's views. He is now, however, an enthusiastic convert.

Dunstmaier's method was, no doubt, suggested to him by his familiarity with experimental science. He considered that light and the soul—if the soul is the odor—are both radiated, and that light can be, as it were, collected and fixed by a photographic plate coated with iodide of silver. What body, now, is as sensitive to odors as iodide of silver is to light? Evidently the nerves of smell in a dog. In the center of the laboratory a cage containing 20 hares was placed, and a dog was admitted to the room. He at once made violent efforts to get at the hares, which, of course, in their terror, rushed to and fro in the cage. After two hours of this torture, the dog was killed, the nerves of smell and the mucous membrane of the nose removed and rubbed up in a mortar with glycerine and water. The 20 hares had been exhaling their souls for two hours, and the dog, during all his panting and sniffing, inhaling them for the same length of time. The glycerine might be expected then, to contain a certain quantity of the soul of the hare, the main characteristic of which is, of course, timidity. That this was the fact, the following experiments seemed to prove: A few drops of the extract were administered to a cat; she ran away from some mice instead of pouncing upon them. By the subcutaneous injection of only two cubic centimeters, a large mastiff was rendered so cowardly that he slunk away from the cat. By a similar experiment, in which, however, a young lion in a menagerie played the part of the hare, Dunstmaier succeeded in isolating the soul-substance of courage and in transmitting it to other animals. Still more interesting experiments showed clearly that these "psychotype" glycerine extracts had a decided effect on the human species. Thus, after swallowing a small dose of psychotypic timidity, Dunstmaier had not the courage to believe in his own great discovery. This effect soon passed off, however.—*London Medical Record.*

THE poet who sweetly referred to the "sighing of the winds," should go out West and experience a sighclone.

Recent Progress in Telephony.

Some important telephone results have been lately obtained by Van Rysselberghe, the Belgian meteorologist, whose very ingenious meteorograph was shown at the Paris exhibition last year. He has succeeded in eliminating from telephonic communication through a wire, the inductive action of a neighboring telegraph wire (which gives a crackling kind of noise in the telephone). Moreover, we can employ the same wire at the same time for both telephonic and telegraphic work. Thus, in a recent experiment, a message was sent from Brussels by the Morse telegraph to the directing engineer of telegraphs in Paris, and an oral message sent by telephone was distinctly heard while the Morse receiver was in action. At the forthcoming exhibition in Munich, telephony is to be tried between that town and Dresden, a distance of about 343 miles. American accounts report experiments in progress as to what may and what may not be done in telephony on underground wires; a cable for the purpose having been laid by the American Bell Telephone Company along the Boston and Providence railroad. There are twenty-one rubber-covered copper wires within a lead pipe, ten of these being also covered with tin-foil to carry off extraneous induction currents, while 10 are twisted together, the 21st wire is covered with cotton and paraffined.

A French naval committee has lately reported on the use of the telephone in diving operations. The transmitter approved as best is a small flat circular telephone, having interiorly two spiral magnets superposed. The Gaiffe telephone as receiver gives good effects. A comparison was also made with the ordinary speaking trumpet, which proves inferior to the telephone, especially as the depth increases, owing to the effects of pressure on the membrane in the case of the trumpet. Various modifications of the telephone appear from time to time; one of those is Bottcher's telephone, the peculiarity of which is that the magnet, instead of being fixed in the case, is suspended by steel wires, so that it can, to some extent, participate in the vibrations of the membrane, but in opposite directions; the magnetic variations are thus increased, and stronger induction currents produced in the coil.

A NEW DIRECT PROCESS.—Mr. J. C. Bromfield, of Brighton, has patented a new process for making iron and steel direct from the ore, and which, we are assured, has been spoken favorably of by no less an authority than Sir Henry Bessemer. Besides the main features of the direct transition from the ore to a high class of metal, either iron or steel, the subproducts, notably the furnace gases, are by this process saved and utilized. Mr. Bromfield grinds to powder coal or coal dust and iron ore, or "blue billy," in proportions varying in the nature of the materials; and, when much silica is present in the ore, he adds alumina with or without calcium oxide or carbonate of lime. At the same time he extracts a mucilage by hydraulic pressure from seaweed steamed in a close jacketed boiler. The powder and mucilage are intimately mixed with Portland cement, carbonate of lime, magnesia lime, or calcium oxide, in proportions varying with the nature of the ore, and this mixture is formed into bricks by a powerful press. When dry, the bricks are coked in a retort, whereby their sulphur and phosphorus are driven off. The gases are led through a hydraulic main and utilized, either for maintaining the combustion or for illuminating purposes, in which case the by-products are also turned to account. After coking, the bricks are ready for the smelting furnace, and, as it is claimed, produce a high class of metal, from which practically the whole of the phosphorus and other injurious elements of the raw material have been expelled.—*Iron.*

IMPROVEMENTS IN SLIDE VALVES.—One of the most needed improvements in slide valves has lately been effected and introduced, consisting in a method for reducing or preventing more efficiently than at present the noise made by exhaust steam of engines, which has heretofore been attempted to be accomplished by the employment of mufflers and other similar devices. It is well understood that, with the ordinary link motion and slide valves used on locomotives, the exhaust edge of the valve must be moved the length of lap and lead before the piston receives steam from the direction in which it has been moving; in other words the exhaust opening begins before the piston finishes its stroke, and before the steam has fully expanded. The exhaust being also opened suddenly by the quick movement of the eccentric, a wasteful and disagreeable explosion of steam from the cylinder takes place. To remove this difficulty, the exhaust steam, instead of being allowed to explode in the manner described, is gradually released, and without back pressure.

THE SMOKE NUISANCE.—A convention of experts has been discussing, at Leeds, England, the problem of how to abate the smoke nuisance in manufacturing towns. Many plans were presented, and the meeting finally passed two resolutions—one declaring that there are inventions by which smoke may be effectually consumed or actually prevented, and the other that, in the opinion of the meeting, the smoke arising from steam-engine fires and furnaces could be consumed, and often without injury to the boiler and with a saving of fuel.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (¼ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (¼ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, October 1, 1882.

The Mission of the A. O. U. W.

It is presumable that every member of the A. O. U. W. is such for two reasons. The first of these, doubtless, is, or should be, to form associations of a fraternal nature. The second, and none the less important, is to secure a benefit, in case of death, that the widows and children may not be thrown helplessly on the world. The latter is a prominent feature of the A. O. U. W., and its mission is a world-wide philanthropy. What is more truly noble than to provide for the widows and helpless ones? In all the ages of the world this sort of philanthropy has been in vogue, and the loftiness of its mission has been unquestioned. To close the eyes of a brother as he calmly leaves this tenement of clay, and lay him away for his last sleep, and then, more than all, to offer his stricken and bereaved family, first the consolation and sympathy that death suggests, and then to make ample provisions for their future temporal wants, complete our office and good work, than which none can be grander. Philanthropy has ever called forth honest praises. Those men of the world's history who have by amassed fortunes provided for the desolate, built schools for the ignorant, cared for the orphans and assisted the needy in any way, have always left behind them memories "more lasting than brass, which time and the elements cannot destroy." While unlike the individual, yet the community of interests constituting the great brotherhood of the A. O. U. W., and its dealings with the outside world are such as to claim for its work the same measure of praise that similar beneficence would in the individual.

If there are any that look upon the Order as merely a mercenary organization, the members of which are banded together as so many speculators—whose only interest is a financial one—they are certainly resting under a delusion. The aim and object of the Order is higher, grander, nobler. There may at times be those within its folds who thus look upon the A. O. U. W., but selfishness ard narrow-mindedness are generally the controlling motives of such, and it is only when the proper conception of the objects of the Order is had, that the purity of its work can be realized. That men should band themselves together in this way is perfectly natural. Human nature does not tend to isolation in the individual; but, on the other hand, to association and co-operation. The good that has been done, the many widows who have received our benefits, and the good we yet may do, together furnish the true Workman with the grandest reward for his labors. In life, to protect and sustain; in death, to provide, should be the grand working principle of every member of this Order.

BE not over-anxious about the rapid numerical increase of your Lodge. The cornstalk grows tall in the fervid glow of the summer sun, but the early frosts of autumn wither its leaf and lay it low, while the sturdy oak, that stands for centuries, is many years in coming to maturity. Brothers, make the application.

A Serious Question.

There is no question of such absorbing interest to the Lodges of the A. O. U. W., in California, as that involving the long-argued one of "Temperance."

Now we are not going to write a long editorial on temperance, dilate on its advantages, pitch into those who do not believe in it, or bring any figures to show how many people die drunkards, and how much they would have saved if they had not drank. All this has been done over and over again. The drinking men don't pay any attention to it, and to those who do not drink it is of no value.

But it is the question of dollars and cents that concerns the A. O. U. W. Men get into the Order who drink, and who die, and those who do not drink, and live, have to pay for them so much per head. There is much too large a number of drinking men among the Lodges, as there is in the community.

The community's burden is indirect. It maintains courts, jails, asylums, hospitals, etc., and pays pretty heavy bills. The Lodge has none of this, but it pays a good round bill when the lover of alcohol dies. The tax is direct, positive and peremptory. A man dies from causes induced by his drinking habits, and his brethren pay for him.

Now, the Lodges are getting tired of this. They are trying to find some way to stop it. They are trying to see how they can prevent these men getting in, and how they can get rid of those already in. They want also to devise a means by which when a man becomes dissipated, or drinks more than he ought to, he can be dropped from the rolls. How all this is to be done is a subject of discussion in many a Lodge.

Some will say this is "rough" on the poor widow. But would not an expulsion for such reasons be lesson enough to bring to his senses all but a thoroughly irretrievable man? Would it not be a most practical temperance lecture to tell him he could not be kept in good standing in his Lodge, because he was killing himself by a bad habit? Would not this really benefit his family more than his death and a $2,000 donation?

This is a really live question, and one of much moment to the Order and to individuals. There is a fraternal feature and a business feature. The fraternal feature is one of mutual assistance; the business feature is the agreement to pay certain dollars, or receive certain dollars, under certain conditions.

A man comes into the Lodge, although it is found that he is a victim of drink, or he becomes one. The members know they must pay for him before he ought to be paid for. The business proposition is in question, and in business men are sharp and careful, and not apt to take mere excuses or promises. They are willing to pay just debts, but not fraudulent ones.

The Lodges in the jurisdiction of Alameda county are appointing committees to discuss jointly this momentous question, and try to evolve a plan by which men of steady habits may be protected from the evils complained of. As the matter develops we shall speak further concerning it.

THE St. Louis *Overseer* is of the opinion that the organization known as the Knights of the Golden Rule is on the eve of collapse, or, as that paper expresses it, "about to repair to the graveyard." This Order has over 250 Castles, with a membership of about 8,000, and was, seemingly, in a prosperous condition. Whether it be true or not, that this order will collapse, there are too many organizations in the field, and the sooner people learn to be cautious in these matters the better. Designing men are always ready to take advantage of the gullibility of the public for the purpose of obtaining good, fat salaries, or other remuneration, at the least possible expenditure of either mental or physical labor.

THE IOWA SITUATION.—The situation in Iowa at last accounts was not materially changed. Communications, arguments and circulars from both sides are frequent, and the old Grand Lodge and true Grand Lodge each claims to be progressing. The better opinion is to the effect that there is a complete change of sentiment going on in favor of the Supreme Lodge; that the suspended Grand Lodge officers are losing their influence, and the loyal Grand Lodge is gaining ground every day. We cannot doubt the result. Law and justice will prevail, and the membership of Iowa cannot be false to their vows and honor. The authority of the Supreme Lodge must and will prevail.

ARTIFICIAL LIMBS.—Attention is invited to the advertisement of the Artificial Limb Manufacturing company, of Pittsburg, in another column. It is said every member of the company wears an artificial leg, and hence are competent to advise their customers as to the appliance best suited to their needs. They assure us that they employ the most skillful workmen in the manufacture of artificial limbs. Write for a descriptive circular to the office of the company, at 279 Penn avenue, Pittsburg, Pa.

Make Initiations Impressive.

Our first impressions are generally lasting. The child going for the first time from the narrow circle of his youthful surroundings will generally be impressed with what it sees. The first sight of a great river or city, or phenomenon of nature, will linger in its memory through life. The dawn of reason, then, in the child is the most fitting time to draw its attention to right impulses and teach it to live a noble life. It has been said that if you give the child its first sight of the world through green glasses, the world will always be green to it afterwards. There is a value, then, in having first impressions favorable. The application of the foregoing to the secret organization is apparent.

What is essential to the greater success of the fraternal society, then, is to have all initiations of an impressive character. This is apparent for two reasons: First, it is necessary for the candidate, that he may be thoroughly imbued with the spirit and principles of the Order, and thus earlier become a worker. Second, it is useful and beneficial for the older members That our first proposition is correct, no one can deny. There have been cases where lack of interest and non-attendance of members may be directly traced to this source. If a candidate early obtains the impression that a lack of interest is prevalent among the members (and what proves it more than an indifference during initiation ceremonies?), the tendency will be to mold him in the same way. Unless other influences are brought to bear subsequently, it may almost be settled upon that he will become one of the non-attendants in the future. Then the initiation ceremony is valuable to the older members as well. No man is so thoroughly posted and familiar with the workings of his Order that he does not need to give attention during open sessions.

To the old the young look for example, and were there no other reason, the fact that example is all powerful should induce all the older members to participate heartily. During initiation ceremonies, no member in the hall should give attention to anything else. If the candidate feels this, his impressions will be the stronger and better. The older members of the various Lodges owe this much to their Order.

It will be scarcely necessary for us to indicate what should be the duty of members during initiations. This cannot but be apparent to each one. What we plead for is interesting, impressive initiations. Make them such, and the secret Order will flourish as under no other circumstances.

Nothing Political in the Lodge.

The politician is an antagonist. An affiliation with the doctrines and precepts of one party at once suggests an antagonism to those of the others. And this is what makes our political campaigns the occasions for the manifestation of considerable bitter feeling. Wars of words are of daily and hourly occurrence, and until the elections are over, there is no peace in the political camp.

There is a proper place for these discussions, and there is a time when they should be refrained from. At whatever time and place political discussions are proper, the Lodge is certainly not one. While there is a feeling of brotherly love—fraternity—existing between the members of the Lodge, there will always be found a difference in political views. No member who has the good of the Order at heart will arouse an antagonism by forcing his views upon his associates.

This consideration is of vital importance; and that Lodge will further its interests the more by allowing politics to find no place in its discussions. This may be putting the case too strong, but we think not. There, doubtless, are those who can maintain such an equanimity of temper that even caustic remarks by another will not sting, but it is too often true that a hostility and unfriendliness will be engendered that all the good offices of the Lodge will fail to extinguish. The Lodge has other objects, and to secure the best results, politics should not enter in.

PERCENTAGE OF DEATHS.—Life insurance companies calculate on having about 10 deaths to the thousand. In the published mortality experience of the leading life insurance company of the country, "The New York Life," it is stated, that out of 1,000 deaths, 268, or 27%, were from consumption. Our last year's experience shows that out of 765 deaths, 141, or only 18½%, were from consumption. This is surely a favorable showing, and in spite of the great cry which has been raised, proves that our portals have been as well guarded by mutual and fraternal interest as have those who had only pecuniary obligations at stake.

THE following are the officers of the Supreme Legion: Select Knights, Hon. Clark D. Knapp, Supreme Commander, of Albion N. Y.; W. F. Bohn, Supreme Recorder of St. Louis, Mo.; Dr. D. H. Shields, Supreme Medical Examiner, Hannibal, Mo.; Wm. R. Sheen, Supreme Treasurer, Lawrence, Kansas.

A Hobby.

Bro. W. Warne Wilson is Grand Recorder of Michigan, a member of the Supreme Lodge, and editor of the Michigan *Herald*, the organ of the A. O. U. W. in his jurisdiction. Bro. Wilson is a very exellent, intelligent and earnest Workman, but he has a hobby, and has it bad. To his mind, the A. O. U. W. must sometime "bust wide open," unless it shall make haste to embody the system of graded assessments into its governmental polity. In this view Bro. Wilson stands almost alone in the Order, but yet he stands. We were once something of his notion, misled by the deceptive "expectancy tables" of life insurance companies. We had faith in the Carlisle tables, and still more in the so-called tables of American experience. But when we came to notice that our members persisted in dying in utter violation of all these tables, insomuch that if the rule must be established at all, it must be established entirely by the exceptions—in other words, that there was no rule, nothing but exceptions—the conclusion was forced upon us that something was out of joint in the calculations. Facts were on one side; they were all about and around us, under our eyes and noses continually. Theory was on the other side; a nice, plausible, sensible looking theory, but the two didn't agree—that was patent to the most careless observer. We had to knock under to the facts. Somehow we never did have any stomach to quarrel with such stubborn things as facts. Satisfied as to where people have heretofore erred in applying "expectancy" or "experience" tables to the business of life insurance, or its equivalent, as found in beneficial societies, we have tried to make others see as we see, but some will not or cannot. Time and again we have explained that a table of expectancy of life, if it really is what it purports to be, must show the expectancy of life of people in general; taken in a mass, which must include all—the halt, the lame, the blind, as well as the sound and healty. The good, the bad and the indifferent must not be separated, except as they separate by death. Evidently this is the way the English or Carlisle table was made up, for it is the record of the people of the town of Carlisle, taken from extreme youth and followed to extreme old age. As to how the so-called American table was made up, we are free to confess we can't tell—probably by main strength. We are gravely told it was made from 100,000 lives selected in extreme youth and a careful record kept till the whole 100,000 had passed away. A good orthodox Christian may be allowed to doubt the religious accuracy of this extraordinary statement, unless backed up by testimony other than insurance actuaries, and not be subjected to charges for breach of faith. But swallowing it all, still the character of the table would remain as we have stated it.

Now, in all candor, let us ask what sense is there in selecting out from the multitude only the best men mentally, morally and physically, and then apply the ordinary tables of expectancy to them to determine how long they will live? A boy in the grammar school should know better than commit such an absurdity.

Again, suppose we had an accurate table for such selected men—which we have not—but suppose we had, why base a man's premium payments or assessments on such a table, when we know his expectancy of remaining in the organization is only about one-fifth that of his expectancy of life? Common sense would seem to dictate that if we were to make or get any table at all, it should be one that would give the expectancy of a man's remaining in the organization till he died; or, in other words, his expectancy of calling upon the organization for the promised sum, payable at his death. In a business sense, we want to know the hazard incurred by the Order when a member joins. We don't care to know how long he may, or probably will live, provided that probability would take him beyond the time of the probability of his remaining with us. In life-insurance companies such probability does not extend beyond about seven years. Then we want to know the probability of his dying in the seven years succeeding the time he joins. The best risk for seven years is the one for us, no matter what the probabilities may be beyond that. We have no pecuniary concern in one who is no longer a member.

Our good brother don't seem to see things in this light. We have argued with him, produced statistics to back up our position, but still he says this proves nothing. We despair. But one thing we must admit: If our members could be persuaded to die, and die only in accordance with the expectancy tables, we shouldn't lose anybody scarcely, for a man of 50 has an "expectancy" of 21 years, very nearly, while his expectancy of membership cannot by the most generous figures be put at more than half that space of time.

O fiddle! Bro. Wilson, there is not the first element of equity in this whole business. You can't make it so by any system. Put it to the account of benevolence, and fight it out on that line. It will pay by far the best returns in this world and the world to come.

ACCORDING to the last statement of the Supreme Recorder, the Order numbered 110,195 members. California numbered 14,738. New York is 2,400 ahead of us, and Pennsylvania 1,300 behind.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

WM. C. FLINT, ESQ., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

FOR the first time in the history of the WATCHMAN, we are obliged to go to press without material for this department. This is owing to illness of Grand Recorder Pratt, who was confined to his bed at intervals during the week, but was at his post again Friday, though in a very feeble condition. We sincerely hope that Bro. Pratt will be tough and sound again in a few days, for this paper can ill afford to do without his valuable services.

Beneficiary Societies a Success.

The beneficiary organization has now been in existence long enough to prove its value. Outside parties, and that class who are always ready to depreciate such organizations, may endeavor still to prove the falsity of the position taken in the caption of this article, but facts are potent. For ten years now, the fraternal co-operative society has been doing business. The plan and success have been demonstrated beyond a peradventure. The systems by which such organizations are carried on are correct and business like, and there need be no fear of a general collapse and failure of all of them. We are not now speaking of individual organizations. There may be some less successful than others; there doubtless are those less beneficial than others; but the truth remains the same. One failure does not make the system a failure. The good that has been accomplished stands out in bold and pleasing relief to the few failures there may have been. There are many honest, conscientious men who have thoroughly studied the matter, and have examined and investigated the whole matter. These persons have shown by facts and figures, drawn from the records of the past, that the principles upon which several of these co operative societies were founded are correct, and that all necessary to make them a permanent success is to live up to these principles.

It would be as injudicious as untruthful to declare that every association that has commenced operations as a beneficiary has been a success. Of these organizations there are always certain ones that spring up, and apparently give promise of life and permanency, but soon go down. Enthusiasm is no sure proof of permanency, the object that stimulates our enthusiasm may, sooner or later, interest us no more, and then we become indifferent. Other organizations never attain the requisite number necessary to make them a permanency. While recognizing the tangible and practical good that each and every organization would do during its existence, long or short, and also realizing that should some one or more, at some future date, cease to work, none would be injured or defrauded by said cessation, we have encouraged and befriended all such associations that were legitimate and practical. We have now stated the strongest case against the success and value of the mutual beneficiary association. It will be seen at a glance that this does not prove the system a failure, but, on the other hand, gives evidence of success. In the business world all enterprises are not successful. Even in certain lines of business, there will be successes along with failures. And yet it does not argue anything against the business as a paying and laudable one. There is a field and a need for the beneficiary society. That there is a certain permanency about some of these Orders, numbering now over 100,000 members each, and "that they are as sure as a bank, would be with the same number of stockholders upon whom they could call for an assessment should emergency demand," is evident.

While the working principle of these organizations is of recent advent in this country, in the old world it has long been familiar and popular. How minutely correct the following may be, which is taken from the St. Louis *Observer*, we cannot say, but there is enough in it, at least, to convince every impartial mind that mutual beneficiary Orders and associations have not been a failure by any means. The *Observer* says:

All over Europe, but especially in England, mutual benefit associations are very numerous. In England there are no less than 25,234 of them, with a membership of about 8,000,000. Five of these societies have over 100,000 members each. Sixty have been in existence over 100 years, while seven are nearly 200 years old. This shows how false the statement is that these societies are short lived. In this country co-operative societies were never thought of until within the last score of years, and there are now 16 of them that are over 12 years old, while only five per cent. of them have failed. These failures have not brought disaster and ruin, for the members had only paid in small sums, less than a few pleasures would have cost, and the loss has not been felt. There have been connected with these failures no stealing for what funds have been collected were disbursed to the children and widows of those who had died.

Anniversary Parties.

A LARGE and select gathering assembled at B'nai B'rith hall, 121 Eddy street, to celebrate the fifth anniversary of "Old Harmony, No. 9," on Thursday evening, September 28, 1882. The following programme was well carried out, and was very well received by the large and highly delighted audience, encores being called for in every instance. G. M. W., W. H. Barnes, in his address, held the audience spellbound by his eloquence. After the order of exercises, a programme of 12 dances was carried out, the music being furnished by Lattimer & Co. The music furnished was very good, and gave great sasisfaction to those that like to "trip the light fantastic toe." Beautiful flowers adorned the stage, and lovely bouquets were presented to each of those who, by their kindness, made the fifth anniversary of Harmony, No. 9., so successful. Great credit is due to the Committee of Arrangements for the way in which they performed their duty. The committee was composed of the following: Thomas H. Wilton, M. W., D. Cohan, S. S. Johnson, Frederick Blight, P. M. W., C. R. Mitchell, Thomas G. Smith. The following was the order of entertainment: Opening remarks, T. H. Wilton, M. W.; piano solo, Miss Katie M. Mathews; address, Wm. H. Barnes, G. M. W.; song, Miss Nellie Hughes; recitation, Prof. H. C. Eastman; comic selection, Mr. Goldsmith; song, Miss Maggie Webb; recitation, Miss Selina Cohan; song, Mr. Charles Lelong; recitation, Miss Maude E. Noyes; recitation, Miss Alexander. Master of Ceremonies, Thomas H. Wilton, M. W. Reception Committee—Z. T. Whitten, P. M. W., Wm. Decker, P. M. W., W. I. Brownrigg, Peter H. Will, Richard D. Roach, J. J. Finn. Floor Manager, C. R. Mitchell. Floor Committee—D. Cohan, J. H. Schick, Thomas G. Smith, Thomas J. Davis.

OLYMPIC LODGE, No. 127, celebrated their fourth anniversary on Tuesday evening, Sept. 19, 1882, at their hall, 35 Eddy street, with a grand ball and refreshments. Over 100 people were present, consisting principally of members, their wives and friends. The large hall, with its tastefully decorated walls, the floor having been beautifully canvased, and the lights gleaming from elegant chandeliers, the graceful dancers, and all, presented to the eye of the observer an enchanting scene. During the evening ice-cream and other delicacies were freely passed around, and it is the subject of remark that Olympic sustained her fair name in splendid style. The hall of Olympic is one of the largest and finest in the city used for Lodge purposes.

GOLDEN GATE LODGE, No. 8, celebrated its fifth anniversary at Ixora hall, Wednesday evening, Sept. 20, 1882. A large and select audience was present. Harry J. Lask, Grand Guide, was the chairman of the evening, and, with a few well-timed remarks, welcomed the visitors. An address was made by Wm. H. Barnes, Grand Master, and a first-class programme followed, which was finely rendered. First, a piano solo by Miss Lyonall, which called forth marked appreciation and a hearty recall; zither solo, by Adolph Fine, accompanied on guitar by Mr. Whitby; recitation, Master J. Andrews; song, Mrs. Blake Alverson; cornet solo, Bro. R. E. Hazeltine; duet, Messrs. W. H. H. Toby and W. E. Toby; recitation, "April Showers," Miss Gertie Olmstead, which was finely rendered by this popular young lady. It was received with marked approbation and called forth a hearty encore. E. Lewis, P. M. W., one of the oldest members of the Order, made a few remarks, and again called on the Grand Master, who, in the name and on behalf of the entire membership of No. 8, preferred a set of charges against Bro. David Irwin, M. W. When Bro. Irwin was escorted to the scene of trial, he was happily surprised. The first charge was that he had never neglected a meeting, having always been on hand, discharging his duties to the utmost of his ability, to which the brother pleaded not guilty. The second charge was that he had worked faithfully and honestly for the interest of this Lodge, and that of the Order. The third was that he had been married twenty-five years ago, and that each and every member of Golden Gate Lodge presented him this casket, not only as a testimonial of the appreciation and esteem of the members of Golden Gate, but also as a pleasant reminder that this was the 25th anniversary of his wedding day. The recipient was totally unaware of the gift intended, and could only respond with a few grateful words. The occasion was unusually interesting. The elegant casket consisted of knives and forks, tea and tablespoons, of sterling silver. The hall was cleared, and a list of thirteen dances was indulged in until an early hour. The music was furnished by the hall company. No. 8, although one of the oldest, is also one of the energetic subordinates of the jurisdiction. From its membership has been formed several excellent Lodges, and it may well be considered one of the fountain heads of the Order. Its fifth anniversary reflected credit upon all concerned. The following were the committees: Committee of Arrangements—C. J. W. Simpton, R. E. Haseltine, E. C. Atwood. Reception Committee—J. S. Thomson, Mark Heywood, Thos. J. Johnston, David Irwin, Emile Schmitt, Ignatz Wisler. Floor Director—(silver star and tassel) Theo. G. Linton. Floor Committee—(white ribbon) C. W. Beals, Geo. C. Steinhauer, A. G. Anderson, F. E. Neuberger.

Aims, Objects and Regulations of the Ancient Order of United Workmen,

The Ancient Order of United Workmen is a general organization for the mutual benefit of its members and their families. It embraces in its membership men of every vocation, profession and occupation—employers and employees—workers of all classes, whether their labor be mental or physical. It has no connection with any religious sect, political party, or organization for affecting the prices of labor or commodities, but is designed to promote fraternity, mental and social improvement, and mutual assistance.

BENEFICIARY FUND.

The most distinctive feature of the Order is what is designated as the Beneficiary Fund—a carefully-devised, well-guarded, economical and beneficial system, by means of which the sum of

TWO THOUSAND DOLLARS

Is secured to each member's family, or such person or persons as he may choose to designate. During the several years since the Order has been established this sum has been promptly paid in full in each case of death, to the persons entitled to receive it, within a few weeks, and without any litigation or troublesome formalities. A careful examination of the working of the system will satisfy any intelligent person that such will continue to be the case.

HOW ASSESSMENTS ARE PAID.

Each person who becomes a member of the Order pays to the Receiver of his Lodge one dollar for the Beneficiary Fund. Every Lodge has on hand, at the beginning of the month, ready for a call, one dollar of Beneficiary Fund for each member. When a death occurs, if there is a sufficient amount of the Fund in the Grand Lodge to meet the required payment of $2,000, no call is made upon the Subordinate Lodges, but if there is not a sufficient surplus from the last assessment, then the Lodges are notified at the first of the month to forward their portion of the Fund on hand ($1 for each member), and an assessment is made to replace the amount forwarded. By this means the Beneficiary Fund of the Lodge is again replenished, ready for a call at the first of the next month, if it should be made. Assessments are only made on the members at the first meeting night in each month, and a written and printed notice is sent to each member, bearing date of such meeting night. Twenty days time is given from that date to meet the payment. Thus the payments are made at such intervals, and are called for in such manner that they may be easily provided for and met without inconvenience even by persons of small income.

HOW MUCH DOES IT COST?

In the first year of the working of the Supreme Lodge (1873-4), the number of assessments made upon the members of the Lodges directly under its jurisdiction, was 20; second year, 14; third year, 15; fourth year, 15; fifth year, 14; sixth year, 16. Since that time, the average has remained about the same, and these figures will also apply to the Jurisdiction of California. It is probable that the future average will remain about the same. The average cost to each member, therefore, has been $15.66 per year; being a little more than four cents per day as the cost of a completely-secured guarantee of $2,000, to be paid on the death of a member. Can any man who is in circumstances to avail himself of this system be justifiable in neglecting to give to his family the security which it affords? Does not prudence and affection dictate that he should secure for them the protection thus offered? A number of States, having over 2,000 members in each, collect and disburse the Beneficiary Fund separately through their Grand Lodges, instead of through the Supreme Lodge. In these, the cost per year has been, in some cases less and in others greater than that given above, but the average has been about the same.

California was set apart as a separate Beneficiary Jurisdiction in July, 1878, and at the end of July, 1879, had levied and collected ten assessments for deaths occurring in the State, and for the months of August and September three more, making a total for 14 months of 13 assessments, or an average of a little less than 93 cents a month for each member. During 1880, 16 assessments were levied in California, and for 1881, it is estimated there will probably be 14 assessments.

ADVANTAGES OF THE SYSTEM.

The A. O. U. W. Beneficial system is simple, easily understood, economical in its workings, and in all its details comes under the direct observation and care of the members who meet weekly in their Lodges, where the business is transacted, and where they enjoy the advantages of social and fraternal intercourse, and of mental improvement. These Lodges are governed by officers regularly elected by the members—the financial affairs are under the proper guards and restrictions, and a careful system of checks prevents fraud or betrayal of trust.

PROTECTION AT NET COST.

All money paid on assessments for the Beneficiary Fund goes to the payment of death benefits without reduction even for expenses, these being provided for out of a General Fund raised in each Lodge. This fund is made up from initiation fees (usually about $15 for each member, with sometimes an advanced rate, according to age), and weekly dues of not less than 25 cents per month. The advantage which each member derives from the social, fraternal and educational features of the Order, and the good which is accomplished by it in these respects, afford a more than ample return for the sum he pays into the General Fund, which meets all the expenses of the Order, leaving the entire Beneficiary Fund intact for the beneficent purpose for which it is intended. There are no commissions, fees or salaries to be paid out of it, but the entire amount paid in goes to the widows, orphans and other heirs of deceased brethren. Thus the Beneficiary system may be fairly said to be carried on absolutely without any working expenses, and, at the same time, to be more closely under the observation of those interested in it, and more carefully guarded than any other method adopted for similar purposes.

REQUIREMENTS FOR ADMISSION.

A medical examination is required under such rules as are generally adopted by life insurance companies. The character of the applicant must also be investigated, and the Lodge pass upon his application by ballot. Persons between the ages of 21 and 50 only are admitted.

BENEFITS OF SICK OR DISABLED MEMBERS.

The payment of weekly sick benefits to members is a matter left to the control of each Subordinate Lodge. Some provide in their By-Laws for such benefits—others do not. If sick benefits are to be paid, the initiation fees and weekly dues are fixed at an amount sufficient to cover the expense—each Lodge having the power to fix the fees and dues at such sums (not below $15 for initiation and degrees, and $2 for Beneficiary Fund and certificate, and 25 cents per month for dues) as may be determined upon.

GENERAL FEATURES OF THE ORDER.

The A. O. U. W. is a secret Order, having two degrees, with appropriate initiation ceremonies. These are simple, but impressive. The teachings are calculated to strengthen the character and elevate the moral principles of the members.

The Order is composed of Subordinate Lodges, Grand Lodges and a Supreme Lodge. Subordinate Lodges in States or Territories where no Grand Lodge has been established, are under the immediate jurisdiction of and report to the Supreme Lodge, until a Grand Lodge is established.

When a Grand Lodge has over 2,000 members under its jurisdiction, it can be set apart as a separate Beneficiary district if desired. In this case the members are assessed for the deaths which occur within such district or jurisdiction, and the Grand Lodge collects the assessments and pays the death benefits under the laws and regulations adopted by the Supreme Lodge. The Grand Lodges of Pennsylvania, New York, Illinois, Iowa, Missouri, Minnesota, Tennessee, Indiana, Michigan, California, Wisconsin, Kansas, Oregon and Ontario have been thus set apart as to the Beneficiary Fund. In all other respects they remain integral parts of the Order.

PROGRESS OF THE ORDER.

The A. O. U. W. was started in Pennsylvania in 1868 but was not sufficiently established to pay the $2,000 benefit until 1873, from which time up to the 1st of January, 1880, the Grand Lodge of that State alone has paid over $546,000 of Beneficiary Fund.

The Supreme Lodge, up to June, 1881 had paid out $919,172.90 on deaths of members of Lodges under its immediate jurisdiction. The amount paid by the Order during the year 1880, was $1,305,887.00.

The membership reported on the first of March, 1881, was 97,179, with Grand Lodges established in the States of Pennsylvania, Ohio, Kentucky, Indiana, Iowa, New York, Illinois, Missouri, Minnesota, Wisconsin, Tennessee, Michigan, California, Georgia, Kansas, Ontario (Canada), Oregon and Washington Territories, Massachusetts, Nevada, and Subordinate Lodges in a number of other States. In all these States the Order is steadily and rapidly growing. With the increase already since the above date, it is safe to say that before the close of the year 1881 it will number over 125,000 members.

The Order was founded by a few earnest, honest men, for fraternal and beneficent purposes. Its sphere of usefulness has been enlarged, and it has been faithfully conducted as its founders designed it to be—not to subserve the selfish interest of a few, but for the mutual benefit of all. Thoughtful and prudent men join it because they can thus provide, without present embarrassment, for the contingencies arising from the uncertainties of life, and at the same time aid each other in mutual improvement and the elevation of humanity.

Further information cheerfully given by applying to H. G. PRATT, Grand Recorder, S. F., Cal.

THE opening meeting of Alameda Lodge No. 5, A. O. U. W., announced for Wednesday evening, has been indefinitely postponed on account of a previous engagement made by Grand Master Workman Barnes.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2,500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs one and a half miles from the center of the Redlands tract, and a depot will be established at once for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide. The cross streets are 60 ft. wide.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots. Within this town plat, at the crossing of Palm and Center avenues, is a circular public park, with a fountain in the center. This park will be improved by the proprietors of the tract. Above the town plat will be constructed a small reservoir, from which iron pipes will be laid to supply the town with water under pressure.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.

Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and watergates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have moved upon the tract are credited to Redlands, and the others to localities where they now reside:

Names.	Acres.
J. G. Cockshutt, Redlands	20

Total sold	1,004

Judson & Brown (San Bernardino, P. O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast.

Restaurants, Bakeries.

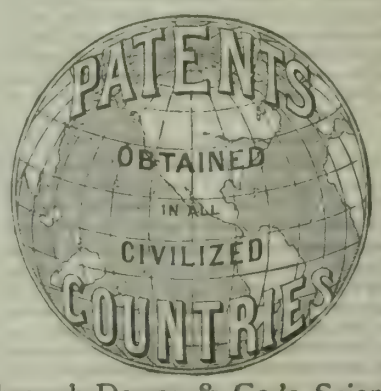
A NEW BOOK.
A Treatise on the Horse and his Diseases.
By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the home effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and use of medicines.
Rules for telling the age of a horse with a meeting giving showing the appearance of the teeth at each year.
It is printed on fine paper and has nearly 100 pages, 7½x5 inches. Price only 25 cents, or 5 for $1, on receipt of which we will send by mail to any address
DEWEY & CO.,
252 Market St., S. F.



Good Land and Sure Crops.

There has been steady and tolerably rapid advancement made in the growth of a majority of the towns in Colusa, Butte, Tehama and Shasta counties. Especially is this so in the agricultural districts where the land produces at least fair crops in all seasons—wet or dry—as does the land on the Reading Ranch. Those looking for homes in California where diversified farming will pay every year; where wood and water are plenty and easy to be obtained, and other desirable advantages are to be had, should address the proprietor of the Reading Grant.

Some 14,000 out of 26,000 acres of the grant remain for sale at comparatively low rates, in quantities to suit purchasers, on easy terms. Prices range from $5 to $30 per acre. The tract is between two and three miles wide, with the Northern Division of the C. P. R. R. passing centrally through its entire length. Send postage stamp for free circulars containing information about Shasta County and these lands, to the proprietor of Reading Ranch.

EDWARD FRISBIE,
Anderson, Shasta County, Cal.

Telephone No 668.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free. DEWEY & CO., PATENT AGENTS.

204 McALLISTER, COR. OF HYDE.

Wrought Iron Philosophically Considered.

Dr. Anderson, in his lecture on "Tools," lately delivered in Manchester, England, said: When we think of any sort of material, beyond the working treatment of its mechanical properties, we seem to be in another world. Take, for example, a piece of common wrought iron. It seems to us as of the earth earthy; but, if we are closely questioned in regard to the reason for its various properties, we find that we scarcely know anything. Tracing it from the ore through its various stages until it is in the hands of the smith is comparatively easy. We know the natural law that governs its elasticity, the limit of its elasticity, its ultimate strength, that it can be welded, that it is ductile, and can be drawn out into a fine wire, that it is malleable, and can be spread out into a sheet, or worked round from the sheet into a goblet, and may be gathered back again, if by so doing it served any useful purpose; but when we think of the marvelous changes which have taken place amongst its molecules during the operation, we are lost in wonderland.

To many minds, the piece of cold iron seems to be a solid; under the pressure of the testing machine, it is shown to be an unstable fluid. When the smith has the misfortune to leave a piece too long in the fire, it vanishes; it has found evil companions, and gone off under an assumed name and a new character. When a piece of iron is broken and carefully examined under a microscope, we can see that it is composed of fine crystals; but these crystals, we are told, are composed of innumerable molecules, which are not to be seen by the microscope, being smaller than the human mind can imagine; still, the smith feels himself under their influence. In homely words, he speaks of the iron being "red-short" or "cold-short," without thinking that he is on the threshold of some of the impenetrable secrets of nature. The steel maker can take advantage of the molecular properties. With heat he can push them asunder and infuse among them the subtle vapor of carbon, and the iron becomes steel, highly improved in most of its mechanical properties, and with an increase of strength and elasticity. It may be inferred that each iron molecule is a little world in itself, surrounded with a thin wrapping of infinite space, no single molecule being in actual contact with any other molecule. We have reached the limit of subdivision, so far as the engineer dare venture. The investigating philosopher, however, ventures much further with his speculations; he tries vainly to penetrate into the supposed ultimate atoms of matter of which the molecules are composed, but further we need not follow.

THE SABBATH DAY.—We are commanded to "remember the Sabbath day, and keep it holy." If the sacredness of the Sabbath is destroyed, the life of the nation will be imperiled, and the church, as a visible organization among men, cease to exist. Should we happily live to see the day when the Sabbath is universally observed and its sacred duties and privileges delighted in, then the horrible plagues of intemperance, lust and crime, which are undermining society and destroying millions of our race, would be blotted out, and a day of universal joy and peace reign instead. To the laboring classes the Sabbath is an unmixed blessing. It replenishes what the six days' labor has exhausted, and supplies strength for the coming week's toil. On that day the farmer quits his plow, the merchant his store, the blacksmith his anvil, the children the labor and confinement of the factory, the miner emerges from the bowels of the earth into the brightness and glory of the hallowed day, and the toilers in every department of life's busy scenes rest their weary limbs, drink in the invigorating air, commune with nature and nature's God, catch a glimpse of the Celestial city, and, with fresh inspiration and renewed strength, press forward.—*Dr. Snowden.*

AN artful juryman, addressing the clerk of the court, while the latter was administering the oath, said: "Speak up. I cannot hear what you say." "Stop!" said Baron Alderson, from the bench. "Are you deaf?" "Yes, my lord, of one ear." "Then you may leave the box, for it is necessary that jurymen should hear both sides."

☞The following was reduced from a circular 6 by 10 inches in size by the photo-relief engraving process of the S. F. ENGRAVING Co., No. 405 Kearny St., S. F.:

TO INVENT PATENTEE

DEAR SIR:

Attention has recently been called to a number of cases in which inventors and patentees have been outrageously swindled after they had safely obtained their patents. Most of the swindlers are located in Eastern cities, and they pay more attention to California and other distant inventors, because it would cost too much for the victims to prosecute them after he discovers the fraud.

We have, therefore, prepared the following statement for the purpose of warning you of the pitfalls which surround the inventor who is anxious to realize something from his patent.

When a patent issues, the patentee's or assignee's name is published in the Official Gazette of the United States Patent Office, and he will soon be flooded with circulars from all parts of the country. Some of these are from reliable and honest attorneys, but many are from professional swindlers, who make a living by cheating patentees.

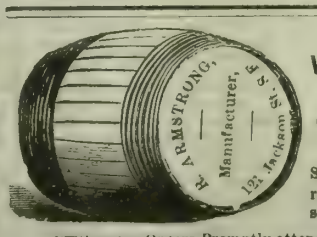
An explanation of a few of their methods will aid you in recognizing them when you see them.

One circular professes to come from a firm having a system of Patent selling agencies in all of the principal cities in the United States, that they will undertake to sell your patent for a slight commission if you will send them five or ten dollars to pay for copies of your patent, these copies they say are to be sent to their different agencies, and various means adopted to attract the attention of those in the line of business to which your invention relates, and you will soon be the possessor of hundreds or thousands of Dollars realized from the sales which they will make. If you send the money for the copies of the patent, it is the last you will hear from it.

Another party will send you a circular intimating that he has had an inquiry made in regard to your patent, and that if you send him a power of attorney he will endeavor to make a sale for you. If you send him a power of attorney, he will write back that he can not dispose of the patent, but can get $5 000 or $10,000 for your Canadian Patent (he has first examined and found that you have no Canadian Patent), but if you have no such patent, will hold offer till you get one, if you wish to do at once. 10 per cent. for selling, total cost of Canadian Patent through me is $30; this includes Government fee $20, and my fee $20; but in view of the sale will wait for my fee ($20) until Patent is sold. Upon receipt of Government fee, I will prepare documents and send them to you to sign. If you can not accept, say so, and do not ask me to advance the fee, as I am not permitted to do so as Solicitor." Of course, if a second thought is bestowed upon this letter the swindle becomes very apparent. The language itself is obscure, and the last sentence shows the true character of the lind value of your patent. Accompanying this letter is a certificate from an alleged notary, certifying to the character of the anxious solicitor. Anyone sending him money to pay for such a fee can not expect to receive anything in return, and must not feel disappointed if he never hears said swindler's name and nothing is heard from their Canadian Patent.

There is still another swindling institution which has paid particular attention to patentees residing on the Pacific Coast. The modus operandi adopted by them is as follows:

When you receive a well worded circular letter, saying they believe your invention is valuable, and after going to some length in telling its value, they inform you that they are in the Patent selling business, and would like to take hold of your patent. It will be necessary to send them but a small amount—usually $15 or $20—to buy copies of your patent, and pay for some other little matters. When they get the money from you they send to Washington and get one copy of your patent, print a small advertisement on it, and send it to you saying that it is a sample of what they are going out. In a short time they write you again and say that one of their branch houses has been successful, and can dispose of your patent for a piece of property in a distant city, but they also call upon you for $50 or so to pay the expenses incurred by the branch house. A man is led to believe that he is soon to come into possession of land worth many thousands, it is presumed that he would not delay to give $50 or a like amount in advance of the realization of his bright prospects. If he sends it he does not get any return but a little disappointment, and although "sadder," he is a much "wiser man."



There are many other schemes adopted to secure money from patentees, but they are all of the same general character.

The United States Patent Office publishes an Official Gazette every week which gives the name and address of each patentee. These parties who derive their income from the ways here shown, take this Official Gazette and send circulars to each person who has taken out a patent, and it is easy to believe that they have quite a comfortable income if only a small proportion of the patentees send money.

After having carefully read the foregoing, you will be possessed of sufficient information to prevent yourself from being duped by unscrupulous parties who have no intention of returning any equivalents for the money they have received. Our advice to patentees is, to make the value of your invention known as widely as possible, at once, by advertising, or by correspondence with manufacturers who are in that particular line of business, and do your own selling with such assistance as you can secure among your own acquaintances, and such parties as are thoroughly recommended.

Very truly,

DEWEY & CO.

THE PACIFIC RURAL PRESS,

AN ILLUSTRATED

AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.

Because it is the largest and best agricultural weekly west of the Rocky mountains

That Patrons may be reliably informed on the progress of the Order in this and other fields.

That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.

That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress

That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.

That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements.

That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information consubscription, etc., on application.

Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

The Forests of the Pacific Coast.

We have often alluded to the comprehensive work undertaken by the census office, with Prof. C. S. Sargent in charge, to make known the forest resources of the United States in 1880. As we have stated, the forest volume of the census will be full of tables and illustrated by colored maps of the different States, showing the forest area of each. This will be published in due time. We find that Prof. Sargent has given the public a sort of a forecast of his conclusions in a well-written article in the *North American Review* for October. It is a significant fact, showing the prominence with which agricultural and industrial subjects generally are now attaining, that almost every issue of this popular magazine contains a good review of some industrial theme. Not long ago such matters were cast aside for more acceptable discussions of literary, philosophical, political and other matters.

But to return to the forests: We shall collate from Prof. Sargent's article, which treats of the forests of the whole country, such parts as contain his conclusions on the Pacific coast forest growths. He shows that the distribution of the forests of the Pacific region clearly illustrate the influence of moisture upon forest growth. The rainfall of the northwest coast is very large, exceeding that of any other part of the continent; it gradually decreases with the latitude, and on the coast at the southern boundary of the United States is reduced to an average annual precipitation of less than 10 inches, not quite one-eighth of that received on the southern coast of Alaska. High mountain ranges, parallel with the coast, and extending from Alaska through the peninsula of Lower California, dissipate much of the moisture attracted from the Pacific ocean, leaving the whole the vast of interior region east of these mountain ranges, and lying between them and the eastern edge of the Pacific region, imperfectly supplied with water. It is a region of light, uncertain, and unequally distributed rainfall, heavier at the north, as on the coast, and decreasing gradually with the latitude, in nearly the same proportion.

The whole of the Pacific region is composed of the mass of mountain ranges and narrow valleys which form the Cordilleran system. The precipitation of moisture, both snow and rain, is, of course, heavier on the mountains than in the valleys between them, increasing, other things being equal in proportion, to their hight. In the case of the region in question, the western slopes of the mountains facing toward the ocean receive a larger precipitation of moisture than their opposite eastern ones. The forests of this region correspond with its rainfall. Along the northwest coast there is a strip of forest unequaled in density by any forest outside of the tropics; but this heavy growth does not extend east of the western slopes of the main Coast ranges. It pushes southward along the California coast, where the redwoods illustrate the maximum of forest productiveness. It decreases in density with the latitude on the slopes of the Sierras, disappearing entirely from the California Coast range south of Point Conception.

Throughout the Pacific region, the forest is confined to the mountains. The great interior ranges are forest-clad; at the north, the higher ones often heavily. At the south these mountain forests are light, often disappearing entirely from the lower ranges. In southeastern Arizona, and the adjacent parts of New Mexico, the forests, under the influence of heavier and more regularly distributed rainfall, are, however, denser than those in the same latitude farther west. But the forests of this whole region, north as well as south, are the forests of dry country. They are nowhere luxuriant as compared with the forests of the Pacific or the Atlantic coast. The trees have grown very slowly, and are often of immense age; underbrush and seedling trees, which characterize a vigorous forest growth, are wanting, except at the extreme north, or in the canyons of some of the highest ranges. Everywhere these forests show that their struggle for existence has been a severe one. They hold the mountains, but they just hold them, and no more. The drier valleys are treeless, or nearly so.

It is not improbable, in the light of recent scientific investigations, that even so recently as the time when some of the immediate ancestors of the trees which form these forests were growing, the whole interior region, now believed to be gradually drying up, enjoyed a more abundant rain-fall than it now receives, and that these forests thus originally grew under more favorable conditions than at present. If this hypothesis is correct, it will be easy to understand why, under less favorable circumstances, their reproduction will be difficult. The interior forests at the north may be expected, however, thanks to the present rainfall of that part of the country, to reproduce themselves slowly; but so slowly must this process go on, that, judging from the age of existing trees, many hundred years will have passed, if these forests are destroyed, before their successors can attain sufficient size to be of economic importance. Through all the southern part of the interior region, the struggle for life has been so severe that the stunted groups of trees, which barely deserve the name of forests, have only succeeded in finding a foothold in the high canyons about the heads of the scanty streams. The age of some of these small trees is immense. Few young trees are growing up to replace those which perish in the course of nature; and, once destroyed, the reproduction of these forests is so doubtful, or must at least be so slow, that the possibility of it, even, need not be considered in any practical discussion of the question.

Unlike the forests of the Atlantic, those of the Pacific region are composed of a few coniferous species, generally of wide distribution. Broad-leaved trees are almost entirely wanting in these forests, or, where they occur, are confined to the valleys of the coast, and to the banks of mountain streams. They nowhere form, as in the Atlantic region, an important element in the forest composition, and, economically, are of little importance.

The heavy forests of the Pacific region are still almost intact; other forests of this region, less productive, although from their position even more valuable, have already nearly disappeared. The unequaled forests of fir of the northwest coast hardly show the marks of 30 years of cutting and annually increasing fires. In this humid climate, young trees of the same valuable species spring up so quickly on land stripped of its original forest covering, and these new forests grow with such remarkable rapidity, that there is little danger of their final extinction. Any attempt to estimate even the productive capacity of this belt of forest is vain, although it is safe to assume that it contains the largest and most valuable body of coniferous timber remaining in any part of the world. The noble forests of pine and fir which grace the western slope of the California Sierras are still, so far as their mature trees are concerned, largely intact, although the increase in the number of forest fires in this region is alarming. The Sierra forests, thanks to their usually inaccessible position, have so far, for the most part, escaped the organized attacks of the lumberman. Serious, and often fatal, injury has been inflicted upon them, however, by the sheep which every summer are driven up by thousands to pasture in the cool, moist, subalpine meadows of these high mountains. The sheep, enforced by great bands of horses, cattle and goats, clean everything before them; nothing but the large trees and the most stubborn and thorny chaparral escape their voracity. Every young tree, every bud and every blade of herbage is devoured; everything green is destroyed; and the sheep tread out from the dry, gravelly hillsides the roots of all young and delicate plants.

The Sierra forest is, over most of its extent, a forest largely composed of full-grown trees, containing but few young seedlings, and little undergrowth to shelter and protect them; its condition, then, is critical, and unless measures can be taken for effectually limiting the range of browsing animals, its total extinction must be merely a question of time.

The belt of redwood forest along the California coast has already suffered severely at the hands of the lumberman, and many of its finest and most accessible trees have already been removed. A large amount of this valuable timber is still standing—less, however, than has generally been supposed; and at the present rate of consumption, the commercial importance of this forest will have disappeared at the end of a few years more. It will, however, owing to large annual precipitations of moisture received by this portion of the California coast, and the unusual vitality of the redwood tree itself, spread again through the canyons of the Coast range; but centuries must elapse before such new forests can rival in productiveness or extent those which California is now so rapidly dissipating. The forests of the northern interior region are still comparatively intact. Few demands upon them have yet been made, although extensive and destructive forest fires sweep bare every year great areas along the mountain sides. The northern forests are largely composed of the valuable species of the northwest coast, and, with proper protection, will long supply with fuel and building material the agricultural population now rapidly pushing into this part of the United States. The great pine forest which extends east from the flanks of the San Francisco mountains, in Arizona, nearly along the 35th parallel of latitude across the New Mexico boundary, has, up to the present time, escaped serious injury. Less valuable in its composition than the forests of Montana and Idaho, and yielding timber of comparatively inferior quality, this broad belt of pine is—owing to its isolated position between wide stretches of desert—of prime importance to the future developement of this region. The remaining forests of the interior region, including those of the high Colorado mountains, are largely wasted. The mining industry has already made serious drains upon them, and fires are licking them up in every direction. It is hardly possible to realize the damage which has been inflicted upon these forests during the past 20 years. They are scarcely reproducing themselves anywhere, and in a few years, unless the present rate of destruction can be reduced, they will have entirely disappeared.

Miss Rose E. Welby, daughter of Charles W. Welby, P. M. W., of Bay View Lodge, took a $10 prize for the best loaf of brown bread and the best loaf of white bread, made by a miss of 12 years, at the State fair.

Bro. J. P. Ziph, M. W. of Manzanita Lodge, 154, was in our city last week.

Patents and Inventions.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in Dewey & Co.'s Scientific Press Patent Agency, 252, Market St., S. F.

For the Week Ending September 19, 1882.

264,607.—Log Chute Wm. H. Barnum, Reno, Nev.
264,508.—Grain Cleaning Apparatus — Daniel Best, Albany, Oregon.
264,509.—Grain Separator and Cleaner—Daniel Best, Albany, Oregon.
264,637.—Wheelbarrow—John Devey, Alpine City, Utah Ter.
264,529.—Machine for Making Wire Rope—A. S. Hallidie, S. F.
264,521.—Forming Button Holes—Loo Chew Fan, S. F.
264,838.—Cuff Button—David Lubin, Sacramento, Cal.
264,839.—Bottle—David Lubin, Sacramento, Cal.
264,546.—Harrow—D. C. Matteson, Stockton, Cal.
264,549.—Can Opener—W. A. McFarlane, Ivanpah, Cal.
264,468.—Bed Spring—D. F. Mitchell, Ferndale, Cal.
264,561.—Door Plate, Letter Box, etc.—Chas. H. Parmenter, Oakland, Cal.
264,569.—Brake Shoe—A. W. Sanborn, S. F.
294,581.—Harness Buckle—J. T. Stoll, Sacramento, Cal.
264,586.—Soda Water Apparatus—F. S. Waldo, Alameda, Cal.
264,590.—Infusing Attachment for Tea and Coffee Pots—James L. Williams, Portland, Oregon.

Note.—Copies of U. S. and Foreign Patents furnished by Dewey & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Scientific Press American and Foreign Patent Agency, the following are worthy of special mention:

Brake-shoe.—A. W. Sanborn, S. F. No. 264,569. Dated Sept. 19, 1881. This invention relates to brake-blocks loosely pivoted on the brake-bar and forced into position by springs. The bar or shaft is journaled under the body, and its arms extend downwardly on each side, and carry the brake-blocks in a vertical position and in line with the rear wheel or wheels. The blocks are arranged usually to impinge against the wheel at about the same hight as its center or hub, and at this point they meet the tire of the wheels squarely and impinge over their entire face. The blocks are rigidly secured upon the rod, and are brought against the wheel by the rocking movement of said rod. Now it is obvious that when the vehicle is loaded, and the body is borne down, the brake-blocks are lowered; but because of their being rigidly secured upon the rod, they do not vary their inclination, but remain vertical and in a position to fit squarely against the wheel only at one point. Therefore they cannot fit the wheel at a point lower down. When thrown back against the wheel the top of the block alone impinges, and the leather, or other shoe upon its face, becomes so much worn that new ones have to be continually supplied. The reverse of this is true when no weight at all is put upon the body. In that case the blocks are elevated, and when forced back against the wheel the lower portions impinge. The object of the invention is to remedy this difficulty, and this is done by loosely fitting the block upon the rod, and so affecting it by springs that in whatever position it may be, and no matter whether the top or bottom impinges first, it may yield sufficiently to square itself against the wheel and wholly fit its face against it.

Combined Door plate, Letter box and Bell-puller.—Charles H. Parmenter, Oakland, Cal. No. 264,561. Dated Sept. 19, 1882. This invention relates to a door-plate, letter-box and bell-pull, and it consists in a box placed upon the inside of the door, to which access from outside is had by pulling out a drawer or chute fitting through the door, the front of which is adapted to receive a name, and which by its movement rings a gong, by means of suitable intermediate mechanism.

Grain-cleaning Apparatus.—Daniel Best, Albany, Oregon. No. 264,508. September 19, 1882. This invention relates to an improvement in grain-cleaning machines, and it consists in combining with a riddle and a blast-fan an auxiliary suction-fan in the top of the case, passages to such fan from the space above the riddle, and a hinge door for closing said chamber.

Method of Forming Button-holes. — Loo Chew Fan, San Francisco. No. 264,521. September 19, 1882. This invention relates to an improved method of forming button-holes in button shoes, and for similar purposes, and it consists in an improved continuous finish extending along the inner ends throughout the entire line of button-holes upon the inside.

Grain Separator and Cleaner. — Daniel Best, Albany, Oregon. No. 264,509. September 19, 1882. This invention relates to certain improvements in grain separating or cleaning apparatus, and it consists in certain specific details of construction, forming a novel and efficient grain separator.

Harrow.—Don Carlos Matteson, Stockton, Cal. No. 264,546. September 19, 1882. This invention relates to certain improvements in harrows; and it consists in an improved formation of the beams or bars of the harrows and in the manner of fixing and holding the teeth in place.

Officers of Lodges should possess superior knowledge of the laws and rules of the Order. It inspires confidence and respect. It gives character to the organization. It promotes harmony and business regularity. It insures success.

Missouri intends to reach the 10,000 mark by the 1st of January. You can do it brethren, if you try. No other society can boast of a more substantial organization than this of ours. Remember the old pioneer, boys, and put your shoulder to the wheel.

A statistical committee was appointed at the last session of the Supreme Lodge, A. O. U. W., whose duty is to collect and compile statistics tending to show the necessity of a change from level to graded assessments. If its work is well done, the report will be interesting.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the Watchman's progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tel whether the Watchman has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the Watchman family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the Watchman.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Our Agents.

Our Friends can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. McGrew—Santa Clara county.
M. P. Owen—Santa Cruz county.
J. W. A. Wright—Merced, Tulare and Kern counties.
Jared C. Hoag—California.
H. H. McDonald—Solano and Yolo counties.
L. L. Woodmansee—Napa county.
B. W. Crowell—Santa Barbara and Ventura counties.
Wm. S. Taylor—State of Nevada.
L. Walker—Butte, Sierra, Plumas and Lassen counties.

Our Representative East.

Mr S. E. Baker, of Springfield, Ohio, a gentleman of first-class recommendations and qualifications, will represent this paper on the Eastern side of the continent. He will occasionally make brief visits to most of the principal cities, and we recommend him to the attention of progressive men of industry for the transaction of business on equally as favorable terms as in our own office. Address No. 14 West High street, Springfield, Ohio.

Officers and members of the A. O. U. W. receiving a complimentary number of the Watchman with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Frank P. Latson & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery Street, under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc., and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

The finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies the best trade in this city.

Mansion House.—First-class in every respect, and reasonable prices. When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

A Turned Leaf will point out the article supposed to be of special interest to persons receiving sample copie of this paper.

Lime Cement.

This cement is one of the most valuable known, not only on account of the great variety of purposes to which it is applicable, but also by reason of the rapidity with which it sets, and also its great tenacity and durability, and its incapability of being again resolved by any ordinary cause. It is used with advantage in uniting wood to wood, wood to cast iron, wood to brass, cork to brass, wash leather to wood or cork, glass to glass, ivory to ivory, etc.

Take of good, moist cheese, any convenient quantity, place it in a saucer, and pour thereon boiling water, working it with a knife so as to expose it thoroughly to the action of the water; as soon as this latter becomes turbid, pour it off and add more; repeat this process until nothing remains to be washed away. The residue of the cheese will now have assumed a waxy consistency, which will be indicated by its allowing of being drawn out into long filaments; when this is the case, about half its bulk of quicklime should be added, and the whole well kneaded with a knife or spatula. It must be used immediately, as it sets in about 15 minutes. This cement may be made to keep by drying the waxy substance, pulverizing it, and mixing therewith the proper portion of lime. It should be kept in an air-tight bottle. When required for use, knead it into a paste with a little water. This is a superior cement, but not so satisfactory as the first, as the ingredients of the compound are liable to deteriorate by exposure.

An excellent cement for wood is the common shellac varnish, *i. e.*, shellac dissolved in alcohol. It is said to be more effective than glue, and to join the parts together stronger than if they had never been separated.

Another cement can be formed by mixing white glue (or gelatine), four pounds; dry white lead, one pound; soft water, four quarts, and alcohol, one quart. Boil the glue and lead in the water by means of a water-bath. The glue being dissolved and the alcohol added, stir the whole until they are well mixed. Pour the whole into a phial for future use.

THE moon, like some men, is brightest when it is full.

Wire-Drawing.

When the ductility of a metal is brought into play in a certain manner, the result is termed wire. The ancient mode of wire-making was by hammering the metal into sheets, cutting these into long strips, and hammering the strips into wires. The method in use at present possesses the advantage of greater rapidity, and produces much better wire than that made in the old way. The metal is shaped into rods by being drawn in a red-hot state between grooved rollers, and these rods are reduced to wire by being drawn in a cold state through holes in a plate of some harder metal. Rods for wire are usually about an eighth of an inch in thickness, the wire-drawer producing the subsequent reduction. The draw-plates are of hard steel, and are perforated with holes varying by very slight degrees in circumference. These perforations are made with the greatest care and are usually round. The wire rods are drawn through them all in succession, begining with those of the largest diameter, thus reducing them in thickness by slow degrees. The force required to draw the rods through is effected by means of a draw-bench, drawing-block, revolving shaft, bevel wheels, forceps, and toothed rack. Frequent annealings are required, for the reason that the wire becomes very much hardened by the compression. The coating of oxide, occasioned by the annealing is removed by a pickling in dilute acid. Frequently a lubrication of the parts becomes necessary, to permit the passage of the wire through the perforations of the plate. Wire is commonly made round, but it is also drawn in oval, square, half-round and angular shapes. Some of the finer and more delicate sorts of wire, for instance, that for the pendulum springs in chronometers, are drawn through perforations in ruby, the usual material for plates, steel, not being of sufficient hardness for the purpose. Some of the finest work of this kind, made and used in the mechanic arts is seen in the gauze for safety lamps, which frequently has 120 wires each way (making 14,400 meshes) to the square inch.

CALIFORNIA VOLCANIC WATER CO.

Mining and Scientific Press.

The Mining and Scientific Press is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The Press gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

DEWEY & CO., Publishers.

No. 252 Market St., San Francisco, Cal

Canvassing Agents.

We want several canvassing agents who will make their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

Friction.

Friction among solids is of two kinds, rolling and sliding, governed by different laws. The laws of the friction of journals (which includes both solid and fluid friction), are quite different from the laws of friction of solids, as given in text-books. Fluid friction varies with the square of the velocity, is proportionate to the area of the rubbing surfaces, and probably independent of the pressure. A fluid lubricant forms a fluid cushion, separating the surfaces more or less perfectly, according to its viscosity. The same surface lubricated with a given material may, under light pressures, seem to be governed by the laws of fluid friction, while under heavy pressures, the lubricant being squeezed out from between the solid surfaces, the laws of friction of solids come into play. The ratio of frictional resistance to total pressure from sliding friction varies directly as the pressure. It is independent of the speed and area of the rubbing surfaces.

The laws of sold friction differ with the character of the rubbing surfaces. The friction of fibrous materials is increased by increased extent of surface and time of contact, and is diminished by pressure and speed. With wood, metal and stone (within the limit of abrasion), it varies only with the pressure, being independent of the extent of surface, contact and velocity. This limit of abrasion is determined by the hardness of the softer of the two materials. Friction is greatest with soft materials and least with hard ones. The friction of lubricated surfaces is determined by the lubricant rather than by solids.

With rotating journal, friction is greater when the journals or bearings are not round than when they are truly cylindrical; greater when they are short than when long; greater when there is much wear than where there is little; greater when the surfaces are not finely finished than when they are of perfect surface; greater when improperly lubricated than when duly supplied with a fit lubricant; greater at high speed and pressure than at slow.

Bearing surface must be given by length rather than by diameter. It is the weight per square inch of longitudinal section that determines the heating and friction. Bearings cannot run cool unless the minute high places on them are either removed or reduced, and the low places are filled up with some sort of unguent. If the caps of journal boxes are left too loose the journal will wabble, and if screwed down too tight the lubricant will burn out and the bearings become ruined.—*Exchange.*

Unsuspected Poisons.

It seems as though we are bound to undergo a certain amount of poisoning, eat what we will, and it is, upon the whole, perhaps, a happy thing that we are, as a rule, able to submit to it with so little interference with our mental composure. The *Pharmaceutical Journal* quotes the opinion of an eminent analyst, from which it appears that decided symptoms of poisoning result more frequently than we are aware of from any considerable consumption of potatoes. Among the poorer classes, who live largely on potatoes, such symptoms tre said to be common, more particularly when the tubers are very young or very old. Such potatoes, we are told, contain considerable quantities of solanine. The poison was found in very unmistakable quantities in the stomach of a man who had been, for two or three days previous to his death, living on nothing but raw, unripe potatoes, and there seems to have been no room for doubt that this diet accounted for the presence of the poison. It is said to be found chiefly, if not entirely, in the skin of the potato, and is soluble in boiling water, and we may, we suppose, assume therefore, that a very young or a very old potato, boiled in its skin, must be, to some extent, permeated with solanine, and must be unwholesome to an extent that may become serious, if partaken of in large quantities.

Another unsuspected source of poison is said to be maize or Indian corn. A disease as fatal in Italy as consumption is in this country, is attributed entirely to the exclusive use of this cereal, which is thought to be especially dangerous if ground in a damaged condition—damaged, we suppose, by incipient decay, though that is not stated. There is said to be one remarkable fact connected with the disease which is thought to have its origin in this source—the disease known as pellagra. Sufferers from it who commit suicide, always do so by drowning,

The Mining and Scientific Press

Established May, 1860, this has long been the leading mining journal in America, and enjoys a large circulation among the more intelligent operators and workers in the gold fields of the world.

As a scientific and mechanical representative of the Pacific Coast, it is decidedly popular and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivaled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer will find profit by its reading.

Subscription, $4 a year in advance. Sample copies, 10 cts.

Patent Agency.

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

Important to All Officers of the A. O. U. W.

We have sent a large number of extra copies of the WATCHMAN to the various officers and members of the A. O. U. W. We ask as a special favor that the officers who are intrusted with much of the success of the various Lodges will lend us a helping hand in increasing our circulation. Nothing contributes more to the successful working of the A. O. U. W. than the circulation of general fraternity news, and the best way to secure this is through the WATCHMAN, which is an able and faithful advocate. It is to the interest of the A. O. U. W. that the WATCHMAN be placed in the hands of every Workman, and to accomplish this we must rely in a large measure upon the Lodge officers.

Liberal inducements will be offered to active and reliable members who will canvass for subscriptions. Sample copies will be mailed free on application to Workmen, all of whom are invited to endeavor to assist in extending the circulation of the WATCHMAN.

Let every Workman into whose hands this notice may come, if not already a subscriber, fill out the subscription blank below, enclose two dollars, and send it to us for a year's subscription.

The Comet.

Just now hundreds of thousands of people are interested in the magnificent comet which is visible in the eastern heavens at sunrise. Prof. George Davidson, of the U. S. Coast and Geodetic Survey, who, with a fine telescope, observed the comet from the top of Mt. Tamalpais, says of it:

One of the atmospherical phenomena exhibited by the nucleus, was its white light being decomposed into a spectrum—blue, white and red—by its rays passing through the prism of air at that low altitude. This same phenomenon is sometimes remarkably brilliant with Venus near the western horizon. Immediately upon the discovery of the comet, I made observations for its position by observing its altitude and azimuth, and noting the times of observation with a chronometer whose error was well known. (Want of time prevents these observations being reduced.) Near noon of the same day, Mr. Pratt, of the Coast Survey, and myself, got observations of the declination of the comet. It was plainly visible all day to the unassisted eye. [So far as known, these are the earliest instrumental observations on the comet by competent observers.—ED.] On the 20th, before sunrise, I got other observations for altitude and azimuth, and at noon obtained its meridian transit in the meridian instrument, while Mr. Pratt observed its declination in the Zenith telescope. It was then clearly visible to the naked eye, but its brightness was diminished.

In the morning the nucleus was but slightly diminished in brightness, but the tail had developed in length to about three degrees, although its width was nearly the same at the extremity. At the nucleus the envelope where merging into the tail was not so broad. On the morning of the 21st, the comet presented a most brilliant spectacle. The nucleus was not so large or bright, but the tail was lengthened to five degrees, with a breadth of one-third of a degree at the free extremity. It was contracted near the envelope, and the bright bounding lines of the tail were straight. I made observations for altitude and azimuth, as on previous mornings, and near noon, at meridian transit, its right ascension and declination were determined by Mr. Pratt and myself. The nucleus and part of the tail were then visible to the naked eye.

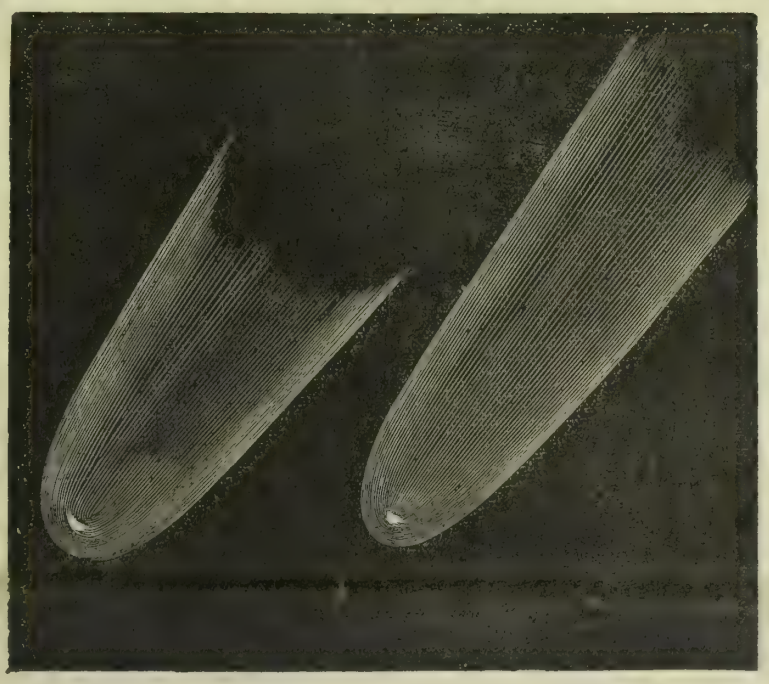

FIG. 1—COMET ON SEPT. 19TH.

FIG. 2—AS SEEN SEPT. 20TH.

On the morning of the 22d, the brightness of the nucleus was still more diminished, but the tail lengthened to about six or seven degrees, and the general effect, as a spectacle, was increased, but when the sun rose the comet nearly faded out of sight. There was no sight of a shadow on the nucleus. I after obtained observations for altitude and azimuth, and at a meridian transit determined its right ascension and an approximately close declination. It was not visible to the naked eye.

After sunrise the comet soon faded out to the keenest eyesight; and at its meridian transit we failed to find it in the meridian instrument and in the larger zenith telescope. On the morning of the 24th there was a remarkable change in the form of the tail. It was slightly increased in length, and about the same width as heretofore at the end; but the eastern white streak of the tail, or cone, was very much curved outward within a degree of the head, while the eastern line of the tail was straight. It seemed to me that two very faint streaks of light projected from the head, nearly at right angles to the axis of the cone of the tail. Observations were not continued after this date, and the weather was not clear enough for favorable study of the comet's appearance. The remarkable apparent developments of the tail in length may be owing to the two considerations: First, the smoky atmosphere of the first day or two; second, the prospective view of the comet when more directly in line between the sun and the earth at the earlier rates. I could not leave my duties at this station to observe for position and physical peculiarities at my San Francisco observatory; but I add the position of the comet as determined on several dates at this station.

U. S. Coast and Geodetic Survey station, Table mountain, latitude 37 degrees, 55 minutes, 20 seconds, north. Longitude west of Washington, 3 hours, .02 minutes, 10.96 seconds. Elevation above the ocean, 2,604 ft.

TABLE MT., MEAN TIME. Meridian Passage.	A. R. COMET. Hrs.	Min.	Sec.	DECL. COMET. Deg.	Min.	Sec
Sept 20, A.M, 11h, 15m, 18.7s	11	13	37.7	Sth 0	39	58
" 21 " 11h, .06m, 2.36s	11	.08	37.2	Sth 1	24	11
" 22 " 10h, 58m, 10.8s	11	.04	21.2	Sth 2	07	

The observations of previous and subsequent dates out of the meridian have not been reduced.

Since the above paper was written, some further observations have been made. Prof. Davidson has kindly made for us a series of sketches of the comet as observed on different days. Four of these sketches we have hastily engraved, to illustrate its appearance at different periods.

Fig. 1 of the engravings shows the comet as first seen on September 19th at 5 A. M. It was then three-fourths of a degree long and half a degree wide; nucleus, 10 seconds by 17 seconds.

Fig. 2 shows it on September 21st at 4:30 A. M. It was then three degrees long and half a degree wide.

Fig. 3 shows it on September 24th at 4:30 A. M., when it was eight degrees long. This shows the curved eastern border, and also the rays at right angles at the point.

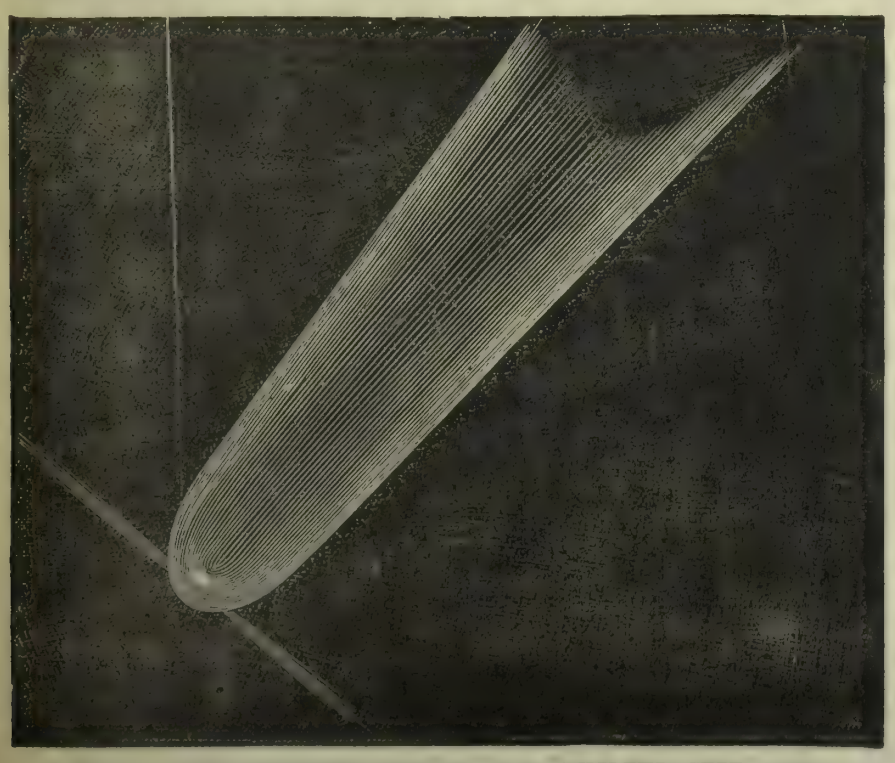

FIG. 3—RAYS AT RIGHT ANGLES NEAR NUCLEUS, SEPT. 24TH.

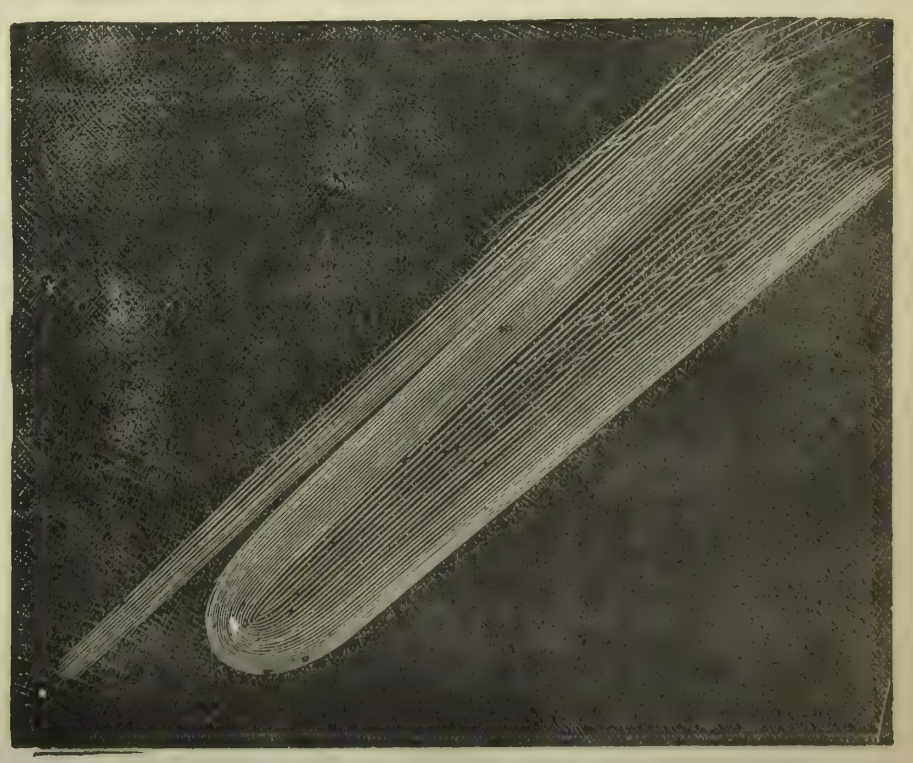

FIG. 4 COMET AND SECONDARY COMET ON OCTOBER 7TH.

Fig. 4 represents it at 4:15 A. M. on October 7th. The length then was 12° to 15°; width, $\frac{3}{4}$° to 1°; exceedingly brilliant. The nucleus sometimes appears separated into two parts (atmosphere not steady), and certainly is not symmetrical with focus of envelope. There is now shown a secondary comet—very faint, but certain, and with its head near a small star, one and a half or two degrees from the large nuclues. This is shown in the engraving. These cuts, of course, do not show the proportionate length of tail.

Home Miscellaney.

The Story of the Gate.

Across the pathway, myrtle-fringed,
Under the maple, it was hinged-
The little wooden gate;
'Twas here, within the quiet gloam,
When I had strolled with Nelly home,
I used to pause and wait.

Before I said to her good-night,
Yet loath to leave the winsome sprite
Within the garden's pale;
And there, the gate between us two,
We'd linger, as all lovers do,
And lean upon the rail.

And face to face, eyes close to eyes,
Hands meeting hands in feigned surprise
After a stealthy quest
So close I'd bend, ere she'd retreat,
That I'd grow drunken from the sweet
Tuberose upon her breast.

We'd talk—in fitful style, I ween—
With many a meaning glance between
The tender words; and low
We'd whisper some dear, sweet conceit,
Some idle gossip we'd repeat;
And then I'd move to go.

"Good night," I'd say; "good night good by!"
"Good night"—from her, with half a sigh—
"Good night!" "Good night!" And then—
And then I do not go, but stand;
Again lean on the railing, and—
Begin it all again!

Ah! that was many a day ago -
That pleasant summer time—although
The gate is standing yet;
A little cranky, it may be,
A little weather-worn—like me—
Who never can forget.

The happy—"End?" My cynic friend,
Pray save your sneers—there was no "end."
Watch yonder chubby thing!
That is our youngest, hers and mine;
See how he climbs, his legs to twine
About the gate and swing.

—*T. H. Robertson.*

Only for Fun, and What Came of it.

"How be you this mornin'," Squire Dunnin'?"

"Oh, middlin', Miss Patty, middlin'. Hain't quite so spry as I was 20 odd years ago; but hold on a bit and I'll help you down." And so saying, aldermanic Si. Dunning reached up a large fat hand, and eased Miss Patty's descent from the one-horse shay that old Doane was tugging at, evidently not wishing to tarry, for she seemed instinctively to conclude that, if Miss Patty stopped, there was no telling when she would resume her journey.

You see, though Miss Patty was a good old soul as ever lived, she was very much given to harmless gossiping, and she generally tarried long at the whine when she began to talk over her own troubles and trials.

Miss Patty was, as she herself expressed it, nigh onto 60, and, in fact, she had admitted the same thing for a number of years, so that most folks put her at 70, or thereabouts. Just now Miss Patty was in a peck of trouble; she had come down from the Roseleaf farm in search of female help.

Mrs. Dunning, the hotel-keeper's wife, came out to greet the new-comer, being always glad to see the tidy old body, especially as Miss Patty Slocum's butter was the best for miles around, and she always made it a point to bring some along with her.

Just now Uncle Si., as most people called him, was grunting over the three gallons of buttercup-yellow creamery.

Mrs. Dunning relieved the butter maker of her basket of eggs, and she herself gathered up a bunch of garden sass, and brought up in the rear as the trio trudged through the garden and around to the ample hotel kitchen, Miss Patty remarking, as they were passing the side piazza:

"I've got to have some help somehow or other. I've inquired all the way along, but girls seem to be mighty scarce; allers the way these days, when you want 'em to do a bit of work they are nowhere around. If it wasn't for this rheumatis now—" but right here Miss Patty's voice was lost as she turned the corner of the great house. Though lost to view, she was indelibly stamped on the memory of the group of girls that sat on the front piazza, some in low wicker rockers, one in a hammock, swinging lazily, another half sitting on the railing, her saucy face half hid by the luxuriant woodbine that clambered up to the second story.

"I say, girls, come here, every one of you," and the face that had been peeping from the woodbine came into full view, and the dainty muslin-clad body sailed down the steps, and four others, not at all alike, but every one more or less pretty, followed after her around the west side of the house, and within hearing of all that was said in the kitchen.

"Mum is the word now, girls, and don't one of you give an audible smile for your life. I think the party in that immense sunbonnet—shaker I suppose you'd call it—is a case; an original, too; and I want to hear what she is going to do about her help. She makes me think of old Aunt Hannah, up at the Springs. This old body is just such a go-ahead—sharp as a cricket, and, except for her rheumatis, would be equal to half a dozen such girls as you and me."

When the girls had reached the desired spot, right under a high window that opened out of the buttery, that was Mrs. Dunning's pride, and a marvel of convenience, by the by, they all sat down on a long wooden bench that was under great overhanging lilac bushes, just now laden with immense clusters of the lovely perfumed blossoms.

Rose Stoneleigh, the leader of the group, put one dimpled finger up to her lips, and the others, in "follow your leader" style, each raised a finger, and they were as quiet as mice. Presently through the window came the voice of Mrs. Dunning.

"Indeed you must stop a minute, Miss Slocum. You'll be all done out time you get back home again."

"No! thank 'e all the same. I'll try one more place, and then I'll get back home again.

"It is too bad you can't find anybody. What is the particular rush just now? Surely haying has not commenced with you?"

"No, not that exactly, but I've a sight on hand just now; got to do down some pie-plant, and then them 'ere gooseberries are about ripe enough to can, and in about a couple o' weeks the cherries 'll be on hand, and, pester the hired help anyway! I'd sooner grub long anyhow than bother with any o' them, if 'twant for this plaguey rheumatis. It kinder catches me wonst in a while, and no use to talk, it takes the spunk clean out of me. I heard as how they had some sort of ile down to the post office that was powerful good for sich cases, an' I guess I must git me a quarter's worth, just to try it. Feel sort of 'fraid to, too."

"Girls, sit still, and I will be back in a trice," and off flew Rose, skimming past stately Helen Parker, who still sat on the piazza, scratching away with her pen, an oval stand before her.

"What are you up to now, Rose Stoneleigh?"

"Can't stop to tell any fibs just now," said Rose, as she flew up the broad stairway and into her room. Presently she emerged an altogether different-looking person. In place of a muslin, she had donned a school-girl gingham, a white apron and plain linen collar, her hair all smoothed down to get the contrary crinkles out perfectly natural, you know. Down she went, stole back and seized Mrs. Dunning's blue gingham sunbonnet, and darting out to the wondering girls, had just time to signal them to come to the front, when Miss Patty emerged from the other side and was just about to ascend the step of the comical vehicle, Mrs. Dunning turning after her, saying: "I hope you'll succeed in your efforts, Miss Slocum. If I wasn't so busy myself I'd let Selena come up a day or two and help you out, but you see we have the seminary girls—at least six of them—and it keeps one kinder busy. Why, what on earth!" Here the good old lady had to stop in sheer amazement, for she recognized her own sunbonnet coming toward her with a little body underneath.

Rose did not stop for anything, but sailed up to Miss Patty, made a demure little bow and commenced: "Please, ma'am, I overheard part of your conversation, and I thought I'd offer myself, if you think I could strip pieplant, or help you in any way;" and she dropped her white lids as though she was frightened at her own temerity.

"You don't look as you could do much. How much did you expect to get a week, and where did you come from?" queried business-like Miss Patty.

"I came from over yonder some miles, and have a sick aunt, and want to earn some money. Please, try me, and if I don't suit I need not stay."

"Well, seein' as how you came in the nick of time, and look kinder clipper like, I'll take you along. Have you any recommends along?"

"N-o, I have not, but Mrs. Dunning here, knows me, she did not expect to see me to-day hunting a place," and the smiling eyes were turned upon the landlord's wife, and, bid by the sunbonnet, she made a grimace at the puzzled face that was slowly taking in the fun.

"Oh, yes," explained the good old lady, "I do know her, but I doubt her capabilities regarding housekeeping. But I'd try her if I were you. You might do worse."

"Can you come right along? I'd a heap rather you would, seein' as I'm clean tuckered out now."

"Oh, yes; certainly I can. Mrs. Dunning, I left my bundle, a gingham and a few other things inside. Will you have them sent? One reason I came was that Cora, over there, used to know me and I heard that the girls were going to spend part of vacation here, and then I thought I'd kill two birds with one stone if I could earn a bit while over."

Miss Patty looked rather suspiciously at the white dimpled hands, and it was hard telling what was in her thoughts, as they finally drove off. They went down into the heart of the village, and Rose pulled the sunbonnet further down around her face, murmuring that "the sun was rather warm."

"Now, we will have to wait for the 10 train," said Miss Patty, "and if you will mind the horse, I'll just drop right in the post office and get what I want. I expect my grandnephew on the morning train, and if it happens to come in while I'm in here, 'you jes' keep an eye open for a long, good-looking chap with an immense gilt chain, and tell him I'll be out as soon as I can git my ile and lamp chimenys, and other stuff Mind the horse, now!"

So saying, off she went.

Rose sat very quiet some minutes, peeping from the depths of the bonnet. It was dreadful, this having to wait when she was in for a frolic. Ten, fifteen minutes went by, when, in the distance sounded the locomotive whistle.

"Whew!" mimicked Rose, "a grandnephew coming! I suppose her idea of a good-looking chap is one that can do all manner of hard work, and a great gawk of a fellow he is, I know.

Her reverie was interrupted by the stopping of the train, and the rush of passengers getting on and off. With a ding-a-ling, a puff, and a snort, the great engine steamed out again, with a long line of cars trailing after.

Rose had all she could do to manage the restless old mare. When Doane finally became quiet, Rose looked over toward the depot in search of the gilt chain, that being uppermost in her mind. The passengers had all gone their several ways except two; these were a lady and gentleman.

There was a cloud of dust, a carriage drove up, and, amid a shower of greetings, the lady was helped in, and immediately driven off. Rose came to the conclusion that the tall gentleman must be the nephew aforesaid, who, espying Miss Patty's turnout, came over.

"Excuse me, ma'am, but I believe this is Miss Patty Slocum's rig, is it not? and did she send you down for me?"

"I'm in for it now," thought Rose; "he thinks I'm the hired girl, no doubt, but I'll carry it through or die, for the girls would make a laughing-stock of me." Aloud she said: "You can jump in if you like; Miss Slocum will be out presently; she is in the post office, and I expect her every minute now."

"Contrary to her expectations, he seated himself beside her, and with a polite "allow me," he took the reins from her hands.

Miss Patty's watchful eyes had taken in all that had occurred outside; she now appeared at the open door.

"I'll be there in just three minutes, Tom; just make yourself agreeable to the young miss; she is going to help me a bit for a week or so."

"I'll wait three hours, Aunty, if you like; I'm not at all in a hurry; and the brown eyes were as full of mischief as those of Rose's. Rose's were as blue as the sky, though they might have been green or yellow for all the glimpse Tom could get of them.

He was mentally anathematizing sunbonnets of all descriptions, and wondering if the man who invented them was dead yet; if not, he wanted to make a target of him immediately. As the being beneath the (to him) hideous structure, was rather quiet, he concluded to bide his time, and if *it* proved interesting, he meant to have all the fun possible during his two weeks' stay. He soliloquized thus: "Now Aunty is as sharp as a steel-trap, and if this little piece here does not toe the mark, she won't have her around, but we'll fix things. I wish she'd throw back that confounded headgear, and let a fellow see what she is like."

Presently Miss Patty, having completed her purchases, stepped out, and was handed into the wagon by the clerk, he being glad of an excuse to satisfy his curiosity regarding the occupants of the front seats.

The sun by this time was getting very hot, and Miss Patty told Tom to drive along right smart, as she had dinner to get yet, and they had three miles or so to go.

"Why, yes, Aunty, I know the precise distance; why shouldn't I, when I lived here so many years; seems though you've more enterprising folks about here than there was three years ago."

"Wall, yes; you see sence them seminary girls came, seems as though it is livelier about here; you know they built the seminary the fall you went away."

Old Doane did her best, and within half an hour they were in sight of a white house with green blinds, and lovely trees and immense rose bushes. "Jest drive 'round to the back, Tom, I've a lot of traps here and I don't like to lug 'em clear through the house." Having done as he was desired, he sprang nimbly to the ground, helped Miss Patty out, then handed her the bundles, and lastly gave Rose a firm good-sized hand and very awkwardly knocked off that terrible bonnet.

Rose untied the strings to get a little air during the drive home. The blue eyes looked defiance at the brown ones, while the brown ones had a look that pleaded, "I'll never do it again, please, ma'am."

Rose followed Miss Patty into the house, while Tom attended to old Doane. Everything was as neat as a pin in the little kitchen. The low, stuffed rockers were inviting, and Rose sat down. Having found her tongue, she went into raptures over everything she saw.

"What a dear little place you have; so old-fashioned and so homelike. Let me pare those for you. I'll do it ever so thin." Having finished her task, she went from one thing to another, and her bright ways and light step soon won Miss Patty's esteem, and Rose had a firm friend forever after.

Tom was astonished at the clear, pretty face as he tipped the bonnet off her head, and he mentally resolved to be on his good behavior, for, as he told old Doane out in the barn, "blue eyes, brown hair, short and plump, and a will of her own, which shows itself in those blue depths, full of fun, though; in fact, Doane, if you'll help me to manage it, and don't tell Aunty until it is all fixed, we'll marry her. That is, of course, providing she isn't spoken for before this, and will have us, you know, eh Doane?"

Doane neighed as though she understood everything, and Tom gave her a whole peck of oats in his absent mindedness.

Two—three weeks glided by; Tom was a model of good behavior. Miss Patty was delighted at the success of her preserving. Rose learned the art of butter making, and she made Tom pick berries, churn butter, and in a hundred ways make himself generally useful, and though he protested that he was "sinfully abused," he could not keep out of the kitchen.

When the three weeks were up, Rose decided to tell Miss Patty that she was only a "seminary girl," and that she must go home to spend the rest of the holidays.

"I'll tell you what Rose, if you and Tom here will hitch horses, you might stay right along."

"Hurrah for Aunt Patty!" shouted Tom, "what do you say Rose, will you be my wife?"

"Oh, Tom Slocum, I have not known you but three weeks; besides what would my folks say? and don't you know, Tom, the old saying, that 'a change of name, and not of letter, is a change for worse, and not for better?"

"I am only a school girl, Tom, and would make you a mad-cap wife."

"I'll soon tame you," laughed Tom. "We will write to father and mother—you see I claim them already—and I do not want my wife too learned. Say yes, Rose, darling, and I will attend to all difficulties, and the old saying won't be a true saying in our case."

Aunt Patty, who meanwhile sat stoning cherries, now spoke again: "Tom is a good boy, Rose, and you might do a great sight worse, 'sides I want to see him settled in life before I die."

"Well, as you are both so determined, you may have me Tom, for better or for worse, mind I warn you; it might be for worse."

"We'll take all the risks," cried happy Tom Slocum.

So in just a month from that day, Rose Stoneleigh became the bride of Tom Slocum, and a happier couple never existed. And her five bridesmaids were the girls that sat on the veranda of the hotel. Though some of them are grandmothers now, they never forgot their wild little leader, Rose Stoneleigh.—*Amy Randolph.*

Unsuspected Poisons.

It seems as though we are bound to undergo a certain amount of poisoning, eat what we will, and it is, upon the whole, perhaps, a happy thing that we are, as a rule, able to submit to it with so little interference with our mental composure. The *Pharmaceutical Journal* quotes the opinion of an eminent analyst, from which it appears that decided symptoms of poisoning result more frequently than we are aware of from any considerable consumption of potatoes. Among the poorer classes, who live largely on potatoes, such symptoms tre said to be common, more particularly when the tubers are very young or very old. Such potatoes, we are told, contain considerable quantities of solanine. The poison was found in very unmistakable quantities in the stomach of a man who had been, for two or three days previous to his death, living on nothing but raw, unripe potatoes, and there seems to have been no room for doubt that this diet accounted for the presence of the poison. It is said to be found chiefly, if not entirely, in the skin of the potato, and is soluble in boiling water, and we may, we suppose, assume therefore, that a very young or a very old potato, boiled in its skin, must be, to some extent, permeated with solanine, and must be unwholesome to an extent that may become serious, if partaken of in large quantities.

Another unsuspected source of poison is said to be maize or Indian corn. A disease as fatal in Italy as consumption is in this country, is attributed entirely to the exclusive use of this cereal, which is thought to be especially dangerous if ground in a damaged condition—damaged, we suppose, by incipient decay, though that is not stated. There is said to be one remarkable fact connected with the disease which is thought to have its origin in this source—the disease known as pellagra. Sufferers from it who commit suicide, always do so by drowning,

To Prepare Wax for Flowers and Fruit.

Take four ounces white wax, two teaspoonfuls balsam of fir, one and one-half teaspoonfuls sweet oil; melt all together in a vessel placed in hot water. If you wish yellow wax, add one and one-half teaspoonfuls of chrome yellow to four ounces of wax; for green, the same amount of chrome green; for other colors use carmine powder, Prussian blue, red lead, black lead, etc. You will need gamboge bristles, moss quills, large and small wire. If you have not a suitable brush you can make a little swab and use instead.

Now, for your green leaves, take a natural leaf—a rose leaf is good to start with—wet it in cold water, dip your brush in your melted wax, brush the underside of the leaf until your wax leaf is as thick as you wish; you can readily separate the leaves with a thin knife blade. Cover the coarse wire with green wax, then place your leaves on, having a knob of wax on the end of the wire.

Where you form the flower, it requires different colors; for a rose, yellow wax; the gamboge is to dust the center of the rose. It requires patterns to form the flower leaves. Lay the roseleaf in your hand, press your finger on to give it the right shape, then lay a plait in the end you place on the wire. A natural flower to look at will assist very much. It requires skill and judgment to succeed well.

THE Connecticut Supreme Court of Error has decided that women are eligible to admission as attorneys, and their sex is no bar.

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

I am composed of 19 letters:
My 12, 3, 4, 18, 6 is a part of the body.
My 1, 7, 2 is a bird.
My 5, 16, 17 is a tree.
My 10, 11, 9, 3, 8, 13 was one of the prophets.
My 19, 15, 16 is a note in music.
My 14, 1, 6, 9 is a musical instrument.
My whole is the name of an American poet.

JENNIE.

Blanks.

[Blanks are to be filled with the same words beheaded.]
1. You will find the door ——— in the ———.
2. ——— did you buy that ———?
3. His ——— was performed with perfect ———.
4. I ——— for a ——— of sunshine to illumine the dreary blank of my life.

MELANCTHON.

Charade.

My first is surely not the all,
For but a portion can it be;
An apple cut in quarters, please—
The first you then will plainly see.

Hast visited Andes or Alps—
Those hills of frost, and ice, and snow?
Then thou hast seen my second's form,
At early dawn or sunset glow.

With me please come some autumn morn,
Aside the thicket's tangle part;
Tread carefully, and I will show
From whence my whole takes noisy "start."

A Baby and a Bear.

Henry Flynn, who resides up in the hills near Inskip, Cal., is in town to-day, and had the following incident to relate, in which a bear of the cinnamon species abducted his three-year-old daughter, not with any desire to harm the child, but through a strange kind of affection. It appears that Mr. Flynn started one morning to take a horse to pasture, about two miles distant from the house, and, as his little girl seemed anxious to go, he put her upon the horse's back and let her ride a short distance, perhaps 40 rods from the house, where he put her down and told her to run home. He noticed that she continued standing where he left her, and, on looking back after going a little farther, saw her playing in the sand. He soon passed out of sight, and was gone about an hour, expecting of course that the child would return to the house after playing a few moments. On returning home, he made inquiry about her of its mother, who said she had not seen her, and supposed he had taken her along with him. On going to the spot where he left her, he saw huge bear tracks in the sand, and at once came to the conclusion that the child had been carried off by the bear.

The family immediately made search through the forest, which was grown up to almost a jungle, rendering their search very slow. All day these anxious parents searched for traces of their child, nor did they stop when darkness came on, but remained in the woods calling the lost one by her name. Morning came, and their search was fruitless. A couple of gentlemen from below, who are traveling through the mountains buying stock, came to the house, and, being informed of the circumstances, immediately set out to find her. The gentlemen wandered about, and as they were passing a swamp spot where the undergrowth was thick, called the child, or else they were talking loud, when one of them heard her voice. He then called her by name and told her to come out of the bushes. She replied that the bear would not let her.

The men then crept through the brush, and when near the spot where she and the bear were they heard a splash in the water, which the child said was the bear. On going to her they found her standing upon a log extending about half way across the swamp. The bear had undertaken to cross the swamp on the log, and being pursued left the child and got away as rapidly as possible. She had received some scratches about the face, arms and legs, and her clothes were almost torn from her body; but the bear had not bitten her to hurt her, only the marks of his teeth being found on her back, where, in taking hold of her clothes to carry her, he had taken the flesh also.

The little one says the bear would put it down occasionally to rest, and would put his nose up to her face, when she would slap him, and the bear would hang his head by her side and purr and rub against her like a cat. The men asked her if she was cold in the night, and she told them the old bear laid down beside her and put his "arms" around her and kept her warm, though she did not like his long hair. She was taken home to her parents.—*Chico Record.*

Health Column.

Medicine Taking.

After more than 30 years of medical practice, I am fully convinced that the masses take much more medicine than is needful. I will go further, claiming that an utter disuse would be less dangerous to society—an extreme we need not adopt—than the present, reckless employment of all sorts of drugs, with but little thought or care about the nature of the drugs used. While there are a few ultraists who ignore all drugs, as they oppose all existing customs, from a mere love of oddity, it may be, there is a strong probability that enough and more than enough of "patent medicines," etc., will be taken, at least, till the whole community shall learn that "an ounce of prevention is worth a pound of cure."

Many "give the reins to their passions and appetites," with the delusive idea that they can do just as they please, indulge all of the appetites, like the swine, or worse. Encouraged by the quacks who say, "Eat what you please while taking this marvelous medicine," they may not know any better, and then expect to escape the just penalty of their sins of gluttony, etc., by taking medicine.

Though medical treatment may modify diseases, mitigate human sufferings, doing the best that can be done under the circumstances, the evils of wrong doing cannot be wholly obliterated. The Bible statement, "The soul that sinneth shall die," might have the same significance when applied to the body. Like the laws of the "Medes and Persians," those of the body never change, are never abrogated, and know no forgiveness. The "pound of flesh" must be granted, since no one can put "coals of fire in the bosom, and not be burned."

It is not the mission of drugs to abrogate God's laws of the body, but to co-operate with the recuperative forces of that body in the removal of existing evils, after the penal authority has asserted its sanctions, to deter from future violations of the sacred conditions of health and vigor, for a moral effect. Prevention is not only easier than cure, but far safer and more economical. The intelligent and honest physician orders drugs when he thinks it right and proper to do so, and then the patient should unhesitatingly take them, or discharge the doctor. The less honorable man sometimes orders them when not needed, simply because of the pressure brought to bear, well knowing that the ignorant will discharge him, and get one who will heed the whims of the sick, thinking it preferable to give some inert medicine rather than give place to a reckless and unprincipled quack.

But the great danger in medicine-taking is the popular custom of taking any nostrum that may chance to be advertised (printers' ink sells anything), neither knowing the nature of the disease nor the compound offered for sale. There is a recklessness in this matter which we do not practice in other respects. Most of this class of empirics know enough of the human system to give some of the symptoms usual in almost all diseases; so that all may find something to resemble their symptoms, and then give one trial, at least.

All should know that medicines, vegetable as well as mineral, are poisonous, at least in their more concentrated forms. As such, they should be employed with the same care that we use other poisons. It would be no more foolish for one to enter a drug store with a prescription from a reliable physician, and then, in the dark, take the contents, in part, of the first bottle reached, than to swallow the various nostrums offered for sale at the groceries, wrapped in an abundance of recommendations, which may be purchased at the small price of one dollar a dozen. It is a matter of but little importance that these nostrums are pronounced "purely vegetable," even if true, since the most poisonous substances in the world are of vegetable origin. Metallic substances, used for medicines, are more objectionable on account of the difficulty in eliminating them from the system, than from their simple, poisonous character.

I repeat, it is injudicious to take medicines at random. It is far safer to do nothing, trusting to nature's wonderful and gracious efforts—always in the right direction—than to "leap in the dark," taking, we know not what, or for what. If human health is of any value, it is of sufficient worth to justify care, intelligence, and seeking advice from those who are supposed to be well-informed in such matters, on the same principle that a "wise builder" has a plan, seeks good materials and good workmen.—*Dr. J. A. Hannaford.*

NEW APPLICATION FOR ULCERS, ETC.—Medical practitioners are employing a new application for ulcers, sores, etc. They take a hundred parts of plaster of Paris, finely powdered, and coal tar from one to three parts, and mix in a mortar; add olive oil enough to reduce the mixture to the consistency of ointment, and preserve it for use in a close vessel. The mixture is of a dark brown color, and has a bituminous smell. If applied to an ulcer, or running sores of any kind, no matter how offensive, it not only absorbs pus and destroys its fetid smell, but also dispenses with the necessity of employing lint. The oil binds the powder, without dissolving it, so that the compound retains its absorbing quality when placed in contact with a suppurating sore, and it never dries sufficiently to become inconvenient to the patient by its hardness.

Household Hints

Rules for Cooking Vegetables.

A French cook gives the following general rules for cooking all kinds of vegetables: Green vegetables should be thoroughly washed in cold water, and then dropped into water which has been salted and is beginning to boil. There should be a tablespoonful of salt for each two quarts of water. If the water boils long before the vegetables are put in, it has lost all its gases, and the mineral ingredients are deposited on the bottom and sides of the kettle, so that the water is flat and tasteless, then the vegetables will not look well or have a fine flavor. The time for boiling green vegetables depends much upon the age and time they have been gathered. Below is a very good time table for cooking vegetables:

Potatoes boiled, 30 minutes.
Potatoes baked, 45 minutes.
Sweet potatoes boiled, 50 minutes.
Sweet potatoes baked, 60 minutes.
Squash boiled, 25 minutes.
Green peas boiled, 20 to 40 minutes.
Shelled beans boiled, 60 minutes.
String beans boiled, one to two hours.
Green corn, 30 to 60 minutes.
Asparagus, 15 to 30 minutes.
Spinach, one to two hours.
Tomatoes, fresh, one hour.
Tomatoes, canned, 30 minutes.
Cabbage, 45 minutes to two hours.
Cauliflower, one to two hours.
Dandelions, two to three hours.
Beet greens, one hour.
Onions, one to two hours.
Beets, one to two hours.
Turnips, white, 45 to 60 minutes.
Turnips, yellow, one and a half hours.
Parsnips, one to two hours.
Carrots, one to two hours.

GREEN CORN.—A novel way to serve green corn, and one which is pronounced a notable addition to the house-wife's bill of fare, is as follows: Take one dozen ears of tender corn, choosing ears that are nearly of the same size and those of medium size; grate them; then add one quart of sweet milk, in which you have stirred till free from lumps three tablespoonfuls of flour, a quarter of a pound of butter, or a piece as large as an egg will do; four eggs, whites and yelks beaten together, with pepper and salt to your taste, are all the ingredients called for; butter a large earthen pudding dish, and bake this mixture for one hour; this will be long enough if the oven is hot when the dish is put in. This is to be served with meat and potatoes as a vegetable, though with the addition of sugar, and with a rich sauce, it takes the place of a pudding.

SPANISH PICKLES.—Four heads of cabbage, a peck of green tomatoes, one dozen good-sized cucumbers, one dozen onions, three ounces of white mustard seed, one ounce of celery seed, one ounce of tumeric, one cup of mustard and two pounds of brown sugar. Let the cucumbers stand in brine three days. Slice the onions, and chop the cabbage and tomatoes the day before making, and sprinkle with salt. When ready to make, drain the cucumbers from the brine and cut in slices. Put all the ingredients into a kettle with vinegar enough to mix all together and simmer slowly half an hour. Bottle and keep in a cool place.

TO MAKE GUAVA JELLY.—Cut up ripe guavas longitudinally into four pieces, and place them in a jar or vessel that will close tight, which immerse in a vessel of boiling water. When the fruit is well steamed, strain out the juice, and to every quart of juice put as much sugar, and boil down to the consistency of jelly and place in molds to cool. Rub the pulp of the guava through a sieve to get out the seeds; mix the pulp with sugar and boil into marmalade. This will give both jelly and marmalade from the same fruit.—*Florida Agriculturist.*

TO FRESHEN SALT FISH.—Many persons who are in the habit of freshening mackerel or salt fish never dream that there is a right and a wrong way to do it. Any person who has seen the process of evaporation going on at the salt works knows that the salt falls to the bottom. Just so it is in the pan where your mackerel or white fish lie soaking; and, as it lies with the skin down, the salt will fall to the skin, and there remain. When, if placed with the flesh side down, the salt falls to the bottom of the pan, and the fish comes out freshened as it should be. In the other case it is nearly as salt as when put in.

PICKLED PURPLE CABBAGE.—Take nice heads of purple cabbage, and slice with a sharp knife or cabbage cutter. Place in a stone jar, sprinkle with salt and let stand 24 hours. Prepare a spiced vinegar as follows: To a gallon of vinegar, allow one ounce of whole black pepper, one ounce of whole cloves, one ounce of cinnamon and one of mustard seed. Drain the cabbage from the brine and put back in the jar. Scald the vinegar with spice and pour over cabbage. Repeat the scalding operation two or three times, and cover tightly.

ONIONS WITH WHITE SAUCE.—Boil in salted water, with a teacup of milk added, until tender. Drain and cover with a sauce made as follows: Put two spoonfuls of butter into a saucepan, and when it bubbles add two scant tablespoonfuls of flour. Stir until well cooked, but do not brown. Then add two teacupfuls of thin cream, some salt and a dash of cayenne pepper.

Worth Knowing.

Fishing for Rats.

A novel mode of catching rats is thus described in the *American Angler*. The writer says that a person having the patience of most fishermen can have much sport in hooking the vermin.

The warehouse adjoining his place of business is infested by these "file-tails," and our friend may be seen in the early spring and late fall, on an occasional evening just after dusk, seated at the back window of his counting-room (overlooking the yard of the ware-house), with an ordinary rod in hand, strong linen line, and a spring hook, commonly called a "sockdolager," baited with a lump of fresh beef, patiently waiting for a bite. It does not tarry long, nor does it consume itself in nibbles, but with a hungry snap the bait is seized, and the hooks of the sockdolager impales the rat, when the excitement commences.

A lusty rat is no mean antagonist at the end of a pliant pole and 10 ft. of line, and his plunges, twistings, and straight-away dashes are more perplexing to the angler, than the leaps, surges, and sulkings of the gamy trout or bass. The rat is generally landed, after seasonable sport, and killed by a blow from a bludgeon.

In this connection, we may state that thousands of small hooks are bought by sugar refiners for ratting purposes. The hooks are baited with small pieces of beef on each, and then distributed about the building. The rats swallow beef and hook—the first is digested, the latter is not—death, of course, results. The remedy is said to be infallible.

KEEPING THE PORES OPEN.—The importance of the breathing function of the skin can be easily shown by experiment, for if we varnish over the skin, the subject so varnished often dies of nothing more or less than suffocation. Insects breathe entirely through their skin. The skin does about one-thirtieth of the work performed by the lungs, and in disease of the latter it is very likely much more active in purifying the blood. Then, fourthly, the skin carries off by the sweat much solid matter that would be, if retained in the body, very injurious. Under ordinary circumstances, about a pound and a half of sweat is given off by a man in a day. The body is also kept at a proper temperature by the evaporation of the sweat; hence the importance of keeping the skin clean in order that nature may regulate the heat of the body. Inattention to these points gives rise to various disorders of the system, especially colds, coughs and the like. The fluid which is sweated out of the body comes from the blood-vessels in the deeper part of the skin. A word more about the little fatty glands, and this part of the subject may be left. These little structures give exit to fatty matter, that, by inducing a slight greasy state of skin, prevents too great evaporation; it acts as a protection to the skin against irritants, and it often carries off certain fatty acids from the body. In an irritative skin these glands get choked up by the retained fatty matter, and we then have pimples, as about the face.

FUNERALS AS DISEASE BREEDERS.—There is good reason to believe that disease is occasionally disseminated through the medium of funerals. We have at least one fair authenticated instance in this country of diphtheria being diffused broadcast through the crowding incidental occasionally to the last ceremony. In America this question is beginning to receive much attention, and several cases have been reported of late where the transmission of the disease from the corpse seemed highly probable. The Suffolk District Medical Society sent out 400 circulars to medical practitioners, with a view to ascertaining the opinion of the profession on the alleged danger of permitting public funerals of persons who had died from diphtheria. Two hundred and thirty-nine answers were received. Of these, 143 writers expressed a belief in the possible danger of contagion at such funerals; 17 believe that there is danger from funerals in the houses of the dead, but none in churches; 29 fancy that, in the present state of knowledge, there is no justification in prohibiting public funerals; and 8 record circumstances which occurred in their own experience confirmatory of the proposition that peril may ensue; but the testimony these latter advance is not quite satisfactory. The society, after due consideration, recommend that funerals at the houses of those who have died of diphtheria should be private, owing to possible exposure to the poison of the disease.—*London Lancet.*

ACID FOR THE HANDS.—Remember that one can have the hands in soapsuds with soft soap without injury to the skin if the hands are dipped in vinegar or lemon juice immediately after. The acids destroy the corrosive effects of the alkali and makes the hands soft and white. Indian meal and vinegar or lemon juice used on the hands when roughened by cold or labor will heal and soften them. Rub the hands in this, then wash off thoroughly and rub in glycerine. Those who suffer from chapped hands in the winter will find this comforting.

TO PRESERVE SWEET CORN.—Boil the corn on the ear from three to five minutes, then slice off, being careful not to cut too close to the cob, pack down in a stone jar, allowing three pints of corn to one of salt; put in layers. When wanted for use, soak over night to freshen.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "Good of the Order."

Valley Visits Fidelity.

On Wednesday evening, October 11th, Valley No. 30, the largest Lodge in this jurisdiction, made a visit to Fidelity 136, the second largest Lodge in this State. There was not a large number present at the opening of the Lodge, their hall being so large that it takes quite a number to make a respectable appearance. The usual routine of business was finished with quick dispatch, Charles E. Wilson, M. W., and his able corps of assistants showing great skill in this direction. A principal part of the work of the evening was conferring the M. W. degree on two candidates, in a manner seldom equaled. Their roll of membership of Master Workmen in good standing is 358, recruited from the active business men and leading citizens of this city. At 9 o'clock a very large delegation from Valley was announced and were admitted with honors. Bro. Smith, late of Fidelity, whose body was recently found in a lake at Chicago, is the second death in this Lodge, and both were from accident or violence. Under the head of "Good of the Order," Bro. Wells, M. W. of Valley, made a few congratulatory remarks, and was followed by Bro. Reading, Secretary of the Guarantee Fund Association, who made extended remarks and related several instances of fraternal action that showed the exalted and humane position we occupy as an organization. The Havanas were now passed, and Bro. Stewart, of Fidelity, entertained his hearers with a fine song. District Deputy McKay was called and made some practical remarks that were well received. Bro. Wm. H. Porter, by request, sang a sentimental song that received a hearty encore. Bro. E. Lewis, one of the first P. M. W. in our Order, was appropriately introduced and related some very interesting history of the trials and struggles that our pioneers passed through. Bro. Henry Hoeber, P. M. W. of Valley, entertained his hearers with some pertinent and well-timed remarks on the status of our Lodges and the duties we owe to one another as Workmen, particularly commending the good work of the Relief Committee. Bro. Mysell, of Valley, was asked to defend himself from certain charges, but as he said he was a little off he would not bore them. Bro. Curtis, of Fidelity, gave a fine performance on the harmonica, and kindly answered a hearty recall. Bro. Shaw, P. M. W. of Bay View, was quite happy in his remarks. He said that our insurance is safe and sure, and outside of the amount we pay for Lodge dues in keeping up sociability and fraternity, every dollar we pay goes directly to pay our magnificent pledges. Bro. L. E. Alexander, M. W. of Spartan Lodge, made a few congratulatory remarks that were well received. It being late, the M. W., Bro. Wilson, announced that the intellectual feast would close, hoping for a repetition of the same soon. It was a grand occasion, and this fraternal reunion of the two largest Lodges in this jurisdiction will long be remembered.

Harmony, 9.

This honored old pioneer is gaining in numbers steadily. On Saturday evening, October 7th, five young men received the J. W. degree. As usual there was a good attendance of the members, besides several visiting brothers. If our visiting brethren wish to attend a good Workman meeting, they will always find it on Saturday evenings in old Harmony, No. 9.

Magnolia, 41.

On Monday evening, Oct. 2d, two candidates received the M. W. degree, and the work was admirably done, Bro. Jacob Davis, P. M. W., acting as the Master Workmen of the Lodge on this evening. After the work and business of the Lodge had been finished, a number of visiting brethren from San Francisco, No. 4., made interesting and acceptable speeches, especially concerning Magnolia Lodge, as they were all favorably impressed. One of the features of this Lodge, which consists in paying sick benefits of $10 a week, was commended by the visitors. It happened that a number of the brethren of San Francisco made known their desire to join the Magnolia, that they might have the humane provisions following their weekly benefits.

Bay View, 159.

This Lodge is quietly moving along, increasing its membership frequently, and gaining strength in various ways. The membership is now over 70. On Friday evening, the 6th inst., Overseer, Bro. E. Munfrey, who has faithfully performed the duties of his office, resigned, and Bro. Noblock was elected to fill the unexpired term of office. Myrtle hall, the meeting place of this Lodge, is a commodious and cheerful place, and the members are deeply interested in the workings of their Lodge.

Noe Valley, 185.

Noe Valley, No. 185, one of the young and thrifty Lodges, will hereafter hold its meetings in their new and cosy hall, corner of Twenty-fourth and Church streets.

A Generous Act.

One of our brethren from Meadville, Pennsylvania, who joined the Order in 1868, and met with quite a misfortune in the loss of his goods by fire lately, applied to Unity Lodge, No. 27, for relief at their hands on Tuesday evening, October 3d. After an examination and investigation by a committee of the members, the Lodge voted to give him the sum of $50.

Excelsior, 126.

Our brethren at the Mission have removed to new quarters, corner Sixteenth and Valencia streets, Masonic hall. It has been their policy to have a literary and social once a month for some time. To celebrate their new hall, they concluded to have a grand meeting, and admit all members of their families. Thursday evening, October 12th, the Lodge was called to order promptly at half-past seven o'clock, and the business finished with quick dispatch. The doors where then thrown open, and Masonic hall, one of the largest in the city, was filled with a very select company of ladies, gentlemen and little folks. At half-past eight o'clock the order of exercises was opened by Geo. A. Bordwell, Foreman of Excelsior, in a few well-chosen words, who welcomed them to their new home. The master of ceremonies, Bro. J. W. Howard, then introduced the following programme: Piano solo, Prof. Hahn. His artistic performance was listened to with apparent satisfaction, and heartily encored. Reading, "A Dream" (original), Prof. Wm. White. This was a rare production of wit, humor and local hits on the brethren of Excelsior that was highly appreciated. Recitation ("The Blacksmith's Wife"), Mr. Fred. Maurer, brother of Chas. Maurer, P. M. W. This was a masterly effort, which carried his audience to a high pitch of feeling, and at the close he was heartily encored. Piano solo, Prof. Hahn. A short recess was now called. Instrumental, Wm. West and Chas. McMahon—a pleasing effort that called a recall and answer. Comic character recitation, Mrs. Wm. White. Her delineation of the country maiden traveling in a large city was so apt and pleasing that her delighted audience demanded a repetition, which was humorously answered. Solo, Sam Booth, P. M. W.—a song dedicated to Excelsior, which we publish. Recitation, Mr. Parasy, "A Scene in Court," who delighted his audience, and answered a hearty recall. Instrumental duet, banjo and concertino, Messrs. West and McMahon. Bro. Silas White, Librarian, was then asked to say a few words. In a very interesting and succinct manner he recited the services of Sam Booth, P. M. W., as a member of Excelsior, and presented him with a fine gold P. M. W. badge, and pinned it on his coat. Bro. Booth was taken completely by surprise, and said, after recovering from this new departure, that he had no idea of being decorated in public before so large and intelligent an audience, and would try and merit the honor. The badge is a solid gold hand-worked badge made by the well-known artist, Bro. R. Schaetzlein, and engraved thereon are these words: "Presented to Sam Booth, P. M. W., by members of Excelsior Lodge, 126, A. O. U. W., Oct. 5, 1882." An impromptu dance was gotten up while the collation was being prepared in Champion hall, to which all repaired and did ample justice to the good things spread. The pride of the Mission, Excelsior Lodge, 126, A. O. U. W., with a select membership of 170, may feel proud of its success and status. Although it has a fine large hall for a home, its extensive and accumulating library will soon require a hall also.

HUNTING A NEW LODGE HALL.

For three long years Excelsior's been
  Hunting a new Lodge hall,
And many adventures we have seen
  Hunting a new Lodge hall;
We have hunted by day, and we've hunted by night,
We have hunted through Kensington, left and right,
From the Mission Dolores to Bernal hights,
  Hunting a new Lodge hall.

Chorus.

Hunting a new Lodge hall,
Hunting a new Lodge hall.
  How we did fret, and toil, and sweat,
  Through summer and winter, dry and wet,
  And you may bet we'll never forget
Hunting a new Lodge hall.

On the first committee were Stone and Scott,
  Hunting a new Lodge hall,
And others whose names I have forgot,
  Hunting a new Lodge hall.
They found a small place, at a very low rent,
Though they were not particular as to a (s)cent;
It was well recommended, and so we went
  Into the new Lodge hall.

The air we breathed and the smells we smelt,
  Into the new Lodge hall,
Were visible things, and were keenly felt,
  Into the new Lodge hall.
In summer mosquitoes in myriads swarmed,
It was cold in the winter and couldn't be warmed,
And a new committee was speedily formed
  To hunt for a new Lodge hall.

We had Jobson, Gibson, Poland, White,
  Hunting a new Lodge hall,
Who came and reported every night
  As to a new Lodge hall;
They hunted all over and under the ground,
Each alley and street they went nosing around,
But never a place, alas! they found,
  Hunting a new Lodge hall

We looked around for a building lot,
  Hunting a new Lodge hall,
Trying to find a convenient s ot,
  To build us a new Lodge hall.
We had specifications and estimates made,
  But some of the brothers were sore a r id
And they raised the cry of a treasury raid,
  To build us a new Lodge hall.

At length a committee came up this way
  Hunting a new Lodge hall,
And thought it a good enough place to stay
  And make it our new Lodge hall.
And now let us hope that our troubles are o'er;
  That peace and contentment may hold the floor;
And at least for a while we may go no more
  Hunting a new Lodge hall.

Aurora, D. of H.

Aurora Lodge, D. of H., since its removal to Washington hall, is having very enjoyable meetings. The Lodge meets twice a month, on the first and third Tuesdays. The method of conducting the meetings could be copied to advantage by other and similar societies.

Silver Spray, No. 4, D of H

On Monday evening, October 9th, there was a full attendance of the members, and the meeting was quite interesting. Sister Beatty gave a a reading, Sister Galehouse sang a song, and a number of the brethren made acceptable congratulatory and humorous speeches, among whom were Bros. Hartshorn, Noerors, Lyon, Black, Beatty and others, closing a very pleasant meeting.

Golden Dawn, D. of H.

Golden Dawn, D. of H., will celebrate its anniversary at the large hall, corner of Valencia and Sixteenth streets, on Saturday evening, October 28th. It is proposed that the affair shall be worthy of the spirit of the Order. Dancing and literary exercises, together with a collation and a grand reunion, will make the occasion very enjoyable.

District Meeting.

There was a very large attendance of the members of the third district, comprising Harmony Lodge, No. 9; Franklin, No. 44; Burns, No. 68; Excelsior, No. 126, and Memorial, No. 174, at the district meeting on the 29th ult. District Deputy G. M. W. Frank S. Poland was on hand early, giving spirit and activity to the gathering. The meeting was held in Shiels' building, in the hall of Franklin Lodge, No. 44. G. M. W., W. H. Barnes, accompanied by P. M. W. Readding, of Fidelity, were present. Among the Past Master Workmen we noticed the sitting Past Master Workman of Harmony Lodge, Frederick Blight; Wilson, of Burns, No. 68; Eccelson and Purdy, of Yuba Buena, No. 14; I. F. Brown and D. A. Brown, of Franklin, No. 44. Of Master Workmen, there were Thomas H. Wilton, of Harmony, No. 9; C. C. Butt, of Burns, No. 68, and F. A. Brooks, of Memorial, No. 174. The officers and members of the latter Lodge attended in a body. After the usual business of the Lodge had been transacted, which we would say was carried out in a dignified and able manner, "Good of Order" was reached, and, after a few fitting remarks from the acting M. W., of Franklin No. 44, P. M. W, C., N. Payson, the D. D. G. M. W., Frank Pollard, was introduced, and in a few fitting remarks spoke of the good that will result from such gatherings and district meetings. He then called upon G. M. W., W. H. Barnes, who in his usual pleasant manner responded. In the course of his remarks he said that the strength of the Order rested not upon the large numbers, but upon the few that have done and are doing the work for the great good of the many. He spoke of the need of regular attendance and earnest work. And, above all, charity should be upmost. In his remarks he spoke of the need of harmony as well as hope and protection. The progress of this great Order was dwelt upon, and in glowing terms he spoke of the onward progress of the A. O. U. W.

S. J. Toby, of Franklin, was called upon, and in a few well-chosen words, extended, on behalf of Franklin, No. 44, its hearty welcome to the G. M. W., D. D. G. M. W., and visiting brethren. At this point the I. W. announced Yerba Buena Lodge, No. 14, to the number of 25, waiting in a body for admission. A hearty welcome was extended the visitors. Prof. C. H. Hoffman, of Franklin, then favored the large gathering with a piano solo. P. M. W. Readding, being called upon, reminded his auditors of his former membership in Franklin, and spoke of former days and of those who have passed over the river, never to return. Bros. John C. Howe and C. N. Payson, of Franklin, then gave an instrumental duet. Bro. W. T. Hamilton followed, and edified the meeting by a few remarks, which provoked much laughter. Bro. Williams was then called upon, and spoke briefly. P. M. W. Frederick Blight, of Harmony, spoke of the great need of fraternal feeling, and to this end, district meetings are a step in the right direction. Prof. Eastman, of Mission Lodge, No. 56, then gave one of his pleasing recitations. Piano solo by Bro. John C. Howe. S. Cohan, Financier of Harmony, No. 9, was called upon, and spoke of the great need of care and good judgment in the choice of material for our Order, and especially to medical examinations, advocating two Medical Examiners for each Lodge. The M. W. of Memorial then spoke briefly. Bro. Bordwell, Foreman of Excelsior, No. 126, spoke and excused the absence of his Lodge. Bro. W. T. Hamilton followed with a comic song. This concluded the programme, and D. D. G. M. W. Frank Pollard, announced that the next district meeting would be with Burns, No. 68, at Pythian Castle, 913 Market street, at a date to be hereafter announced.

Lodge Locals.

Somerville Lodge, 210.

This Lodge is situated in Somerville, Contra Costa county, in a sparsely settled district near the coal district. It has a membership of 23—no material increase since its organization. The uncertainty of employment has a tendency to make a community unsettled, still the little band holds on bravely and feels the importance of helping sustain this humane and protective organization.

Keystone, 64.

This well-known Lodge is moving along with its usual success. One candidate received both degrees by dispensation several weeks ago, and two other certificates have been received. Keystone has a large membership. Bro. J. W. Nelson took the oath of office as P. M. W. on the 11th inst.

Alameda, 5.

We took an occasion to visit Alameda on Wednesday evening, the 12th inst., for the purpose of visiting Alameda Lodge No. 5. This is the quarter when the time of meeting is 7:30; but at that hour a quorum of members could not be counted. It has been the experience of many Lodges lately, since politics have become so stirring and exciting, that quorums are hard to secure. Alameda Lodge, No. 5, is in a most healthy condition. The membership is now about 70, and the brothers are all enthusiastic Workmen. During the last quarter 10 or more candidates were initiated, and other certificates are awaiting action. The hall is located in Odd Fellows building, and is attractive and cheerful. A hearty welcome was extended us to come again, which we shall do.

District Meeting and Dedication of a New A. O. U. W. Hall.

The new hall, known as "Devenech hall," corner of 24th and Church streets, in this city, was opened for a Worknen's meeting on Tuesday evening, October 10th. This new and capacious hall was elaborately trimmed with streamers, crests, evergreens, wreaths and hanging baskets. The accessories and dressing-rooms with fine waxed floors would seem to indicate that terpsichorean exercises would be indulged in as well as Workmen meetings. Over the M. W. chair, in evergreen letters, is the word "Welcome," beneath which hangs the life-size picture of District Deputy J. D. Thompson, a present from his brethren to him recently. There was a goodly number present, although it was somewhat of a stormy night.

The Lodge was duly opened, and two petitions received for membership. There was quite a number of our P. M. W, including E. F. Land, D. G. M. W., and Harry J. Lask, G. G., who were admitted with honors and a neat speech of welcome from Bro. J. J. White, M. W. Two candidates, both young men, with a fine physique, were given the M. W. degree in a manner that was very creditable, Bro. E. F. Land exemplifying the degree by acting in place of the M. W.

Deputy Thompson, as master of ceremonies, then introduced Bro. Land, who, in his usual pointed manner, made a short, trenchant speech that was very favorably received. Harry J. Lask, G. G., made a few complimentary remarks, and prophecied a grand future for Noe Valley, No. 185. J. W. Watson, A. G. R., then, in a systematic and an interesting manner, discussed the principles of Workmen, criticising drones in our Order severely. S. F. Purdy, P. M. W. of Yerba Buena, at request, sang a humorous song that was received with much favor, and for an encore answered in a lively and pointed one. Bro. Sinton, of Golden Gate, sang a sentimental song of much merit. At request of J. D. Thompson, D. D., on the part of Noe Valley Lodge, then gave a speech of welcome and a review of our financial condition as a fraternal and beneficiary organization. J. G. Mysell, the orator of Valley, gave some pointed reasons why the Ancient Order of United Workmen would be perpetuated. Bro. Mark Haywood, Foreman of Golden Gate, made a few remarks, and called on Harry J. Lask, G. G., who related several incidents of personal help, by giving a brother a helping that forms a bright page in our history. Bro. Thompson, Foreman of Myrtle, was called, and excused himself by introducing Bro. Plummer, P. M. W. of Myrtle. Bro. Delano, P. M. W. of Bernal, then read a short extract that was humorous, interesting and well received. Cigars were then passed.

A. A. Egelstone, P. M. W., then made a short review of the excellent speeches that had been made, and related a humorous story. Bro. Lochner, of Triumph, was called, and gave a few congratulatory words, saying that, although it was late and everybody was having a good time, our wives would not scold, as we were attending a Workman meeting. The critic, Bro. Welbow, then reviewed the proceedings of the meeting, and pronounced them appropriate, and in every respect, the meeting one of the best he had ever attended. During the evening regrets were expressed that our good Master was not present, as he was taken with a chill on his way to the meeting, and had to return. The master of ceremonies, Bro. J. D. Thompson, showed tact in making this meeting one of the most successful and pleasant the writer has ever attended.

Saratoga Music Hall.—This popular hall, corner of Geary and Larkin streets, has been frescoed, renovated and refurnished in a superb manner, it being easy of access, having new scenery, elegant accessories, and the best conveniences. It has become the principal resort for balls, parties and socials. Mr. Jacob Schleicher, the proprietor, has earned a favorable reputation as a caterer and manager of celebrations and social gatherings. This careful and successful management, we are assured, will be continued, and no questionable parties or social gatherings will be tolerated at this popular place.

Consolidation of Territory.

At the last session of the Supreme Lodge, A. O. U. W., held in Cincinnati, O., Supreme Recorder, M. W. Sackett, recommended, among many other things, the joining of certain portions of the country still controlled directly by the Supreme Lodge within Grand jurisdictions, or the forming of new districts. The recommendation was made in the interests of the Order, and is well worthy of the thoughtful consideration of all Workmen.

The recommendations embraced the formation of a new Grand jurisdiction, to consist of Colorado, New Mexico and Arizona. A new Grand Lodge has since been formed embracing these districts. The benefits to be derived from forming such a division cannot be questioned. Some portions of the West and of the coast are too remote to be successfully operated without the aid of a Grand Lodge, as territory under the immediate jurisdiction of the Supreme Lodge. It was also urged that Dakota Territory be added to the jurisdiction of Minnesota. Also that Arkansas, Indian Territory and Louisiana be joined to the jurisdiction of Texas, with such restrictions as to the extension of the Order along the Mississippi valley and the Gulf coast as would be deemed best. The other recommendations had reference more particularly to the Southern States.

In the most of the States referred to the population is more or less scattered, which is always something of a discouragement to members in striving to secure a separate beneficiary jurisdiction within the limits of their own boundaries. It is proven that no more healthful and desirable field is to be found for the Order than in the West, but it is impossible to establish and render permanent Lodges in that section, with the continued heavy rate of assessment of the Supreme Lodge jurisdiction, unless we give these Lodges representation in a Grand Lodge, and by extending their territory, encourage them to labor to secure relief by becoming separate jurisdictions.

A Grand Lodge in the Territory referred to cannot but give life and encouragement to the Order there. It is doubted if there is another section in the United States where there is more scope for activity on the part of our Order than in this new jurisdiction. The Workmen in this jurisdiction, we know by acquaintance, are live, energetic men, having the interests of the A. O. U. W. at heart. While the Workmen of Colorado would have greatly preferred some other Territory to Arizona, yet now that the district is fixed, they will move on, shoulder to shoulder, and make the Order win. Realizing, as they do, the grandness of the work, they will now, more than ever, push forward.

Mechanics' Fair Premiums.

The Board of Managers of the Mechanics' Institute met and announced the following additional awards to exhibitors:

V. S. W. Parkhurst—Best display of scales, silver medal.
W. T. Garratt—Display of bells, silver medal.
H. D. Ranlett—Display of copper ore, diploma.
W. H. Smythe—Mechanical drawing, diploma.
Smythe & Watson—Tree feller and log saw, silver medal.
George Ball & Co.—For.able sawmill, bronze medal.
R. Walkingshaw—Improved port window, diploma.
Adams & Carter—Improved tappet for quartz mills, bronze medal.
F. Webb & Co.—Rubber stamp, diploma.
Truman S. Clark & Co.—Folding bedsteads, bronze medal.
John Driver—Mortising machine, diploma.
Henry Doyle & Co.—Display of Clark's O. N. T. thread, silver medal.
Pupils of the Public Evening Schools—Drawings, silver medal.
California Powder Works—Sporting powder, silver medal.
J. S. Bennett—Set of hand-made furniture, bronze medal.
W. T. Coleman & Co.—Royal baking powder, silver medal.
Will & Fink—California made combs, bronze medal.
Misses Dietz—Patent dust-pan and crumb receiver, bronze medal.
Harriet F. Baily—Paper sculpture, diploma.
H. Slocomb & Co.—Dipple drip lubricator, diploma.
H. Liebes—Carriage robes, bronze medal; colored furs, diploma; sheepskin mats, bronze medal.
A. F. Merriman & Son—Dental toilet articles, diploma.
Parisian Polish Company—Polish, diploma.
Arpad Haraszthy & Co.—California champagnes, gold medal.
J. Gundlach & Co.—California wines, gold medal.
J. T. Cutting & Co.—Falk's Milwaukee beer, diploma
J. Hunt—Blackberry cordial, diploma; Peruvian stomach bitters, diploma; Burnell's Albion ale, diploma.
John Roach—Mathematical and surveying instruments, silver medal.
P. B. West—Optical apparatus, bronze medal.
Woolhouse Bros.—Gas machine, bronze medal.
J. H. W. Riley—Caligraph, diploma.

Class No. 2, embracing hydraulic machinery, and the cash premiums, are now all that remain to be announced.

WASHINGTON BUILDING.—This commodious building, corner of Eddy and Mason streets, in which is situated Washington hall, formerly a popular place for socials, balls and parties, has been refitted and remodeled for Lodge-room meetings. This building contains three large halls elaborately and richly furnished. Washington hall is considered in all respects the finest hall for Lodge meetings in this city. The attractions and inducements offered by Mr. A. W. Wilson, the present proprietor, have caused several of our societies to occupy these halls.

PIANO AND ORGAN HOUSE.—Woodworth, Schell & Co., one of the oldest piano houses on this coast, is now the leading house in this line. They carry in stock, and are the sole agents for, the Henry F. Miller pianos, of Boston, the Taylor & Farley organs, of Worcester, Mass., and the Hemme & Long upright pianos of this city. Bro. J. B. Curtis is the affable manager of this house, and sells pianos or organs on the installment plan, or rents, as parties desire.

The Power of Wisdom.

[By MISS CLARA DEMING.]

[Delivered before the State Grange of California at its annual session of 1882.]

Education is a subject of universal interest, and one which has absorbed the attention of the world for ages. A person possessing a good education has always been looked up to with admiration by the masses. The wise men of Greece have wielded a power, such as no king or general were able to wield; and their influence has marched down the steps of time and walks with the thinking population of the world to-day. Every man of wisdom adds his mite to turn the balance of thought in favor of universal education for the future.

Poets have written, and bards have sung its praises until the universe has become imbued with a desire for learning. The wand of the fair goddess Minerva, that used to wave for a favored few, is now stretched forth by her loving, protecting hand to all who are willing to work for the reward of her gracious smile and the respect of their fellow men.

Wise King Soloman has said: "Wisdom is the principal thing; therefore get wisdom; and with all thy getting, get understanding." Wisdom has a broader meaning in the present than in any previous age. Broad intellectual culture is becoming a necessity to all people in every walk in life. Nothing has caused this advance along the line of progress more than the system of free schools in the United States. If every boy and girl has not, at least, an ordinary education, it is his or her own fault. As you educate the masses, so do you advance civilization. When our ancestors established public schools throughout the land, thus giving every child an inalienable right to a common school education, they were mindful of the needs of the nation. They knew if the people were to govern themselves, they must do it understandingly. The legislators were to be chosen from the masses, hence the populace must be one of intelligence, that those who were chosen to represent them in the halls of Congress and the legislatures, might be able to do it with credit to themselves and the districts which honored them with their proxy. They also desired that the people should comprehend the laws which the lawmakers might provide for them to abide by; and when not acceptable to the majority they might be changed by the vote of an intelligent people.

Where has there been a nation so young that has commanded so much world-wide respect as the United States? What is the cause but the integrity and broad intellectual culture of her people? The old world looks to us for the supply of the deficiency of her table and inventive powers. Is it right for us to allow her uneducated subjects who come here to govern u through wire-pulling politicians by the preponderance of their vote? Nowhere has civilization made more rapid strides than here, where education is the heritage of all.

The king said: "With all thy getting, get understanding." Wisdom and theoretical knowledge will be of no use to us if we are unable to make practical use of it in gaining a livelihood for ourselves, and benefiting our fellow creatures by deeds of kindness. The heart must be educated as well as the mind. It will be useless if the necessary daily tasks are to be neglected. Learning should teach us how to lighten the tasks and simplify the methods of performing them. Persons who think themselves too highly educated to make bread or shovel a load of sand, or despise honest manual labor, have not been truly enlightened. We often find upon becoming acquainted with such people that they are not so wise as they think themselves.

The man who shuns another because he earns his living by the "sweat of his brow," is narrow-minded, and narrow-mindedness is caused by little education, and allowing one's self to think in one channel without noticing that there are other channels of thought quite as good, if not better.

The woman who despises housework has been reared with false ideas of ladyhood and narrow ideas of life. No matter what other spheres woman may be called upon to move in, housekeeping will devolve upon her at some period of her existence. How much easier it is to assume the charge of her household and servants if she possesses a complete knowledge of all its departments. The greatest lady of all is she who reigns queen in both kitchen and drawing-room. If we are to have healthy, active minds, we must have vigorous bodies. And what greater pride and happiness can we have, sisters, than to be conscious of the fact that it is through our superior knowledge of the culinary art, cleanliness and good management that the angel sweet content reigns in our homes, and those nearest and dearest to us have attained eminence in some of the walks of life through our influence. Many think that brains are not needed in a trade, farming or housekeeping. But no matter where we are placed, good brains, and educated ones, too, are a necessity, if we would have life a success and living a pleasure. Therefore, Patrons and farmers, give your children as high an education as possible. Send them to the public schools, universities and seminaries. A man with a thorough education is fitted for any station, and you know not where he may be called to stand. You may think Latin and Greek useless to them; but if men of science and wisdom are going to use them in their callings, other men need them to understand the teachings of the learned. Give your girls an equal chance with your boys. So many places have opened their doors to woman, that now she may stand on any plane and rise to any eminence, and be a perfect companion for her brother, enjoying what he does, and helping him with her ready wit and quick perception.

To children whose parents are unable to advance them as they desire, I would say: Persevere and work for your education, gaining it little by little. Those who have to labor most, are often the ones who appreciate it best, and are the ones to rise to places of honor. An example well known, and appreciated by all, is that of our lamented President, James A. Garfield.

While children are becoming proficient in book lore, they should be taught by degress to perform various duties about the home for the purpose of strengthening their bodies and giving them command of life's daily tasks. They may be taught proficiency in these things in such a way that they will not know how or when they learned. A good education is conducive to good morals, and good morals are necessary for us to be noble men and women, "with a heart for any fate." Happiness reigns in households where each evening finds the family resolved into a sort of literary club, reading and discussing all subjects—political, historical, or whatever may be absorbing the public mind. The power of wisdom is ever marching on and drawing men to higher realms of thought and grand achievements. The instigators of the Order of Patrons of Husbandry recognized this power and supplied the great need of the agricultural classes by bringing the farmers together and drawing them out of themselves in the Grange-room. The Grange is educating everyone of us. It is impossible for us to converse with one another without finding some germ of thought worth fostering and dwelling upon. For this reason, if no other, the Grange is a great benefit to the farmer and, consequently, to the country at large.

We need feel no discouragement at our failures as long as the beautiful words of our beloved home poet remain a part of our language and vibrate upon our heart strings:

In the world's broad field of battle,
In the bivouac of life,
Be not like dumb, driven cattle;
Be a hero in the strife!

Trust no future, howe'er pleasant;
Let the dead past bury its dead.
Act—act in the living present;
Heart within and God o'erhead.

Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time.

Footprints that, perhaps, another,
Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
Seeing, shall take heart again.

Let us, then, be up and doing,
With a heart for any fate;
Still achieving, still pursuing;
Learn to labor and to wait.

Advantages of the A. O. U. W. System.

Someone has epitomized the prominent reasons for joining the Ancient Order of United Workmen about as follows:

1. Because insurance benefits are furnished to all the members at cost. Having had 14 years or more of practical experience and trial, during which, hundreds of thousands of dollars have been paid to widows and orphans at less than half cost of insurance in stock companies, it is worth more than a trial.

2. The A. O. U. W. offers more benefits than any other Order.

3. Because the cost of all the above large benefits is less than one-half of a corresponding insurance in the ordinary insurance companies.

4. Because the assessments are based on the "Actuaria Tables of Costs of Risks."

5. Because the Order is steadily and rapidly growing.

6. Because the whole membership is taken into full confidence as to the management, and in the monthly published reports of the officers every member can see what has been done with every dollar received by the Order, and the financial officers have given adequate bonds, and lastly, because

The Supreme Court of the A. O. U. W. will not take advantage of any technicalities, but will pay all claims promptly, whenever they arise.

THE Workman Guarantee Fund Association now numbers 1,500 members, scattered throughout the jurisdiction. A $1,000 warrant for the widow of Bro. J. M. Vanderhoff, of Oroville, was drawn in nine days after proof of death. We learn the books and accounts of the association were examined last week by the Finance Committee and an expert, and found to be correct.

BRO. C. WALLER has opened a large first-class family grocery store at 1713 Market, at the junction of Valencia. He also has a branch for supplying coal and wood. Parties can find in this house a place where they can get their supplies to their satisfaction.

FOR a perfect fit and a nobby suit, you will be fully satisfied if you go to Bro. E. F. Wilton, 12 Stockton street.

News in Brief.

EARTHQUAKE shocks continue at Panama.

THIRTY persons have been poisoned at London, Ont., from eating head cheese.

THE financial condition of Mexico is said to be even more promising than last year.

THE taxable property in Modoc county is now $1,750,000. Last year it was $1,793,270.

ONE hundred and eleven business failures occurred in the United States during the past week.

THE business of the money-order department of the post office during the last fiscal year netted the sum of $300,000.

IN Cundinimarca, South America, the President of the State and his Secretary have been assassinated.

A PARIS newspaper says it is understood that England is negotiating for the purchase of 200,000 Suez Canal delegation shares.

AT a baptizing at Canton, Ga., Sunday, the bridge fell into the river and precipitated 200 persons into the water. No lives were lost, but many legs and arms were broken.

MEXICAN advices report a threatened Indian outbreak in Sonora, and a rapid concentration of troops has been ordered from Guymas and Magdalena to meet the emergency.

THE Red Bluff *Cause* says the large planing-mill recently destroyed by fire there will be rebuilt at once. It will be a very large structure, three stories in hight, and 100x160 ft. in size.

THE officers of the Irish National Land League of America have issued a circular. It says: "The statement which has been made that the Land League no longer exists calls for an emphatic protest."

A CITIZEN of Hartford, Conn., who, 20 years ago, was worth $200,000, was three weeks ago committed to the State hospital a penniless vagabond, having brought ruin upon himself and family by drink.

HANSOM cabs, of precisely the London pattern, are to be introduced in Philadelphia by the Pennsylvania Railroad Company. Two persons may travel a mile and a half in any direction from the station for 25 cents.

THE Shasta *Courier* says: "J. Persain, of Centerville killed an immense California lion near that place Wednesday. Since the mountain fires, wild animals abound in the vicinity of Centerville, foxes, coyotes and skunks predominating."

A NEW USE FOR OLD TIN CANS AND SCRAP TIN.—According to the *Berg und Huettenmannische Zeitung*, a better method for utilizing old tin cans than simply to melt off the solder has been devised. E. Rousset first heats the tin, old or new, in an oxidizing flame, which burns up all the pure tin and that combined with iron. When this is stopped, the scraps of iron are seen to be covered with a brown and brittle crust, the upper layer consisting of oxide of tin, the lower of magnetic oxide of iron. It is passed through rollers and then forms a powder that contains both oxides. The iron that remains after sifting out the powder makes good wrought iron or cast iron, but is particularly fitted for precipitating copper. The oxide of tin, although mixed with oxide of iron, can be easily worked into tin, and the metal obtained from it is free from sulphur and arsenic. But will it not contain traces of lead?

PRESSURE IN PUNCHING.—The pressure required to punch a round hole, one inch in diameter, through one inch wrought iron, will average about 150,000 lbs. It will, of course, vary somewhat, according to the character of the iron operated upon and the construction of the punch and die.

THE commission appointed at the last session of the Grand Lodge, A. O. U. W., for the purpose of revising the laws of the Order in New York, met at the Brozel house, Buffalo, N. Y., on Tuesday, October 10th, at 9 o'clock A. M.

T. M. ANTISELL & CO., corner of Powell and Market streets, are leading dealers in pianos and organs on the Pacific coast. They are importers and manufacturers, and have a large stock of instruments ranging in price from a second-hand for $25 to grand pianos that cost $1,000. Mr. T. M. Antisell has been East this year, laying in a stock of organs and pianos. A large invoice of magnificent upright pianos, made by Hallet, Davis & Co., have just arrived. They will soon commence the manufacture of pianos, as their venture in making organs has proved a decided success.

BRO. J. D. HORAN has a large establishment at the corner of Tenth and Howard, at which he cares for and sells stock, and is a commission agent for the sale of horses and cattle. Any business entrusted to his care will be promptly and intelligently carried out.

BRO. A. J. POMMER, No. 151 Fourth street, is agent for Singer sewing machine, and exchanges all for all other kinds. He also has second-hand machines for sale, and rents them for two dollars per month.

CITY OF HAMBURG, 714 Montgomery, is the place to buy dry goods, fancy toilet articles, gents' furnishing goods, etc. Bros. Moller & Mauty are selling at reduced prices, and carry a large and well-selected stock of merchandise.

TRY Weston's home-made bread and his pies, cakes and fancy biscuits that are made fresh every day, if you wish the choicest luxury that can be found in the city.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi-annually in advance. If errors or omissions are noticed, please write the office direct.

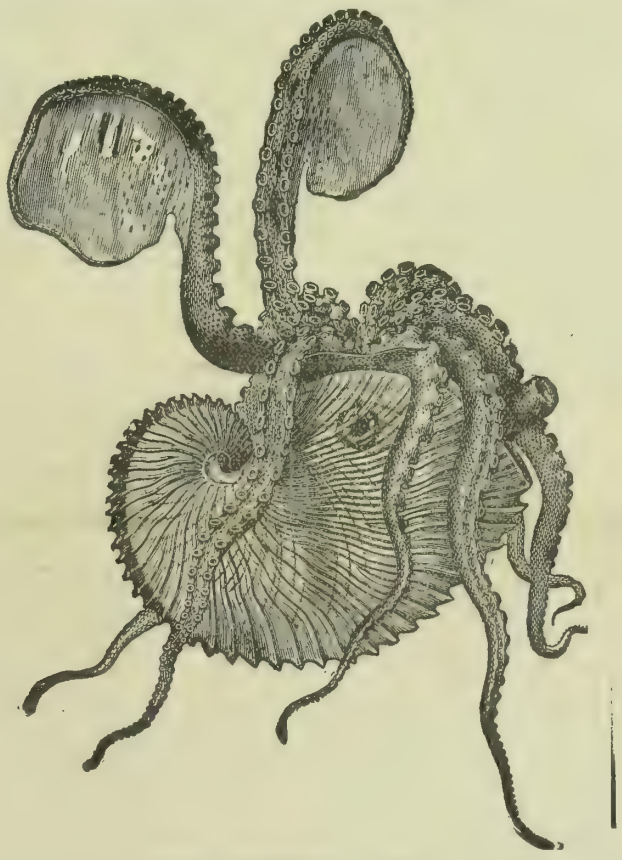
Is Man the Highest Animal?

The measure of zoological rank is the specialization exhibited by all the organs, taken collectively. Specialization may be exaggerated in one or several organs, without the animal therefore attaining, as a whole, a high rank. This is the case in man. The measure of specialization is afforded by embryology, which shows in earlier stages the simplicity and uniformity of structure, which, in later stages, is replaced by complexity. The human body preserves several important embryonic features. In man we find three series of high differentiations, namely, in the brain, in the changes induced by or accompanying the upright position, and third, in the opposibility of the thumbs to the other digits. These are the principal, though, of course, not strictly the only characteristics of man, which show that he is more specialized than any other animal. In other respects he shows a still more striking inferiority. It is, of course, a familiar observation that his senses are less acute than those of many animals—he has neither the keen vision of the falcon, nor the delicate scent of the dog. He is equally inferior in many structural features. His teeth are of a low mammalian type, as is shown both by his dental formula and by the presence of cusps upon the crowns of the teeth, a peculiarity of the lower mammalia, entirely lost in the horse, the elephant, and many other "brutes." His limbs show a similar inferiority, since they are little modified, preserving, even, the full number of five digits; and in respect of these members, man stands, therefore, very low—lower than the cow and the pig. He plants the whole sole of his foot upon the ground, yet none except the lower mammalia, together with man and his immediate congeners, are plantigrade. So, too, with his stomach, which is so simple as compared with that of a ruminant, and, indeed, is about the same grade as that of the carnivora. It makes, however, a still more forcible impression to learn that the human face, which we admire when withdrawn under a high intellectual forehead, is, perhaps, the most remarkable of all the indices that point out man's inferiority. In the mammalian embryo the face is formed under the fore brain or cerebral hemispheres. In our faces the fetal disposition is permanently retained, with changes which, when greatest, are still inconsiderable. In quadrupeds the facial region acquires a prominent development leading to the specialization of the jaws and surrounding parts, which brings the face to a condition much higher than that of the fetus. Hence, the projecting snout is a higher structure than the retreating human face. These facts have long been familiar to anatomists, but I am not aware that the inferiority of the human to the brute countenance has heretofore been considered a scientific conclusion by anyone. Yet that inferiority is incontrovertible and almost self-evident.

The preceding statements render it clear to the reason that man is not in all respects the highest animal—and that it is a prejudice of ignorance that assumes that the specialization of the brain marks man as above all animals in the zoological system. It does give him a supremacy by his greater power of self-maintenance in the struggle of the world, but that has nothing whatever to do with his morphological rank. There is nothing in morphology that anywise justifies assigning, as is actually done, an almost infinitely greater systematic value to the specialization of the brain and a specialization of the limbs, stomach, teeth, face, etc.; hence it is impossible to call man even the highest mammal. It is also doubtful whether mammals would be regarded as the highest class of the animal kingdom, were they not our nearest relatives. Let us beware of claiming to be the head of organic creation, since the carnivora and ungulata are, in many respects, higher than we. I believe that it is just as unscientific to call any one animal species the highest, as to pitch upon any one plant to stand at the head of the vegetable kingdom.—*C. S. Minot.*

Interesting Pre-Indian Relics from Virginia.—Mr. M. S. Valentine, of Richmond, Va., has sent to the Anthropological Institute of London, for exhibition, a collection of very curious articles fashioned in soapstone and clay, which were found lately between the ranges of the Blue and Alleghany mountains, near Mount Pisgah, North Carolina. The objects are said to be of a type absolutely unique, consisting partly of human, partly of animal figures, either in the round or in various degrees of relief. Some are household utensils. They appear to have been sculptured by metal instruments, so perfect is their workmanship. The human type is alike in the various objects, but is not Indian. All are fully clothed in tight-fitting garments. Some are seated in arm-chairs, others on all sorts of animals—bears, prairie dogs, birds, and other shapes belonging to North America. But some also represent types of the old world, such as the two-humped camel, rhinoceros, hippopotamus. Some of the specimens were obviously made since the advent of the whites, and these are fresher looking and of ruder workmanship. The inference hazarded is that the articles were made by an earlier and more civilized race, subjugated and partially destroyed by the Indians found in Virginia on the arrival of white men.



A Good rivet, cold, should bend double without breaking. The head should flatten out, when hammered hot, to ½ inch thick without fraying at the edge or breaking. Boiler plates should be caulked with a convex tool.

A Curious Marine Animal.

We give our readers on this page a glimpse at a peculiar denizen of the deep known as the argonaut. The argonaut is a mollusk of the class known as cephalopods. The cephalopoda, or cepalopods, (from two Greek words meaning "head" and the "foot," because the "arms" or "feet" surround the mouth,) are the highest class of the mollusca, and include the cuttle-fishes, nautili, argonauts, ammonites etc., all marine and carnivorous, and all laterally symmetrical, having a shell usually straight, but sometimes coiled in a vertical plane. The nautilli and argonauts alone have external shells, though many extinct species had them; but the other living species have generally an internal shell, of which "cuttle-fish bone" affords an example. The cephalopods have muscular arms or tentacles, used in prehension and locomotion; many have fins, and all have the power of locomotion by forcibly expelling water from the gill-chamber. They generally have two large eyes, ear cavities, each containing an otolite, two jaws, and a fleshy, spinous tongue. The nervous system is well developed. The brain forms a ring encircling the aesophagus. The gills are either two or four in number, placed in a chamber into which water is admitted by a slit, and from which it is expelled through a "siphon" or "funnel."

The argonauts (*Argonauta*) are a genus of mollusks of the class cephalopoda; is commonly called "paper nautilus." The latter name is derived from the fragile nature of the boat-like shell in which the argonaut floats on the surface of tranquil seas. The shell is not chambered like that of the true nautilus, but has one spiral cavity, into which the animal can retire and be completely hidden. There is no muscular attachment of this animal to the shell, which is said to be peculiar to the female, who uses it for incubation, as a nest. Several species are known. They have eight arms, two of which are expanded into broad membranous discs, which were formerly believed to be sails, and the other arms were regarded as oars; but, though the fable is perpetuated by the poets, it has long been known that the animal really propells itself by ejecting water from its funnel. When it desires it folds its arms, retires within its shell, and sinks to the bottom.

The argonaut shown in the engraving is the female, and is quite a gorgeous animal. The male is an insignificant little chap. It is said by the naturalist that the female when she becomes lonely takes up the little male for a ride in her ship, and when she tires of his society she pitches him overboard again to shift for himself in the mighty deep.

THE ARGONAUTA ARGO.

French Pudding.—Slice small pieces very thin from your bread, enough to fill a quart dish half full, buttering each piece lightly before cutting. Lay them loosely in the dish, sprinkle on one-half cup of sugar and a little grated nutmeg; then heat one quart of milk; beat the yelks of four eggs, add them just before boiling, and immediately pour over the bread. Beat the whites, add a little sugar and spread them over the pudding; set it in the oven five minutes to brown lightly, and it is ready for the table. This dessert can be made in 20 minutes ready for use.

Remedies for Vegetable Poisons.—The most dangerous of the vegetable poisons at this season of the year are the hemlocks (including the hemlock dropwort, water hemlock and the common hemlock), fool's parsley, monkshood, foxglove, black hellebore or Christmas rose, buckbran, henbane, thorn apple, and deadly nightshade. In a case of vegetable poisoning, says *Knowledge*, "emetics (the sulphate of zinc, if procurable) should be used at once, the back of the throat tickled with a feather and copious drafts of tepid water taken to excite and promote vomiting. Where these measures fail the stomach pump must be used. Neither ipecacuanha nor tartar emetic should be used to cause vomiting, as during the nausea they produce before vomiting is excited, the poison is more readily absorbed. Vinegar must not be given until the poisonous matter has been removed; but afterward it may be given in doses of a wineglassful, one part vinegar to two parts water, once every two hours in mild cases, but oftener—two half-hourly doses—in cases of greater severity. Where there is stupor the patient should be kept walking about, and if the stupor is great, cold water may be dashed over the head and chest. Strong coffee may be used where the narcotic effect of the poisoning is very marked. It is all-important that in cases of vegetable poisoning a medical man should be sent for at once.

The Mysteries of a Hair Brush.—A writer in the American *Journal of Microscopy*, has been exploring the forests of bristles in a hair brush, surreptitiously purloined from a lady's toilet-stand, and, though it contained nothing which we are accustomed to regard with unqualified horror, the results of his investigation prove that there are mysteries ordinarily undreamed of in simple appliances of the toilet. There are concealed in the damp lint of hair-brushes, unless kept clean by the use of bicarbonate of potassa or carbonate of soda, many living things, too small for detection by the naked eye, some of which, we are told, are of more than suspicious character, being known as the originators of scald-headed and other diseases of the scalp. The author concludes his article by a caution against wetting the head, recommending dry brushing instead. He also recommends the use of a weak solution of carbolic acid or sulphate of soda, as a cleansing material for hair brushes.

Prove it by Mother.—While driving along the street one day last winter in my sleigh, a little boy, six or seven years old, asked me the usual question, "Please may I ride?" I answered him, "Yes, if you are a good boy." He climbed into the sleigh, and when I again asked, "Are you a good boy?" he looked up pleasantly and said, "Yes, sir." "Can you prove it?" "Yes, sir." "By whom?" "Why, my ma," said he promptly! I thought to myself, here is a lesson for boys and girls. When a child feels and knows that mother not only loves, but has confidence in him or her, and can prove their obedience, truthfulness and honesty by mother, they are

Peach Pie.—One of the best ways to make a peach pie is to put whole peaches in the crust. Remove the skin, of course, and scatter sugar over the peaches just as if you were making pie in the usual way. The flavor of the peach is thus preserved in a surprising manner, and the presence of the pit is not so objectionable as one would suppose. It is a common practice to put a few whole peaches in each can when putting up this fruit.

Need of Reformatory Schools.

The engrossing topics appear to be the railroads and Sunday, but it would be well to give a passing thought to our criminal boys. Our city, township and Superior judges unite in saying that boys are frequently brought before them guilty of various crimes, yet they hesitate to brand them as criminals by committing them to where their associates would be only felons. On the other hand, parents do not wish these boys turned loose to contaminate respectable children. In the District of Columbia, and many Eastern States, there are reform schools or industrial farms. If a ten-year-old boy proves to be a thief, instead of being branded a felon or allowed to run at large and corrupt others, he is committed for a stated number of years to one of these reform schools. There he is given a practical education and kept at work on the farm or in the shop, and finally turned out an industrious, respectable young man. Governor Perkins says there are 72 boys, from 12 to 18 years of age, in the State penitentiary. This one fact proves the necessity of a reform school. Talk with the ladies who have charge of the Orphans' Home, and you will learn that there is scarcely a week passes but they are requested to admit boys guilty of crimes. Of course, such an institution cannot admit them, and the consequence is, they run at large. This fact proves the necessity of a reform school. Talk with our judges, our teachers, our police authorities, and I believe, without exception, all will urge the necessity of a school and farm, to which criminal boys may be committed. The next Legislature should establish such an institution in southern California. The Normal school was an important acquisition; a reform school is fully as necessary.—*Walter Lindley, M. D., in Los Angeles Express.*

This subject is of the greatest importance. In a State where neglected youths so quickly grow up into hoodlums, there should be some carefully organized effort to counteract the tendency. The proper way to reform the youth who have taken the first step in crime should be generally discussed, and the means provided by the State.—Eds. Watchman.

Peach Shortcake.—Take two heaping teaspoonfuls of baking powder sifted into one quart of flour, a scant half teacup of butter, two tablespoonfuls of sugar, a little salt, enough sweet milk (or water) to make a soft dough; roll out almost as thin as pie-crust; place one layer in a baking pan, and spread with a very little butter, upon which sprinkle some flour; then add another layer of crust and spread as before, and so on until the crust is all used. This makes four layers in a pan 14 inches by 7. Bake about 15 minutes in a quick oven; turn out upside down, take off the top layer (the bottom when baking); place on a dish; spread bountifully with sott ripe peaches previously sweetened with pulverized sugar; place layer upon layer, treating each one in the same way, and when done you will have a handsome cake, to be served warm with sugar and cream. The secret of having light dough is to handle as little, and mix as quickly as possible. Shortcake is delicious served with Charlotte-russe or whipped cream.

A Lunatic's Explanation.—The insane often entertain the most ludicrous idea of their own condition. There is a man in an asylum in one of the neighboring States, who became insane in consequence of a failure in business. He explains the reason of his incarceration as follows: "I am here because of a mere mistake in business. I was engaged during the winter in making mosquitoes' wings, which I expected to sell in the summer. I had 10,000 of them on hand when the season opened, but unfortunately I had forgotten to make them in pairs. They were all left-hand wings, and consequently I lost the sale of them, and was compelled to suspend payment." He relates this story with a gravity and earnestness which testifies to the sincerity of his own belief in the explanation.

Stewed Quinces.—A dish which is suitable for dessert or for tea is made of quinces, peeled, sliced, and stewed till they are very soft. Rub them through a colander, sweeten them well. and put them in a berry dish. While the quince is cooling, make a custard of one pint of milk, the yelks of three eggs, and half a cup of sugar. When it is cool pour it over the stewed quinces. Make a meringue of the whites of the three eggs, and into it beat half a cup of sugar; spread this smoothly over the top.

Preserved Tomatoes.—Take of the yellow plum-shaped tomatoes those that are ripe but not the least soft. Pour boiling water on them to take off the skins; allow one pound of sugar to one of fruit, and make the syrup with as little water as will dissolve the sugar; use three lemons to seven pounds of fruit; remove the seeds from the lemons and put the slices in the syrup. When boiled clear, lay in the tomatoes. Boil very gently three-quarters of an hour.

Opinion of an Eminent German Surgeon. The *Athenaeum* says Prof. Esmarch, an eminent German surgeon, has published a lecture, which he delivered before the Physiological society at Khiel, on the treatment of Gen. Garfield's wound. Prof. Esmarch's lecture was to the effect that Gen. Garfield might have been alive but for the treatment he received.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (¼ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (¼ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, October 15, 1882.

Avoid Haste.

Too much cannot be said against hasty action on the part of the Lodges in electing and initiating candidates. It should be a well-settled purpose of the members of the various Lodges to admit no one to fellowship until all the requirements laid down by the Supreme and Grand Lodges are met. There are times when certain brothers, friends, perhaps, of some prospective candidate, who desire that the regulations be so abridged and done away with that an initiation can be gone through with at once. Hasty action is very often regretted. The laws and usages of our Order plainly say that all candidates shall be examined by the authorized Medical Examiner, after which the application shall be read in the Lodge and passed upon. If acceptable, then, a committee of investigation, whose duty shall be to inquire into the character, habits of industry, sociability and general desirability of membership shall be appointed. If satisfied as to these points, which can only be learned by contact with the candidate himself and his circle of acquaintances, or his employers, then the matter must be duly presented to the Lodge, and action for or against taken. All these precautions should be faithfully carried out. There is altogether too much at stake to do less. When we admit a brother to our fellowship, we do no more than invite him to partake with us of the social and fraternal feature. He joins at once with us in the matter of beneficence, and the Lodge has taken an additional risk. It is very essential then, that the members of the Order know all about the candidate. A thorough examination should be made; and it is a great mistake to allow an initiation to proceed, unless such satisfaction has been given. We not only wrong ourselves, but we wrong those dependent upon us. While there are probably equal chances of the candidate proving a desirable brother to that of the opposite, yet the Order ought not assume the responsibility and take the chance, unless all the requirements are met. One of the fundamental principles of the A. O. U. W. is "Protection;" and we should not extend that protection promiscuously at the possible expense of those already looking to the Lodge for future help. We believe that the majority of the members of the Order fully understand the necessity of measured action. No circumstances will warrant other than this. Candidates should not be given to understand that they can be admitted differently. They will respect the Order more, if they understand that caution is exercised, and nothing of haste is permitted.

WE met Bro. Shuey, of Walnut Creek, Contra Costa county, in the office of the Guarantee Fund Association on the 9th inst. Mt. Diablo Lodge numbers 80 members, and gaining in membership regularly but slowly. This Lodge pays $8 per week sick benefits, and is the leading organization in that locality. They own their hall, and rent to other organizations enough to pay their running expenses.

Some Suggestions.

It is a mistake in the members of the various Lodges to remain so frequently away from the meetings. It is really essential to the successful workings of the Lodge that a large attendance be present at every meeting. It is altogether discouraging to any member to go week after week on meeting night to his Lodge-room and find so few of the seats occupied. There must be a reason for this. It is either the meetings are not made interesting, which probably comes nearer being the truth in the majority of cases, or else the members have not that deep interest in the Order that they should have. When assessments are to be paid, perhaps a goodly number will be present, but they seldom remain during the entire session. The long winter evenings are coming on now, and the Lodge officers should see to it that the meetings are interesting and enjoyable. Induce the stay-away brothers to come to some of the meetings, make it particularly interesting for them, get them interested in this way, keep all wrangling out of the sessions and refrain from long, tedious parliamentary discussions upon little and unimportant technicalities. In this way much can be done towards securing the attendance of members.

Upon the matter of non-attendance, Grand Master Workman W. H. James, of Pennsylvania, writing in the *Protector*, says:

"It is a fact that many of the Lodges have very small attendance. Various reasons are given. Some allege business engagements; some that many of the members reside at a distance; others, that their members are connected with other organizations, etc., etc.,; all are considered ample reasons or excuses. When the Lodge is small it is doubtless difficult to obtain a quorum, but this cannot reasonably be given as an excuse where the Lodge is a good-sized one. Other reasons must be sought. More than a dozen times during that trip was the writer introduced to prominent citizens of the places visited, and informed that these were members of the Order, and we would be answered that it is so, but they never attend Lodge meetings, and don't know what is going on. It seemed sometimes as if this was spoken in more of a boasting manner, as if it were something of which they were proud. Frequently they added, 'I only join that my family might get the insurance,' and that they "never intend taking any part in the Lodge proceedings,' and that they 'left that to those who like to attend Lodges.'

"These reasons contain the real causes for non-attendance. They seem to forget that as members of a great fraternal organization each one has a duty to perform, and the business of the Lodge should not be left to the faithful few who are willing to attend to the Lodge duties. There is too much at stake to be passed by unheeded. The Lodge-room, besides, is a great school for study. Active, attentive and energetic members can soon make it a place to be eagerly sought for, and a place of delight to the members. Not that our members should neglect their business or other engagements, but is it not possible that engagements can be so arranged that some attention may also be given to the Lodge meetings? What seems to be necessary is that there should be introduced under the 'Good of the Order,' various exercises that will add interest and attract the members. This has been done in some with good effect. Essays, recitations, readings and lectures on various subjects add much, and are fruitful sources of pleasure. Discussion upon the live topics of the day would not only interest the members and give them freedom of thought and speech, but would also be carrying out the fundamental principles of the Order."

This is a live and important question with every Lodge. It is one upon which much of the success of the Order depends. What a grand organization ours would be if every member acted and felt as those that are regular in their attendance? It is important that every member attend to the duties of the Lodge, so that when trials and distress come, as come they will, sooner or later, he will be thoroughly indoctrinated with the grand principles of the Order, and bear them heroically. It is due the member and the Lodge that the former should be prompt upon the attendance of the latter.

GRAND RECORDER, R. NEWCOMB, of the jurisdiction of Oregon and Washington, says in the *Pacific Overseer:* I have had the pleasure of making a flying trip to California, to see the "old folks at home," and took occasion, while in San Francisco, to visit the office of Bro. Pratt, the efficient Grand Recorder of our sister State. Bro. Pratt has over 220 Lodges and 15,000 members under his care, and has his work so systematized as to be a pleasure to look at its workings. It is an old and true saying that "we are never too old to learn," and I am satisfied that I was well repaid by my visit in gathering new and valuable ideas from our California brethren, and hope to be able to introduce some of them in our jurisdiction. The Order is very flourishing, indeed, in California, and, although the ground is well worked, they still have additions at the rate of 200 per month, and have had in the past over 300 per month. I take occasion here to return thanks for the many courtesies received from the brethren in California.

Attend the Lodge First.

Without calling to task the members of any Lodge, the WATCHMAN maintains the ground that the members who allow politics to interfere with the attendance and workings of the Lodge, are altogether recreant to their trust. There is a time and place for all things—a time for work and a time for play; a time for politics, and a time for the Lodge. Political questions are just now occupying the attention of all classes. The merchant and the mechanic, the business man and the laborer, are thinking of the approaching elections, and making preparations for the success of party. We do not pretend to say that this is wrong, but we do hold that where the interests of the Lodge are interfered with by non-attendance, especially from this cause, it is wrong. We recently became acquainted with the fact that certain officers of certain Lodges, desiring that there be no quorum for the transaction of business, in order that they might attend some political meeting or convention, induce certain other members, whom they know to be regular in their attendance, to remain away, and thus defeat the assemblying of a quorum. That this is morally wrong, no one can honestly doubt for a moment. Oftentimes there are interests at stake—as for instance the payment of sick or death benefits, that demand immediate action. When it so happens, as is possible, that these matters must remain unsettled for another week, simply on this account, then the true neglect and apostasy of the guilty ones is seen. The Lodge meets but once a week, and that man who cannot spend one evening in seven attending to the interests of his Lodge certainly is unworthy of the sacred trusts committed to him as a Workman. Of course, there are reasons for non-attendance that are just and reasonable, but no one can demonstrate the justice of leaving the Lodge, and preventing a meeting on account of political considerations. Instead of remaining away because it is thought that there will be no meeting, we should be the more prompt in attendance, so as to make a meeting possible, at least as far as we are individually concerned. The night on which your Lodge meets should be devoted to the Lodge, and to nothing else.

Charity, Hope and Protection.

To every loyal brother of the A. O. U. W, these words symbolize the greatness of an organization which, to-day, is doing good commensurate with the loftiness of its mission. Charity, hope and protection are the three cardinal principles of our Order. By a combination in the character of each member of these three attributes, we have men of noble mien working together for a common good. Our field is a world-wide philanthropy, where the merits so combine as to make of every member a true man. Selfishness is no part of the A. O. U. W. system. It is a departure from it as much as is possible. The true Workman has none other than charity for a brother, hope for the good of the future, and protection for the helpless in time of sore trial and distress. These are the three talismanic words and objects of the Order, and he who cannot affiliate with those whose aims are embraced in these, cannot be, in word and deed, a true Workman.

Unsafe Risks.

The Medical Examiner-in-Chief of the jurisdiction of the Grand Lodge of Maryland, New Jersey and Delaware, has issued instructions to the Medical Examiners of all the subordinate Lodges in that jurisdiction, to effect, among many other things, that an applicant "is not eligible, if he daily or habitually uses, manufactures, or sells as a beverage, malt or alcoholic liquors (saloon keepers, bar tenders and inebriates are eligible under this rule.) The Medical Examiner shall decide whether the applicant uses tobacco to excess, and, if so, he is not eligible." The occupation of saloon keepers and those mentioned in the first restriction is regarded as very hazardous, the rate of mortality being at most double that of ordinary occupations. The restrictions and suggestions made by this officer are seasonable. It would be wise did the members of the Lodge remember that too much liquor drinking and excessive using of tobacco are the direct causes of many deaths. Not only this, but an inebriate, either from liquor drinking or tobacco using, is liable to sickness more readily. His system is brought into such a condition that the inroad to disease, and, subsequently, death, are more certain and easy. Committees of investigation and Medical Examiners should make careful examinations upon these points in every case. A regard for these considerations and an observance of them would prevent many unworthy ones from entering the Order, and would certainly protect the Order against many unsafe risks.

ENTERTAINMENT AND SOCIAL.—The brethren of Noe Valley Lodge, No. 185, will give a social entertainment at Devenech's hall, cor. Twenty-fourth and Church streets, on Tuesday evening, October 24th. Judging from their past socials, those who may attend will be sure to have one of the most enjoyable evenings.

For the Good of the Order.

The following stirring appeal is issued by John A. Child, Grand Master of Oregon and Washington, and is published in the *Pacific Overseer*. The words are applicable everywhere:

OFFICE GRAND MASTER WORKMAN,
PORTLAND, Oct., 1882.

Dear Brothers of the A. O. U. W. in Oregon, Washington and British Columbia:—The long evenings of the fall and winter are upon us, and the time has come when each one of us should buckle on our armor and work for the good of the Order. We fancy we hear an echo from some brother, "How can I work for the good of the Order?" My brother, your asking that question shows us that you have some interest left in the Order. Let me take you by the buttonhole of your coat, and whisper a few words in your ear.

Have you attended your Lodge lately, to see whether it is conducted all right, or not? I hear you answer, "No; I have confidence in my officers." That may be true, my brother; so have I; but you are a business man. Would you leave the sum of $2,000 in any person's hands, even in a National bank, to be paid at your death to your dear wife and children without making some inquiry occasionally as to its security? Or do you expect even a bank to take care of the money and keep your accounts for nothing? Don't you think you are treating the officers very uncourteously to elect them, and then never attend a Lodge meeting or give them a word of encouragement, but more probably finding fault because the assessments come so often? Or, maybe, you are an officer yourself. Have you performed the duties of a man and brother, that you promised the brethren who elected you, if not by word, by accepting the office? But it does not all consist in attending the Lodge. You should always have a good word for the Order wherever you are; and that you may have something to say, let us give you a few facts to tell your neighbor and friends of the noble and glorious record our Order is writing for itself. According to the proceedings of the Supreme Lodge, during the year from June, 1881, to June, 1882, we find there have been 761 deaths in the Order, and $1,515,000 paid to the families of deceased brothers. Just let us give you an idea how many persons have been directly benefited by that amount.

It has been estimated that for each male person or voter over 21 years of age, five persons are depending for a livelihood. Let us multiply 761 by 5 and we have 3,805. According to the last census, 1880, there are only three cities in the jurisdiction that have more people. So much for the whole United States; let us come nearer home. There were 18 deaths in our jurisdiction last year, for which you and I paid $36,000, thus relieving 90 persons by each one of us contributing one dollar a month. Who can tell how much suffering, how many fears allayed, how much real happiness was created by thus doing our duty; but let us continue—for we want to fill your mouth with arguments. The Order increased last year, net, 310 Lodges, 16,766 members, almost 46 members each day, making the total number of Lodges 2,128, with a membership of 107,177, thus making an army of over 500,000 dependent upon this Order who are united together by the bond of a common purpose—that of being useful to ourselves, to each other, to our neighbors and our country, and now you wonder why I should say this to you. My brother, this jurisdiction wants and expects each member to do his duty by increasing our membership and keeping our ranks full. We have 3 300 members in good standing, and over 4,000 on the rolls. Suppose every member tries to get two new members this winter, or by our next annual meeting in July. Just think, for a moment, how much good would be done—we would have nearly 10,000 members. Can we not depend on you for your two? Ask your neighbor, your merchant, your acquaintance, to join in this great work of charity. If you do we will soon be coming alongside our sister State, California, with her 15,000 members, and increasing at the rate of 200 a month. My brothers, if you do this, you will be happy in your work in doing good, and we will feel that, as our reports grow larger by the united effort being made, that this appeal has not been made in vain. Fraternally yours in C. H. and P.,

JOHN A. CHILD, Grand Master.

THE Grand Master, during his recent trip across the continent, as Grand Representative, contracted malaria, and has been more or less indisposed since his return. His physicians have counseled him to desist from all hard labor, such as public speaking, especially at night. Feeling the responsibility resting on him, he has endeavored to follow the line of policy pursued in his first administration; that is, to hold public meetings, and let the world know who we are, and what we are doing, although he has not been able to accept the many invitations he has received from every part of this jurisdiction. We believe he has passed the crisis in his ailment, and will be heard from as usual in the near future.

WE met Bros. J. B. Hewitt, of College City, 209, and E. J. Perry, Recorder of Oak Grove, 198, Oakdale, Stanislaus county, in Valley, No. 30, on Wednesday evening, October 4th. Our brethren report, as usual, fair prospects and a steady growth in membership. The leading citizens are joining this great organization.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

We are not keeping up our old-time ratio of increase. This is partly owning, do doubt, to a diminution of acceptable outside material, partly to many other Orders recently introduced, partly to unusually heavy assessments, and partly to the change of system which seems to act against the best class of applicants and in favor of the other class. Still we are getting along smoothly, and all the time progressing. The country is now in a good condition, financially, and it may be well to suggest that our Lodges brush up a little and see how good a showing can be made for the next annual report of the Grand Recorder to the Grand Lodge.

Many Recorders are careless about reporting reinstatements that occur each month, and so members appear on our records as out of standing when the fact is otherwise. Some time or other a member will die with such a record against him in this office, and then difficulty may arise in settlement of the loss.

When a member joins a Lodge, from another jurisdiction, he should be treated in the matter of assessments just the same as any other member of the Lodge he joins. If he receives the M. W. degree before the date of the death on which an assessment is levied, he is liable, if not, not. A member cannot drop an impending load in one jurisdiction, go and join in another, and then dodge assessments therein, while he is all the time entitled to the full benefits of the Order. A member in good standing is always liable to pay assessments somewhere, and as he is certainly not liable to pay in a jurisdiction or Lodge to which he does not belong, he is just as certainly liable to pay where he does belong. This is not only common sense, but it is the law also. See Section 8, Article XIII, G. L. Court.

Under our Constitution representatives to the Grand Lodge must be elected on the first meeting night in January next. The Grand Lodge will not meet till April. It would seem a wise plan to change the law in that regard, making the representatives elective on, say, the first meeting night in March. It would save the trouble of making many changes, and generally be more satisfactory.

We have already paid out this year $250,000 to the beneficiaries of our deceased members.

Healthy and Unhealthy Districts.

From the report of the Grand Master Workman of the jurisdiction of Nevada, we take the following paragraphs: Upon the intelligent spirit and moral dignity of a society depend its power, influence and longevity, and we have just cause for congratulation in this respect. Without the slightest manifestation of a spirit of partial exclusiveness, the upward tendency of the individuality of the Order has been maintained. Our principles set forth that we deem it a sacred obligation to aid and assist each other and the deceased brothers' families. That which is sacred must be touched by hallowed hands, but the degree of sanctity will always find an exponent in the moral measure of the members.

The A. O. U. W. is the only organization that grades the liability of its members according to the actual hazard of the locality wherein they reside. The rate of the A. O. U. W. varies in different States in accordance with the actual ascertained mortality rate of each State. In regular life insurance companies and other national co-operative institutions a member is charged no more who lives in an unhealthy district than in a healthy one. Surely, nothing can be more unequal, and the time is near at hand when a man in Montana, or other healty localities, will not affiliate with an institution that gives the same benefits in an unhealthy for the money it charges a man in healthy districts or States. I would respectfully recommend that you instruct your Supreme representatives to use their best endeavors to have a law enacted making the excessive use of intoxicating liquors a forfeiture of all rights and privileges in the Order.

It seems undeniable that the death rate in some localities of the Supreme jurisdiction is greatly augmented by the excessive use of intoxicating liquors, and to maintain our high and moral standing some definite and vigorous measures should be adopted. I would advise the engrafting of a clause in our constitution designating the presiding P. M. W. of a subordinate Lodge as intrusted, not only with the supervisory care of the Lodge, but obligated "to prefer charges against all members of his Lodge for violations of law when brought to his notice," and thus secure to the honor of the Order exemplary conduct and temperate habits by its members.

There will be a district meeting under the auspices of Magnolia, No. 41, on Monday evening, the 20th of November. We may expect a big time.

Does it Pay?

When assessments come at the rate of two a month, many of our members ask themselves the question that forms the caption of this article, and thoughtlessly decide, perhaps, in the negative. Let us figure a little, and see whether it really pays to be a member of the A. O. U. W.

We will make as strong a case as possible against the Order. Put the assessments at two a month for the year, which makes $24; then add 50 cents a month for Lodge dues—$6 a year more; we have then $30 a year total cost. Say the average expectancy of life of the membership is 40 years; $30 a year for 40 years would be $1,200. The Order would then pay $2,000 to the beneficiary of the member, or $800 more than he had paid in, to say nothing of any incidental benefits such member had received during his lifetime, which often are worth much more than his Lodge dues. No one of the thousands that have died has paid assessments to the Order for one-third of 40 years, and yet the beneficiaries in each case have received $2,000, save a few in the beginning. To them it was a paying investment. From the above it will be seen that to him who pays for 40 years it will be a paying investment, and if, perchance, he should continue on till 66 years after joining, he would lose nothing, but receive back all he had contributed. It is safe to say that few will ever remain so long in the Order—not one in 20,000. It would therefore seem that a more proper question to ask would be: Is there any other investment that promises to pay any better than membership in the A. O. U. W? There is no probability that anyone will pay to the Order over $400, and for this $2,000 will be returned. Then the investment is so easy to make. A little each month, enough to be felt to be sure, but not so much that even a poor man cannot afford it—the price of one cigar daily. But a poor man cannot afford to be a member of several such societies. It's bad policy to distress one's self and family while one lives that he may be comparatively rich when he dies. These things should be averaged up. First let us meet the real necessities of life as we go along; then we should provide, so far as our circumstances will allow, for those who would be left behind in case of our death.

There are thousands upon thousands who can make a good living while life and health remain, and can also, at the same time, carry the expense of membership in the A. O. U. W., but if taken away could leave nothing of pecuniary value behind to keep back the wolf from the door. More than half our membership, we believe, belong to this class. Such, at least, has appeared to be the case with those who have died, and such will no doubt prove the fact in the future.

A System of Justice.

It is a matter of great satisfaction to the members of the A. O. U. W. that all just claims made upon the Order by the death of brothers are speedily and satisfactorily met. In the ordinary business affairs of the day there is so much of selfishness connected with the management that one must be thoroughly posted in many of the technicalities of the law to have justice done him. This is true to a very large extent with the ordinary life-insurance corporations. In the Order of which the Watchman is an exponent, this is not the case. The humblest widow, having no knowledge of business whatever, will be as sure of having her interests protected and receiving her payment as the well-informed. What is more, the brotherhood from which her husband has been called is always ready to aid her and see that she receives the consideration due her. Of the Workmen she can go and ask advice—these are they who can counsel with her as to how best her new estate may be disposed of to the best advantage. Certainly in this there is everything to commend the A. O. U. W. to wives and husbands alike. It is no unusual thing to hear of suits in our courts between some life-insurance company and a claimant for payment of a just claim. The following is a case in point: At Paw Paw, Mich., a suit was lately commenced by Mrs. Inez V. Matthews, widow of Charles Matthews, against a certain life-insurance company, on its refusal to pay a $2,000 insurance policy which he held at the time of his death. The company alleges that the policy was obtained through fraud. Mr. Matthews died at Ann Arbor a few months since, from the effects of an operation for the removal of a tumor upon his neck. The company alleges that he already had this tumor at the time he took out his policy, and that his not mentioning it makes it a case of fraud. On the other hand it will be claimed that if this tumor had shown itself at all at the time of taking out the policy, it was so slight that he no more thought of its being a serious matter—one worthy of mention—than he would had it been simply an ordinary boil.

The A. O. U. W. makes its settlements without such annoyances of litigation.

Bro. G. W. T. Carter, M. W. of Point of Timber Lodge, has been nominated for the Assembly. He is a prominent Workman, a good speaker and an able writer.

An Important Point.

A late issue of the *Protector* called attention to the necessity of having all beneficiary certificates made payable to the proper persons. The suggestion is a good one, and every Workman should see that his certificate is properly filled. A case was cited where a certain brother had died, whose certificate made the benefit payable to his wife. But the wife had died about three months before, leaving two minor children. At his death the father left a will, and among the bequests was his beneficiary certificate in the A. O. U. W., his children becoming the legatees. After his death, upon the presentation to the Order of the certificate by the executor under the will, the Grand Master Workman decided that the money could only be paid to the party named in the certificate or her heirs or assigns, and insisted that letters of administration should be taken out upon the estate of the wife, such administrator being the only one to whom the money could properly be paid. The money for the payment of the claim was, at the time, in the bank awaiting payment, but the peculiar circumstances of the case made delay necessary.

"The basis for the action of the Grand Master Workman is the well-settled principle that the liability of the Order is to the party named in the beneficiary certificate and to none other. The laws of the Order prescribe the manner in which a change of direction of beneficiary money shall be made, and the highest courts in several States have decided that those laws must be complied with, and that a will is of no avail.

"In the instance above cited there was happily no evil consequence, the legatees under the will and the assigns of his wife being identical. But at the same time, principle was involved, as the question naturally arose whether the executor of the husband or the administrator of the wife was the proper party to receive the money. Strange to say, our legal friends are by no means unanimous in their opinion on the question. On this point, however, all the brotherhood should be of one mind—that the laws should be strictly complied with, and timely precaution be made while in life, so that hereafter the Order's benefactions will not fail of their intended purpose."

The case in point is by no means an impossible or even unfrequent one. Had the husband, at the death of the wife, transferred the prospective benefit to some other member of his family or relationship, the payment of the beneficiary would have been made at once. Under these circumstances the delay was altogether justifiable.

Life Insurance and Fraternal Benevolent Insurance.

From a compilation of the statistics of 12 insurance companies, doing business in New York city, the cost for insurance on $1,000, for the year 1881, was found to be $32.98. The cost for insurance of $1,000, taking the average of 12 mutual benefit societies during the year 1881, was $15.75. This was less than one-half, or, in other words, a humane provision whereby we are having an insurance on our lives at cost.

The prosperity and stability of any life insurance company rests on an honest administration and the reserve fund. The success and permanency of our fraternal benevolent insurance societies rests on the idea of receiving an insurance at cost, and that we are a brotherhood and fraternity, bound together in a common interest to protect one another. If the foregoing premises are correct, we submit the question: If the interest and benefits are so great, is it not criminal neglect that so many of our brethren never attend our Lodge meetings? If a brother only attends Lodge meetings just long enough to pay his assessment, can he expect that this humane and beneficial system of protection will be perpetuated?

A Nice Question.

Editors Watchman:— Permit me to submit through the columns of your paper the following nice question: On the 16th of September, last, I instituted a Lodge of A. O. U. W. in Utah. Among the applicants proposed for admission was a stout, rugged man whose birthday was to arrive on Sept. 28th, at which time he would have been 50 years of age. Was he entitled to admission? The laws of our Order require that a person, to be eligible to membership, must be under 50 years of age at the time of receiving the Master Workman degree. At the institution of a new Lodge, it is well known that both degrees are conferred on applicants on the same evening. I did confer the two degrees on 14 applicants on the 16th of September. The party referred to, if admitted with the other applicants, would have received the Master Workman degree 12 days before he reached 50 years of age. Without stating whether I admitted the party or not, I submit this question to the Order, and solicit opinions in your next issue. I will then give you my opinion by stating what I did, and why I did it. Yours in C. H. & P.,

J. W. Kinsley,
Grand Lecturer and D. G. M. W. for Nevada, Utah, Montana, Idaho and Wyoming.
Deer Lodge, Montana, Sept. 27, 1882.

Lodge Visits.

One of the best ways to encourage a fraternal and social feeling, not only among the members of a Lodge, but also among the members of different Lodges, is the exchange of visits by Lodges.

In this way the members are brought together in a different manner from the regular Lodge meeting. The great consideration in every brother's mind, then, is, "How can I act so as to entertain my brother, and add to the general enjoyments of the occasion?"

The Lodge which fails to foster a social spirit and encourage fraternity in every manner possible comes far short of its possibilities. The tendency will be to make the members cold and indifferent, not only towards their Lodge, but among themselves.

While the A. O. U. W. is not altogether an organization for the advancement of fraternity and brotherly love, yet this is one of its highest objects. It will generally be found that the officers of each Lodge lead in these matters. Where the M. W. is a live, earnest devoted worker, and interested in the welfare of his Lodge, it can almost be predicted that his Lodge will partake something of the same spirit. We would urge, therefore, upon the M. W.'s, and the other officers of the various Lodges, that encouragement be given to secure fraternal visits from sister Lodges as often as possible.

Wilmington Lodge, No. 130.

Wilmington Lodge, No. 130, of Wilmington, Cal., celebrated its third anniversary by having a grand ball and supper on the night of September 27, 1882. Major P. H. Downing's hall was engaged for the occasion, being the best in Wilmington. The hall was decorated from ceiling to floor with evergreens and flags of most all nations, and the anchor and shield the emblem of our Order, which was made of wood, and decorated with flowers and evergreens, and two large American flags, which had a beautiful effect in that hall. Nearly all the members of the Lodge with their families were there, besides a great number of invited guests. At nine o'clock the dancing commenced, and at 12 o'clock, supper being ready, the party marched to the Commercial restaurant, kept by Bro. Rafael Poggi, where an excellent supper was served. After supper dancing continued to about three o'clock A. M., when the party broke up, well satisfied with the entertainment, and only wishing that the anniversary of the Wilmington Lodge, No. 130, A. O. U. W., would come oftener.

This Lodge was instituted on the 27th of September, 1872, with 13 charter members, and we are now 53 Master Workmen; have had but one death in our Lodge. In about a month we expect to hold our meetings in the Masonic hall, which will be an ornament to this town when finished. J. F. C. Johnson, Rdr.

A Gratifying Acknowledgment.

Oroville, Butte Co., Cal., October 10, 1882.

E M. Reading, Esq., Secretary Workmen Guarantee Fund Association:

Dear Sir and Bro.:—I herewith return to you the receipt of Louisa Vanderhoof for the sum of $1,000 received from the Workmen's Guarantee Fund Association, for insurance on the life of her late husband, John M. Vanderhoof. The money came only ten days after the proof of his death was filed in your office. It came without any expense to the widow. These facts speak loud in praise of your Association, and should be known to the end that men of small means may know how and where to invest their money that it may be of the greatest benefit to their loved ones when they, themselves, are removed by death.

The man who truly loves his family will keep his life insured if he has the means with which to do it, and there are no better, safer and less expensive institutions than the A. O. U. W. and the Guarantee Fund Association in which to insure. Fraternally yours,

John C. Gray.

For the benefit of our readers we will state that the Secretary's office of the Gaurantee Fund Association is room 41, St. Ann's Building, Cor. Powell and Eddy Sts.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2,500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs one and a half miles from the center of the Redlands tract, and a depot will be established at once for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide. The cross streets are 60 ft. wide.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.

Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and watergates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have mo ed upon the tract are credited to Redlands, and the others to localities where they now reside:

Names.	Acres.
J. G. Cockshutt, Redlands	20

Total sold	1,004

Judson & Brown (San Bernardino, P. O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast.

Telephone No 658.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free. DEWEY & CO., PATENT AGENTS.

Good Land and Sure Crops.

There has been steady and tolerably rapid advancement made in the growth of a majority of the towns in Colusa, Butte, Tehama and Shasta counties. Especially is this so in the agricultural districts where the land produces at least fair crops in all seasons—wet or dry—as does the land on the Reading Ranch. Those looking for homes in California where diversified farming will pay every year; where wood and water are plenty and easy to be obtained, and other desirable advantages are to be had, should address the proprietor of the Reading Grant.

Some 14,000 out of 26,000 acres of the grant remain for sale at comparatively low rates, in quantities to suit purchasers, on easy terms. Prices range from $5 to $30 per acre. The tract is between two and three miles wide, with the Northern Division of the C. P. R. R. passing centrally through its entire length. Send postage stamp for free circulars containing information about Shasta County and these lands, to the proprietor of Reading Ranch.

EDWARD FRISBIE,

BUY LAND

Where you can get a crop every year; where you will make something every season; where you are sure of having a crop when prices are high; where you have a healthy place to live; where you can raise semi-tropical as well as other fruits; where you can raise a diversity of grain and vegetables and get a good price for them. Go and see the old Reading Grant (in the upper Sacramento Valley), and you will find such land for sale in sub-divisions to suit purchasers—at very low rates and on easy terms. There are 12,000 acres at from $3 to $30 per acre, including pasturage, vine, fruit land and grain land. Will sell the whole tract at a great bargain. Send stamp for map and circular to EDWARD FRISBIE, proprietor, (on the Grant), Anderson, Shasta Co., Cal.

Orange Culture in California.

With Appendix on Grape Culture.

An Important Work

This book is written by Thos. A. Garey, of Los Angeles, after many years of practical experience and observation in orange culture. The subject is an interesting as well as important one, containing information which all reading Californians should possess, whether engaged in orange or grape culture or not.

There are few writers in America who could have contributed more richly or abundantly on this subject than has the author.

The book is issued in good style and print, and convenient form. It contains 225 pages, 12mo.

Printed and Sold at the Office of the "Pacific Rural Press," San Francisco.

Mailed (postpaid), in stiff cloth binding, for $1.25; in flexible cloth, $1. Agents wanted for this and other books.

Dewey & Co. {252 Market St.} Patent Agt's

SOLAR PHYSICS.—In concluding a series of lectures on "Solar Physics," Prof. J. Norman Lockyer recently said: "I am in honor bound to say, as the result of the work on our solar physics, in that small branch of the inquiry into solar matters with which I am more personally connected, that my belief is that the late work has changed the views which were held, say 20 years ago, to this extent: Whereas, 20 years ago we imagined ourselves to be in full presence in the sun of chemical forms with which we are familiar here, I think, in this present year, we are bound to consider that that view may be modified to a certain extent, and that we are justified in holding the view that not these chemical forms with which we are acquainted here, but their germs really are revealed to us in the hottest regions of the sun."

ARTIFICIAL AGATE.—A glass which closely resembles natural agate may be obtained by combining 100 lbs. of sand, 100 lbs. of red lead, 32 lbs. of potash, 22 lbs. of borax, 4-10 of a pound of arsenic, and chloride of gold to the amount of about $5 in value. The gold is to be first dissolved in as small a quantity as possible of aqua regia, diluted with 10 lbs. of water, and intimately mixed with the flux. The melting pot is then placed in the furnace, and the material allowed to melt together for seven or eight hours, when it is to be stirred with a stick, or some potatoes thrown in. The working of the glass can then begin, and a mass is obtained which presents the grey, brown, milk and crystal-white shades and marks of natural agate, and a second melting fits it very well for the manufacture of ornamental articles.

POTATO PUFF.—Potato puff with the addition of a little cold meat makes an excellent breakfast dish. To two cups of cold mashed potatoes allow two well-beaten eggs, two tablespoonfuls of melted butter, and one cup of sweet milk; beat all together until very light, then add the cold meat, chopped very fine. After mixing it thoroughly, put it in a shallow pudding-dish, and bake for from twenty minutes to half an hour. If preferred, you can bake in well-buttered gem pans.

UTILIZING THE FORCE OF THE WAVES. It is both interesting and instructive to watch the progress of engineering in this direction. *La Nature* describes a recent invention having this object in view. It is an invention of M. Ganchez. It has a float weighing from 35 to 95 tons, as may be required, connected with a bell-shaped compressor by means of ropes or chains, which pass over suitably arranged pulleys. The float, of course, rises and falls with the action of the waves. When the float falls it raises the bell, which had been previously below the surface of the water, and as it empties itself of water the air rushes into it through openings in the top. As the float rises again the bell sinks, the water rises in it, and, compressing the air, drives it out into pipes, which conduct it to reservoirs on shore, where it can be distributed as required. There seems to be a very general effort at the present time to utilize all sources of mechanical power. The discovery of the Faure accumulator has done much to stimulate this. There is no doubt that soon there will be many better attempts than this of Ganchez's to capture "waste" force.

SUN SPOTS AND GREAT STORMS.—Prof. Coach, of Des Moines, Iowa, advises those living in exposed places to provide cellars or caves of refuge for shelter, when the sky looks threatening in the southwest. He says that 1882 is the maximum year of the 11.1 years of sun-spot period, and also the maximum year of two other periods, a long and a very long period; and the same degree of energy that gives the maximum sun-spot period, also gives the American continent maximum rainfall and a marked degree of force in the effects of the storms; and the end is not yet.

TO KEEP DAMSONS. — Put them in small stone jars or wide-mouth bottles, and set them up to their necks in a kettle of cold water; set it over the fire to become boiling hot; then take it off, and let the bottles remain until the water is cold; the next day fill the bottles with cold water and cork and seal them. These may be used the same as fresh fruit. Green gages may be done in this way.

Beneficiary Feature of the A. O. U. W.

The A. O. U. W. papers, in commenting on the origin of the Knights of Honor, claim that its beneficial system was taken from their Order. Now, if they will tell us who introduced it into the A. O. U. W., we will be glad to render honor unto whom honor is due. That Order was started in 1868 by J. J. Upchurch, but we do not find any plan for the payment of a death benefit of $2,000 in its original construction. The beneficiary system was introduced in 1873, about the time the Knights of Honor started. Who originated the scheme of death benefits?—*K. of H. Reporter.*

The *Reporter* would scarcely answer for a reliable historian. Grand Recorder Pratt, of this jurisdiction, is in possession of the original paper, of which the following is a true copy:

CORRY, PA., Aug. 12, 1871.

Received of H. G. Pratt, Grand Recorder, A. O. U. W., $156 insurance money, in case of Clarence Robinson, deceased.

A. KIBLING, Rvr.

The above receipt was given for a partial payment of the first death-loss that occurred in the Order. Bro. Robinson was a member of Washington Lodge, No. 2, of Corry, Pa., and at that time beneficiary moneys were collected from the various Lodges, and paid over to the Receiver of the subordinate Lodge in which a death occurred. The beneficiary system was a part of the A. O. U. W. plan in the beginning, if we understand aright. Certainly the foregoing furnishes proof positive that it was such as early as 1871, two years prior to the advent of the Knights of Honor. The *Reporter* cannot be ignorant of the fact that Darius Wilson started the Knights of Honor, because he was displeased with something R. D. Handy, S. M. W., did, and, of course, borrowed largely of the A. O. U. W., the beneficiary system among the rest—in fact that was the one thing important that he could not leave out of his new enterprise. The writer hereof heard him say in 1874, if we remember correctly, that the principal claim the new Order put forth was in behalf of a higher grade of membership, intellectually and socially, as compared with the Workmen, who were then largely composed of mechanics and artizans, the class amongst which the Order originated, though he was quite complimentary to the membership of Washington, No. 2, from which he drew somewhat largely in the organization of a Lodge of the Knights of Honor. We opine that the reason the *Reporter* fails to find any plan for payment of a death benefit in the original construction is because he has not seen the original plan. It was a part of the Order's system as far back as 1869, to our certain knowledge, though we have not now at hand, the documentary proof of the fact.

The Darwin Memorial.

The scientific work of the late Charles Darwin was of such a nature as to be recognized by the people of all civilized nations. It was not confined within such narrow boundaries as to be only appreciated by a few learned men or a small circle of specialists in one branch of science. His conclusions from his researches were such as to command the attention of thousands who never before gave any heed to scientific truths, as well as that of those who were perusing studies or investigations requiring intelligence of high order.

A short time after Prof. Darwin's death the project was broached of giving the people an opportunity of testifying to their appreciation of his work by contributing to a "Darwin Memorial." The idea originated in England, where a committee of eminent scientific men was appointed to carry it out.

The English executive committee has now asked an American committee to join them in carrying out this work. These gentlemen gladly contribute to the object, and request subscriptions from those who may wish to join in this tribute to the memory of Darwin. The committee is as follows, Asa Gray (chairman), Spencer F. Baird, James D. Dana, Charles W. Elliott, D. C. Gilman, James Hall, Joseph Le Conte, Joseph Leidy, O. C, Marsh, S. Weir Mitchell, Simon Newcomb, Charles Eliot Norton, James A Walker, Theodore D. Woolsey, Alexander Agassiz (treasurer). Subscriptions may be sent to the last named at Cambridge, Mass., who will acknowledge the same and forward them to the treasurer of the English executive committee.

The form which the memorial is to take has not yet been decided; it will probably include an endowment for a scholarship to carry on biological research. Prof. Joseph Le Conte of the University of California, one of the American committee, will lecture on "The Life and Work of Darwin" at the next meeting of the California Academy of Sciences, Monday, October 16th. No fee is charged, but the attention of the public will be called to the project of the "memorial."

THE WIDEST GAUGE RAILWAY.—Washington Territory boasts the widest gauge railway yet reported. It is an 8 ft. gauge logging road, running back from Skagit river. The rails are wood, 8 by 8 inches. The cars are large, and are carried on 12 wheels, of 9 inch face, with double flanges.

Pacific Coast Interests.

There was quite a norable meeting held in this city on Tuesday of last week. It was a conference between the representatives of the State at Washington and the leading business men of San Francisco, and the subjects for discussion were several public enterprises calculated to advance Pacific coast interests, to-wit: "The Incorporation of the Nicaragua Maritime Canal Company," "The American Commercial Marine" and "The Bill regarding the Tenure of Public Lands." There were present United States Senators Farley and Miller and Representatives Rosecrans and Page, and nearly all the prominent merchants of the city. The main facts were brought forward by the local side of the meeting, the Senators and Congressmen stating that they agreed in the main with the views advanced, and would labor to get Congress to enact as the sense of the meeting required.

Concerning the Isthmus canal, the following, introduced by Captain W. L. Merry, was unanimously adopted:

WHEREAS, A bill authorizing the incorporation of the Maritime Canal Company of Nicaragua, has been favorably reported by the Committee on Foreign Affairs during the last session of Congress; and,

WHEREAS, The Legislatures of Oregon and California, by concurrent resolutions, the representative commercial bodies on the Pacific coast, and thousands of our producers and merchants, have petitioned Congress, urging the passage of this bill as a matter of vital importance to the Pacific coast, beneficent in its results to our whole country and the commercial world; therefore, be it

Resolved, That the Board of Trade of San Francisco extend to our honored Senators and Representatives in Congress its thanks for their friendly assistance to the bill authorizing the incorporation of the Nicaragua Canal Company, and respectfully urge upon them the necessity for their active co-operation in securing its final passage and the Executive sanction during the next session of Congress.

C. J. Dempster stated that by the canal, in the moving of one single wheat crop over $12,000,000 would be saved to our producers. Suppose this addition was put into the building of iron steamers for the carrying trade, can any one picture the impulse that would be given to every branch of trade? Some doubt whether our present wheat shipment can continue at its present magnitude without increased means for export. If the vast Red River country and the lands of India are to produce what has been calculated, the canal will become an absolute necessity.

The Shipping Interest.

C. T. Hopkins, Chairman of a committee to draft a memorial on the subject, "The American Commercial Marine," read the result of their labors. The substance of the document is: That the immense and constantly growing foreign carrying trade of San Francisco, now the sixth among the 93 seaports of the Union, is so completely in the hands of foreign ship owners that only 12 out of 550 vessels loaded at this port for Europe, during the harvest year ending June 30, 1882, were owned at San Francisco. That for said period of 12 months the freight paid on exports to Europe alone, by sea, amounted to $16,069,789, and that the aggregate of inward and outward freights in the foreign trade to and from all ports on this coast must be not far from $25,000,000 annually, the proportion whereof earned by vessels owned at American Pacific ports is an insignificant fraction of the whole. That the present lamentable decay of the American merchant marine in the foreign trade, has been entirely due to the failure of our Government to change the laws to suit the changing exigenices of modern progress, while other nations, especially England, have always given close attention to every detail of this subject, and therefore, by the substitution of iron and steel for wood, of steam for sail, by exemption from taxation, by Government employment as mail carriers, and by the use of every means calculated to improve and cheapen transportation by sea, they have underbid us in every port and on every sea, so that in another decade, unless Congress comes intelligently to our relief, they will have completely excluded the American flag from the foreign trade everywhere; and while wooden ships can yet be built in the United States as cheaply as in foreign countries, the world now demands ships of iron and steel, but Americans are prevented by the tariff from constructing such vessels, save at a cost so much greater than those of England as to confine their building to the coasting trade, in which they are protected from foreign competition; that the high tariff of the United States, therefore makes the business of iron or steel ship building for the foreign trade impossible.

The memorialists specially pray for the repeal of the last clause of Sec. 4131 of the Revised Statutes. "And officers of vessels of the United States shall in all cases be citizens of the United States" Repeal all sections or parts of sections numbered 4561, 4580, 4581, 4582, 4583, 4584, 4600, that provide for the payment of three months' or one month's extra pay to seamen when discharged in a foreign port, and substitute therefor the statute, which is now the law of Great Britain relating to the same business. Abolish all the fees of United States Consular officers now collected from shipping, and make good any resulting deficiency in their compensation by regular salaries. Allow a rebate of the tonnage tax of 30 cents per ton on each 300 tons of the vessel's register, for which no American apprentice shall be carried in the foreign trade, and compel all vessels in the coasting trade to carry at least one apprentice to every 300 tons of her enrollment. Abolish the laws obliging masters to return seamen to the American port of shipment, and to allow crews of any nationality to be shipped anywhere on time or by the voyage. Make it a penal offence to demand or pay advance wages to seamen in any American port, or any bonds for shipping seamen, and that all such payments shall be void in law in final settlements with seamen. Enforce this against foreign vessels by requiring the Collector to refuse a clearance in case of its violation. Allow all provisions, stores and supplies used or consumed on board vessels where such vessels are bound upon a voyage to any foreign port, to be taken out of bond free of duty. Declare all shipping engaged in the foreign trade to be under the protection of the United States, and therefore exempt from State and municipal taxation; establish a Bureau of Commerce with a Cabinet officer at its head, and with duties analogous to those of the British Board of Trade. Liberal compensation for postal service by established American steamship lines, as is the policy of our commercial competitors.

The Public Lands.

The gist of the third topic was stated by the chairman to lie in the fact that a pre-emptor could not enter upon lands already inclosed; that public lands must be unoccupied by any one before the actual settler can enter on it.

Captain Blanding, from the State Immigration Bureau, addressed the Board on this question. He said we want a large population. He contrasted the population and area of the New England States with that of California, and showed how population is the first element of political power. The difficulty to get anti-Chinese legislation, he instanced as one of the benefits to be had from political power. He said the misrepresentation of the land agents of the northwestern States kept all but 3,000 of the 400,000 and odd immigrants, who landed in New York from coming to this State. But a more serious obstacle than this must be removed, for the United States Supreme Court has decided that if lands were fenced, although they might be part of the public domain surveyed for entry, the pre-emptor could not legally settle on them. The Immigration Bureau, partly supported by voluntary cotributions, and in part by the Railroad Company, had discovered that California has 43,795,000 acres of public lands, half of it suitable for agricultural purposes—a country equal to Indiana, whose population is a million of people. There is now surveyed and open to pre-emption, in this State 14,537,000 acres. The bills to right the evil in the matter of a settlement upon lands already inclosed, were still pending in Congress.

Sand and Mud Baths.

In many low plains in the neighborhood of the sea, immense quantities of sand are constantly deposited from the in-rolling waves, particularly at the promontory of Sunium, near Missolonghi, near Corinth, and on some of the islands. These places are visited by persons affected with chronic rheumatism, anchynosis, chronic synovitis of knee-joint, for the purpose of taking a sand bath. The patients, who are generally of the poorer classes, bury themselves in the sand, or cause others to cover them with it, so that only the head, which is covered with a nightcap or straw hat, remains free. It is a ludicrous sight to see 20 or 30 such odd-looking heads sticking out of the sand. In consequence of the weight and the saline character of the sand, the skin of the patients becomes so red, that when they emerge from their sandy bed, which they occupy as long as possible, they look like boiled lobsters. Wooden huts or tents, improvised with oleander and plantain branches, are used as bathing houses, and a piece of bread, some grapes, and a glass of wine generally constitute the meal of a patient. Direct inquiry from the patients has elicited the fact that the effects of this sand treatment are decidedly beneficial.

Another variety of bath is likewise not uncommon, namely, the so-called mud-bath. In the canals and ditches, into which the sea-water is allowed to flow in order to obtain common salt by spontaneous evaporation, a mother-water containing chiefly magnesium bromide remains behind, after the crystallized salt has been removed. At the same time an aluminous mud collects at the bottom. This mother-water, together with the mud, is used by patients affected with chronic splenitis, caused by the frequent malarial fevers prevailing among the workmen in these localities, and with intestinal infarctions. The method consists in smearing the whole body with saline mud, and in exposing themselves afterward to the rays of the sun until the coating has become dry, when it is washed off with the saline mother-water. Sometimes both the sand and mud baths are used locally on a special portion of the body, as, for instance, the legs or feet.—*X. Sanders, M. D.*

Mud baths are used in California. A specially noted location for such treatment is located a few miles east of San Bernardino.

WOOD holds a high position as an employing agent. The carpenter trade alone gives employment to nearly three times as many persons as the cotton mills and fully 12 times as many as are engaged in the production of flour and meal.

Curious Electrical Phenomena on Pike's Peak.

Sergeant L. M. Dey, signal officer at the summit of Pike's peak, writes under a recent date as follows: "At 8:45 o'clock this evening, on opening the door, a most curious phenomenon met my astonished eyes. The line on the summit was distinctly outlined in brilliant light, which was thrown out from the wire in beautiful scintillations. On near approach to the wire these little jets of flame could be plainly observed. They presented the appearance of little electrified brushes or inverted cones of light—or, more properly, little funnels of light with their points to the line, from which they issued in little streams about the size of a pencil lead, and of the brightest violet color, while the cone of rays was of a brilliant rose-white color.

"These little funnels of light pointed from the line in all directions, and were constantly jumping from point to point. There was no heat to the light, although it was impossible to touch one of these little flames, for as soon as they were approached by the finger they would instantly vanish or jump to another point on the line. Passing along the line with finger extended, these little jets of flame were successively 'puffed out,' so to speak, to be instantly relighted in the rear. It was a curious and wonderful sight. No sensation was experienced on applying the tongue to the line. Not only was the wire outlined in this manner, but every exposed metallic point or surface was similarly tipped or covered. The cups of the anemometer, which were revolving rapidly, appeared as one solid ring of fire, from which issued a loud rushing and hissing noise. The wind vane represented a flaming arrow, and a small, round, wooden stake—stuck up in the snow to show the position of the gauge—was similarly tipped, as well as an angle of our stone chimney.

"In placing my hands close over the revolving cups of the anemometer—where the electrical excitement was abundant—not the slightest sensation of heat was discovered, but my hands instantly became aflame. On raising them and spreading my fingers, each of them became tipped with one or more beautiful cones of light, nearly three inches in length. The flames issued from my fingers with a rushing noise, similar to that produced by blowing briskly against the end of the finger when placed lightly against the lips, accompanied by a crackling sound. There was a feeling as of a current of vapor escaping, with a slight tingling sensation. The ristband of my woolen shirt, as soon as it became dampened, formed a fiery ring around my arm, while my moustache was lighted up so as to make a veritable lantern of my face. The phenomenon was preceded by lightning and thunder, and was accompanied by a dense driving snow, and disappeared suddenly at 8:55 o'clock, simultaneously with the cessation of the snow. I much regret that there was no one on the peak to witness the phenomenon with me—It was a wondrously beautiful sight."—*Colorado Springs Republican.*

MORTAR FOR FURNACES.—It is well known that the mortar made of fire-clay generally used in building metallurgical furnaces has no binding qualities whatever, and serves only to fill the small inequalities between the surfaces of the fire-brick. It is for this reason that engineers insist on thin seams and plenty of water in the mortar. It has been urged recently that the desire to render furnaces absolutely fire-proof has led metallurgists to adopt a wrong policy in this respect, and it has been proposed to use as a mortar a mixture of lime, cement or cinder, and sand or clay in such proportions that it will sinter when exposed to the heat of the furnace. Thus fire-brick mason-work may be made to have that solidity which it does not now possess. Of course, it would be necessary with such material to suppress as carefully as heretofore the tendency of the average mason to use mortar as liberally as he does in ordinary brick-work. It is likely, too, that in many instances, with smooth and straight brick, it would be possible to do away with much of the rammed linings which are so troublesome in requiring repairs in many metallurgical operations. The suggestion, we believe, is worthy of attention, though probably more care would have to be bestowed on the staying of furnaces built in this manner.

STEAM ON STREET CARS.—After the most faithful efforts of the managers of the street cars in Paris to substitute steam power for horses, they have given up the job. For five years they have used steam, during which period, they have tried 21 different forms of engines. The companies now discard steam, and return to horse flesh as, on the whole, the safest, most economical, and most satisfactory. It would seem as if the experience ought to be of value to inventors; that they can and will ultimately overcome every difficulty, there can be no doubt. Who will win the prize by the invention of a steam street car that will successfully compete with animals?

POUNDING in an engine at the end of a stroke, when the crank is on the dead center, may come from a ridge in the cylinder or at the guide-bar end, or from the connecting-rod brasses not being keyed up tight enough. Pounding when the crank is at half stroke will not be caused by any of the above, but will be apt to be occasioned by the crank-pin not being parallel to the crank-shaft, or from one or the other of the crank-shaft journals being low.

A New View of the Earth's Evolution.

The assumption that the earth was at one time in a fluid condition, as held by Laplace, and by many astronomers and geologists, was disputed with a suggestive array of evidence by Dr. Houghton, of Dublin, before a recent meeting of the Science Association at Montreal.

Following are some of his reasons for doubting the fluidity of the earth, or any other planet, at any stage of its evolution:

1. The possibility of the equilibrium of the rings of Saturn, on the supposition that they are either solid or liquid, has been more than doubted, and the most probable hypothesis concerning them is that they consist of swarms of discrete meteoric stones, discrete meaning that they are separate from each other in space.

2. It is difficult to understand the low specific gravity of Jupiter and the other planets on the supposition that they are either solid or liquid, for we know of no substance light enough to form them. If the outer planets consist of discrete meteoric stones moving around a solid or liquid nucleus, the difficulty respecting the specific gravity would disappear.

3. The recent researches connecting the periodic showers of shooting stars with comets tend in the direction of showing that comets, in cooling, break up into discrete solid particles, and that probably the solar nebula cooled in like manner into separate fiery tears, which soon modified by radiation into the cold of space.

Mr. Huggin's recent comparisons of the spectroscopic appearances of comets and incandescent portions of meteoric stone show the presence in both of hydrogen and nitrogen compounds, confirming the conclusions drawn from the identity of the path of comets and meteoric shooting stars.

From all these and other considerations, it is allowable to suppose that the earth and moon, when they separated from the solar nebula, did so in the form of solid meteoric stones, each of them having the temperature of interstellar space—that is, something not much warmer than 460° Fahr. below the freezing point of water.

The Poisonous Mushroom.—Prof. Ponfick, of Breslau, has lately made experiments on the common mushroom, of which the following are the practical results: All common mushrooms are poisonous, but cooking deprives them in a greater or lesser degree of their poisonous qualities. The repeated washing with cold water which they usually undergo to clean them, takes away a portion of the poison, and boiling does the rest; but the water in which they have been boiled is highly poisonous, and should always be carefully got rid of. Experiments made on dogs showed that if a dog ate 1% of its own weight of raw mushrooms, it fell sick, but recovered; if it ate 1½%, the poison had a more violent, but not fatal, effect, and if he ate 2%, it was inevitably fatal. The water in which mushrooms had been boiled was far more poisonous than even the raw mushrooms, while the mushrooms thus boiled could be taken without hurt to the amount of 10% of the weight of the dog's body. Washing with cold water does not remove all the poison, so that mushrooms thus prepared were poisonous when taken in larger quantities. Dried mushrooms are still dangerous for from 12 to 20 days, and also the water in which they have been boiled. They require to be dried for at least a whole month, and are only really safe after four months' drying.—*London News.*

Steam Water Wheels.—A novel appliance has recently been patented by Prof. Wellner, of Brunn, Austria. It is called a steam wheel, and is described as consisting of a simple water wheel, immersed for the greater part in hot water, contained in a closed vessel. Steam is admitted at the lower part, and forces the chambers of the wheel upward, producing rotation. The steam is introduced in such a manner as to fill only those cells on the rising side, and after a portion of a revolution of the wheel it begins to escape into the steam space above the water. The steam may either be produced directly at the lower part of the apparatus, or conducted to the vessel from suitable generators, and the upper tube for discharging the steam may lead either into the open air, or into a suitable condenser. The mechanical work consists in the ascent of the specifically lighter steam in the heavier liquid, and the apparatus, when connected with an ordinary steam engine, may utilize the exhaust steam. It will be seen that the apparatus embodies no specially new features. Nothing definite has been said about its practical success, and we should imagine that it is rather an interesting toy than a useful and practical apparatus.

No Atmosphere in the Moon.—At a recent meeting of the Photographic Society of France, M. Janssen handed round a magnificent proof of the late partial eclipse, and said a few words upon the long-discussed question of a lunar atmosphere. In speaking upon the subject he said: "Suppose for a moment that the moon is surrounded by an atmosphere, what would be the result if we took a photographic view of it during an eclipse? The lunar disc would be sharp enough, but there would be a gradual decline in density, as in a vignetted portrait. This is exactly the contrary which took place, as the proof will show. The lunar disc is very sharp, and the negative is rather intensified near the disc, probably from refracted light." M. Janssen appears to doubt the existence of a lunar atmosphere.

Steel Plates for Boilers.

Some years ago the French Congress of Engineers refrained from rendering a definite decision on the relative value of steel and iron for boiler plates, on the ground that the subject was not far enough advanced to warrant such action. At the fifth congress, however, which recently met in Lyons, the following report was submitted: Two boilers ordered by the Midi company of the Fives-Lille Works burst at the trial, and the company consequently decided not to use steel plates, notwithstanding that Creusot offered every guarantee for its boilers. The Forges et Chantiers de la Mediterrane have likewise excluded steel plates for boilers. Krupp has also given up steel, and the experiments made at the instance of the English Admiralty have shown that steel corrodes more quickly than iron. This corrosion is all the more dangerous, as steel plates are used much thinner than iron plates. Mr. Webb, of Crewe, notwithstanding, still adheres to the application of steel plates for the engines of the Northwestern railway.

The engineers of Rouen also employ steel plates on the ground, presumably, that they would prove more homogeneous in case of overheating. But this advantage is, according to M. Roland, of too small account compared with the great drawback that they are very liable to tear and burst at the ends and in the rivet holes either during manufacture or during use. He cites in support of his views the case of the eight boilers made for the *Lavadia*, three of which burst at pressures of from 3½ to 6½ tons per square inch, resulting in the rejection of all the boilers. The prevailing opinion of the congress was expressed by M. Cornut, who stated that at present steel plates do not offer sufficient safety for the construction of boilers, and that it would be advisable not to employ them. It was further stated than an amount of care would be required in the manufacture of steel for this purpose which few makers would be inclined to exercise, and that the many failures observed in this department of the use of steel must be ascribed to this circumstance.

How to Make the Phosphorus Metals.—For the preparation of phosphorus compounds of metals, for example, phosphor-copper, Dr. H. Swarz gives in the *Industrie-blatter* the following directions: A mixture of bone ash, silica and carbon is placed in a crucible, and upon it a layer of granulated copper, which is in turn covered with the above mixture. The lid of the crucible is luted on. To make it melt more easily, some carbonate of soda and glass may be added, or a mixture of pulverized milk-glass with charcoal and powdered coke is used for lining and covering it. Take, for example, 14 parts of silica, 18 parts of bone ash, and 4 parts of powdered carbon. This is mixed with 4 parts of soda and 4 parts of powdered glass, stirred up with a little gum water, and used to line the crucible. When this is dry, the copper is put in and covered with the same mass, and the whole melted at a bright red heat. The copper obtained flows well, and has a reddish-grey color. It contains from 0.50% to 0.51% of phosphorus. The simplest method for introducing phosphorus into bronze, says the *Metalworker*, is to stick a bar of the phosphorus into a tube of pinchbeck, one end of which is hammered together and closed tightly. After the phosphorus is put in, the other end is closed too. When the metal, which contains 32 parts of copper to 5 of zinc and 1 of tin, is melted, the tube charged with the phosphorus is pushed down in it to the bottom of the crucible by means of a bent tongs. The stick of phosphorus must always be kept under water until it is about to go into the pinchbeck tube, when it must be carefully dried, as the presence of any moisture would be sure to cause the metal to spurt or fly about.

Low Water in a Boiler.—If, from any cause the water gets low in the boiler, bank the fires with ashes or with fresh coal as quickly as possible, shut the damper and ash-pit doors and leave the fire doors wide open; do not disturb the running of the engine, but allow it to use all the steam the boiler is making; do not, under any circumstances, attempt to force water in the boiler. After the steam is all used and the boiler cooled sufficiently to be safe, then the water may be admitted and brought up to the regular working hight; the damper opened and the fires allowed to burn, and steam raised as usual; provided no injury has been done the boiler by overheating.

Rheumatism is so rare in the earlier years of life as to be hardly ever mentioned by such writers as West and Vogel. Dr. Garden, in the London *Practitioner*, gives the case of an infant of nine months who caught cold from bathing in cold water. Rheumatism followed, affecting the knee and ankle joints. These were wrapped in cotton, and three grains of salicin thrice daily were prescribed. The patient recovered in a fortnight, without showing any signs of heart complication.

Over 400 Miles a Day.—The Guion steamer *Alaska* has again beaten her best westward record. She left Liverpool June 17th, and Queenstown at noon the next day. She arrived at Sandy Hook at 9:45 on the morning of the 25th, her corrected time for the run being 7 days, 1 hour, 50 minutes. On the 22d the distance run was 430 miles. The average for the trip was over 400 miles a day.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in Dewey & Co.'s Scientific Press Patent Agency, 252 Market St., S. F.

For the Week Ending October 3, 1882.

265,306.—Water, Gas, Sewer or Drain Pipe—John P. Culver, Tucson, A. T.
265,490.—Rock Crusher—A. G. & J. M. Dyer, S. F
265,328.—Side-Hill Plow—P. I. Knapp, Half Moon Bay.
265,331.—Bridge—Wm. Litell, Boise City, I. T.
265,321.—Arched Girder—P. H. Jackson, S. F.
265,322.—Ventilator—P. H. Jackson, S. F.
265,445.—Wrench—P. Potermund, Eureka, Cal
265,461.—Clothes Pin—Thos. A. Sweet, Cambria, Cal.

Note.—Copies of U. S. and Foreign Patents furnished by Dewey & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Scientific Press American and Foreign Patent Agency, the following are worthy of special mention:

Ventilator.—Peter H. Jackson, San Francisco, Cal. No. 265,322. Dated Oct. 3, 1882. This invention relates to an improved ventilator for soil-pipes, chimneys, flumes, etc., or for any place in which impure air or foul gases are liable to generate, or within which there is imperfect ventilation. This invention consists in the provision of means for inducing an independent draft or current in such relations with the body of impure or foul air or gas, that a part shall surround, and another part be inclosed by said body of impure air. The general principle of operation is well known, and needs but a short reference. In pipes wherein foul air or gas has accumulated, or in which there is imperfect draft, the air, being heavy, will not pass off. In all ventilators of this class, an independent draft is effected, in such a relation with the body of foul or heavy air as to cause the latter, by induction, to rise and clear the pipe. In some devices the body of foul air is surrounded by, and in others it surrounds, the actuating draft or current, in either case but imperfectly inducing the latter, as it acts upon one edge only; but in this construction the invention combines both features—surrounding and being inclosed by the air to be induced—whereby the whole body of the latter is acted upon and drawn out.

Arched Girder.—Peter H. Jackson, San Francisco, Cal. No. 265,321. October 3, 1882. This invention relates to certain improvements in the construction of sectional cast-iron arched grinders, by which the tensile strain upon the tie-rods and the compressive force upon the cast-iron arch are better distributed and equalized. It consists in such a construction that the abutting parts of the sectional arch always meet on a line with the intrados of the arch, whatever may be the deflection under loads, and also in connecting the joints or meeting ends of the section with the tie-rods, by intervening vertical connecting struts, which serve to transmit the strain from arch to tie-rods, so that any deflection of the arch is resisted by the tie-rods, and all vertical strains are resisted by both the arch and the rods.

Water, Gas, Sewer or Drain Pipe.—John P. Culver, Tucson, Arizona. No. 265,306. October 3, 1882. This invention relates to certain improvements in the formation of continuous pipe for the purpose of conveying water, gas, or other fluids or liquids, and it consists of sheets of metal sufficiently long to form the sections, and of a width to form two or more thicknesses when rolled into a pipe of suitable size. The sections are formed by rolling the sheets in a bath of molten solder, which, flowing between the thickness of the metal, unites it into a solid multiple-walled tube during the operation of rolling, and without further treatment of any kind, having the outer surface finished with a coating of tin. The pipe section thus prepared may be joined in any desired manner to form the lengths required when laid.

Machine for Making Wire Rope.—A. S. Hallidie. No. 264,529. Patented Sept. 19, 1882. This machine is especially designed for the manufacture of wire ropes or cables, already patented by Mr. Hallidie, in which the wires forming the strands are drawn to a section other than round, so as to present a flattened exterior surface for wear, and thus prolong the life of the cable. The present invention consists in the combination with a rope-making machine, of a series of dies or formers through which the wires are led, and by which they are drawn into the desired shape before they are laid up into strands and ropes. By means of suitable mechanisms these wires are kept in the proper position, so that unless they pass through the strand forming die they will be laid with their flattened sides outward.

Apparatus for Capping, Uncapping and Loading Cartridge shells.—L. Sontagg, S. F. No. 264,204. Dated Sept. 12, 1882. This invention relates to an apparatus for performing the work of crimping, capping, loading and decapping cartridge-shells. It consists of a holder for the cap and shell, and a lever by which the cap is seated, a block for setting the bullet after the powder has been introduced into the shell, a movable post with a pin, which may be brought beneath the lever after the discharged shell has been placed upon it, so that, by pressing down upon the lever, the cap will be forced off, and a device for crimping the open ends of the shells,

Ditching Plows—Abraham Kirkpatrick, Bridgeport, Mono Co., Cal. No. 265,102. Sept. 26, 1882. This invention relates to the class of plows, and more especially to those adapted to make a trench, and commonly known as ditching plows. The object of this invention is to provide a plow for ditching and irrigating purposes, which will be simple and economical in construction, effective in operation, and easy of transportation. This invention consists of certain details of construction for carrying out this object.

Street Car.—Samuel Howe, Oakland. No. 264,948. Sept. 26, 1882. This invention relates to certain improvements in cars, and it is more especially applicable to street cars. It consists in sundry details of construction, as hereinafter fully set forth, and specifically pointed out in the claims.

Overalls.—Moses Greenbaum, S. F. No. 264,944. Dated Sept. 26, 1882. This invention relates to certain improvements in pants, or overalls, for boys' and men's wear, and it consists in a novel method of cutting, whereby the crotch seam is strengthened.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the Watchman's progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can test tel whether the Watchman has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the Watchman family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the Watchman.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Officers and members of the A. O. U. W. receiving a complimentary number of the Watchman with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

Do Not Delay.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the Watchman. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Frank P. Latson & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery Street, under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc., and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

The finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies the best trade in this city.

How to Stop this Paper.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*

Mansion House.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.

FLIES AND THE CASTOR-OIL PLANT.—Observations made by M. Rafford, a member of the Societe de Horticulture at Limoges, show that a castor-oil plant (*Ricinus communis*) having been placed in a room infested with flies, they disappear as by enchantment. Wishing to ascertain the cause, he soon found under the castor-oil plant a number of dead flies, while a large number of bodies remained clinging to the under surface of the leaves. It would therefore appear that the leaves of the castor-oil plant give out an essential oil, or some toxic principle which possesses strong insecticide qualities. Castor-oil plants are, in France, very much used as ornamental plants in rooms, and they resist well variations of atmosphere and temperature. As the castor-oil plant is much grown and cultivated in all gardens, the *Journal d'Agriculture* points out that it would be worth while to try decoctions of the leaves to destroy the green flies and other insects which in summer are so destructive to plants and fruit trees. The plant is also common enough in this country, and readers can therefore test the accuracy of these French reports.

MEDICAL CONSULTATION.—The practice of calling in an additional doctor, when the one already in attendance feels the case becoming grave, has, if the latter is a skillful and experienced man, somewhat the same reasons in its favor as Paliamentary government. The appearance of doctor the second strengthens the nerves of the patient's family, and sometimes, though not always, those of the attendant physician. The patient himself is generally startled and alarmed by it. In 99 cases out of 100 it has not, as everybody knows, any influence whatever on the management of the case. The consulting doctor almost always approves of what the other doctor has done; seldom or never does he suggest anything new. But he makes the other doctor decidedly more comfortable in his relations with the family, and makes the family comfortable in the feeling that they have left nothing in reason untried.—*Nation.*

ALL the iron mills in the Wheeling (W. Va.) district will resume operations Monday.

LEATHER GUNS.—During the Cuban "Patriot war" the patriots, as they were then called, devised a curious cannon of leather as a substitute for the metal pieces, which they were unable to obtain. The barrel of the gun was about three feet and a half long, and made by stretching stout, well-dressed leather, in a soaked state, upon a mold four inches in diameter, and sewing the edges with cords of the native *pita de carojo*, which has a great tenacity. When dry, another thickness of leather was stretched upon the first layer, and four more subsequently added. The breech was made of hard wood, and the chamber often lined with tin. These guns fired from 10 to 20 rounds before becoming unfit for use, and were usually loaded with stones, through the absence of grape and cannister. They did considerable execution, and were lightly transported in pairs upon the shoulders of a man. When used they were laid upon the ground, and pointed at short range upon an approaching column.

WEBSTER'S WISDOM.—Daniel Webster once said: "Small is the sum that is required to patronize a newspaper, and well rewarded is the patron. I care not how humble and unpretending the gazette which he takes. It is next to impossible to fill a sheet with printed matter without putting something into it that is worth the subscription price. Every parent who has a son away from home at school, should supply him with a newspaper. I well remember what a marked difference there was between those of my schoolmates who had and those who did not have access to newspapers. Other things being equal, the first were always decidedly superior to the last in debate, composition and intelligence."

METALS, and especially steel, brought to a cherry-red heat and strongly compressed, the pressure being continued until the mass is perfectly cold, are said to acquire an excessive hardness, and a striking fineness of grain. Steel thus treated acquires a coercitive force which enables it to become magnetic. The durability of this property requires to be studied.

Mining and Scientific Press.

THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

Interchangeable Systems of Manufacture.

The London *Times* comments on the American system of what is called "assembling" in manufacture, as follows:

Among the various phases of the manufacturing interests, it is worth calling attention to the rapidly-increasing development in the United States of the interchangeable system, which has of late years become so important, and been applied to so many different branches, that it has been thought worth while to devote a special report to it in the census investigations. Mr. Fitch, to whose hands this inquiry was intrusted, remarks that not only American manufactures, but also American agriculture depend largely for their success upon the application of this particular feature. The art of making complete machines or implements, each part of which may be introduced into any machine of the same kind, and especially the adaptation of special tools by which handwork in fitting the parts is often entirely avoided, is one of American origin. The farming classes have been benefited in an extraordinary degree by the interchangeable system, for they are enabled to provide themselves with every kind of implement at a great reduction of price, as well as of manual or muscular exertion, while the durability and working performances of the implements are notably increased. Nor is it only agricultural machinery that is thus affected, the system being applied with equal success to sewing machines, watches, firearms, railway cars, locomotives, etc. The development of one of these branches of manufacture, viz., firearms, there being now 38 establishments on the interchangeable plan, mostly in Connecticut, Massachusetts and Pennsylvania, employing nearly 6 000 hands, and having a capital of over $80,000,000,000. America stands high in the estimation of the world for firearms and ammunition, since 1867 the Danish, Swedish, Spanish, Egyptian and Japanese governments being supplied with American arms and machinery, as well as Chile, Peru, Mexico and the Argentine republic. During the late Turco-Russian war both belligerents were furnished from American armories, and the Prussian government arsenals at Spandau, Erfurt and Dantzic are supplied with American gun-making plant.

Popular Young Folks' Publications.

We have been constantly receiving the serials from the noted and popular house of D. Lothrop & Co., Boston, including "Wide-Awake," "Babyland," "Pansy" and "Little Folks." We suppose a great many who will read this notice know these books, for "Wide-Awake" has reached its 12th volume and "Pansy" its ninth volume; and the others have each had several birthday anniversaries, but every new number of each is a fresh gem. They do not repeat themselves, and they never grow dull. They delight every child, and make older persons feel young again. The September numbers are no exception, and the "Truant Fire-Flies," "Baby Boys' Band," "The School in the Meadow," and other pictures, will charm and fire the young heart as if they were the first ever seen; they are so like nature—fresh and full of life. And the kittens in these books must set every lover of cats wild with delight, the kitten instinct is so visible in them. These books are very justly popular.

And now we want to say, in addition to the above, that last spring we had the pleasure of a visit from Mr. Lothrop and his wife, who writes so charmingly under the *nom de plume* of Margaret Sidney. They were much delighted with what they saw in a flying visit to southern and central California, and returned to Boston happy and brim full of good will to California and its progressive people, and we happen to know that Mr. Lothrop has some good undertakings of special benefit and interest to California in the way of future publications, so that his recent visit is one of more than ordinary significance to this coast. This is one of the largest and most thrifty publishing houses in America. Its works are chaste and useful in character, and are issued at the rate of one first-class book per day, or faster.

POSTAGE-STAMP FRAUDS. — The principal losses to the Government appear to be, in brief, from the following causes: 1. Stamps are not canceled, or are so slightly defaced that they readily pass into second use and escape detec- The liquid sticks easily to rubber, as well as to wood and metal. It hardens as soon as the ammonia evaporates, and becomes perfectly impervious to liquids.

The Pacific Rural Press.

[Established in San Francisco in 1870.]

This is the leading farming journal on the western half of the continent, and second to none in America. It is well printed and illustrated, weekly. Contains an unusual amount of fresh, original farm, household and family circle literature. Careful attention is paid to giving full and reliable weekly market reports The following are among its ably conducted departments. Editorials on agricultural and other timely and important subjects of live interest to farmers and their families; agricultural, and other useful and ornamental illustrations: correspondence from various quarters of our new and rich developing fields of agriculture on the Pacific coast, embracing new hints and ideas from progressive men and women in all branches of rural industry; Horticulture; Floriculture; The Garden; The Home Circle; The Grange; Young Folks; Domestic Economy; Good Health; Entomological; Sheep and Wool; The Dairy; The Stock Yard; Poultry Yard; The Swine Yard; The Apiary; The Vineyard; Queries and Replies; New Inventions (and illustrations of new and improved machinery); Agricultural Notes; Items of General News, etc. Its columns are studiously filled with chaste, interesting, fresh and useful reading, devoid of questionable literature for old or young and fancifully alluring clap-trap advertisements. Send for sample copies.

Important to All Officers of the A. O. U. W.

We have sent a large number of extra copies of the WATCHMAN to the various officers and members of the A. O. U. W. We ask as a special favor that the officers who are intrusted with much of the success of the various Lodges will lend us a helping hand in increasing our circulation. Nothing contributes more to the successful working of the A. O. U. W. than the circulation of general fraternity news, and the best way to secure this is through the WATCHMAN, which is an able and faithful advocate. It is to the interest of the A. O. U. W. that the WATCHMAN be placed in the hands of every Workman, and to accomplish this we must rely in a large measure upon the Lodge officers.

Liberal inducements will be offered to active and reliable members who will canvass for subscriptions. Sample copies will be mailed free on application to Workmen, all of whom are invited to endeavor to assist in extending the circulation of the WATCHMAN.

Let every Workman into whose hands this notice may come, if not already a subscriber, fill out the subscription blank below, enclose two dollars, and send it to us for a year's subscription.

DEWEY & CO.'S

Scientific Press  Patent Agency.

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

Some Suggestions.

We have nothing but the most kindly feeling for other beneficial orders aiming at substantially the same objects as the A. O. U. W. We do not expect all will succeed, but we do expect many of them will. But if any fail the work will be the better off because they lived through but a brief period of time. They pay as they go, and pay all they receive into their respective beneficiary funds to the widows and orphans of their deceased members. No reserve funds are created from the contributions to be absorbed by managers or receivers. Month by month the balance is struck between society and member so if either should perish the other could lose nothing. It is a grand and glorious work these Orders are doing and the knowledge of the fact comes frequently home to almost every community in the land. The argument in their favor is irreistible. Hence their marvellous increase.

As to which of these Orders is the best, there is, no doubt, an honest difference of opinion. We believe the old pioneer A. O. U. W. to stand justly at the head. We believe it the fairest exponent of the spirit of the age. It stands alone as a democratic institution, fashioned on the idea of a government of the people, by the people and for the people. It divides the responsibilities incurred insomuch that each one is made to feel that on his individual shoulders rests a part. The Supreme Lodge is supreme only in a few things, and those few such as are absolutely necessary to bind the fraternity as a whole under a system of substantial uniformity. A Grand Lodge of the A. O. U. W. is a body but little less in importance than the Supreme Lodge itself. By the division of duties and responsibilities we are enabled to transact our business with more celerity, certainty and satisfaction. In short, to all intents and purposes, we do our own work. If it be good, we get the benefit; if bad, we get the penalty, and that is right.

In times gone by we have urged other societies to adopt our plan of government, but we believe in every instance have been more or less abused for our well-meant efforts. Societies are apt to be proud, too proud to take advice. And despite this fact, and despite the buffetings, we venture to suggest to our sister societies, that if they would but adopt one single feature of the A. O. U. W. plan they would be very greatly benefitted. When we have Grand Lodges, but not separate beneficiary jurisdictions, all assessments are issued through the Grand Lodges, and all collections made by said Grand Lodges and the sum thereof remitted in gross every 30 days. If a subordinate Lodge is to be suspended the Grand Lodge does it, and if to be reinstated the Grand Lodge does that also. Moreover, the Grand Lodge issues the beneficial certificates, and keeps the record of membership and their standing in its jurisdiction. This systems seems like a common sense arrangement, and would, if adopted by the other Orders similar to the A. O. U. W., remove much cause of complaint. We commend it to their careful consideration and trust in doing so our motives prompted only by good, will not be misconstrued.

And yet we most thoroughly believe in separate beneficiary jurisdiotions with a reserved power in the Supreme body to bring the whole strength of the organizations together in case of necessity. Our laws having this end in view, we do not believe are the best that could be devised, but they are based on the correct idea, and need improvement only in detail. If some young and progressive society would take officially the scheme of the A. O. U. W., and then improve where improvement should be found possible, it would no doubt "strike it rich." Some day this will happen to the astonishment of organizations whose system of government is of an age many years gone by.

A Vital Point.

In the last issue of the WATCHMAN we endeavored to impress the matter of making the meetings of the Lodge interesting and suggestive, in order that large attendances would be guaranteed. An exchange in taking up the matter, adds: "Start discussions of living questions, inject music and literary entertainment into your exercises; perhaps a few of those 'moral and scientific lectures,' one of the prime objects for which the Order was established, might be tried with profit. It has been fully well demonstrated that the order can live with slim Lodge meetings; therefore think how things would boom with full meetings! Besides, the question of growth and prosperity out of the reckoning, why is it not just as well for us to get all the enjoyment possible out of our gatherings? With men possessed of the will and energy, there is no reason why Lodge night should not be made the pleasantest night of the week and the Lodge room the dearest place on earth, home always excepted, and the one place from which nothing but necessity should keep a brother." This paragraph is in the right spirit and endeavors to drive the nail further home.

The fraternity feature of the Order should not be overlooked. Man needs and will have association. If the Lodge does not supply that want of his nature he will find it some place else. Man was created a social being. Adam was so lonely that Eve was given him for a companion. Men have associated themselves together for social and other reasons ever since the world began. This being so, how very important it becomes to make the associations of the Lodge such that every member can find his companionships there. The healthy, moral tone of a well-conducted Lodge is beneficial upon all the members. The members of a Lodge should not be allowed to find better companionships and associations outside the Lodge than they do in it. If they do something is wrong somewhere. Our happiest moments are those which are spent in social intercourse; when friend meets friend their hearts are warm, and the troubles of life are forgotten. It is in assemblies of friends that great plans are formed, and methods adopted to attain success.

A KEY-HOLE VIEW OF CALIFORNIA.

The Lodge room should be made attractive and inviting. Elegant surroundings have a refining and elevating influence, and members soon learn to take a pride in making their personal appearance correspond with the interior of the hall for meeting. The Masonic Order understands this, and acts upon the idea. Its Lodge rooms are generally gems of decoration and furnishing. Let our Lodges remember this, and begin at once the work of improvement; if they do, their influence will be much better and stronger.

There is nothing Utopian or impossible in these suggestions. The fact that carelessness and indifference does exist in many of our Lodges in these particulars does not argue that it must be so.

When the social feature is neglected little interest will generally be taken by the members in the welfare of the Lodge. It is a fact easily proved that those Lodges having the best appointments, most attractive surroundings and, above all, the highest development of the social feature, are the strongest and best. The potent influences of social intercourse should never be forgotten, but be remembered in all that we do, especially as an Order. The social features of the A. O. U. W. have often been referred to, and justly, too, for our founders knew that this tendency of men towards companionships and friendships would do the most towards building up the organization.

Our Lodge meetings give rare opportunities for social intercourse which ought to be improved. We fear that they are not remembered as they ought to be; but that too many brothers only think of the insurance they are receiving.

The chances for solid improvement in the Lodge are incalculable. Entertainments, anniversaries and gatherings of all kinds, in which brother can meet with brother and friend with friend, can be held at trifling expense; and their worth to the Lodge is very great.

There will be numerous occasions this winter which can be made exceedingly attractive, and productive of good results. We hope that there will be no lassitude now, nor a repetition of the omissions which have been sources of regret. Let our members remember our social features, and make them known by sociables and entertainments.

A Peep at California.

Our picture gives a portrayal of the impressions which the hasty tourist is most apt to catch of California natural scenery and productions at this season of the year. In the foreground are the peerless fruits now ripening and to ripen during the summer months. These pomological jewels give much joy to the tourist's eye and taste, and many a visitor retains his impressions of beautiful and lucious fruits long after the haze of forgetfulness has dimmed the impressions of deep gorges and lofty mountains. Of course there are fine natures which rise to our mountain tops and linger there through life, but others of inferior mold, whose most enduring thoughts are excited through the gustatory nerves or are elated by the profits in peerless products, who always hold California fruits as her crown of glory.

Passing the fruits in the foreground, one gets a hint of our forest wealth. True, our area of forest, as compared with our open areas, is pitiably small, but we have grand trees which the beholder never can forget. The famous Sequoias are world-wide in the minds of tree lovers. But they are little more than figure-heads in our forest columns. The wealth of the Sierra forests of fir, pine and spruce, the great resources of the redwood regions of the coast mountains; these deserve to figure in all sketches of the State, and should receive more attention than they do at the eyes of tourists.

Looking through the narrow valley in the center of the picture—a valley with precipitous sides and narrow floor broken by the wandering stream, the like of which are many in California—one catches a glimpse of a stretch of plain and lofty snow-clad mountains beyond. Of the pictures of natural scenes which fix themselves upon the memories of tourists, doubtless our deep canyons and high mountains make the deepest impress, and are pronounced most characteristic of the State.

BRO. C. HERMANN, the popular hatter, has one of the largest and finest stocks in his line in this city. If you want a fine hat, at low prices, go to C. Hermann, the hatter, 336 Kearney street.

BRO. DAVID MCCLURE, Grand Foreman, has been nominated for Senator of the Sixth district. His ability, watchfulness and legislative experience give him special fitness for the office. We need a few Workmen in our legislative halls to guard our interests.

Home Miscellany.

The Bairns a' at Rest.

There was din, as ye ne'er heard the like,
'Mang our bairns the nicht roun' the fire-en';
A' were busy as bees in a bike;
A' were noithe as the birds in the glen.
What wi' castles and kirks built wi' stools,
What wi' rhyming at spellings a' roun',
What wi' playing at ball and at books—
But there's peace now, they're a cuddled doun.

Now the bairns are asleep, and a calm
Has fa'n roun' like a soft gloaming shade,
And a kind hand, unseen, sheds a balm
O'er their wee limbs in weariness laid.
On their fair chubby faces we see
Sic a heavenly sweetness o' rest,
That ye'd doubt but they'd borrow'd a wee
Frae the far-awa' realms o' the blest.

Like wee birds in a nest do they cow'r,
By ilk other so coozy and kin';
O, their bed's like a rose-bed in bow'r,
And our glances o' love on it shine.
O, awa' wi' your glairy gowd crown,
Frae the cunning cauld fingers o' art!
But, hurrah for the bairns that hae grown
Like a living love-wreath roun' the heart!

Ha, let's wheesht.† As we warm in their praise,
We micht waken some flaxen-hair'd loon;
See, already shot out frae the claes
Just as lithe a wee limb's in the toon!
Hap it o'er, hap it o'er. Bonnie bairn,
Whaur awa' may that wee footie pace?
The richt gait o' the world's ill to learn,
And fair fortune is fickle to chase.

There are hid 'neath these lashes so long,
The full een that are stars o' the day;
There lies silent the nursery song
On these lips fresh as mornings in May;
And there beats in these bosoms a life
More o' promise than spring-buds are giv'n,
That must meet the world's favor or strife,
And shall make them or mar them for heav'n.

Will ye guard them, ye angels o' peace,
In this haven, in the curtains o' nicht?
Will ye guide them when dangers increase,
Heaving out in their day-ocean fight?
For O, whaur, frae the bairnie so wee
To the bairnie the biggest of a',
Is the ane we'd first part 'wi', and see
To a bed in the mools; taen awa'?

Good Words.

*Marbles †Whisper. ‡The grave

A Plea for the Children.

What shall we do with the wild, noisy, restless, mischievous boys and girls? Like a vessel on the sea of life, they need a compass, an engine and a rudder. They should have "wisdom which entereth into the heart," and "knowledge which is pleasant to the soul." If they have such, "discretion shall preserve them and understanding keep and deliver them from the way of the evil man. Thus they will walk in the way of good men and keep the paths of the righteous."

What the youths need to-day is to have distilled into their susceptible and retentive minds lessons of Christian virtue, giving a proper bias to their impulses, and curbing their impetuous dispositions. Thus armed and equipped for the battle of life, they can mingle with the impure and vicious, as they are sometimes compelled to at school and other places, and, by comparison, weigh that which is good and evil, and be enabled to accept the former and discard the latter.

Locke says: "If we would rightly estimate what we call good and evil, we shall find that it lies much in comparison." Comparison, then, is certainly an important factor in the formation of character. Many are made better by that which is positively evil. Evil frequently has a repellant effect. For instance, children of intemperate parents, notwithstanding their hereditary tendencies, have been temperate, and all their lives have waged an unrelenting warfare upon the giant disturber of the world, the wholesale murderer of men, women and children.

Children are the material of which men and women are made. They will take our places in life, enter the various vocations and professions, make laws, assume the reins of government, sit in Congress, in the Senate of the United States, while many may aspire to the dignity of the Chief Magistracy of the great republic. Shall they excel their parents in their march to honor and greatness, become the noblest specimens of the race, the highest type of men and women? or shall they be as "broken cisterns"—social, moral and mental wrecks in life, a curse to themselves, a reproach to their parents, a burden and pest to the State?

If we would have them like the former we must begin at once to instil good principles into their minds and hearts, give them a sound moral and literary education, and lay broad and deep the basis of a symmetrical character which will be a source of joy, a fountain of delight, and a perpetual recommendation to them.

Yes, begin at once to thus shape and mold them. Don't let us wait until they are grown, flattering ourselves that we can then speak the word or administer the rebuke which will make them what we would have them be.

We were summoned to the bedside of a very sick child which was supposed to be dying. Mother and friends were weeping. Something offended a five-year-old brother of the little sufferer, which aroused his uncurbed temper and caused him to break forth into fearful blasphemy. No one rebuked him, and when we called the attention of the aged grandmother to him, she calmly said: "When he grows up we will whip that out of him."

If they wait until the boy grows up, to straighten his crookedness, they might as well attempt to dip the Pacific ocean dry with a thimble. A child may turn the mountain streamlet, but when it runs into the valley and becomes a swollen river, no power can stay its impetuous progress.

In the early and proper instruction of the children lies the bulwark of their safety. To effect this desirable end there is nothing more powerful and salutary than wholesome parental example. Moral and mental instruction, backed up by wise, judicious and consistent lives of the parents, is a powerful incentive to good.

Many esteem very lightly the solemn and responsible duties of parents. They pay much more attention to the raising of fine calves, fat pigs, and other blooded stock, than to the training and proper discipline of those who sprang from their loins, and who must live forever.

God says to the parent: "Take this child and nurse it for me, and I will give thee thy wages." He also anoints parents, as priests, over their children, saying: "Fathers, provoke not your children to wrath, but bring them up in the nurture and admonition of the Lord."

If the human soul is more valuable than the whole world, we should do all in our power to save it. There is no relationship so tender, and none more responsible, than between parent and child.

"What will you drink?" was asked a young man in the presence of his father. He replied: "I will take what father takes." Yes, boys walk in the footsteps of their parents, and are thus often led to ruin.

A mother was famous for her

Fine Brandy Peaches.

Her son, 14 years of age, had free access to them, and it was not long until he formed an ungovernable appetite for strong drink. In four years the hellish work was done. Just before he expired, he said: "Those infernal brandy peaches, mother, gave me the first start on the downward road. Remember that, mother." Was it strange that the heart-broken mother, filled with remorse and unutterable agony, fell on her knees at the open grave of the ruined son, and, in wild despair, cried: "Oh, my precious boy! Lost, lost, lost! Sent to perdition by your mother's hand!" and swooned away. When will parents take warning? When will they cease to imperil the life and character, the body and soul of those whom they were instrumental in bringing into the world, and whom they should love?

May it be said of all parents: "For I know him, saith the Lord, that he will command his children and his household after him, and they shall keep the way of the Lord to do justice and judgment."—*Written by Rev. Dr. Snowden in the Rural Press.*

Elnore's School.

"Hark a moment, Toddlekins! I want to read my letter aloud for the benefit of the family. Listen:

October 11, 1881.

My Dear Niece:—I am school commissioner in our district this year. We are to have a large school the coming term, the majority of the scholars being young men and maidens. They are not rough, uncultivated boors, requiring to be governed by brute force, but thinking, earnest students, who need an educated teacher. I notice your name in the list of Vassar graduates, and if you are half as capable as your mother was at your age, you will suit me capitally. Will you come and teach? We shall pay a salary of $40 per month, and if you "board round" the school will be longer; if you prefer to remain with us, we shall only be too glad to have you, and I need not tell you that you will be welcome to all I can give. We are all well, and all join in love to you and your family. Tell your father a hearty welcome awaits him and his family here at the old homestead. Please let me hear from you as soon as possible.

Your Uncle,
James O. Gregory.

"Of course you'll write and tell him no," from Mrs. Gregory.

"Tate me?" from Toddlekins.

"The idea!" from Mabel.

But papa said nothing, only looked over the top of his paper and waited for Elnore to speak. She said nothing, however, but a funny smile played around her mouth.

"It is very evident Uncle James thinks we are not very well off in this world's goods," observed Mabel. "Forty dollars a month! Why that would hardly pay your boot and glove bill!"

"I am ashamed, Emma, when I think how we have neglected writing to James, and how little I know of his circumstances, and he still less of mine," said M.. Gregory.

"I can tell him all about it, father, for I am going."

"To the backwoods!"

"Why, Elnore!"

"I'se doin' too!"

Such was the chorus that followed her remark.

"Yes; I've felt for some time that since my school-days were finished I certainly was not a useful member of the family circle; and after mature deliberation, I have reached the conclusion that Mabel is decidedly the more ornamental; besides, I want to be sure I'm not a sieve."

Papa smiled, and nodded his head in token of his entire approval. A few days later, a dainty missive informed Mr. Gregory that Elnore was coming. Still later, she went.

Her uncle was waiting for her at the station, and went dashing home through the crisp, dim air, behind a span of black horses which Mr. Gregory guided with a word. A hearty welcome greeted her at the farm-house, and her cousin Lois went up with her to her room. As they reached the landing, Lois opened the door of the guest chamber, and said:

"This is your chamber, and mine opens out of it this side."

Elnore paused at the door of the cheerful room, and then said:

"Why may I not share it with you? I have always slept with my sister Mabel at home, and I shall make you my sister in her place."

"I should like it so much!" cried Lois, a flush of pleasure staining her fair face. So Elnore's trunk was brought to Lois' room, and the two girls were soon busily engaged in unpacking.

Elnore studied her new relatives during the evening, and found herself agreeably disappointed in them. The family consisted of Mr. and Mrs. Gregory, their three sons—aged respectively 24, 20 and 16—and the only daughter, Lois, a dainty maiden of 18—all but the eldest to be Elnore's pupils. She loved Lois at once, and her affection was as warmly returned.

School commenced Monday, and Elnore was escorted to the scene of her labors by George, Clarence and Lois. She—Elnore—had entered crowded ball-rooms, where wealth and fashion were congregated, without ever experiencing the tremor which siezed her as she entered the school-room to be confronted by some four-score pairs of dancing eyes, brimming with curiosity.

The forenoon was spent in arranging her classes, and she was surprised to find that some of her pupils studied Latin, others French, and there was a large class in astronomy — her oldest cousin belonging to this—who spent two nights weekly in star-gazing, and had purchased by subscription a fine telescope, which was kept at the home of Mr. Emerson, he having furnished a room for that purpose. Elnore began to be secretly afraid they knew more than she did, and determined to send at once to New York for many books she had left at home, not thinking she would need them.

It is not my purpose to tell you of her school; suffice it to say that she filled the position of teacher to the satisfaction of all concerned.

Monday night being particularly fine, the class in astronomy met at Mr. Emerson's; and Elnore, writing to Mabel a full account of the evening affirmed that she never spent an evening, in her life which she enjoyed better, and never one in which she got clearer views of what life meant.

"I wish," she wrote, "you could have seen those earnest students, doing the very best they could with what they had to do with; accepting so gladly any information, and making the most of their opportunities; you would have been utterly disgusted with all the young men you ever knew. I could not help mentally contrasting our cousin Selwyn with Clyde Carrol, and a dozen more of his set; and oh! how pitifully small they look in comparison! I tell you, Mabel, they raise men here instead of simple eggs and butter, as we have been led to suppose. Did you ever think that almost without exception, our most successful public men were country bred?"

Wednesday evening Elnore made one of a coasting party. The girls wore short dresses and snug hoods, and the sleds were made by nailing a long board to two sleds, one at each end, and a young man sat at each end to guide the sled, and the merry, laughing bevy of girls were closely cuddled between. The first time they went down, the swift motion made Elnore faint and dizzy; but she soon grew to like it. Up and down, up and down, till the blood was bounding in their veins; then home to slumber such as Elnore could never remember having enjoyed before; and how strange it seemed to go to a merry-making and be in bed by 10 o'clock; the tea parties given in honor of "the teacher," where quaint old china figured, and the old-fashioned silver shone, brightly polished for the occasion; the sleigh rides and sled rides, on sleds drawn by oxen; the house-warming at the home of a young bride—all these were new and novel experiences to Elnore, and she enjoyed them heartily; but the evenings spent at home were best of all.

"O, I love the country, Aunty," she would cry; "people seem to live for something here!"

"Don't they in the city, dear?" laughed Aunt Hulda.

"Yes; they live to make money, with which to make a more splendid failure of life than A B and C have done before them."

"Oh, you don't mean all that, Elnore."

"I do Aunty! Why, taking myself for an example, I have certainly thought more since I came here of what can be made of life, of what we are in the world for, than ever before in my whole life. I have had more to call out such thoughts and enlarge my vision. We don't have time to think in the city; we hire a few to do our thinking for us, and let the matter rest there; and as to reading or study, if one reads the last successful novel and glances over the reviews in Littell's and Harper's, why that is all that is necessary."

"But you miss the culture and refinement here, Miss Gregory, do you not?" queried Ernest Ross, the son of a neghbor, and Selwyn's dearest friend.

A flush stained Lois' cheek as she awaited Elnore's reply, and revealed that she, too, had been thinking on this point.

"I find no lack of true refinement, Mr. Ross. There is a certain fashionable polish missing, but in its place I find the old-fashioned courtesy, which scorns to speak ill of the absent—the chivalrous respect for all womankind, which is ever tendered by men whose mothers and sisters have been women worthy of the highest respect."

"And yet a little of the fashionable polish would be very pleasant," said Ross, half musingly, half bitterly. "Why, Miss Gregory, I doubt if I could wrap a shawl around you without 'mussing your back hair,' and tearing your train, perhaps."

"Perhaps, though, I do not consider you awkward; but you could tell me that life is not alone a holiday for balls and parties, but a working day as well, which is more than any of my gentlemen friends ever did for me, even though they might be able to wait on me in the most elegant manner possible."

The young man gave her a grateful look, and Lois silently patted her mother's hand and smiled. Aunt Hulda smiled also, but with the smile was a doubting look which Lois did not understand.

As the weeks and months went on, and the time drew near for Elnore to return to her city home, aunt Hulda's face wore often its doubting look, and Lois questioned with her eyes in vain. At last one Saturday, when Elnor had gone driving with young Ross, she asked her mother if she did not think they would make a noble couple.

"Child," said aunt Hulda, "I fear she takes his attentions just as she would Selwyn's, and thinks no more of them; but he—his is manhood's love, no boyish fancy. What kind of a farmer's wife would she make, Lois? It is folly to dream of such a thing."

"But think what she has said, mother."

"I know, but the country has the charm of novelty, and is not her settled home; when it palls, she can return to her father's."

A few days later Ross and Elnore were trimming the school-house with evergreen, preparatory to examination day, assisted by Lois and George. The latter were obliged to go home at three, and Elnore was to come with Ross, when they should have finished.

The last sprig fastened in its place, Elnore stepped to the platform to note the effect, unconsciously pushing a book to the floor as she did so. Ernest picked it up, and saw it was a volume of Whittier's poems. Opening it slowly he laid his hand lightly on Elnore's, which rested on the table, and read:

"You tempt me with your laughing eyes,
Your cheek of sundown's blushes,
A motion as of waving grain,
A music as of thrushes.

"The playing of your summer sport,
The spells you weave around me
You cannot of your will undo,
Nor leave me as you found me.

"You go as lightly as you come,
Your life is well without me;
What care you that these hills will close
Like prison walls around me?

"I dare your pity or your scorn,
With pride your own exceeding;
I fling my heart into your lap
Without a word of pleading."

As his voice, tremulous from deep feeling, pronounced the last word, he laid the book on the table, and stood quietly beside her. She lifted it, and with down-drooped eyes read clearly:

"Nor frock nor tan can hide the man;
And see you not, my farmer,
How weak and fond a woman waits
Behind this silken armor?

"I love you; on that love alone,
And not my worth presuming,
Will you not trust for summer fruit
"The tree in May-day blooming?

The dear old Quaker poet—may God's blessing follow him ever!—sums up *their* lives in his own sweet words thus:

"And so the farmer found a wife,
His mother found a daughter;
Their looks no happier home than hers
On pleasant Bear camp water.

"He sees with eyes of manly trust
All hearts to her inclining;
Not less for him his household light
That others share its shining."

—*Mrs Andrews*

Cinders in the Eye.—Persons traveling by railway are subject to continued annoyance from the flying cinders. On getting into the eyes they are not only painful for the moment, but are often the cause of long suffering that ends in a total loss of sight. A very simple and effective cure is within the reach of everyone, and would prevent much suffering and expense were it generally known. It is simply one or two grains of flax seed. These may be placed in the eye without injury or pain to that delicate organ, and shortly they begin to swell and dissolve a glutinous substance that covers the ball of the eye, enveloping any foreign substance that may be in it. The irritation of cutting the membrane is thus prevented and the annoyance may soon be washed out. A dozen of these grains stowed away in the vest pocket may prove in an emergency worth their number in gold.—*Western Rural.*

Kindling Wood.—The manufacture of this comparatively new article of commerce is becoming quite an important industry all through the country.

For our Boys and Girls.

Our Puzzle Box.

Cross-Word Enigma.

My first is in hail, but not in rain;
My second is in pretty, but not in vain;
My third is in wild, but not in tame;
My fourth is in crippled, but not in lame;
My fifth is in sorrow, but not in joy;
My sixth is in girl, but not in boy;
My seventh is in carel, but not in song;
My whole is a german city strong. JENNIE.

Concealed Quadrupeds.

1. Martin expects to do great things.
2. I saw the *Sebec* at sea.
3. Callio never can hope to rival his elder brother.
4. He will either hear from Seth or see him.
5. I hope to meet you at London or at Liverpool.
6. Why assume this unseemly shape?

MELANCTHON.

Poetical Anagram.

The Longest Day in the Year

I don't know what the almanac man said about it, but Dan said it was the longest, and Dan was certainly the one who understood the matter best.

"We must get the scythes in good order, so as to make a fair start at the lower meadow to-morrow. Don't let me have to waste time hunting after you, Daniel, when I'm ready to go at it."

Daniel's appetite was gone at once. How he hated to turn that heavy, creaking old grindstone! and how sure his father was to find a dozen things to do first, and keep him waiting all the morning! He went around by the sink drain and dug his bait; he examined his fishing-pole; he put up his lunch; he even tried a worm on the hook, and then he wandered disconsolately around, wishing grindstones had never been invented.

He went to the end of the garden, and leaned sulkily over the low stone wall, eating the half-ripe harvest apples, and throwing the cores spitefully away. Down the road a few rods, lay the mill-pond, and in the middle of the road near by, stood Deacon Skinner's horse and chaise.

Old Whitey had his nose down, and one leg crooked in a meditative fashion. The deacon was over in the field, making a bargain with Solomon Murray for some young cattle. What fun it would be to start the old horse up and set him trotting home! Dan could almost hit him with an apple core. He tried two or three, just to see, and then he picked a smooth round stone from the wall, and sent it singing through the air.

Old Whitey brought up his nose with a jerk, straightened his fore leg, and started off at a brisk trot, the chaise-top tilting, and pitching back and forth.

Dan laughed—at least the laugh began to grow, when he caught one glimpse of a frightened little face at the chaise window, and knew that Nanny Dane, the deacon's little lame grandchild, was in the chaise.

It was only a glimpse, and then the bank of gray fog swallowed Whitey and the chaise, and it seemed to Dan that they had gone straight into the mill-pond.

"Daniel! Daniel! come on now, and be spry about it!" called his father, as he moved toward the grindstone, and he obeyed, though he felt as if his feet had all at once turned to lead.

Round and round and round; his tough little hands were blistered on the handle, but he did not know it; his mouth and throat were as dry as the stone, but he did not think of it. "Crr-orr-orr," rang the rough wearysome noise, until his ears were so deafened he did not even hear it. For he was perfectly sure he had killed little Nanny Dane. What would people say? What would they do to him? Hang him, of course; and Dan felt in his heart that he deserved it, and that it would be almost a satisfaction.

"There," said his father at last, "I reckon that'll do, Daniel. You've been faithful and stiddy at your work, and now you may go fishing."

Dan never knew how he got to Long Pond, or how he passed the slow hours of that dismal day. The misery seemed intolerable, and before evening he had made up his mind he could bear it no longer. He would go home and tell his father; he would tell everybody. They might hang him, they might do anything they pleased.

Tramping desperately home with his empty basket in his hand, he heard the sound of wheels behind him, dragging slowly through the deep sand. Perhaps that was the sheriff coming to arrest him. Dan's heart beat harder, but he did not look around. The wheels came nearer; they stopped, and some one said:

"Hullo, Daniel! been fishing? Fisherman's luck, hey? Well, jump in here, and I'll give you a lift."

Before Dan knew it he was over the wheel and sitting beside Deacon Skinner in the old chaise; with Whitey switching his tail right and left as he plodded along.

"Git up, Whitey!" urged the deacon; "it's getting along towards chore-time. Whitey ain't so spry as he used to be, but he's amazin' smart. This mornin' I left little Nanny in the shay while I was making a dicker with Solomon Murray, and a keerless thing it was to do, but I'd as soon have expected the meetin' house to run away as Whitey. I reckon something must have scart him; but he trotted off home as stiddy as if I'd been driving, and waited at the door for mother to come and get Nanny before he went to the barn."

"Oh! Deacon Skinner," burst out Dan, "it was me that scart Whitey."

"Did ye now, sonny? Well there wuzn't any harm done, and I know ye didn't mean to."

"I did, I did," said Dan, sobbing violently from the long strain of excitement, "I didn't know that Nanny was in the chaise, and I threw a stone at him."

"Well, well," said the deacon, rubbing his stubby chin, and looking curiously at Dan. "Beats all what freaks boys will take; but I know ye won't do it again."

"I never will," said Dan, solemnly. "This has been the awfulest longest day that ever was in the world."—*Emily Huntington Miller.*

Stories About Animals.

THE ELEPHANT.—The elephant of the Jardin des Plantes at Paris, says Mrs. Lee, used to play his visitors a trick which could not have been thought of but by an animal of much intelligence. His house opened upon an inclosure called the elephant's park, containing a pond, in which he would lay himself under the water, concealing every part of him except the very end of his trunk, a mere speck, that would hardly be noticed by a stranger to the animal's habits. A crowd would often assemble around the inclosure, and, not seeing him in it, would watch in expectation that he would soon issue from his house. But whilst they were gazing about, a copious sprinkling of water would fall upon them, and ladies and gentlemen, with their fine bonnets and coats, would run for shelter under the trees, looking up at the clear sky and wondering whence such a shower could come. Immediately afterwards, however, they would see the elephant rising slowly from his bath, evincing, as it seemed, an awkward joy at the trick that he had played.

THE SQUIRREL WHO LOVED MUSIC.—I have just read about a sportsman, who, one day, in the woods, sat very still, and began to whistle an air to a red squirrel on a tree. "In a twinkling," says he, "the little fellow sat up, leaned its head to one side, and listened. A moment after, he had scampered down the trunk, and when within a few yards, he sat up and listened again. Pretty soon he jumped upon the pile of rails on which I was, came within four feet of me, sat up, made an umbrella of his bushy tail, and looked straight at me, his little eyes beaming with pleasure. Then I changed the tune, and chut! away he skipped. But before long he came back to his seat on the rails, and, as I watched him, it actually seemed as if he were trying to pucker up his mouth to whistle. I changed the tune again, but this time he looked so funny, as he scampered off, that I burst out laughing, and he came back no more. I had much more enjoyment out of this squirrel than if I had shot him."

THE ALLIGATOR AT HIS MEALS.—An alligator's throat is an animated sewer. Everything which lodges in his open mouth goes down. He is a lazy dog, and, instead of hunting for something to eat, he lets his victims hunt for him. That is, he lies with his great mouth open, apparently dead, like the 'possum. Soon a bug crawls into it, then a fly, then several gnats and a colony of mosquitoes. The alligator dosen't close his mouth yet. He is waiting for a whole drove of things. He does his eating by wholesale. A little later a lizard will cool himself under the shade of his upper jaw. Then a few frogs will hop on to catch the mosquitoes. Then more mosquitoes and gnats will light on the frogs. Finally a whole village of insects and reptiles settle down for an afternoon picnic. Then all at once there is an earthquake. The big jaw falls, the alligator blinks one eye, gulps down the whole menagerie and opens his great front door for more.

PLEASURES OF HOTEL LIFE.—"Here's a fly in my soup, waiter." "Yes, sir; very sorry, sir; but you can throw away the fly and eat the soup, can't you?" "Of course I can; you didn't expect me to throw away the soup and eat the fly, did you?"

Health Column.

Patent Medicines.

All patent medicines are not good, nor are all of them bad. Some of them are composed of excellent materials, and are very valuable; a few, comparatively, are either really useless or dangerous. Far the most part of these compounds are based substantially on well-known formulas, the chief distinguishing feature being in coloring or flavoring. The money value of any one of these preparations represents the business skill of advertising and pushing.

For our part, we fail to see why the "Sarsaparilla," or "German Syrup," or "Catholicon," or other line of trade is not just as dignified and advantageous to the public at large as the manufacture of soda fountains, or lager beer or any of the many branches of employment that gratify men's tastes, or their whims or notions.

The following figures will show the numbers of the several kinds of these mixtures or compounds:

There are fully 2,000 different corn cures sold by dealers. The number of balms for the lungs, rheumatism, consumption, etc., is 46; balsams, 96; stomach bitters, 106; cordials, 48, catarrh, asthma, skin, cough, rheumatic, heart, cholera, dyspepsia, ague and other cures, 137; drops, 48; elixirs, 77; extracts, 131; hair dyes, 23; hair tonics, 16; liniments, 151; lotions, 34; lozenges, 57; hair oils and cod liver oil preparations, 150; ointments, 87; pills, 312; plasters, 157; powders, 163; various remedies, 142; different kind of hair restorers, 68; salts, 29; salves, 75; snuffs, 18; soaps, 129; specifics, 66; syrups, 188; tablets, 27; tonics, 51; troches, 32, and medicinal waters, 75. Besides these articles there are many others with extraordinary names, and to be a good salesman in such an establishment, it is necessary to remember all of the 5,000 different articles in the place.

RELATION OF BRAIN WORK TO BLOOD SUPPLY.—Even if it is true that the larger and healthier physique affords more blood for brain use, it does not follow that the larger the supply the greater the amount of brain work possible. The argument assumes that the brain has no limit to its activity, except in the quantity of blood that can be prepared for it. But it needs no scientific education to know that there are other influences which limit the thinker's activity, and that these limitations are somewhere in the mysterious recesses of the brain, or in the forces of which the brain is the organ. The physical health of the brain worker may be perfect, his digestion unimpaired, his power to assimilate food the same, and yet he may not be able to concentrate his thoughts or carry on a complicated train of reasoning. The defect is not in his body; that is as healthy as ever; nor is it in any of the processes of blood making—these go on as before. The trouble lies in the brain itself, whose capacity for work is measured by some hidden standard of its own, and which gives warning when a cessation of brain work is imperative. The body is a furnace whose power of consuming fuel is greater than the capability of its boiler, the brain, to generate power. To keep the latter in good working condition, something more is necessary than building and feeding the fires. A supplementary but important consideration is, whether the steam beyond a certain point will not be productive of unpleasant consequences in the form of an explosion.—*Popular Science Monthly.*

FRIGHTENING CHILDREN.—Nothing can be worse for a child than to be frightened. The effect of the scare is slow to recover from; it remains (sometimes) until maturity, as is shown by many instances of morbid sensitiveness and excessive nervousness. Not unfrequently fear is employed as a means of discipline. Children are controlled by being made to believe that something terrible will happen to them and punished by being shut up in dark rooms, or by being put in places they stand in dread of. No one without vivid memory of his own childhood, can comprehend how entirely cruel such things are. We have often heard grown persons tell of the suffering they have endured, as children, under like circumstances, and recount the irreparable injury which they are sure they then received. No parent, no nurse, capable of alarming the young, is fitted for her position. Children, as nearly as possible, should be trained not to know the sense of fear, which, above everything else, is to be feared in their education, early and late.

SUNSHINE AND SLEEP.—Sleepless people—and they are many in America—should court the sun. The very worst soporific is laudanum, and the very best, sunshine. Therefore, it is very plain that poor sleepers should pass as many hours as possible in the sunshine, and as few as possible in the shade. Many women are martyrs, and yet they do not know it. They shut the sunshine out of their houses and their hearts, they wear veils, they carry parasols, they do all possible to keep off the subtlest and yet most potent influence which is intended to give them strength and beauty and cheerfulness. Is it not time to change this, and so get color and roses in our pale cheeks, strength in our weak backs, and courage in our timid souls? The women of America are pale and delicate; they may be blooming and strong, and the sunlight will be a potent influence in this transformation.—*Rural New Yorker.*

Household Hints

Celery as a Cure.

The habitual daily use of this vegetable is much more beneficial to man than most people are aware of. A writer who is familiar with its virtues says: "I have known many men and women who, from various causes, had become so much affected by nervousness that when they stretched out their hands they shook like aspen leaves on a windy day, and by a moderate daily use of the blanched footstalks of celery as a salad they became as strong and steady in limb as other people. I have known others so nervous that the least annoyance put them in a state of agitation, and they were in constant perplexity and fear, who were also effectually cured by a moderate use of blanched celery as a salad at meal time. I have known others to be cured of palpitation of the heart. Everybody engaged in labor weakening to the nerves should use celery daily in the season and onions in its stead when not in season."

To this we may add that a prominent New York druggist draws in winter from his soda fountain a hot extract of celery, mixed with Liebig's meat extract, under the name of oxcelery. It is a nourishing drink at lunch time, far better than coffee or tea, and is doing a great deal in this neighborhood to promote temperance. We give celery almost daily to our canary birds, and it cures them of fits; they are little animals with very delicate nerves, easily frightened, and therefore they need such a remedy very much, and the relish with which they take it is a proof that their instinct guides them to eat what is good for them. A manufacturer of perfumery of our acquaintance, some years ago, commenced to prepare an extract of celery seed, put up in bottles, and intended to give strength to old or exhausted persons who, by over-indulgences, have reached such a state as to require restoratives.—*Journal of Chemistry.*

POLISHING WOODWORK.—Soft woods may be turned so smooth as to require no other polish than that which can be given by holding fine shavings of the same wood against them in the lathe. For polishing mahogany, walnut and some other woods, the following formula is given: Dissolve beeswax by heat in spirits of turpentine until the mixture becomes viscid. Apply with a clean cloth, and rub thoroughly with another flannel or cloth. Beeswax is sometimes alone used. For work in position, it must be melted and applied and rubbed as above. For work in the lathe, it can be applied by friction, the slight amount of wax melted being sufficient for the polish. The work should be thoroughly rubbed. Mahogany may be polished by rubbing first with linseed oil, and then by a cloth dipped in a very fine brick dust. Some hard woods have a natural polish, and do not require a polishing medium. A fine gloss can be produced by rubbing with linseed oil, and then holding shavings or turnings of the same material against the work in the lathe. A very perfect surface can be obtained with glass-paper, which, if followed by hard rubbing, will give a beautiful luster. Luster can also be given to carefully finished surfaces by applying a small quantity of thinned varnish, shellac or "fillers," by a cloth, and carefully and thoroughly rubbing.—*Comstock's "Interior and Interior Details."*

PINEAPPLE PREPARATIONS.—Over the peelings of two small pineapples, pour one quart of boiling water, which allow to steep until cold, then sweeten to taste, strain and bottle, corking tight, tying down the cork, and lay the bottle on its side. If placed in a warm place it will be ripe in 24 hours. A small piece of ginger placed in the bottle will improve the flavor. The whole pineapple can be used if required. This is a favorite tropical drink, and sold by women on the street corners. Pineapple skins boiled, allowed to cool, strained and the liquid sweetened, and with addition of lemon or limejuice, makes a delicious lemonade. Pineapple cut in slices and cooked in sugar, then candied, is a fine preserve. If chopped fine and stewed with sugar makes a splendid jam.

TO PICKLE SMALL YELLOW TOMATOES.—Let them lie in salt and water for three or four days, changing the brine if a scum rises; then rinse them with clear water and let them lie for a night in weak vinegar, or, say, half vinegar and half water. The next day prepare thus: To one peck of tomatoes allow half an ounce of whole cloves, a quarter of a pound of ground mustard, half an ounce of whole black pepper, and six good-sized onions, cut in slices. Put the tomatoes in a jar, putting a layer of onions and spice between the layers of tomatoes till the jars are full. Cover the whole with cold vinegar of good strength. In a week or ten days the pickles will be ready for the table.

TOMATO SALAD.—Tomato salad is an agreeable *entree*, and goes well with almost any dinner, but particularly well with fried or roast meats. To half a dozen medium-sized tomatoes, with the skins removed and the tomatoes sliced, add the yelks of two hard-boiled eggs, also one raw egg, well beaten and mixed with a tablespoonful of melted butter, a teaspoonful of sugar, with cayenne pepper and salt to suit the taste. When all these are mixed thoroughly, add half of a small cupful of vinegar.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "Good of the Order."

Harmony, 9.

On the evening of October 21st, six candidates received the M. W. degree in this Lodge. Everything is moving along nicely. Applications are received from time to time, and Harmony No. 9 is doing good work. The evening of meeting is Saturday.

Hercules, 53.

The brethren of Hercules will give a literary entertainment and social on Friday evening, November 17th, at their Lodge-room, on the corner of Steiner and Geary streets. It will be an open meeting, and all are invited.

Valley, 30.

On Wednesday evening, Valley, No. 30, had three applications for degrees. Seven were elected to receive the M. W. degree and eight had the M. W. degree conferred on them. S. T. Dodson, P. M. W., made a few remarks, giving a description of his travels in the country, which was quite encouraging.

Washington, 60.

This Lodge is in a most flourishing condition. Upon the roll there are about 200 names, and applications are coming in very fast. On the evening of October 19th two candidates received the Junior Workman degree. Bro. Henry J. Maack, the newly-elected M. W., is a very efficient officer and a prominent Workman. One of the young brothers of this Lodge, Adam Loh, the popular Outside Watchman, recently became the father of a bright, promising boy—a prospective Workman. In every particular the Lodge is doing well.

Burns, 68.

A district meeting was held by Burns, 68, in Pythian Castle on Thursday evening, Oct. 26th. There was a full attendance from the various city lodges and several visiting brethren from the country. A good delegation from Excelsior with Deputy Poland were admitted in a body, as also a large delegation from Harmony, No. 9. Dr. Maclane, one of the medical examiners of Burns, gave an address of welcome that was very appropriate. The exercises were varied, and consisted of sociality, fraternal and congratulatory speeches. Brother Duncan, of Burns, gave a reading. Dr. L. J. Henry, P. M. W., of Harmony, made a speech that was well received. He was followed by Thos. N. Wilton, M. W., who spoke briefly. Lawrence Vincent, of Burns, sang a song that was highly creditable. The Grand Master made an extended speech full of points of interest. Sam Booth, P. M. W., was on hand and sang an original poem, that was alike descriptive and humerous, being about the Carnival. Brother Silas White, of Excelsior, as usual, made a short speech that was particularly interesting. A character piece that was highly humerous was read by Brother Howard, of Excelsior. Then followed a recitation by Prof. Eastman. Deputy Poland closed the meeting by thanking the several members present for their attendance, and stated that the next District meeting would be held in Shields' building, in Memorial Lodge, some time next month. Altogether, it was a very pleasant meeting, and the M. W. of Burns—Brother C. C. Butt—has proved himself worthy of the responsible position he has filled as the presiding officer of this thrifty subordinate.

Sts. John, 72.

This conservative and steady-going Lodge is keeping and holding its position as one of the bright jewels in this great organization. On October 26th there was a fair attendance, and when the statement of the Financier was made the record was clean, not one member was delinquent. After the business of the Lodge had been finished the chairman of the Entertainment Committee, Bro. Fletcher, P. M. W., furnished a short literary programme, which was opened by a reading by Prof. Eastman from the "Bedott Papers." Humorous readings followed by Wm. B. Marschutz, P. M. W. Bro. A. A. Stout then gave a reading of a similar character. Several of the brethren present made interesting speeches that were well received. Some of them were to the effect that Sts. John Lodge would swell her number soon to 200 members. A committee will be appointed to take into consideration the feasibility and propriety of celebrating their anniversary, which will occur in December.

Olympic, 127.

This Lodge will give a reception in their new hall on Tuesday evening, November 7th. The invitation tickets read, "yourself and ladies." It is expected that this will be one of the best socials of the season, as the canvas will be spread and a fine collation will be served.

Noe Valley, 185.

On the 24th of October a social party was given by the brethren of Noe Valley in their new hall. The Grand Master was present, and helped to make the evening a pleasant one by a short congratulatory speech. The most of the evening was given over to terpsichorean exercises, which prolonged the meeting to a late hour.

Myrtle Lodge, 42.

On Saturday evening, Oct. 21st, the brothers of Myrtle Lodge, No. 42, held an intereresting meeting. The attendance was good, and one candidate received the M. W. degree. After the business of the Lodge had been finished a short time was spent in what the brothers of Myrtle call "their weekly socials." As such their exercises take a wide range and are interspersed with pleasantries and intellectual hits among themselves, sandwiched in with song and recitations, etc. On this evening there were several visiting brothers present. Bro. E. M. Reading, Secretary of the Guarantee Fund Association, made a grand speech that was well received. Bro. J. W. Watson, Assistant Grand Secretary, in his usual systematic style made extended remarks, which were instructive, interesting and listened to with close attention. C. C. Gilmore, P. M. W., one of the pioneers, gave some interesting incidents connected with the early history of the first Lodge organized. The early struggles of our Order will make a part of our literature that will be sought after for years to come. Bro. Loane, P. M. W., had some timely remarks that were appropriate and well chosen. It was all in all an interesting meeting. It is always a pleasure to visit and receive that heart-felt welcome that is given by Myrtle Lodge, No. 42.

Noe Valley Lodge Social.

Noe Valley Lodge, No. 185, gave its first public reception in Devenech hall, corner Twenty-fourth and Church streets, on Tuesday evening, October 26, 1882. This handsome Lodge-room was filled to its utmost with Workmen, their families and friends. The hall was elaborately trimmed with streamers, crests, evergreens, wreaths and hanging-baskets. The accessories and dressing-rooms, with fine waxed floors, and the cordial welcome given guests indicated a pleasant evening, in which none were disappointed. Over the M. W. chair, in evergreen letters, is the word "Welcome," beneath which hangs the life-size picture of District Deputy J. D. Thompson, a present from his brethren to him recently. First on the programme was an address by the M. W., Bro. J. J. White. A cordial welcome was extended the visitors. District Deputy John D. Thompson was introduced and made a few remarks on behalf of Noe Valley Lodge. He esteemed it a privilege to address so large and respectable an audience, and endeavored to show his appreciation in performing that duty. Grand Master, W. H. Barnes, made a short address. Bro. Geo. Stuart next rendered some fine instrumental music and songs. His effort gave him a hearty recall. Bro. Barnes interpreted the letters w. e. l. c. o. m. e. as follows: "Workmen ever love company on moonlight evenings." Bro. J. J. White, who acted as master of ceremonies, next introduced Miss Carman, daughter of Bro. W. P. Carman of Harmony, No. 9, who gave a recitation, entitled "A Picture of Memory," which was very fine, at the close of which she received an encore. Bro. Leon Carran then entertained the audience with an alto solo, which was finely rendered. The rest of the programme was as follows: Piano solo, Mr. Franks; violin solo, Master Theo. Judson; Piano solo, Mrs. Dr. McDermott, which was finely rendered by that talented lady; violin solo, Master Geo. Presho; Mr. W. Weldon sang, accompanied on piano by Mrs. Dr. McDermott; Bro. A. C. McCurdy was next introduced as one of the pioneers of the Order, who gave as few fitting remarks which were to the point; song, Mr. Waldron, "Castles in the Air," accompanied by Mrs. Dr. McDermott, after which the floor was cleared and dancing commenced. The following were some of the active committee men: J. J. White, W. W., A. C. McCurty, Leon, Carran, Frederick Luhrs and others.

Fidelity 136 Visits Occidental 6.

On October 26th the members of Occidental, in full force, met in their cosy hall, West Oakland, and in a very careful and painstaking manner attended to the business of the Lodge. The Master Workman, J. F. Hammer, called a recess and extended an invitation to the brothers present to come forward and take tickets for their grand entertainment, which occurs on Nov. 29th. The delegation from Fidelity was then announced, and escorted into the Lodge room with due honors. A short and appropriate address of welcome was made by the Master Workman. Bro. Chas. E. Wilson opened the literary exercises in his inimitable manner by a few congratulatory words, that were well received. Havanas were passed, and Bro. Le Noir, the organist of Pacific, gave an overture on the piano. Bro. Britain, of the same Lodge, sang a fine sentimental song and received a hearty recall. A recitation by Bro. Smith, P. M. W. of Fidelity then followed, and an instrumental duet, by Bro. R. Nappe, on the flute, and Bro. O. Walters, on the guitar, was given This was one of the features of the evening, and was so well appreciated that a double recall was made and kindly answered. Bro. Farless, P. M. W. of Fidelity, then recited a humorous character piece. Grand Receiver Chas. H. Haile, then gave a succinct history of the first formation of the Grand Lodge, which was in this hall five years ago. "During that time I have paid out over $1,000,000 as Grand Receiver. I well remember the taunts and derision heaped upon us when we first started this grand and humane organization. It was termed a mushroom and the crazy conception of fanatics." Following this address was a harmonica solo by Bro. Curtis, of Fidelity. His very pleasing and artistic effort was awarded a hearty recall. As appeared by a preconcerted signal, six of the brothers retired, and, as by magic, the Lodge was transformed into a banquet room, and a magnificent collation was spread, to which all did ample justice. At the close of the banquet E. M. Reading, Secretary of the Guarantee Association, made a good speech that was logical, and made up from carefully compiled statistics. A sentimental song followed by Bro. Stewart, of Fidelity. Then an original humorous recitation by Bro. Brittain, of Pacific. This effort was the real hit of the evening, and convulsed the audience with laughter. For a double recall he delivered a characteristic lecture that was highly humorous, and which showed him to be an artist and genius, possessed of the best talent and tact. A solo by T. G. Geisting, of Fidelity, and humorous reading by Bro. Swinerton, of Pacific, were the next on the programme. Bro. Eastman, of Pacific, made a few humorous remarks, then called on his old schoolmate, Bro. Sanderson, P. M. W., to respond for Fidelity. In a few well-chosen words he portrayed the real status of Lodges in point of fraternity, sociability and charity. Bro. John Munce, Financier of Occidental, made some humorous and practical remarks that were well received. The chairman of the social, J. F. Hammer, M. W., by his considerate attention and admirable management, together with the assistance of Bro. Schultz, P. M. W., and other members of Occidental, succeeded in making the evening a very pleasant one. In every respect this was one of the happiest meetings of the season. Our brothers of Fidelity were delighted with their visit.

Golden Dawn, 10, D. of H.

This flourishing Lodge celebratod its first anniversary in Champion Hall, corner 16th and Valencia streets, on Saturday evening, October 28th. The invited guests were welcomed in a neat and appropriate address by the W. S. of H., Mrs. J. F. Jenness, who stated that the chairman of the committee on entertainment P. W. S. of H., Mrs. Pollard, would take charge and direct the evening's exercises. These were carried out to the complete satisfaction and enjoyment of all present. The following programme was given: Recitation, Sister Clark; piano duet, by Sisters Gunnison and Booth; cornet and piano duet, Sister Booth and Bro. Payson; vocal trio, Sister Booth, Bros. Booth and Clark; musical trio, Bros. Pollard, violin, Payson, coronet, Sister Booth, piano; musical trio, cornet, Mrs. Gunnison, second cornet, Payson; piano, Sister Booth. The literary exercises were brought to a close by a side-splitting farce, entitled "A Husband's Secret," which was well and pleasingly performed, at the conclusion of which all present were invited to take seats at the tables, which were already set and prepared in the hall. We have been at many entertainments but never at one where greater taste was displayed in the arrangement of the fruit and floral decorations. This was only excelled by the excellent collation. At this part of the entertainment our jovial and good-natured Bro. Booth constituted himself master of ceremonies. After giving a short history of Golden Dawn Lodge he gave as a toast, "Golden Dawn Lodge D. of H.," and called upon Bro. White to respond, which he did in his usual happy manner. The next toast offered was "Our Sister Lodges" which Bro. Reading, of Silver Spray, was called upon to respond to. The next toast was, "The A. O. U. W. of California," responded to by Grand Master Barnes. Bro. Gunnison then gave a few humorous parting words, and this very enjoyable evening was brought to a close more than delightful.

VERETAS.

Lodge Locals.

Marysville, 38.

This Lodge has been at something of a standstill for sometime. A few members have been lost occasionally by suspension and card. All Lodges have their ups and downs, prosperity and adversity. Marysville, No. 38, has had a full share of both, so we are informed. It is with considerable pleasure that we are able to report that the Lodge has just passed through a period of adversity. A serious financial difficulty, caused, it is said, by carelessness on the part of the Financier, all but broke up the organization. But this has now been overcome, and the Lodge is at present stronger and better by having experienced some stormy times. The membership is about 113, and it is expected that a number of candidates will soon be received.

Lincoln, 83.

On Tuesday evening, October 24th, Lincoln Lodge, No. 83, was visited by a representative of the WATCHMAN, and he can truthfully report that Lincoln Lodge is not by any means a defunct institution, as the lively and interesting discussions which were brought up in the course of the evening very conclusively proved. Lincoln Lodge now numbers 36 members, all good, substantial citizens. This Lodge was organized Feb. 28th, 1879, with 10 charter members, and has been steadily progressing ever since. During this time the Lodge has lost by death three members, namely, H. Lohse, P. M. W.; J. Vogt, and J. Niles. H. Lohse was elected First P. M. W. and C. C. Saunders First M. W. At this meeting the M. W. degree was conferred upon one candidate, and although the work was not carried through quite letter perfect, yet we have good reason to congratulate the officers of Lincoln Lodge upon a laudable desire to do their work well and effectively, especially Past Master Gray, whose charge was solemnly and impressively delivered, and certainly did not fail of that effect which this charge of all should produce upon the candidate to the mysterious realm. Under head of Good of the Order, an interesting discussion was held upon the advisability of raising the dues of the Lodge to such a figure that all assessmens, might be paid from the general fund, and much interesting information was developed. The debate was participated in by Brothers Haennyt Gray, Clark and Newton. There is always, in all Lodges, more or less obvious ignorance of the laws and rules of the Order, owing to the fact that frequent changes are made in them, and also that the WATCHMAN is not consulted often enough. Bro. James Young, the faithful and efficient Recorder of this Lodge, has been occupying his post of honor ever since its organization. On the 4th of July, Lincoln Lodge gave a grand celebration, consisting of a barbecue, etc., and ball in the evening, which netted the Lodge about $200. Considering the fact that Lincoln Lodge is somewhat isolated from headquarters, the Lodge is flourishing, and the attendance proportionately large. The following are the names of those who have served in the office of Master Workman: C. C. Saunders, T. B. Harper, G. Gray and E. O. Matthews, present incumbent. Following are the members: C. C. Sanders, A. C. Fleming, G. Gray, J. E. Young, J. Halmy, Wm. Ingram, C. H. Hoppert, A. Hemphill, T. B. Harper, E. O. Mathews, H. Newtown, H. Nades, S. S. McCurry, Chris. Crook, Hans Anderson, Peter Toland, Geo. Felis, J. A. Nickerson, H. M. Cartwright, P. Mulligan, Jas. Malonew, L. L. Crocker, Chris. Anderson, John Crook, F. H. Fowler, J. F. Guthrie, O. Clark, T. H. Cate, L. Fowler, J. H. Skinner, Wm. Foster, J. C. Crosby, Peter Anderson, D. Barkhaus, L. Jarvis. Rich. Fuller, Wm. H. Sommers.

Mt. Diablo, 91.

Bro. J. W. Watson, Assistant Grand Reporter, visited Mt. Diablo Lodge, No. 91, situated at Walnut Creek, Contra Costa county, on Friday, October 27th. By request, he exemplified the M. W. degree by conferring it on one candidate; afterward he delivered a short complimentary speech. An incident of fraternity was shown by these worthy brothers that well illustrates the practical doings of this great organization. A member of the Lodge, who was in moderate circumstances, financially, lost his promising boy, a youth of 17 years. Wishing to assist him and still follow the letter of the law as to their Lodge funds, they quietly made up a purse of $70 and handed it to him to help him in his misfortune.

Reliance, 93.

Preparations are being made by the members of Reliance Lodge, No. 93, of Alvarado, to give a ball upon Thanksgiving evening. A fine programme is being arranged, and the ball will be one of the events of the season in that locality.

Ashler, 165.

Every visitor to this Lodge acquiesces in the opinion that there are few livelier amd more healthy Lodges within this jurisdiction. The members are mostly business men and thoroughly interested in the work of the Lodge and the welfare of the Order. Several weeks ago the members participated in a mellon racket, which was a most enjoyable event. At the conclusion of the Lodge meeting the members and their guests to the number of about 80, sat down and enjoyed an hour in mellon eating and speech making. The mug degree (whatever that is) was given one of the members on this occasion. Monthly socials and gatherings are held. At every meeting high-jinks are given, which are prepared by a committee appointed two weeks previously. The social feature of Ashley is very prominent. The membership is in the neighborhood of 75 and is increasing. Quite a number of applications are now in the hands of the proper committees. On Tuesday evening, Oct. 31st, two candidates were received—one taking the J. W. and the other the M. W. degree. D. D., A. S. Cheninant, also recorder of Ashler, is a live Workman and an earnest worker. Much of the success of Ashler Lodge belongs to him. Any Workman wishing to spend a pleasant evening in visiting a sister Lodge, would do well to go to Alameda some Tuesday evening, when Ashler Lodge meets.

Blue Canyon, 184.

We were pleased to receive the following letter from Bro. Boldon, concerning this lodge:

EDITOR WATCHMAN:—I believe I promised to write to you and to give you something for the "good of the Order;" but the fact is I have had nothing that would come under that head. Our Lodge, "184," is so very small and our members so badly scattered from Texas to Washington Territory, that we have to gather all our forces to get a quorum: However, we have only failed twice since our lodge was organized, and each time it was on account of stormy weather. We have had no additions lately. We number 23 in all. Our population is all of the transient kind, and it is to be feared that we will not be able to keep our lodge going for many years; but our little band will persevere in the good work as long as there is anything to work on.
—J. F. BOLDON, Emigrant Gap, Oct. 10, 1882.

Butte City, 206.

This lodge celebrated its first anniversary on Saturday evening, October 14th, with a select entertainment, comprising vocal and instrumental music. About 80 people were present, consisting principally of members, their families and immediate friends. The hall of the lodge was tastefully decorated with evergreens, and when all retired to the banquet room a sight met their gaze which would satisfy the most

fastidious. Able addresses were delivered by Bro. H. G. Hartley and Bro. A. B. Butler. The vocal music by Miss Fannie France, the Misses Minnie and Vickey Hartley, and the Misses Wiles was of the superior class, as was also the instrumental music of Miss Frankie Hainlein. Too much praise cannot be bestowed upon these young ladies. The duet "I Am Going to Write to Papa," by the Misses Effie and Lena Miller, little children of Bro. Miller, was astonishingly well delivered; in fact, each one was proficient in the separate parts, and all present enjoyed a musical treat such as has never before been presented to them. The programme was as follows: Singing by the Lodge; address, "C. H. and P.," Bro. H. G. Hartley; song, "Only Waiting," Mrs. L. H. Ensley, accompanied by Miss Hainlein; duet, "I am Going to Write to Papa,", the Misses Effie and Lena Miller; recitation, "Her Letter," Bro. A. C. Heimbach; duet, "Music in the Air," Misses Vickey and Minnie Hartley; song, "Gathering up the Shells on the Shore," Miss Lizzie Wiles; instrumental music, Miss Frankie Hainlein; duet, Miss Fannie France and Miss Lizzie Wiles; song, "Days of Yore," Mrs. L. H. Ensley; duet, the Misses Wiles; address, Bro. A. B. Butler; song, "Jennie, the Flower of Kildare," Miss Fannie France; instrumental music, Miss Frankie Hainlein; song, "Twenty Years Ago," Bro. H. G. Hartley; recitation, "Experiences in Poultry Raising," Bro. Jacob Black; song, Miss Amelia Blogett; violin solo, Bro. Morgan Albery, accompanist, Mr. Fine; singing by the Lodge.

Grand Ball at El Monte.

The members of Saucelito Lodge, No. 20, A. O. U. W., gave a grand ball at El Monte Hotel, Saucelito, Marin county, on Saturday evening, Oct. 28, 1882. The hall was filled to its utmost with Workmen, their wives and sweethearts. Among the number were representatives from San Francisco, San Rafael, Tomales, as well as other towns on the bay. Dancing was freely indulged in until 12 o'clock, at which time all were invited to the banquet rooms, where Brother Slinkey had prepared a Maison Dore supper. The attendance was so large that Brother Slinkey kindly consented to allow them to use his large and commodious parlors. With the assistance of Miss Lillie Slinkey, who presided at the piano, all enjoyed an evening that will be long remembered. The following were the committees in charge: Reception Committee—Robert Furlong, Fin.; E. Gray, Dr. W. Jenningson, H. A. Cobb, Jacob Schnell, M. C. Hamlin. Floor Manager—Capt. John Holthusen, O. W. Committee of Arrangements—J. E. Slinkey, Geo. J. Hood, M. W.; Capt. T. H. Wentworth, Con. O'Leary, G.; Victor Guerineau, F.

Celebration at Livermore.

The brothers of Livermore celebrated the fourth anniversary of Vesper Lodge, No. 62, at Independence Hall, Livermore, on Friday evening, Oct. 20th. At half-past seven o'clock the large and beautiful hall was densely packed, the audience being composed of Workmen, the wives and daughters of the Workmen and their invited guests who were awaiting the arrival of the delegation from San Francisco when it came. The exercises were varied, pleasing and instructive. The first on the programme was the reading of a succinct history of Vesper Lodge, and a few pertinent and well timed remarks by Israel Horton, P. M. W. In the course of his speech he said that Vesper Lodge was organized four years ago with 22 members, which, with the subsequent additions, made the present number 100. Four had withdrawn, making 96 Master Workmen on the roll, and not one of their membership has died. Such a record is hardly to be found in this or any other jurisdiction. The overture, by Prof. Wagner, was well received. The select reading by Miss Agnes Mahoney, an accomplished young lady, was a sentimental piece. In clear, well-modulated accents she rendered it, and was heartily encored. The piano solo by Miss Susie Morrell, daughter of Brother Morrell, delighted the audience. The rendition was artistic, and she received a hearty recall. The next was a song, "Sweet Little Birdie Come Meet Me," by Sister J. L. Mitchell. Her effort was received with much favor, and heartily applauded. Then followed an address by Wm. H. Barnes, G. M. W. His speech was, as usual, interesting, and listened to with close attention. The Grand Master said that this grand demonstration, under the auspices of our noble Order, is not the work of one man or a few men. It is the work of the noble men who compose it with leaders of standing like Deputy Horton, and a pioneer, now a resident of our town, Bro. Carnduff. The speaker paid a deserved compliment to the former administrations of Bro. Jordan and Taylor, and a glowing tribute to the army of workers and deputies all over this jurisdiction. "Soon we shall hear the click of the Workman's gavel around the world, and see this young, happy and prosperous Order stand as the electric light of the nineteenth century. I commend this institution to every thinking man, and Vesper Lodge as a bright star in this community that will throw around your loved ones a certain and sure protection. We have paid $250,000 this year, and no longer ago than last night I carried $2000 to a widowed home, and what I saw in those tears of gratitude was enough to satisfy me for all the assessments I have paid. The zither solo by Prof. Jos. Shafer gave him a hearty recall, that was kindly answered. In the course of the remarks by F. F. Carnduff, P. M. W., he gave some amusing history of the early times of our order, which was very interesting and listened to with close attention. The G. M. gave by request a song at the close of which he received a double recall. The piano duet, by Mrs. Ella Mendenhall and Master Gove Roberts, was a lovely performance, that was greeted with much applause. In the address of P. M. Fisher, P. M. W., among the many good things he said was this: "The benefit I derive from being a Workman is one of the happiest and surest I have ever experienced. Wherever you go, you will find a welcome and friends that are steadfast and true, and your pilgrimage of life will be sweetened." In a few well chosen words he paid a deserved compliment to the PACIFIC STATES WATCHMAN. He said that it was like the comet in the heavens, a bright star that outshone all similar publications. By request the Grand Master sang a humerous song. The hall was then cleared of benches, and spirited dancing was begun and kept up until the "wee sma' hours," most of the company joining therein. As an entertainment, under the mutual direction of the leading brethren, it was in every respect well managed and worthy of one of our leading subordinates.

West Mountain, 4.

A recent letter from the Recorder of this Lodge, West Mountain, No. 4, of Bingham, Utah, informs us that the Lodge is in a very flourishing condition. At the last election of officers, A. J. Gauchat was made M. W. and John Strickley, Recorder. The Lodge meets on Monday evenings.

Arizona Lodge, 1.

In a recent letter from Bro. Frank Cobler, Recorder of Arizona Lodge, No. 1, of Tucson, Arizona, we learn that this Lodge is in a very healthy condition, and altogether prosperous. The outlook for the future is very encouraging. We are glad to see the affairs of our Order looking so well in that Territory.

Oakland Lodge Locals.

Pacific 7.

On every Thursday evening at the pleasant hall in the A. O. U. W. building, at the corner of 12th and Franklin streets, Oakland, is held the meetings of this lodge. A representative of the WATCHMAN took occasion to visit this lodgee on the evening of the 26th, and found there a warm hearted, congenial body of Workmen. This lodge is doing well, being one of the strongest in that city. The membership is now about 250 and other initiations are soon to be made. The lodge is fortunate in having a Master Workman of considerable power to preside over them; and as a result the sessions are business like, interesting and agreeable.

Oak Leaf, 35.

A visit to this well-known Lodge in Oakland recently showed us that Workman matters are in good hands there. The corps of officers are efficient and competent, and as a result the Lodge is very prosperous. The death of Dr. Thomas Guard, so well known on this coast as a leading divine and theologian, has added another to the death-roll of this Lodge. Dr. Guard was justly regarded as one of the brightest lights in the pulpit of this country, and has always been one of the best thinkers of his day. He was a member in full and regular standing of this Lodge. The death was very sudden and unexpected. Letters from the doctor to friends on the coast only a short time previous to his demise gave evidence of the fact that he was enjoying reasonably good health. He died in Baltimore, on Saturday night, the 14th inst. About three years ago Dr. Guard was pastor of the First Methodist Church of Oakland. Memorial services were held in this church on Sunday evening, October 22d, which the members of Oak Leaf attended in a body. This good man is remembered for his many kind offices while a resident in California, prominent among which is the fact that it was Dr. Guard—the only one of all the ministers in Oakland who would do it—who preached the funeral sermon over the remains of the poor girl who, with her lover, committed suicide at the Nicholl house a couple of years ago.

THE EFFICIENCY OF WASHED COAL—Though it is generally conceded now that wet bituminous coal will not make as large a quantity of steam in a boiler as dry coal, there are few figures to substantiate this. There have been firemen, and there are some now, perhaps, who insisted that their coal yielded better results after it had been liberally moistened than when dry, but of late that idea has lost ground, and, as a general rule, has been condemned. A series of tests has recently been made at Bochum, Germany, which offers facts in place of theoretical considerations. A quantity of washed slack, holding 18% of water and 9.9% of ash, evaporated 5.7 pounds of water per pound of fuel, while the same coal, with only 3% of water, made from 8 to 8 5 pounds of steam. Making due allowance for moisture by reducing to a standard of like quantities of coal free from moisture, there is found to be a direct loss by using wet coal of 14%.

CARE OF BOILERS.—In tubular boilers the hand holes should be often opened and all the collections removed from over the fire. Also, when boilers are fed in front, and blown off through the same pipe, the collection of mud or sediment in the rear end should be often removed.

A Snake Turned to Wood.

The scientific world is indebted to Lenpor Lopez Netto, the Brazilian Minister to the United States, for introducing to their attention the evidence of a phenomena, which, although it may have been regarded as possible, has never before been observed—that of an animal turned into wood. The specimen is that of a snake called the jararaca, one of the most venomous reptiles of the province of Matto Grosso, Brazil, which, having crept into a crack in the bark of a tree, has died there, and afterward become lignified. The head, neck and other parts of the animal are clearly delineated, and the most delicate details of the organization are plainly visible in many regions—as in the nostrils and the eye cavities, and in the disposition of the scales. M. Louis Olivier, of the Botanical Society of France, who has made an anatomical examination of the figure, reports that he has found it to be composed of cells and fibers like those of the secondary wood which surrounds it. "The formation," he says, "cannot be explained by saying that it has resulted from the disposition of the elements in a hollow, which, having been traversed by the animal, has preserved its form; for not only the contour of the serpent, but the whole relief of its form, is recognizable in the wood. The entire body of the animal has been thus lignified, except the center, where the constituent elements of the animal still exist."

Following the line of the projection of the head, and about an inch distant, was found a cylindrical figure, also in relief, which seems to represent the larva of an insect. The deduction is, therefore, drawn that the reptile, pursuing the insect into a crack in the tree, had insinuated itself between the wood and the bark, or into the zone of the cambium, out of which the wood and inner bark are formed. Having died there, it went through the process of decay, in the course of which each animal particle, as it was dissolved, was replaced by a particle of woody tissue deposited by the cambium. The specimen was exhibited to the Botanical Society of France on the 9th of April last, and is the first reliable instance on record of a gradual substitution of ligneous fibers and cells—the generative tissues of plants—for the constituent elements of animal life and substance. As rapidly as the flesh decayed, its place had been occupied by the cells produced in the natural growth of the wood—just as minerals are so often found to occupy the cells of vegetable or animal matter, as it passes into decay under favorable conditions for such substitution. A full account of this interesting phenomena is given in the *Popular Science Monthly* for November, accompanied with a well-executed pictorial representation of the fossil snake, as shown in relief upon a section of the tree upon which it was found.

THE ALCOHOL OF FERMENTED AND DISTILLED LIQUORS.—It has generally been assumed that the alcohol of fermented and distilled liquids is identical, but it is by no means certain that such is the case. We know, says the *Brewers' Guardian*, that alcohol is produced by fermentation, and can be concentrated, and even isolated, by distillation, but it is possible that the action of heat necessary for distillation modifies and perhaps changes the chemical constitution of this substance. Although there is no direct evidence of the existence of these two kinds of alcohol, it is not altogether unreasonable to suppose that the action of heat causes a partial dehydration, and that in this way the alcohol of distilled spirits differs somewhat from the alcohol of fermented liquids. This hypothesis is supported by the well-known fact that distilled spirits have a different and more injurious effect on the human system than the alcoholic liquids produced by fermentation. Medical men often prescribe beer and wine, but prohibit the use of brandy, whisky, gin and all spirits which have undergone the process of distillation. It is within the personal experience of many that a wine which has been fortified by the addition of distilled spirits is far more potent and, we may even say, unwholesome, than a wine of equal alcoholic strength, but produced by fermentation only; in like manner we believe that a larger quantity of alcohol may be safely consumed in the form of beer than in that of spirits. The question deserves further investigation, not only in the interests of the brewing trade, but in the interests of temperance and health.

STEAM ENGINE IMPROVEMENT.—This important improvement in steam engines appears, even to many experienced engineers, a sort of mechanical paradox. With but one crank, with two cylinders cast in one piece, and only one chest valve, the entire engine is as simple and few in parts as the simplest ordinary single cylinder engines. It has no dead centers, but will start forward from any possible position in which it may be placed. Further, it may be stopped, started and changed from a single to either a double or compound engine as may be desired, by the motion of a single lever, and the change to either form may be made while moving at any speed just as easily, it is asserted, as when it is still. The engineer can run it with one cylinder as a single engine, or with both cylinders, using live steam, as a double engine, or with one cylinder, using live steam, and the other running by expansion as a compound engine, either way as economically as any engine especially built for that particular way.—*Journal of Franklin Institute.*

The Origin of the Diamond.

A. B. Griffiths, F. C. S., etc., in the *Chemical News* says: "We can theoretically account for the formation of crystalized carbon in nature, although scientific men generally hold the opinion that the origin of the diamond is enterely unknown. We know that the diamond has been found in a fine-grained sandstone in Brazil, and is principally found in an alluvial matrix of sand and quartz pebbles. Knowing these facts, and that there are only three methods by which crystals are formed, namely, by fusion, by solution and by sublimation; and as the diamond has been found in sedimentary rocks, and in an alluvial matrix of sandstone and pebbles, and knowing that sandstone and pebbles are produced by the action of water, hence their name of aqueous rocks; and as aqueous or sedimentary strata are often fossiliferous we may draw an inference that the carbonaceous matter of the fossils (plant and animal remains) has been dissolved by highly heated water, aided by great pressure existing in the crust of the earth.

"It is a well-known fact that highly heated water, aided by pressure can dissolve silica, as in the Geysers of Iceland, etc., where it is deposited around the mouth of the vent, forming 'the sinter,' and also we have the experimental researches of De Senarmot (*Ann. de Chimie* III, xxxii, 129), and others on the artificial production of crystalized minerals, as quartz, mispickel, corundum, heavy spar, etc., by the prolonged action of water at high temperatures and pressures, and I think we can see no reason why highly heated water or water gas should not have the power of dissolving the carbonaceous matter of fossiliferous plants and animals and then on cooling depositing the carbon in the crystallized condition, forming the gem known as the diamond. As to whether the diamond was formed by sublimation we can draw no inferences from facts or from nature, so must put this method of forming crystals on one side as not being able to solve the problem; and further, the diamond cannot be formed by fusion, because we know that crystalized carbon in the form of graphite is formed by fusion (as 'kish' in the manufacture of pig-iron).

"Therefore, it appears from these views on the subject that the diamond has been formed in nature by the solvent action of highly heated water or water gas, aided by enormous pressure on the carbonaceous matter of fossils contained in sedimentary rocks followed by slow cooling."

Porosity of Rocks.

At the recent meeting of the British Association, Mr. C. E. De Rance read the report of a committee appointed for the purpose of investigating the circulation of underground waters in the permeable formations of England, and the quality and quantity of water supplied to various towns and districts from those formations, to which was added an appendix on the density and porosity of rocks, in relation to the water supply. A knowledge of the porosity of rocks was stated to be important as regards the water supply, the suitability of stone for building purposes, and in accounting for some of the lithological changes often observed in the strata of the earth. Though the matter had not escaped investigation, the vast volume of water stored in rocks had not been fully realized. The density of the old red sandstone was 2 61, the volume of water absorbed by a cubic foot being over .707 gallons, and by a square mile 3 ft. thick 59,000,000 gallons. Conglomerate beds of the same formation are still more absorbent, being capable of taking in .85 gallons per cubic foot, or 67,000,000 gallons per square mile, 3 ft. thick. The millstone grits which lay at the base of the coal measures vary much in different localities, that found in the forest of Dean being most porus and absorbing 66,000,000 to the square mile, 3 ft. thick. Some of the coal measure grits also stored large volumes of water. The Pennant rock, 900 ft. thick, in the Bristol coal field, was capable of absorbing 12 000 gallons in a square mile 3 ft. thick, and specimens of magnesian limestone taken from the neighborhood of Bristol gave 86,000,000 gallons, but the carboniferous limestone was quite the reverse, absorbing only 3,500,000 gallons. Oolites were stated to hold vast stores of water, and the rock was used extensively for building purposes. From an analysis of rocks it is clear that nothing in their chemical composition could purify the water, and in order to get rid of organic contamination, there must be oxidation, and the oxidizing agent was considered to exist in the air, absorbed by the water and the air contained in the interstices of the rock.

EXAMINATION OF GLASS.—The author applies the known blowpipe reactions. Lead in glass or enamel is detected by heating for a minute or two a bead of the sample fused to the end of a small glass rod. Glass free from lead shows no change. Specimens containing much lead blacken, and the bead becomes opaque. Green cupriferous glass, if heated in the reduction flame, is colored in parts an intense purple red. The simultaneous presence of lead masks this reaction. If a fragment which is to be tested for copper or gold is heated in a glass tube, and if both are drawn out a little while soft, the color due to gold remains unchanged, while red copper-glass becomes perfectly colorless.—*Max. Muller.*

DUCKS are plentiful on the lakes and sloughs of Southern California.

The Vapors of Metals.

M. Eugene Demarcay has recently obtained volatilization at much lower temperatures by diminishing the pressure of the gas by which they are surrounded. His apparatus consists of a crystal tube 12 centimeters in diameter, containing the metal, and closed at its extremities. The heating is effected by vapors of sulphur, mercury, aniline, water, and other substances, giving temperatures ranging from 440° Cent. to 100° Cent. The vacuum is obtained by a Sprengel pump, and the tube is then heated in the vapors mentioned, at the same time that the pump is worked. A fine U tube, which enters the crystal tube until its bend is about two centimeters from the piece of metal, is traversed by a current of cold water, and serves to condense the volatilized metal. When the heat is applied a considerable quantity of vapor is given off, and this condenses rapidly on the bend of the cold water pipe, forming a dark deposit, which in time acquires a metallic tinge. Cadmium, zinc, antimony, bismuth, lead and tin have been volatilized in this way, at temperatures of 160° Cent., 184° Cent., 292° (antimony and bismuth), and 360° Cent. (lead and tin) respectively. At higher temperatures the deposits are more abundant; but M. Demarcay has not proved any volatilization at inferior temperatures to these given. He does not doubt, however, that volatilization, at lower temperatures, does exist; but it is masked by the formation of a thin layer of suboxide of a deep color, which is less volatile than the metal itself. In such cases, the metallic sublimation begins after this protective skin is broken. A very fine sample of vaporized gold attracted much attention at the microscopical reception, given at Harmon Seminary, Berkeley, on the 14th inst. It was collected from the flue of an assay-office furnace in San Francisco; shown under a small power, it presented a mass of exceedingly fine globules.

THE ELECTRICITY OF FLAMES.—A valuable contribution to the subject of the electricity of flames has been lately made by Messrs. Elster & Geitel. The discrepancies in results previously obtained are attributed largely to the fact that the behavior of the layer of air immediately outside of the flame was disregarded. The gentleman mentioned used a Thompson quadrant electrometer for measuring, and found the supposed longitudinal polarization of a flame merely apparent, and due to unequal insertion of the wires used as electrodes. They found, on the other hand, that a flame is strongly polarized in cross section, and an electrode in the air about the flame is always positive to the one in the flame. The theory adopted by the experimenters is as follows: By the process of combustion, free electricity is not produced in the flame, but the flame gases and the air envelope have the property of exciting, like an electrolyte, metals or liquids in contact with them. To this electrolytic excitement is added a thermo-electric, due to the incandescent state of the electrodes. The amount and the nature of the electrolytic excitement is independent of the size of the flame, but depends on the nature, surface, condition and glow of the electrodes, and on the nature of the burning gases. It was remarked that flames may be combined in series, like galvanic elements, so as to form a "flame" battery.

THE RESISTANCE OF THE AIR TO THE MOTION OF BULLETS IN GUNS.—Prof. Collador, of Geneva, recently described a curious experiment showing the resistance of the air under certain circumstances to the motion of bullets in guns. He charged the hollow iron breech of an air-gun serving as a reservoir with compressed air, and, having screwed up the gun, introduced a round lead ball, running freely, but nearly filling the bore; then, placing the gun in a vertical position, he seized the upper end and pressed his thumb vigorously on the mouth. The gun was then "fired" by an assistant; the thumb remained in position, and the ball was heard to fall back in the bore. Thereupon, after recharging the breech and with the same ball he shot the latter at a pine board about four inches thick on a pane of glass, and it passed through. The experiment, M. Colladon says, is without danger if the operator is quite sure of the strength of his thumb, if the gun is more than 32 inches long, and if the ball is spherical and nearly fills the gun, in which it must act like a piston.

THE ATOMIC WEIGHT OF URANIUM.—The "Lerichte der Deutschen Chemischen Gesellschaft" states that Clemens Zimmerman has prepared metallic uranium, and determined some of its properties. Its specific gravity was found to be 18.685, and its specific heat between 99° and 0° is .02,765. The latter number multiplied by 240 gives a product of 6.64, which agrees with the mean atomic heat indicated by Dulong and Petit's law. The controversy between the values 120, 180 and 240 for the atomic weight of uranium is thus settled in favor of the highest.

TO MEASURE THE VELOCITY OF TRAINS.—Among the instruments described during the late meeting of the British Association was one exhibited by Sir F. Bramwell, employed for ascertaining the velocity of trains and the efficiency of brakes. With this apparatus it was found that a train weighing 125 tons ran five miles five yards after steam was shut off while traveling at a speed of 45 miles an hour. The line was level and the day calm.

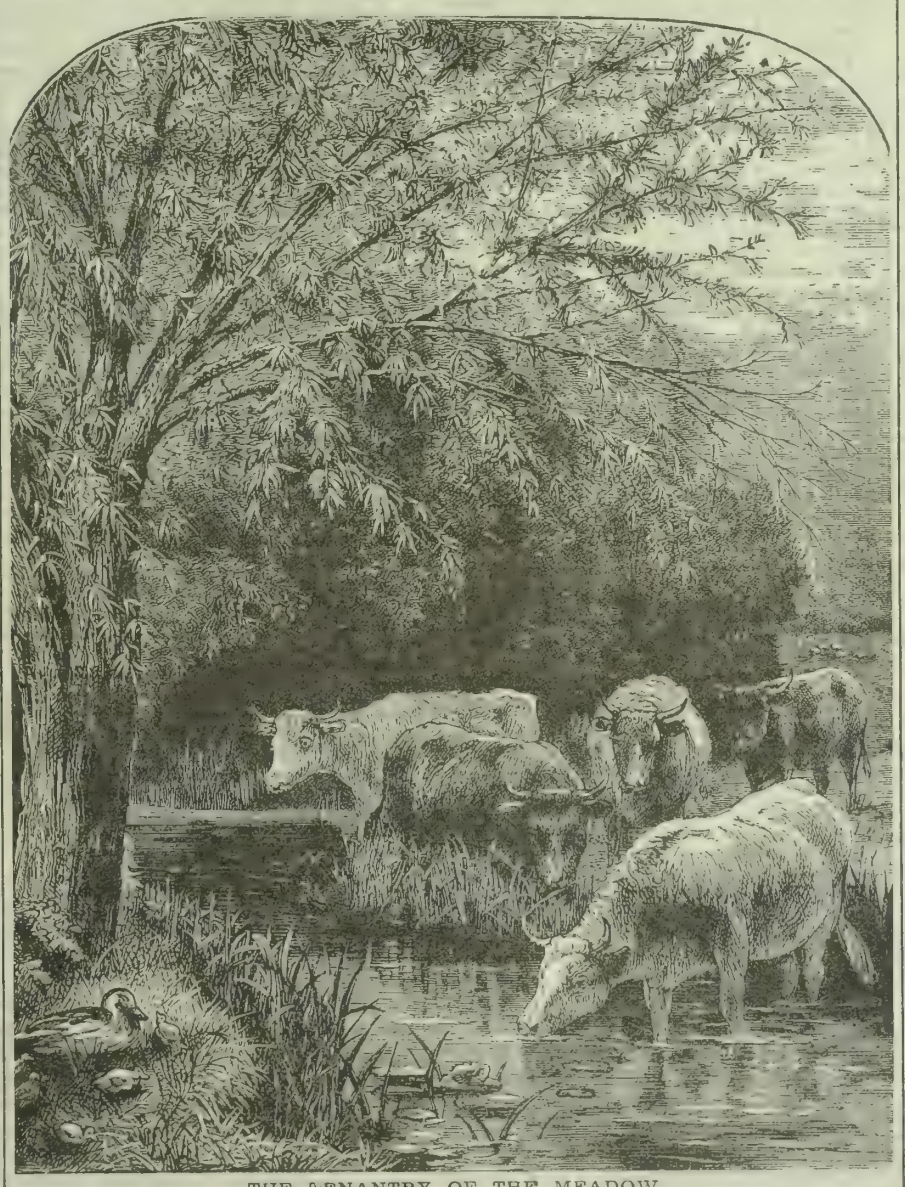
Verses from Col. Wilder.

The venerable President of the American Pomological Society, Col. M. P. Wilder, having been urgently requested by a contemporary for "ten lines of his best thoughts," answered in the following stanzas, taking as their motto the advice he has so long and constantly urged through the press and in public addresses: "Plant the most perfect and mature seed of our very best fruits, and as the means of more rapid progress, cross-fertilize our finest kinds for still greater excellence:"

Plant the best seeds of every good fruit,
Good fruits to raise, all lands to suit,
Fruits which shall live, their blessings to shed
On millions of souls when we shall be dead.

These are creations that do the world good,
Treasures and pleasures with health in our food,
Pleasures which leave in the mem'ry no sting,
No grief in the soul, no stain on Time's wing.

For fruitage and flowers let praises arise
From earth's utmost bound to heav'ns highest skies,
Songs of rejoicing where'er they are found,
Songs of thanksgiving where'er they abound.



A CURIOUS CASE OF DEMOLITION.—The *Building News* relates a singular misfortune which has occurred to a small church in Andover, Mass., which seems to be in process of being eaten up bodily and swept away. The church was erected about six years ago, and is finished with what is said to be ash, but has more the appearance of chestnut, which often closely resembles the coarser kinds of ash. A year or two after its completion the sexton noticed little heaps of dust on the carpet near the walls. These grew more and more frequent, and appeared in various portions of the building, so that they had to be gathered up regularly every week, and on searching for their cause the wood of the base-boards and portions of the pews was found to be completely riddled with holes made by small, round, black or blue worms, the *debris* of whose borings fell out occasionally upon the floor in the form of dust. Unlike most boring worms, this species seems not to object to the taste of varnish, for the polished surface of the wood is pierced in thousands of places. The stock was regarded as completely seasoned and in good condition when put into the building, but it would seem that it must have contained the embryos of the insects, for the finish of the galleries is attacked equally with that of the ground floor. If any of our readers, adds the *News*, meet with a similar case we should be pleased to receive an account of it, and if any know of a remedy, the trustees of the church would be glad to avail themselves of it.

OF VALUE TO A NEWCOMER.—George Shrader writes from Los Angeles: "I think the RURAL PRESS is the most reliable agricultural paper on the coast and of great value to a newcomer like myself."

The Brook in the Meadow.

What more beautiful water than the brook threading its way through the meadow, its banks fringed with shrubs and flowers, or studded here and there with shade trees? The clear water, with the darting silversides, the cresses, the plunge of the startled frog, the splash of birds at their ablutions, the turtles roasting in the sun, the swift crossing of the musk-rat, if no dangerous sounds are heard—all these and a hundred other events fill up the day beside the brook. And then come the cows, with solemn, stately tread, daintily tasting the flowing water, then venturing farther, until the group stands knee-deep, with swaying tails and philosophic mood, enjoying the cooling shade and cooling water—a picture of rural quiet beyond compare.

MEN of this age are not content with the success and achievements they have already made. We have now more rapid transit both by land and by sea than ever before, and yet it is all too slow for us. We can now accomplish the distance between New York and Liverpool in from six to eight days. Less than fifty years ago the time required was twice as great; and who knows but that fifty years hence it will be reduced approximately as much. It is now proposed to lessen the time of sailing at least two days by building a line of railroad through Nova Scotia and New Foundland, there to connect with a new line of steamship which will run to the western shores of Ireland. By this route the sea voyage will be but little over 1,000 miles, and the passenger from Chicago and the West will gain in time at least four days. A railroad company has already been formed, and will commence the building of the line of railway through the northeastern portion of this continent next year. The line as surveyed is said to possess scenic, beauties and attractions equal to that of any other road in the country. The project is a feasible one, and, no doubt, will meet the approval of the American and European people.

THE TENANTRY OF THE MEADOW.

ANTIDOTE FOR WASP OR BEE STINGS.—Mr. Plant, of Stonham Aspel, Suffolk, writes to the Suffolk *Chronicle:* "During my life I have heard of many persons having been stung—some even to death—by wasps, etc. I have shared in the suffering to a great extent. On one occasion I was dreadfully stung by a wasp on my tongue and arms. I have invariably found the earliest application of hot water to instantly nullify the sting and prevent further suffering. I am happy to say many others who have tried this simple thing have found a perfect cure."

Good Morning.

"He waketh morning by morning."—Isa. l., 4.

"O, I am so happy," a little girl said
And sprang like a lark from her snug little bed;
"It's morning, bright morning! Good morning, papa
O, give me a kiss for good morning, mamma!
And only just look at my pretty canary,
And hear how he's singing good morning to Mary;
The sun, too, is shining right into my eyes,
Good morning to you, Mr. Sun, as you rise
So early to waken my birdie and me,
And make us as happy as happy can be."

"And happy you may be, my dear little girl,"
Said mother, as gently she smoothen'd a curl;
"As happy can be; but think of that One
Who waken'd this morning, both you and the sun."

The little one turned her bright eyes with a nod,
"Mamma, may I say, too, good morning to God?"
"Yes, dear little darling, most surely you may;
So kneel, as you do in the morning to pray."

Then solemnly kneeling and lifting her eyes,
She gazed up earnestly into the skies;
And, with her two hands nicely folded together,
As gently she leaned on the lap of her mother,
"Good morning, dear Father in heaven," she said,
"I thank Thee for watching around me in bed.
For taking good care of me all the dark night,
And waking me up with this beautiful light."

An angel looked down in the sunshine and smiled,
Beholding and hearing that beautiful child,
While father and mother adored the grace
By which, in dear Mary, God perfected praise,
And thought on the words of the Son of His love,
"Of such is the kingdom of heaven above."

—*Fraternal Messenger*

Can Iron be Burned in Melting?

Mr. L. C. Jewett gives the following answer to the above question in an Eastern exchange:

I had the fortune a few days since to meet a foundryman who was in constant fear of getting his iron too hot. He claimed he was melting his iron just as hot as possible without burning—that if he melted hotter it would surely be burned. This is one of those strange delusions that sometimes trouble the minds of otherwise sensible people.

Now, I want to ask this man, and any others who may entertain the same views, what basis they have for their opinions?

A few years ago in a foundry in one of the Eastern States, the question arose: "Can iron be burned in melting in a cupola?" To settle this, test bars were cast at one heat, just coal enough being used, as my friend would claim, not to burn the iron. The next day test bars were cast of exactly the same dimensions and from the same mixture of iron, enough coal being used to melt the iron so hot that it was yellow, a fitful flame arising from it when in a dry ladle. The bars from the two heats were afterwards tested in a testing machine, when it was found that the bars cast from the hot iron were more than nine per cent. stronger than those cast from the iron which was said to be just as hot as it could be made without being burned.

Now for the reason: It is generally the case that in putting up iron for ordinary machinery castings, two, three, four or perhaps five kinds and quantities of iron are used. It is of the utmost importance, especially for such castings as cylinders, steam-chests, cylinder-heads and finished work generally, that the castings be homogenous.

When iron melts in a cupola it is essentially different from the melting of ice in water. The iron gets soft till it falls in pieces from the pig, and these pieces into still smaller pieces and the liquid condition is assumed, which means the separation of the molecules thet were united to form the solid iron. Now, the hotter the iron gets, the more complete the separation of the molecules of each particular brand, and the more readily they will mix when they come together in the bottom of the cupola. As soon as the disintegrated pig gets hot enough to liquify it don't stop long enough in one place until it gets to the bottom of the cupola, and any additional heat it receives must be imparted in the transit from the melting point to the bottom.

It is not claimed that too much fuel cannot be used in a cupola. On the contrary, a surplus over and above that required to melt hot liquid iron may be used, which means an extravagant use of fuel. It has no effect on the quality of the melted iron, but it has the effect to make the cupola melt slow, and enough fuel may be put in a cupola to absolutely prevent melting. In stove-plate foundries, iron is generally melted much hotter than in machinery foundaries, and I have always observed that in foundaries where the iron is melted hot the average of the work is much better, and the percentage of poor castings much less, than where so much caution is exercised to prevent burning the iron in melting.

GUMBO SOUP.—Prepare a large chicken, cut it into joints, roll them in flour, and fry in a little lard. Take out the pieces of chicken and fry one and a half pints of okra, cut in slices, till it is brown. To the tablespoonful of fat left in the frying-pan, add a large tablespoonful of browned flour, three pints of water, the chicken cut in small pieces and the okra. Simmer all together two hours, and strain through a colander. Serve with boiled rice, a tablespoonful of rice in the plate with a ladleful of soup poured over it. This if a favorite Southern dish.

THE Bay Horse smelter, Utah, has produced about $300,000 in bullion this season, and is still running.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, November 1, 1882.

Let the Drones Go.

Never waste any regrets over one who allows himself to become suspended, but at once endeavor to seek out some good man to take his place. In a financial point of view the oftener we change our membership the better. If we made an entire change once a year our death-rate would be only about one-tenth of what it now is, and if we changed every week we scarce would have any death-rate at all. O. course such a thing would not be desirable—there would be no use for such a society as the A. O. U. W. Neither would it be desirable to keep every person who joins the Order in until he should die. It would destroy the organization by piling up the assessments to such a hight that few could stand under the burden. History repeats itself, for human nature is about the same now that it was in the beginning. Experience shows that a large per cent. who join our beneficial Orders drop out from one cause or another before they die. The money they pay while members is just so much saved to the pockets of those who keep their standing good, for without this money the steadfast ones would have been obliged to make up a like sum from amongst themselves. It is this lapsing that keeps assessments down to an average of about 16 a year, while otherwise they would be nearly 60. But to be benentted by the lapsing of certificates it is an absolute necessity that the places made vacant be filled with new and fresh material, otherwise our membership will be not changed but lost.

There is a very considerable sprinkling of our members who joined the Order solely for selfish reasons. They wanted the protection it affords, and they find insurance in the Workmen by far cheaper than in an insurance company. But they don't want to be bothered with attending Lodge meetings, or assisting in any way to transact the necessary business of the order. They don't care for fraternity—they get enough of that in other institutions. In 9 cases out of 10 we are better off without than with such members. Don't run after them, but rather seek out other good men to fortify the Order against dimunition, and let the drones go. We want those who will be content to do their part of the sowing in order to share in the harvest.

A CASE of considerable interest was recently decided in New Jersey. It seems that a certain member of the Lodge of Knights of Honor, while discussing the rights of a certain candidate, used some remarks derogatory to the latter, which caused him to be black-balled. The candidate brought suit for slander in the Court of Common Pleas at Newark. The counsel for defendant asked for a non-suit, on the ground that the language was not used in public, but the judge held that words spoken in Lodge-rooms are not private communications. This discussion is of interest to all secret society men. Whether it will stand the decision of the higher Courts remains still to be seen.

Lodge Libraries.

Few things are so elevating and refining as a good library. The possession of a library always suggests refinement and culture. In the individual it marks him as a thinker and leader. In the association or organization it suggests a reaching after the things that refine and educate. The application of this generalization to the Lodge is apparent at once. We are of the opinion that there is nothing which the Lodges need more to-day than libraries. Many of the Lodges already possess them, and are reaping the benefits. One of the fundamental principles of the Order is to improve the members, and we know of no way in which this can be done as well as by the establishment and maintenance of libraries. The price of books has been reduced to such an extent within the past few years that a library is not beyond the possibility of possession by the weakest Lodge. There was a time in the history of the world when our suggestion would have been impracticable and impossible of attainment, but in this day of books and newspapers it is no longer so. The world has never known such a revolution as the printing press has made. The making of a book is a simple and comparatively inexpensive matter; and a newspaper, in which the world's history of a day or week, or the accumulation of the more matured thought of the world's thinkers in the numerous monthlies, is a marvel of cheapness and information.

We venture the assertion that for the expenditure of several hundred dollars a library and collection of valuable books could be made that would in time become one of the most prized features of the Lodge. It would be a good plan if the Lodges would make a very small assessement on the members per month, which could be formed into a library fund, and soon sufficient would be accumulated to make a purchase of books and thus form a nucleus for a future library. Suppose the average Lodge to have 100 members. Were an assessment of only 10 cents per month levied upon each brother, this would secure a fund, at the end of the first year, of $120. This would be sufficient to make a start, and when once the library is begun, the members will have something to represent the value of their contributions; and then if it is properly conducted an interest will be awakened in its success, so that additions will be rapidly made. In addition to the library proper the Lodge should maintain a reading room, where the members could come several evenings in the week and have the full use of the papers. We venture the assertion that in this way the Lodge would secure a much better attendance upon its meetings.

Another way worthy of consideration for raising funds for the establishment of libraries would be by forming something of a lecture course. If properly conducted a lecture or other entertainment of a high moral character can be made to pay handsomely. At all events, the establishment of libraries in our Lodges should be a matter for careful consideration by all. Bring the subject up at the next Lodge meeting when the "Good of the Order" is reached, and obtain an expression of opinion from the brothers. We hope to see some of the Lodges do something in this direction soon.

A New Enterprise.

The initial number of the Ohio *A. O. U. W. Journal* is received. It is published at Hillsboro, Ohio, monthly, and this number is an interesting and creditable one. The A. O. U. W. is becoming stronger in the Buckeye State every month, and this new journal will give to the Order additional strength. From the salutatory we clip the following:

"No enterprise of any magnitude can long exist without the aid of the powerful voice of of the press. What would have been the condition of our noble Order to-day had it not been for its journals? Up to 1871 the Order had struggled hard for existence. At that time a journalist was admitted as a member, and being deeply impressed with the grand principles upon which the Order was based started a paper in its interest, since which time, with the aid of its journals and those grand principles, notwithstanding the power and the accumulated millions of the ill gotten gains of the old self-syled reliable life insurance companies and their subsidized press, with its watchwords, "Charity, Hope and Protection," has pressed onward and upward, until to-day she can laugh at the prognostications made a few years since by these filchers of the people's money. The A. O. U. W. has outlived the 10 years alloted it by these prosnosticators, and its beneficiaries are numbered by the thousands, and is still dispensing its benefits to the widows and orphans of its deceased members and is in a most healthy and flourishing condition, showing no signs of decay, but bidding fair, under the blessings and in answer to the prayers of the widows and orphans of our deceased brothers, ascending daily to heaven for its success and prosperity, to grow and flonrish."

Anniversary Celebrations.

Every member who has the good of the Order at heart, will begin to consider soon as to what can be done during the approaching winter to make the Lodge more successful and enjoyable. When once the obligations of a Workman are taken, it becomes a solemn obligation on the part of each one to endeavor to uphold and advance the interests of the Order. During the summer months and the stirring political times of the fall, there is naturally a lull in Lodge work; but when this is over the uppermost consideration in the mind of every brother should be how to make his lodge so interesting that no member will absent himself from the meetings. However unfortunate it may be that there is an apparent diminution in the interest taken in Lodge work at certain seasons, it should furnish a greater reason, why during the winter months so much more attention should be devoted to it. The question naturally suggests itself, in the first place granting that the foregoing is true, "How can this be accomplished."

There are various ways, among the most important of which would be that every brother should be punctual in attendance. But we desire to speak of another way. As the holiday and festival season is fast approaching, we would recommend the holding of reunions, to which the families and friends of the Order could be present to witness and participate in the exercises. In other words, much will be gained by celebrating anniversaries of the establishment of the Lodge, or some important event in its history. To these the towns-people should be invited. In this way, those unacquainted with the workings of the Lodge will become familiar. They will see what good the Order is doing and has done since its organization, and the interest thus engendered will often lead to applications for membership by those whose names are desirable on the rolls, and it will place the organization in a much better position in the community.

We are very glad to see that many of the Lodges are adopting this course already. The occasions are always pleasant and enjoyable. Let this be a means to an end. For during the winter months the evening becomes much longer, and the opportunity for increasing the membership of the Order becomes better. As an exchange says: "During the winter men generally have less to employ their time in the evenings than during the summer months, and they can be more easily induced to connect themselves with our Order; and our members should make this their time of harvest. A strong effort should be made to secure, as far as may be possible, the younger class of men. This, however, should not be done to the neglect of those of more mature years; indeed, this latter class are among those upon whose shoulders the success of the Order rests, but we want the young men of the country to enjoy the advantages of membership." What the Lodges need is preparation for a winter campaign. We urge that the best way to inaugurate this is in the manner already suggested. Anniversary gatherings should be held during the coming winter in every Lodge in the Order.

An Important Matter.

Upon various occasions the WATCHMAN has suggested the matter of some one in the various Lodges of the A. O. U. W. writing short histories of the subordinate organizations for publication in our columns. We have asked more than this, for frequently have we urged that not only the officers of the Lodges, but the members as well, furnish us with news items of events that transpire, either in the Lodge or connected with it. But there seems to be such a hesitancy and backwardness on the part of the members of the Lodges that we are not favored in this way as much as we should be. By a little thought on the part of the members of the Order, it can readily be seen how hopeless is the task of obtaining data for publication concerning the various Lodges, unless some one takes it upon himself to furnish us with the facts. In all there are upwards of 300 A. O. U. W. Lodges in the immediate territory in which the WATCHMAN circulates, and it is expected that we mention the news concerning each one of these Lodges as often as possible. There would appear in the WATCHMAN much oftener than at present accounts of doings of these Lodges if we had the facts and news at hand.

A certain brother, in writing to us from one of the Lodges in the State, deplores the fact that our call for Lodge histories was not responded to as it should have been. "Some of the experts of the pen," he thinks, "should have responded, but all seem silent." This is true, and yet it must remain a matter of choice with the Lodges whether it shall longer continue. It is to be hoped that our Lodges will make it a rule to appoint some one to write as often as once a month, at least, for the WATCHMAN. If this is done a great change will soon be apparent in the life and vivacity of the Lodge. The members will take more interest in its affairs. We invite correspondence from any Workman, but we urge again that every Lodge take it upon itself to furnish us with Lodge news as often as possible.

Election of Officers.

Few matters relative to the Lodge are as important as the selection of competent officers. While it is true that the Lodge is a body formed on democratic principles, where every member has equal rights and prerogatives, yet it is likewise as true that the officers have very much to do with the welfare of the organization. As the officers are, in the majority of cases, so will be the Lodge. With good efficient men in the positions of trust and responsibility, the Lodge will prosper; with incompetent men in the same positions it cannot. The time is not distant any more until the election of officers will be held for another term. It will be wisdom on the part of the members to inquire into the matter, and find who among the brothers are best fitted for the several positions. Those officers that have been faithful should be retained and re-elected. But the unfaithful ones should no longer be given positions which they are incapable of filling well.

The two officers upon which so much devolves are the Recorders and Financiers. The best men should be given these positions. Men of business and social qualifications, men of integrity and honor, men who will attend to their several duties promptly and intelligently, should be placed in these positions, and when once there should be kept. The good of the order demands this.

What Every Lodge Should Possess.

In a pointed editorial the *Overseer* urges that in every town the Lodge ought to have its own hall. The beneficial influences connected with such a possession cannot be overestimated. There is then something permanent, and the outside world recognizes the value of the institution more than otherwise. The fraternal and benevolent society "is not an institution of to-day, nor of to-morrow, but for all time. It will flourish when we and our children are under the sod, for it is destined to a mighty importance. Each Lodge, then, should begin to create a building fund. A monthly contribution of even a few cents will soon amount to a considerable sum, and even a feeble Lodge may in time be able to erect or purchase a building. If outsiders could see this there would be a desire to join us."

The truth of this is apparent wherever the Lodge is the possessor of the building in which is located its home. The members have a greater interest in the Lodge and its welfare, because they see something tangible—something that has present value, and in the possession of which they have a part. The suggestion is a good one, and should be improved whenever possible.

BRO. WM. AXFORD, proprietor of the Mission Iron Foundry, situated at the corner of Twenty-fifth and Noe streets, S. F., manufactures all kinds of safe and light castings to order. The following are some of the leading piano manufacturers that obtain their piano plates here: G. Rudolph, 107 Stockton street; R. Fay, corner of Mission and Thirteenth; Hall's piano, 120 Tyler street; C. C. Hornung, 739 Market street. The castings of oil cups for the cable roads, which require the utmost care and preciseness of workmanship, are also made in this establishment. All the cups of the Union, Sutter and Geary street roads have been cast at his foundry. He also casts ventilators for buildings, Burn's centennial slop hoppers, proof presses, bells, sewer traps, rochets for bed lounges, billiard cups, Ladd's cartridge loaders, spring rocking-chair castings, shelving for stoves and ranges, and California Electrical Co. fire alarm boxes—in fact, anything that can be molded.

SAN FRANCISCO LODGE, No. 4, A. O. U. W.—This old pioneer Lodge has now a membership of 165, and has lately made an amendment to their by-laws, giving $100 to the heirs or representatives of a deceased brother. It is understood that a number of members of this Lodge, wishing to affiliate with a Lodge that pays sick benefits, desired to take their withdrawal cards for that purpose. On Wednesday evening there was a fair attendance, and the M. W. degree was conferred on two candidates. In the absence of the M. W., Bro. Crawford, Bro. Falkenstein presided.

THE repairs and improvements that have been in progress at Ixora hall, on Mission street, are now finished. The hall has been finely repainted, frescoed and remodeled. The dining room has been enlarged, and the ladies' parlor newly decorated. Electric light is used, and all the appurtenances are first-class. Several societies of the city celebrate their anniversaries and hold their parties here. It is particularly well adapted for this.

☞BRO. W. B. PASSMORE, of Olympic, the talented and accommodating musician, is now in Leipsic, Germany, under instruction of the celebrated Professors, Foxasohn and Robbing. He is studying both vocal and instrumental music. It is anxiously hoped that he will return soon, and that his services as a brother Workmen in making the Lodge meetings and entertainments pleasant, may be in the future as they have been in the past.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

Just now we are overwhelmed, so to speak, in politics, and our members, many of them, are so much interested in who shall serve the dear people that they have little room in their minds for Lodge matters. It is, however, with a little pride we notice so many names on the lists of candidates of the various parties that are also to be found on our Lodge records. The candidates for city offices are so many, and so recently nominated, that we cannot at this writing give a list of those who are Workmen, if, indeed, it would be otherwise disirable, but a few in the country and across the bay, we trust, we will be pardoned for mentioning. Past Grand Master Clay W. Taylor is a candidate for the office of State Senator in his district. Henry Vroomen, Chairman of Committee on Appeals and Grievances, is a candidate for a like position in his district. T. H. Allen, P. M. W., is a candidate for County Clerk of Alameda county. P. F. Fisher, another Past Master, is a candidate for Superintendent of Public Schools. E. M. Gibson, a prominent Workman, is a candidate for Railroad Commissioner. With these, brethren, we are personally acquainted, and have faith that any of them would do honor to the position which they seek. Some belong to one party, some to another, but really a man's party does not always determine his fitness for office; in point of fact, we may say it rarely does. Give us the good man, and somebody else may have his partisan.

October 28th was the day set for the organization of Gualala Lodge, No. 221. The material will be first-class, judging from the examination papers.

We do not expect to increase very rapidly again till after election. The country must be saved or we would have no abiding place. It seems a little strange that it should need saving so often, but then it *does*, you see. This, we presume, accounts for the slowness and irregularity of some of our Recorders in sending in their monthly reports.

We may reasonably expect but one assessment for December, making 19 for the year, against 14 for last year, and 16 the year previous, an average of 16⅓ yearly. It is fair to presume that about 18 assessments per annum will be our future experience.

Several Degree of Honor Lodges are being talked of, and one for Sacramento has supplies ready for its institution. If the Degree were made beneficial, we should have faith that it would prove at least a partial success. This can be done at the next session of our Grand Lodge if the D. of H. Lodges will but unite in the effort.

Wellington's Improved Egg Food.—This compound has attained a celebrity as one of the chief factors among those engaged in raising poultry. It is cheap, keeps poultry in a healthy condition, and, as an egg producer it stands unrivaled. Bro. B. Wellington is also an importer and dealer in seeds, and agent for the Perfect Hatcher Co. Office and salesroom, 425 Washington street.

Bro. John Q. Adams, who, although now in the prime of life, was one of our pioneers, arriving in California in 1847. He was admitted to practice in the Supreme Court in 1872, and is known as an upright and honored citizen. As a candidate for the office of Justice of the Peace, in the coming election, he is worthy and we hope he will be elected.

The A. O. U. W. is the oldest of all mutual aid societies, and also the best. Its experience has taught it how to shun pitfalls and dangers, and its membership is composed of carefully selected lives. Large as our numbers are there ought to be great accessions received this winter. See to it brothers that it is done.—*Overseer.*

Calculating that the average smoker pays at least 25 cents a day for cigars, it would cost him $7.50 per month or $90 a year. This amount would much more than pay all the dues and assessments in the A. O. U. W. for two years, and insure the family $2,000 in case of death.

Bro. Chas. S. Ruggles, one of our prominent Workmen, has received the nomination for Superintendent of Streets. He is an old resident of this city, and has a reputation of honesty and reliability. Those who know him best believe him to be the right man for this responsible position.

Brother David Wilder, the present County Clerk, has made one of the best officers that has ever been in this department; courteous, affable and attentive to his duties, with an able corps of deputies, his administration has been marked by efficiency and economy. He is now a candidate for the same office.

Still Alive.

Office of the Supreme Secretary of Knights of the Golden Rule, Cincinnati, O., Oct. 20, 1882

Ed. Watchman:—The wish was evidently father to the thought with the editor of the St. Louis *Overseer*, when he wrote the article on the Knights of the Golden Rule which you copied, I believe thoughtlessly. That article says the K. G. R. had collapsed, and the heart of the editor is touched to the extent of some considerable tears. Well, if the K. G. R. is dead, why does it still exist; and why is it not buried? Does a man who is dead continue in the even tenor of his way; work, eat and perform other physical and social functions, the same as he did before he died? Where is the difference between the death of the one and the other? If it be true that the K. G. R. has collapsed, then is it not the most active, and powerful defunct organization ever known? It has over 200 live Circles manned by over 6,000 loyal and live members, men and women, and every day its ranks are being recruited from the material of society. Is that an evidence of death and decay? Hardly. The plain truth is that the K. G. R. is still doing a thriving business at the old stand. It is here and intends to stay.

The noise made by the enemies of the beneficial Orders is generally based upon an exceptional death rate, and I regret to say also that it almost invariably originates among the chonic growlers and marplots in the organizations. The death rate in the K. G. R. was unusually heavy for several months and hence the advent of the "kicker." The Supreme Commander, with a view of paying all just claims on the Order, without oppressing the membership, passed a relief law the same as the A. O. U. W. did under similar circumstances—to meet its liability on yellow fever deaths, some of which are yet unpaid.

The K. G. R. is not only alive, but flourishing and gaining in popularity and members every day. Its system is held to be the best of all, and whether it is or not it serves its purpose, and that is enough. Yours in C. H. and P., T. J. Smith,
Supreme Secretary. K. G. R.

The above letter was called forth by an item which appeared in the Watchman of October 1st. This item we copied from the St. Louis *Overseer* and was to the effect that the organization known as the Knights of the Golden Rule was an the eve of a collapse. In that item we stated that the Order had over 250 Castles and a membership of about 8,000. The Supreme Secretary corrects our figures, lessening them materially. In the comments on the item taken from the *Overseer* we ventured the assertion that there were too many organizations in the field, a fact which the members of most fraternal societies will recognize. There was no reflection in this assertion on any particular society. It was simply called out by the statement that this one was on the eve of collapse. That the statement was incorrect we are pleased to hear, and on no less authority than that of the Supreme Secretary of the Order. A paragraph of his letter takes us to task for printing the item and the comments to which we refer. There was no intention of doing any injury to the K. G. R. at all; we simply chronicled what was supposed te be a fact, taken from one of the fraternal organs.

As to the comments to the effect that there were too many orders, and that some of them were evidently devised for the purpose of obtaining good fat salaries for leading members, no one familiar with secret societies will contradict. As soon as a society gets to have a prominent position it is well known that there are certain men always connected with it who endeavor to foist themselves into positions of prominence and profit. It is the duty of all well wishers of organizations to guard against such persons, and to endeavor to open the eyes of thoughtless ones to the evils which may spring up from improper men having control. A general statement to this effect is applicable to all societies, and is by no means a reflection on any one of them. That it is so is well understood by everyone who has ever given any attention to the subject whatever. People who have given the matter any thought know perfectly well that there are already too many fraternal organizations in the field. Some of them are weak, and it requires the greatest efforts on the part of their promoters to keep the organization in running order, and there is not much doubt that within the next five or six years a certain proportion of the societies now in existence will fall by the wayside. Those which are managed economically and faithfully for the interests which they are intended to serve will be the ones which will survive. Whatever weak points there may be in the constitution of these societies gradually develope themselves in course of time, as circumstances bring to the front inherent defects. When these defects are discovered, if not immediately remedied, they work injury to the whole Order, and if it is found that there are so many defects as to bring the Order to a different plan from that on which it was organized, then it may be that its members will find it to their advantage to drop it and take up with stronger and healthier organizations already in existence.

The Grand Master Workman of New York has decided that a trace of negro blood excludes from membership.

Our Recent Immigration.

Although there has been no rush of immigration to California of late, our population has throughout the entire year been steadily increased by accessions from abroad; and, what is more to the purpose, the people arriving here have for the most part been of the right kind and come from the right quarter, being composed largely of emigrants from the rural districts of the old world or from the Eastern States of the Union. They would in any country constitute a desirable element of the population, and to us, who want tillers of the soil and permanent citizens, they are especially valuable, since the most of them intend to engage in this branch of business, and they all come to abide. These people want homes and are in no sense adventurers. One immigrant of this kind with his family, or even if he is alone, is worth more to the State than a score of gold-seekers, such as came here in former times with the purpose of amassing a fortune as speedily as possible and then going elsewhere to spend it.

For individual miners there is not much to do, unless they are willing to work by the day or are desirous of prospecting. In the older established mining towns, where the mines are being worked, skilled men can get employment. New men coming here to prospect, however, will do best, perhaps, in the south-eastern part of the State. Mono, Inyo and San Bernardino counties offer fields for prospecting. In the northern part the land is more settled, though there is still room, of course, to prospect. Prospectors, however, must expect to have means for maintainance aside from their occupation.

For grain raising or purposes of general farming it makes but little difference what part of the State a man locates in, so long as he keeps in or to the westward of the lower foothills of the Sierra Nevada, and within easy reach of market; though, even here, certain localities will, on account of soil, water, etc., be found especially well fitted for particular branches of the business. The climate of the great interior valleys, and even at the same altitude throughout the coast tier of mountains, is much the same from one end of the State to the other, the mercury in winter ranging only a few degrees lower at the upper end of the Sacramento valley than it does in San Diego county, 500 or 600 miles farther south. Garden flowers bloom throughout the winter and oranges can be grown in the open air in either of these localities. The settler, so he avoids the extreme northern and the mountain and desert districts of California, will find no great choice between other portions of the State; coming from almost any other part of the world, to him both our winter and summer climates will be likely to prove acceptable.

In commencing living in California, it is possible for the beginner, if his means are limited, to economize in the matter of building to an extent not practicable in countries having long, cold winters and rainy summers. A very cheap sort of house can here be made to do for a few years at first, scarcely any barn at all being needed. The poor man can, if needs be, make shift to live in a board shanty or a canvas covered hut, a shed, closed only on the sides from which the heavy rains come, affording all needed shelter for his cows and work animals. Some of the largest land owners and most prosperous farmers in the State began their careers in this way, having lived with their families in the covered wagon with which they crossed the plains or in a tent pitched beside it for a year or two at the start.

Paradise Mills.—Flour manufactured at Modesto, of which Bro. J. H. Congdon, 34 California street, is the sole agent, has attained a very high reputation for family use. The demand has increased to such an extent that regular shipments are made to this house of from 20 to 40 tons a week.

The A. O. U. W. has 110,195 members. California numbers 14,738. New York is 738 ahead of us, and Pennsylvania 3,000 behind. If 8 in every 1,000 die annually, there will be 880 deaths, which calls for $1,760,000, requiring an assessment of $16 from each member.

Bro. Alex. Badlam, who has held the office of City and County Assessor for a number of years, has been renominated for this responsible position. His long experience and successful administration in the past are cogent reasons for his re-election.

C. S. Hoffman, P. M. W., who was married something over a year ago, has a new addition to his household. It is a daughter. He is now Financier of Memorial, No. 174, and is recognized as one of the efficient officers of our organization.

Bro. D. Hicks, one of our solid tax-payers and senior member of the house of D. Hicks & Co., has been nominated for Supervisor of the Sixth ward. He is an honored citizen, and no doubt will make, if elected, a reliable and independent Supervisor.

The A. O. U. W. is growing rapidly. We expect that within five years there will be more than 250,000 members of the Order. And still there will be room for more.

Louis F. Holtz, one of our genial and honored merchants, has been nominated for the office of Assessor. In all that fits a man for this responsible position he is well qualified.

Resolutions of Respect.

[In Memoriam.]

At a regular meeting of Elmira Lodge, No. 89, A. O. U W., held October 7th, 1882, the following resolutions were unanimously adopted:

Whereas, It has pleased the Supreme Master Workman of the Universe to remove from our midst our late Brother, Wm. J. George; and

Whereas, It is but just that a fitting recognition of his many noble traits of character should be had, therefore be it

Resolved, That while we bow with humble submission to the Most High, we do not less mourn the loss of our brother who has been taken from us.

Resolved, That in the death of William J. George we lament the loss of a true M. W., and a faithful, active member of our Lodge, whose utmost endeavors were exerted for its welfare and prosperity—a friend and companion who was dear to us all.

Resolved, That the Charter of the Lodge be draped in mourning for 30 days.

Resolved. That the heartfelt sympathy of the Lodge be extended to his bereaved family in their sore affliction.

Resolved, That an engrossed copy of these resolutions be sent to the Pacific States Watchman and *Dixon Tribune* for publication, and that a like copy be presented to the family of the deceased brother under seal of the Lodge, and further that they be written in the Journal of Proceedings of this Lodge.

Submitted in C. H. & P., by
N. B. Bassett, P. M. W.

[In Memoriam.]

Hall of Spartan Lodge, No. 36, A. O. U. W., San Francisco, Oct. 20, 1882.

Whereas, It has pleased Almighty God, the Supreme Master Workman of the Universe, to remove from our midst our Brother, John Godsil, and while we submit to his decrees without murmur, we at the same time regard it our duty to testify to the many noble qualities possessed by our late brother, as well as to the high esteem in which he has been held by us. It is therefore

Resolved, That in the death of Brother John Godsil this Lodge has lost one of its most faithful members, his wife a kind and good husband, and this community an upright and honorable citizen.

Resolved, That to his widow we extend, in this, her hour of sorrow, our heartfelt sympathy, with the assurance that we shall be ready, at all times, to aid her with fraternal advice and support to the best of our ability.

Resolved. That these resolutions be spread on our minutes, an engrossed copy, signed by our Master Workman, forwarded to the widow of Brother Godsil, and also that a copy be furnished for publication in the Pacific States Watchman.

Geo. Jordan,
H. Shoemaker,
Wm. Wilson, } Com. on Resolutions.

Painting on Silk.—Some years ago an artist of Florence employed a method of painting on silk and other fine fabrics in such a way that the surfaces of the colors were not damaged when folded or rubbed. His paintings, even when subjected to tests far more severe than such crumpling as ordinary wear would produce, are said to retain their appearance unchanged, the colors remaining as bright and the surface as smooth as when first laid on by the brush. The method is now no longer the complete secret it was, as the medium is at present manufactured for amateurs, though protected by patent. An example, consisting of groups of flowers painted on blue satin by this Adolfi process, shown by Mr. Emil Dunki, has been subjected to hard rubbing, without there being any appearance of injury to the painting. Some Italian artists have tried the medium for oil-painting on canvas.—*Land and Water.*

Grading on a Volcano.—The Idaho *Statesman* says: "The activity of volcanic action in the Snake river lava beds, near the line of the Oregon Short Line railroad, is driving many of the graders from the work. In an area of about 22 square miles, at short distances apart, smoke and flames of peculiar odor, color and shape issue from the chasms and seams in the lava. The irritating sulphurous vapors in themselves cause many to quit work, while the unusual agitation of the boiling springs and the general commotion all over the fields of lava has caused a superstitious fear to take hold of many of the railroad hands, and they are leaving the section terror stricken. The whole area has the appearance from a distance of being on fire."

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation etc., to the publishers of this paper.

PALMER'S,

726, 728 and 730 Market Street, S. F.

New Department added, with a full line of Gents' Furnishing Goods. Our usual variety of Novelties in Millinery and Fancy Goods and Ladies' Furnishing Goods.

Kid Gloves a Specialty.

FURNITURE.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2,500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs one and a half miles from the center of the Redlands tract, and a depot will be established at once for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide. The cross streets are 60 ft. wide.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.

Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and watergates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have moved upon the tract are credited to Redlands, and the others to localities where they now reside:

Total sold	1,004

Judson & Brown (San Bernardino, P.O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast.

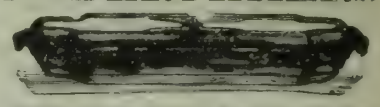
The best of



Through Dewey & Co.'s Scientific Press Patent Agency.
No. 252 Market Street. Elevator, 12 Front St., S. F.
Telephone No 658.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free. DEWEY & CO., PATENT AGENTS.

Embalming and preparing bodies for shipment a specialty.

Good Land and Sure Crops.

There has been steady and tolerably rapid advancement made in the growth of a majority of the towns in Colusa, Butte, Tehama and Shasta counties. Especially is this so in the agricultural districts where the land produces at least fair crops in all seasons—wet or dry—as does the land on the Reading Ranch. Those looking for homes in California where diversified farming will pay every year; where wood and water are plenty and easy to be obtained, and other desirable advantages are to be had, should address the proprietor of the Reading Grant.

Some 14,000 out of 26,000 acres of the grant remain for sale at comparatively low rates, in quantities to suit purchasers, on easy terms. Prices range from $5 to $30 per acre. The tract is between two and three miles wide, with the Northern Division of the C. P. R. R. passing centrally through its entire length. Send postage stamp for free circulars containing information about Shasta County and these lands, to the proprietor of Reading Ranch.

EDWARD FRISBIE,
Anderson, Shasta County, Cal.

A New Edition, over 100 pages, profusely illustrated, with handsome, life-like illustrations of the different varieties of poultry and live stock. Price by mail, 50 cents. Address PACIFIC RURAL PRESS Office, San Francisco. January, 1882.

About Obtaining Patents.

Patents Are Virtually Contracts

Between inventors and the public. The consideration flowing from both parties to the contract is expressly fixed by statute. The Government requires the following consideration in every case: First, that an applicant for a patent shall disclose a new and useful improvement, of which he is the first and original inventor. Second, that the invention has not been patented, or published in a printed publication, prior to the date of his *invention*. Third, that the invention has not been in public use, or on sale, more than two years prior to his application for a patent. Fourth, that the invention shall be properly described and claimed in the specification forming a part of the patent. Provided an inventor complies strictly with these conditions, the Government guarantees that the inventor shall have the exclusive right to make, use and sell the thing invented for the term of 17 years.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. This question can often be answered gratuitously by us immediately on receiving full information of the invention, by reason of our long and extensive practice as patent solicitors and editors and publishers of first-class scientific and industrial journals during the past 20 years and over. When the question of priority of invention is not so readily to be determined, it is generally best to make what is termed a "preliminary examination," by searching through the patent office reports among the patents in the class to which the invention relates, and referring to our extensive patent library, containing compilations of special classes of American and foreign inventions, mechanical dictionaries, scientific encyclopedias, files of scientific and mechanical newspapers, and an immense number of patent publications by inventors of the Pacific coast, carefully filed by this office since 1860.

If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive for the small fee of $5 for the examination a verbal or written report showing definitely whereby his invention has been anticipated, thereby saving him further expense, and perhaps much time, useless delay, anxiety, etc.

To avoid all unnecessary delay, however, in securing patents at the earliest moment practicable, inventors will do well to forward a model, drawing, or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with $15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately, and forwarded to the inventor for his signature. When the inventor receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps to be taken.] When the patent is allowed, the inventor will be duly notified, and on sending the final Government fee of $20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretence of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give a case up as long as there is a chance to obtain a patent. The Agency charge is from $25 to $30, or sometimes more, if the invention is intricate or complicated, or requires much labor. Drawings cost from $5 upward, according to their number and the time employed; and, if a model is sent, the express charges upon this and the papers must be added. The total cost, in addition to Government fees, rarely exceeds $40, and for this we do all we can without appealing the case.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients sufficient to make the experiment, and also of the manufactured article itself must be furnished.

Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are considered more satisfactory to the Patent Office than the old and more cumbersome system of storing up an immense bulk of almost numberless models.

Drawings or sketches sufficient to illustrate clearly the invention, with a sufficient description to enable us to make a full set of perfect drawings for the Patent Office is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it for our use.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or very poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sales had the invention been fully portrayed by artistic and skillfully executed drawings. Again, when patents of this character are brought into court, the uncertainty and ambiguity of the drawings enable the opposing experts to mystify the judges as to the construction or combination of parts intended to be covered by the patentee. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken that the invention is fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

In the Patent Office

The application is assigned to the Examiner having charge of the class to which the invention relates. The case must then take its turn with others in the order of filing, and in due time is carefully examined to test the novelty of the invention. If the Examiner fails to find anything that anticipates the invention, a patent is immediately allowed, provided the specification and claims are drafted in proper form. Should the Examiner find a prior patent which, in his opinion, anticipates one or more of the claims in the application, a letter of rejection is sent to the attorney in charge of the case; and if the attorney coincides with the views of the Examiner, the claims rejected are erased. In preparing applications for patents, an attorney should be careful to familiarize himself with the class of inventions to which the application pertains, so that the specification and claims may be drafted as nearly perfect in the first instance as is possible. This course saves much time in prosecuting the application to a patent.

When claims are improperly rejected on patents which do not anticipate the spirit or wording of the claims, proper steps are immediately taken to convince the Examiner of his error. This is done, in most part, by personal arguments, as the differences in construction, operation, function and results are more readily discovered and appreciated by an oral presentation of the facts than can possibly be done by relying solely on written arguments. In order that the Patent Office record of the patent shall be complete, an oral argument is generally supplemented by a manuscript brief, that others, in examining the files at any future time, may clearly comprehend the position taken by the Examiner and attorney in prosecuting the case to patent.

In addition to our own personal attention to the interests of our clients here, we have, for over 12 years past, had constantly in association with us in Washington, one of the soundest legal counselors and ablest of practitioners in patent business in this country, who carefully attends in person to our business at the Patent Office and has attained success in a most marked degree.

Perfect Claims.

The value and force of a patent are dependent on its claims. A patent may disclose to the public the most important and valuable invention, and yet the claim be of such meager scope that the patent is actually worthless. When the claims of a patent are so loosely drafted that infringers can flood the market with improvements, differing from the improvement disclosed by the patent only in slight changes in construction and arrangements of parts, such a patent is valueless to the owner, as it fails to afford him that exclusive and complete protection guaranteed by the Patent Law. Hence it is that the greatest care, skill and perseverance are required, first in properly drafting the claims in the first instance, and, second, in prosecuting the application before the Patent Office, and maintaining the rights of the inventor to claims as broad and sweeping as the invention will warrant. This latter is no easy task. The Examiners of the Patent Office serve in the capacity of attorneys guarding the interests of the public. It is their sworn duty to exercise the greatest care and watchfulness, that patentees do not secure claims of greater scope than they are justly entitled to. It is but natural that Examiners are sometimes in error as to just what scope should be accredited an invention. Although the Examiners act under honest convictions in cases where they refuse an inventor his just rights, yet it is the duty of the attorney to maintain the claims of his client, if he is convinced that they are just and proper. To succeed in this requires the display of tact, firmness and ability; and when the Examiner is made to see that the inventor is honestly and fairly entitled to the claims which have been rejected, he will almost invariably recede from his former action, and allow the case.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. (continuously editors and publishers of the MINING AND SCIETIFIC PRESS, nearly from its early commencement in 1860) offer comparatively far better facilities to the local inventors of the Pacific States and Territories than are possessed by any other agents in America. Members of the firm give personal attention to the applications entrusted to their care. They have been longer in practice in patent soliciting than most agents who are still personally engaged in the business. They have secured more U. S. and foreign patents in the past 20 years (with very few exceptions) than any other firm still existing. Their practice has been so successful and long continued that the great majority of inventions on this side of the American continent have been patented through their agency, thus affording them great and valuable experience, by thorough information of the true principles and points of novelty in the inventions, whether general in character or peculiarly local to this coast.

The extensive business combination and experience of this firm is undoubtedly one of the most fortunate in existence for affording inventors prompt and reliable advice and the best possible facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention in one or more of our influential and reliable newspapers, affording just the circulation that is best calculated to widely inform the class of readers most specially interested in the subject of his invention.

Saving of Time, Etc.

Inventors on this coast will find that owing to our familiarity with inventions and local affairs of this coast, we can more readily and fully comprehend their wants, and thus save much of the time ordinarily consumed in preliminary writing back and forth when distant agencies are employed.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee is $10 additional.

To enable us to prepare caveat papers, we only require a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves, or for them by other agents), who desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so.

DEWEY & CO.,

GEO. H. STRONG. W. B. EWER. A. T. DEWEY.

A NEW NORTH AMERICAN ROSE.—Dr. George Engelmann describes, in the *Bulletin of the Torrey Botanical Club*, a new species of rose that appears to present peculiar botanical and horticultural features. It was discovered by a party of botanists, consisting of Dr. Parry and Messrs. M. E. Jones and C. G. Pringle, while they were riding along a road skirting the shores of All Saints' bay, in Lower California. Forming, as it did, a most conspicuous and agreeable feature in the arid landscape, with its finely-divided foliage and showy pink or white flowers, it at once attracted the attention of the whole party. It has been named *Rosa minutifolia* by Dr. Engelmann, who describes it as "a most striking and lovely species, distinguished from all other roses by its minute deeply-incised leaflets." The species is quite peculiar among its American congeners, and even among the roses of the old world, so that it is difficult to determine its true position. As seeds have recently been collected, we may hope to soon see the plant in cultivation.

ON THE EFFECTS OF COMPRESSION ON THE HARDNESS OF STEEL.—Some interesting experiments have recently been made at the iron works of St. Jaques, at Montluson, France, confirmatory of the results already reported by M. Darnos to the effect that compressed steel showed a greater degree of hardness than that metal produced without compression. In the experiments above alluded to, further and confirmatory results have been obtained. Steels have been analyzed, compressed and uncompressed, and containing different proportions of carbon. The proportion of combined carbon, as regards the total carbon, has always been found to be greater in the compressed than in the non-compressed steels. In some experiments made at St. Jaques on elongated shot, the samples being taken from four different points of depth, the results showed a mean of .585% of combined carbon in the compressed shot, while but .49% was found in the uncompressd. The same results, however, were obtained by sudden cooling in the ordinary process of hardening. Hence, it is inferred that compression produces the same physical effects in steel that tempering does in the ordinary manner of hardening.

SPIRITS of turpentine are now made from sawdust and refuse of the sawmill. It is extracted by a sweating process, and yields 14 gallons of spirits, 3 to 4 gallons of resin, and a quantity of tar per cord. The spirits produced have a different odor from that produced by distillation.

House Furnishing.

Indianapolis Chair Man'fg Co.

How to Predict Frosts.

A pamphlet giving directions how to foretell frost has been prepared by Lieutenant James Allen, of the Signal Service, under the direction of General W. B. Hazen, chief signal officer of the United States army, and published by authority of the Secretary of War. The information it gives is of great value to horticulturists and others who live at places not reached by the bulletins of the service giving warning against frosts. From the pamphlet referred to are taken the following extracts on the

Hygrometry of the Atmosphere:

At all temperatures, even the lowest, moisture exists in the atmosphere in an invisible state; the air is never absolutely dry. The intervals between the particles of air are partly filled with the vapor that is constantly rising from the earth. This capacity of the air for moisture has a limit, and when this is reached the air is said to be saturated. This vapor is not sustained in the air like water in a sponge, nor does it float in the air like small particles of dust, but it penetrates between the particles of the permanent gases which compose the atmosphere, and sustains itself precisely as they do. A rise of temperature increases the capacity of the air for moisture. On the other hand a fall of temperature diminishes the capacity. But the capacity of the air for moisture increases more rapidly than the temperature.

Thus, air can contain at 30° the 160th part of its own weight, at 59° the 80th part, and at 86° the 40th part, the law being that for every increase of 27° the capacity is doubled.

The Amount of Vapor in the Air

May be measured with great accuracy by noting the temperature at which moisture begins to be condensed on a cold vessel. The moisture thus deposited is called dew, and the temperature at which this deposition begins is called the dew point. The dew point, then, may always be determined by cooling a metallic vessel until dew begins to appear upon its surface, and noting, by a thermometer, the temperature of the vessel. Thus, a thermometer is placed in a polished metal cup, and small pieces of ice are dropped in until moisture appears on the surface of the cup. At the instant this occurs the thermometer is read. The temperature indicated is the dew point. In this experiment, however, the results are approximate, and, as it requires considerable time, various contrivances have been proposed to faciliate it, but one of the best methods is that of

The Dry and Wet Bulb Hygrometer.

This hygrometer consists of two mercurial thermometers, which, being placed side by side, would indicate the same temperature. The dry bulb is a common thermometer, intended to show the temperature of the air. The wet bulb is also a common thermometer, but having its bulb covered with a piece of thin muslin, from which passes a few threads of darning-cotton or narrow strip of muslin into a small vessel containing rain water. Water rises by capillary attraction from the vessel and thus keeps the muslin constantly wet. When the air is dry, evaporation from the muslin proceeds rapidly, and, on account of the heat lost in this way, the wet bulb indicates a lower temperature than the dry bulb; when the air is damp, evaporation is slower, and the difference between the two thermometers becomes less, and where the air is completely saturated, evaporation ceases, and the two thermometers indicate the same temperature.

Necessary Precautions.

To keep this instrument in working order, one or two things require special attention. The thermometers must be alike, for if one is filled with mercury and the other with spirit, or if they contain different quantities of the same fluid, the readings will be vitiated. All starch or foreign matter should be washed out of the thin muslin covering and the cotton wicking. Rain or distilled water, absolutely pure, should be used. The muslin ought to be changed frequently, and should never be touched with the finger, otherwise it will get slightly greased and capillary attraction will be interfered with. The bulbs of the thermometer should project one and a half or two inches below the scales The thermometers should be a little apart from each other, and the vessel containing the water as far as possible from the dry bulb. The thermometers should face the north, and should always be in the shade. They should be at least a foot from the wall of any building and about ten feet from the ground, and exposed to the air where the circulation is unobstructed. They should be protected against the heat reflected by neighboring objects, such as buildings or a sandy soil, and should be sheltered from the rain. If the dry bulb should become moistened by rain the bulb should be carefully dried about five minutes before making the observation, since drops of water, by evaporation, would lower the temperature of the mercury in the bulb. All instruments should be of known reliability and their accuracy determined by comparison with standards before being used. Accurate instruments will be procured by the Signal Office for observers at cost price; they will be compared with standards at the office and correction cards will be furnished free.

Cost of a Hygrometer.

A complete hygrometer costs $7. A minimum thermometer is a very useful auxiliary to the above instrument. It costs $5. To facilitate the taking of observations, Lieut. Allen gives in his pamphlet a table showing the dew point at the various temperatures, as indicated by the dry bulb, ranging from 30° to 80°, with the difference in 13 readings, between the wet and dry bulbs. There are 15 columns of figures. The left-hand column is the different temperatures of the air, as read from the dry bulb, ranging from 30° to 80°. The top row of figures gives the difference between 14 readings of the wet and dry bulbs, ranging from 0 to 13 The dew point is determined by the following rule: Subtract the reading of the wet bulb from that of the dry bulb; find the temperature of the dry bulb in the left-hand column of the table, then in the line opposite that figure, and in the column under the figure at the top of the table indicating the difference between the readings of the wet and dry bulbs will be found the dew point. The table (which, for want of space, cannot be reproduced here) simplifies the operation very much.

The Ascertainment of the Dew Point

Is of great practical importance, particularly to horticulturists, since it shows the point near which the descent of the temperature of the air during the night will be arrested. For when the air has been cooled down by radiation to this point, dew is deposited and latent heat is given out. The amount of heat thus set free being great, the temperature of the surrounding air is immediately raised. The same process continues to be repeated, and thus the temperature of the air, in contact with plants and other radiating surfaces, may be considered as gently oscillating about the dew point. For, if it rises higher, the loss of heat by radiation speedily lowers it. Thus the dew point determines the minimum temperature of the surface of leaves on the ground during the night. The minimum temperature in the instrument-shelter would be higher than this. This suggests an important practical use of the hygrometer. If the dew point be ascertained by it, the approach of low temperatures or of frost may be foreseen and provided against. Thus, suppose on a fine clear day, towards evening, that the dry bulb is 50° and the wet bulb 40°, the dew point at the time is therefore 22° F. Frost on the ground may then be predicted with certainty, and no time ought to be lost in protecting such tender plants as may be exposed in the open air. If, on the other hand, with a sky quite as clear, the dry bulb is 50° and the wet bulb 47°, the dew point being thus 43°, no frost need be feareed.

Assuming the sky to remain perfectly clear of haze or clouds, the raising or depressing of the dew point during the night (usually with a change of wind) are the only circumstances that can happen to interfere with the predictions founded on the hygrometer. Frequently the presence of a haze at high altitudes during the night prevents the radiation of heat from the earth, and thereby the frost which otherwise would have occurred.

Hoar-Frost.

Hoar-frost is formed under the same circumstances as dew, with the exception of a lower temperature. When the temperature of the surface of plants falls below 32° the moisture of air is condensed upon them in the solid state, and forms a layer of snow crystals like spongy ice. Hoar-frost therefore is not frozen dew, but the moisture of the air is deposited in the solid form, without having passed through the liquid condition. Hoar-frost, like dew, is deposited chiefly upon those bodies which radiate heat, such as plants and the leaves of vegetables, and the deposit is made principally on those parts which are turned toward the sky. Since plants sometimes become cooled by radiation from 12° to 15° below the temperature of the surrounding air, a frost may occur, although a thermometer a few feet above the ground, in an instrument-shelter may not sink to 32°. During a clear and still night, when a thermometer six feet above the ground sinks to 36° a heavy frost may be expected; a slight frost may occur when the same thermometer sinks only to 47°. Whatever prevents the radiation of heat serves also to check the formation of hoar-frost. During the cold nights of spring, plants which are sheltered by trees are less liable to be injured by frost than those which are fully exposed, and a thin covering of cloth or straw will generally afford entire protection. A garden may frequently be saved from injury by kindling a small smudge fire, which will envelop the plants in a cloud of smoke. Fogs and clouds also protect vegetation from the effects of frost.

Precautions in Reading Thermometers.

To read a thermometer accurately requires some little care.

First—The eye must be exactly at the level of the reading, if the thermometer is vertical; and in all cases must be so situated that a line drawn from the eye to the top of the column would be perpendicular to the column. If the graduation is not on the tubes, and the eye is above the top of the column, however little, the reading will be too low, and vice versa. This is a point frequently neglected by careless observers.

Second—The thermometer must be read quickly, and the face and head must not be very near it; otherwise it will be affected by the warmth radiated from the body.

P. M. Fisher, P. M. W. of Mission Lodge, has been nominated for Superintendent of Schools for Alameda county. The well known position he occupies as an educator and teacher seems to point to him as the right man for the place.

A Difference in Electric Currents—Some Not Dangerous.

Mr. Ladd, of the District Telegraph Co. of this city, in a recent letter to the *Bulletin*, while speaking of the difference in electric currents, says:

Every electric current, however produced, has two qualities: First, "intensity," which we denominate "electro-motive force" or the power of overcoming the resistance offered to its passage through conductors; second, "quantity," or the volume of the current generated without regard to its "intensity." For example: A stream of water an inch in diameter, with a fall or pressure of 100 ft. in a mile, will run at the same speed (friction disregarded) and press against any obstacle with the same pressure as the Mississippi river with the same fall or pressure. In the Edison system of lighting by incandescent lamps the circuits are so arranged that the "intensity" of the electric current generated for one lamp is sufficient for all the lamps in the district, regardless of the number, but the "quantity" or volume of a current must be in proportion to the number of lamps. Therefore the "intensity" of an Edison current is fixed at 110 "volt"—the "volts" being a term used to indicate the electro-motive force of a current. Somewhat as "pounds" are used to indicate the pressure of steam or water, 110 "volts" is only about the force of the strongest current used on the Western Union wires, and the shock would be no greater. Indeed, Mr. Edison has frequently taken the whole shock from his largest generator of 250 horse-power without the least personal injury. But the current used to operate "arc" lamps of the standard size used in the streets of San Francisco and other cities is from 46 to 60 "volts" *to each lamp*, and as 40-light generators are generally used, 40 lamps are placed upon each circuit and the "electro-motive" force on such a wire is therefore from 1,840 to 2,400 "volts;" 1000 volts is sufficient to produce instantaneous death, and where the current is transmitted in waves, as is the case, practically a smaller number of volts would be fatal. The British Parliament has recently passed an act prohibiting the introduction into buildings of any electric current exceeding 300 volts, within which limit no danger of fire or personal injury is apprehended. The San Francisco Electric Light Company, which is soon to introduce electric lighting in this city on a large scale, will use the Edison current, which will consist at most of only 110 volts, which is only equal to the strength of the current used by the Western Union Telegraph Co., and is perfectly harmless.

The Gulf Stream.—Commander Bartlett, of the English Coast Survey, has been investigating the Gulf Stream, and last week at Montreal he gave some of the results of his work. He made havoc among certain generally received ideas concerning that famous current, which, he says, does not flow out of the Gulf of Mexico, nor over a bottom channelled with ridges and valleys parallel with the Appalachian system. He says that there is a wide plateau extending along the coast from the Bermuda Banks, over which the Gulf Stream flows, sweeping it clean to its hard coral bottom. Beyond this the bottom slopes rapidly downward, and is oozy with the wash from the plateau. The stream is not a river of warm water flowing over cold, and the Arctic current does not run inside. This will be all new to most people, and especially to those whose ideas of the Gulf Stream are indefinite anyway. Perhaps a fact which will interest these people most in connection with the matter is the tribute Commander Bartlett paid to Yankee ingenuity at the meeting referred to above. Dr. Carpenter having expressed his admiration of the work added that it pleased him to know that the results were obtained with British instruments. To this Commander Bartlett replied that Sir William Thompson did invent an apparatus and kindly forwarded it to the Coast Survey, but it would not work. Yankee ingenuity then invented an attachment by which it was made so efficient that soundings of 3,000 fathoms can be made in 30 minutes and without deflecting more than a fathom from the perpendicular.

Miocene Man.—Grant Allen, an English evolutionist, gives this imaginary picture of our supposed ancestor: "We may not unjustifiably picture him to ourselves as a tall and hairy creature, more or less erect, but with a slouching gait, black-faced and whiskered, with prominent prognathous muzza, and large, pointed canine teeth, those of each jaw fitted into an interspace in the opposite row. These teeth, as Mr. Darwin suggests, were used in the combats of the males. His forehead was no doubt low and retreating, with bony bosses underlying the shaggy eyebrows, which gave him a fierce expression, something like that of the gorilla. But already, in all likelihood, he had learned to walk habitually erect, and had begun to develop a human pelvis, as well as to carry his head more straight on his shoulders. That some such animal must have existed seems to me an inevitable corollary from the general principles of evolution and a natural inference from the analogy of other living genera."

Brother Wm. Schlothan, proprietor of the Potrero Ranch Dairy, supplies pure country milk at the lowest rates. We recommend this dairy to families who wish a first-class article of milk. His depot is at the corner of Third and Howard streets.

The Steam Engine Doomed.

Whatever else may survive in the future, Dr. Siemens is certain that the steam engine is doomed. Its fate is first to be confined to the driving of large dynamo machines, which will distribute force at present supplied by a myriad small and wasteful steam engines, and then to be superceded altogether by the gas engine. Gas and electricity may be mutually hostile, but they are to unite their forces in order to exterpate the steam engine. The unpardonable sin of the steam engine is waste. Even the best of them consume two pounds of coal per horse-power per hour; whereas, says Dr. Siemens, when the gas producer has taken the place of the dangerous steam boiler, it will not take one pound of coal to develop one horse power for one hour. But before gas banishes steam it will supercede coal as the agent for the development of steam. A pound of gas gives forth exactly twice the heat of a pound of coal, and even this may be improved upon. To burn raw coal is to squander our inheritance. Dr. Siemens gave some startling figures to prove that the by-products of the coal annually used in gas making are worth three million sterling more than the coal used in producing them, without allowing anything for the value of the gas. Besides the products already realized, 120,000 tons of sulphur are now wasted every year, which may yet be converted into a source of income. By abolishing the use of raw coal, Dr. Siemens maintains that science, as with some magician's wand, will "banish the black pall of smoke which hangs over our great cities, and restore to them pure air, bright sunshine and blue skies."

Nor shall we even have to suffer as compensation from the multiplication of enormous gasometers. The coal will be converted into gas at the bottom of the mine—a prospect not altogether to be contemplated without alarm by the workers in fiery seams—and the gas carried by pipes wherever it is wanted. Electricity will also be made largely serviceable for the distribution of power. Even after allowing 50 % for loss in transmission, the gain is still enormous. The electric light will chiefly be confined to lighting public places. The gas light will hold its own as "the poor man's friend," and gas heating will become universal. Thus, in the near future, Dr. Siemens unfolds before our eyes a world in which there will be no smoke and no steam, and where coal will only be visible in the immediate vicinity of the pit. Electricity will light our streets, gas will cook our dinner, and driving power will be laid on by wire wherever it is wanted. There will be no pollution of rivers, for every waste product will be utilized, and the sulphurous fumes which have converted whole counties into scenes of dark desolation will be employed in making the wilderness to blossom as the rose, and in restoring fertility to our exhausted soil. In short, science at last will begin to banish all the manifold abominations by which the "black age" of manufactures has defaced the beauty of our land. It is not before time.—*Pall Mall Gazette.*

A New Test For Gold Leaf was accidentally discovered at the Farrell Venetian Art Glass Manufacturing Company's works, in Brooklyn. By the Farrell process the leaf is placed on the incandescent glass, which is then blown. The expansion splits the leaf into beautiful and fantastic forms, and the object is then fired. In using a guaranteed .999 quality of gold leaf the workman found that the expansion separated the gold from a copper alloy, and the object was ornamented with gold and a handsome green, the latter color being due to the oxidation of the copper.

Getting Rid Of Stumps.—In the early autumn or winter bore a hole one or two inches in diameter, according to the diameter of the stump, and about 18 inches deep. Put in it one or two ozs. of saltpetre, fill the hole with water and plug it close. In the ensuing spring take out the plug and ignite it. The stump will smoulder away, without blazing, to the extremity of the roots, leaving none but the ashes.

Indianapolis Chair Manufacturing Co.—Parties who have never visited this notable house have but a small conception of the magnitude and variety of goods appertaining to house furnishing that are kept in stock. They occupy four store-rooms, and have recently added one more, to make room for a fine display of desks, patent bed sofas and wardrobes. This firm is one of the leading and most reliable houses of this city, and goods of all kinds are sold at bottom prices.

Brother Joe Poheim, the popular tailor, has just received a fine line of domestic and imported suitings. If you wish a nobby suit, and at bottom prices, go to Joe Poheim, the artistic tailor.

Iron and Wood may be joined with the following composition: Fine Russian isinglass is dissolved in strong acetic acid (pyroligeneous acid) until the consistence of a strong firm glue is obtained.

Bro. L. B. Mastick, P. M. W. of Excelsior, has been nominated for Tax Collector. As one of our leading and responsible citizens, it seems meet and proper that he should hold this office, and we hope he will be elected.

In less than 36 days the Oxford mine, of Nova Scotia, has shipped over $13,000 in bullion, the ore averaging upwards of $40 per ton.

Smoke Consumption.

That much of the smoke nuisance complained of in cities might be avoided by care in "fixing," is shown by the following: Some time ago the city of Chicago enacted an ordinance, requiring that locomotives within the city should consume their smoke. This resulted in experiments with various devices and fuels, but chiefly in the enforcement of more careful firing. Suits were brought against some companies for creating a smoke nuisance, but these were recently dismissed on the ground that the companies had complied with the ordinance. The Chicago *Tribune* has inquired into the methods used and reported as follows:

"We are using one smoke-burner," said Superintendent Lyford, of the Chicago & Eastern Illinois, "and it does away with the black smoke to a great extent, but some still comes from the chimney. I watched the locomotive yesterday, and scarcely any smoke was to be seen. We are testing the burner, and if it works satisfactorily, we shall put it in all our engines. So far it is very satisfactory, but we are going to give it a thorough trial. We expect now that it will be a success."

"We are not using any smoke-burners," said an officer of the Burlington & Quincy, "nor have we changed our fuel. A compromise was effected with the authorities, and a man has been appointed to watch our engines and make complaints if too much smoke comes from them. The engineers and firemen have been instructed to be careful in firing. That is our remedy."

"There must be smoke to some extent," said Augustus Herrington, of the Northwestern," but there is no necessity for so much as to be a nuisance. We have demonstrated that careful firing is the remedy. Smoke-burners themselves are a nuisance. Our engineers and firemen have been directed to fire carefully, and if they don't do it they will be discharged. Prof. Paton examined our road and became satisfied that we were not violating the ordinance."

"We are using coke," said Mr. W. B Keep, Assistant Attorney of the Lake Shore & Michigan Southern. "It works all right, but is more expensive. Out on the road we burn soft coal. Every passenger locomotive has on 259 lbs. of coke when it leaves the depot, and that lasts until the city limits are reached. Coming in they take on coke enough at Forty-third street to get to the depot. The grates in the switch-engines which are running in and out all the time have been changed so that coke can be used, and that is the case, too, with the engines on the suburban trains. Now and then a freight engine runs in with soft coal, but the smoke nuisance has been done away with on our road."

A FORTUNE SAVED.—Twenty years ago a large manufacturing concern in England, running several mills and using about 50 steam boilers, commenced to burn anthracite screenings under their generators in their different mills. When they first commenced this process this fuel was purchased very low, as it was then a waste and drug. With the improvements made in combustion, its use has now become more general, and the price has advanced, so that the difference now is only about two dollars a ton. Now, allowing that this difference is all that has been saved from the start, and estimate a daily consumption of one ton of fuel per boiler, doing a duty of 300 days a year, we find an economy of between $500,000 and $600,000 over what it would have been if lump coal had been used. This concern is now changing its boilers to use this fuel by utilizing the waste gases with hot air on top of the fire. As there is estimated to be millions of screenings wasted at the mines every year, it is astonishing none of the large cotton mills adopt this fuel. There are several mills in Lowell, Lawrence and Manchester that burn from 12,000 to 28,000 tons of lump anthracite coal every year, while actual experience has demonstrated that the screenings when properly fired will make as much steam per ton as the best grades.—*Boston Journal of Commerce.*

LARGE ENGINES NOT ECONOMICAL.—The division of driving power has become an important matter of consideration with manufacturers. Many are replacing one large engine by two or three smaller ones, so that needed repairs may not close all the departments at the same time. It has been suggested that electricity would, before long, furnish the artificial light for manufactories; so that if one engine is stopped another might drive the machines for providing the light. As an additional reason in favor of this division of power, when occasionally only certain departments require over-time work, a small engine may supply the need and save the expense of running the shafting for the whole of the machinery.

DIMENSIONS OF STEAM BOILERS.—Different makers differ in their rules for dimensions of boilers. The following estimates, however, are safe: For each nominal horse-power a boiler should have one cubic foot per hour, one square yard of heating surface, one square foot of fire-grate surface, one cubic capacity, 28 inches flue area, 18 inches over bridge.

ANOTHER.—Edison has recently secured a patent for a device for raising or lowering the electric light at will. The new invention is called an "adjustable resistance," and is operated after the manner of a German student lamp. The light can, by a single touch, be raised to its full power or lowered to a mere spark. The cost of the device is $2.50 for each light.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in DEWEY & Co.'s SCIENTIFIC PRESS PATENT AGENCY, 252 Market St., S. F.

FOR THE WEEK ENDING OCTOBER 3, 1882.

265,306.—WATER, GAS, SEWER OR DRAIN PIPE—John P. Culver, Tucson, A. T.
265,490.—ROCK CRUSHER—A. G. & J. M. Dyer, S. F.
265,328.—SIDE-HILL PLOW—P. I. Knapp, Half Moon Bay.
265,331.—BRIDGE—Wm. L tell, Boise City, I. T.
265,321.—ARCHEN CIRDER—P. H. Jackson, S. F.
265,322.—VENTILATOR—P. H. Jackson, S. F.
265,445.—WRENCH—P. Potermund, Eureka, Cal.
265,461.—CLOTHES PIN—Thos. A. Sweet, Cambria, Cal.

FOR THE WEEK ENDING OCTOBER 10, 1882.

265,655.—ROTARY HARROW—W. T. Browne, Stockton, Cal.
265,769.—FEEDER FOR THRASHERS—M. C. Dillman, Orland, Cal.
265,671.—AIR BRAKE FOR CABLE R. R. CARS—W. W. Hanscom, S. F.
265,681—PIPE JOINT PACKING—O. M. Loveridge, Weaverville, Cal.
265,629.—WATER ELEVATOR—John Patten, S. F.
265,630.—APPARATUS FOR RAISING WATER—John Patten, S. F.
265,700.—FLOWER HOLDER AND STAND—Jos. Perkins, S. F.
265,718—CODLIN MOTH TRAP AND TREE PROTECTOR—Geo. W. Thissell, Winters, Cal.
265,938.—CAR COUPLING—Geo. W. Bedbury, Portland, Ogn.

FOR THE WEEK ENDING OCT. 17, 1882

266,009—SPOOL AND THIMBLE HOLDER AND THREAD CUTTER—A M Barrett, Ione, Cal.
266,093—TRACE BUCKLE—H. J. Butler, Independence, Oregon.
266,016—SHEEP HOLDING DEVICE—Clairessa B. Cook, San Francisco.
266,026—STEAM PUMPING ENGINE—W. M. Ferry, Park City, U. T.
266,029—DEVICE FOR OPERATING CABLE R. R. GRIPS—A. Grutter, S. F.
266,035—CAMERA ATTACHMENT—E. R. Higgins, S. F.
266,640—CLOTHES DRIER—J. H. McCanna, Fresno, Cal.
266,045—CLAW HAMMER—H. D. Morris, S. F.
265,934—FAN WHEEL—Wm. Schmolz, S. F.
9,374—TRADE MARK—G. N. Milco, Stockton, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS American and Foreign Patent Agency, the following are worthy of special mention:

CLOTHES-DRYER.—James H. McCanna. Fresno City, Cal. No. 266,040. Dated October 17, 1882. This invention relates to certain improvements in that class of clothes-dryers in which a number of arms diverge from a supporting center to which they are hinged or joined, and have lines extending from one to the other. These arms have usually short braces pivoted to them and meeting midway, the whole being supported upon a central post. This invention consists of diverging arms, the lower ends of which are hinged to a hub which slides loosely upon a vertical post, and their upper ends are united by particularly-arranged parallel lines upon which the clothes are to be hung. A second hub or cross is fitted upon a pin upon the top of the post, and short arms extend from it upward and outward until they meet the longer arms, to which they are connected by links. The angle of these short arms is more obtuse than that of the longer arms, and as the center or hub of the longer arms slides loosely upon the post the weight is supported by the short arms and their hub, and they then operate to keep the outer arms extended, and the greater the weight of clothes upon the lines the tighter they will be stretched.

COMBINED SPOOL AND THIMBLE HOLDER AND THREAD CUTTER.—Antonio M. Barrett. Ione city, Amador county, Cal. No. 266,009 Dated Oct. 17, 1882. This invention relates to a new and useful device, which is called a "combined spool and thimble holder and thread-cutter." It consists of a suitable spindle or shaft for receiving thespool, of a standard for supporting the thimble, of a cutter for severing the thread, and of a hook or pin for affixing the device in convenient position. These are the results of a construction as follows: A single wire isbent to form a cross above and an open base below, one end of the wire fitting into a hook on the other end at one corner of the base and forming the spindle for the spool. Upon the front of the cross above is soldered a wire, the upper portion of which is bent outward and receives one end of a small blade extending from the main piece. Upon the back of the cross is affixed a bent pin or hook, which sustains the device, and forms with the top of the cross a secure resting place for the thimble.

DEVICE FOR OPERATING CABLE RAILWAY GRIP.—Albert Grutter. S. F. No. 266,029. Dated Oct. 17, 1882. This invention relates to an apparatus for operating the grips of cable railways, so that more power may be applied to close the grip when required. It consists of a hand wheel and a pinion, the shaft of which is journaled upon the ordinary operating lever, so that the pinion may engage with the teeth of a rack formed in the lower part of the arc upon which the lever travels, so that the power of the wheel and pinion may be applied whenever desired.

CAMERA ATTACHMENT.—Egerton R. Higgins. San Francisco, Cal. No. 266,035. Dated Oct. 17, 1882. This invention relates to certain improvements in photographic apparatus, and it consists in the employment of a musical or other audible attachment and a movable eye-rest, with means of setting them in motion, and in connection with these, of a shutter which may be subsequectly opened by a pneumatic or other device, which also operates the eye-piece and the musical attachment.

SHEEP HOLDING DEVICE.—Clairessa B. Cook. San Francisco. No. 266,016. Dated Oct. 17, 1882. This device is principally useful for holding sheep while they are being sheared. It consists of standards having collars so hinged that they may be opened and clasped around the neck and hind legs of the animal, and thus hold it firmly while being operated upon. The animal is in a standing position and being held thus, is prevented from struggling while being sheared. It is intended to lessen the labor of the shearer.

IRON WORKING IN INDIA—The ancient inhabitants of India were remarkably advanced in the art of iron working. The famous iron pillar of the Kutab, near Delhi, indicates a skill in the manipulation of a large mass of wrought iron which could hardly be surpassed by modern foundries. The pillar is 23 ft. 8 inches in length, with a circumference of about 15 ft. at the base, tapering to about four feet just below its capital. Its total weight is over six tons. It is supposed by Mr. Ferguson to date from the year 400 of our era; and, if so, has stood exposed to wind and weather for nearly 15 centuries without signs of rust—an enduring monument to the skill of the old Indian iron workers.

Agents Now Wanted.

Extra inducements will be offered for a few active canvassers, who will give their whole attention (for a while at least) to our business. Apply soon, or address this office, giving address, age, experience and reference.

DEWEY & CO., Publishers,

No. 252 Market St., S. F.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
L. L WOODMANSER—Nevada State.
B. W. CROWELL—Los Angeles county.
L. WALKER—Butte, Tehama and Shasta counties.
E. A. WILLIAMS—San Francisco.

Extra Type For Sale

We offer Scotch brevier type, (same as used on this paper) for sale in any quantity from 100 lbs. to 1,000 lbs., for 25 cents per lb., if ordered soon. Also, several hundred pounds of nonpareil at favorable rates. The type is in good condition and is of a very durable character.

DEWEY & CO.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

THE YOSEMITE is strictly first-class and the leading hotel of Stockton. Prices moderate. JAS. CAVEN, Propr.

IMPORTANT additions are being continually made in Woodward's Gardens. The grotto walled with aquaria is constantly receiving accessions of new fish and other marine life. The number of sea lions is increased and there is a better chance to study their actions. The pavilion has new varieties of performances. The floral department is replete and the wild animals in good vigor. A day at Woodward's Gardens is a day well spent.

HOW TO STOP THIS PAPER.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the WATCHMAN'S progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tel whether the WATCHMAN has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the WATCHMAN family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the WATCHMAN.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies the best trade in this city.

Pay in Advance.

Our terms for subscription are in advance, and we desire no new names on our list without prepayment.

Shorthand Writer.

A young lady who can give the best of reference wishes a situation as phonographic reporter or amanuensis in a first-class newspaper, law or business office, on very reasonable salary. Writes a good hand and is accustomed to correspondence. Address W., Box 2361, S. F.

The California Honey Product, Past and Present.

In the California *Apiculturalist* for September J. G. Corey of Santa Pauly, Ventura county, makes a pointed reply to the estimates of the honey products of the State, put forth by Mr. McCaul, of New York, which we recently copied from an Eastern paper. He says:

The bee-keepers of California are now and then treated to some very amusing reports of their doings; for example, about two years ago there appeared in the English newspapers a statement that most of the bees in America were owned by the Thurbers, of New York; that they were farmed out in lots of 25 and 50 to farmers, who attended to them for a certain share or the product. This article was extensively copied by a great many American newspapers, who, without any knowledge upon the subject, were very easily "sniped." And now in 1882 comes Joseph M. McCaul, agent of Messrs Thurber & Co., and rushes over portions of the honey-producing counties of Southern California, and reports to *Bradstreet's*, estimating 90 to 100 tons as the honey crop the present year for Southern California. Ventura county alone has produced 110 tons this year, and certainly Los Angeles, San Bernardino, San Diego and Santa Barbara counties have produced some. The honey crop for California for 1878 was estimated by him at 360 tons, while the figures made by the Ventura Bee-keepers' Association for that year show that we produced 40 tons more honey in this county than he gave the entire State credit for.

The folly of these crazy reports ought to be a good lesson to parties seeking correct news, to look out in future and see that their reports come from some reliable source.

The yield the present season has been very light, and confined to warm locations quite remote from the sea coast, the warm canyons being most favored, and even in these localities the secretion did not appear until July. The statement of Mr. McCaul, as to the cause of the frequent failures to produce honey in this section, were frequent fires and pasturage of the bee ranges by herds of sheep. Our experience differs with this, as only one year is lost and the bee range is improved by fire. Then the sheep do very little damage to a good bee range, as the surface of the mountains is so rough that it produces no grass and is not approachable by sheep or any animal, except now and then a deer or grizzly bear. The true causes of our failure he did not discover.

In 1877 we had only 4.35 inches of rainfall, and, as a consequence, had no flowers to secrete anything. In 1878 our rainfall was over 20 inches. Cold weather continued until June, when favorable weather set in, and we produced over 200 lbs. to the colony that year. In 1879 we had nine inches rainfall, followed up with cold weather during the whole honey season; the entire country was a sea of blossoms, but lack of moisture and unfavorable weather prevented secretion, and we made no surplus. The year 1880 we had over 20 inches rainfall, but the weather remained cold so late that it was a good year for increase, but below an average for surplus honey. In 1881, with 12 inches rainfall and cold weather, notwithstanding our bee ranges were covered with bloom, we had no secretion of any importance during the entire honey season, and, as a consequence, made no surplus. The present year, with 10 inches rainfall and cold and unfavorable weather, with abundance of bloom of every kind, we had no secretion until after July 1st. Our bees did well in warm locations, and produced from one-fifth to one-sixth of a crop, taking the county over.

A careful review of the causes of our failures to produce honey every year will be found to be lack of moisture and unfavorable weather, and not frequent fires and herds of sheep.

The question of sowing seeds of honey-producing plants looks well on paper; but to the honey producer, who looks to the high, rugged, rocky and almost inaccessible mountains for his foliage, it looks very unreasonable. The bee-keeper who has rolling hills, with good soil, might cultivate honey-producing plants, but the bulk of the honey produced in southern California must come from the high, rocky mountains, and from wild, indigenous shrubs and plants.

THE PACIFIC RURAL PRESS,
AN ILLUSTRATED
AGRICULTURAL HOME JOURNAL.
Among other Reasons for Subscribing are the Following:
Because it is a permanent, first-class, conscientious, able, and well conducted journal.
Because it is the largest and best agricultural weekly west of the Rocky mountains.
That Patrons may be reliably informed on the progress of the Order in this and other fields.
That more farmer's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.
That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress.
That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.
That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements.
That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.
Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information concerning subscription, etc., on application.
Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year.

It is printed on fine paper and has nearly 100 pages, 7½x5 inches. Price only 25 cents, or 5 for $1, on receipt of which we will send by mail to any address.

DEWEY & CO.,

252 Market St., S. F.

Mining and Scientific Press.

THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

The Atomic Weight of Carbon.

The atomic weight of carbon has recently been redetermined by Mr. Roscoe according to the method employed by Dumas and Stas, consisting in the direct combustion of pure carbon, or, in other words, diamond. Diamonds from South Africa were used, and were placed in a tarred platinum boat placed in a glazed tube of Berlin porcelain, which was heated in a charcoal fire, and through which carefully purified oxygen was conducted. The products of combustion were passed (1) through a U-tube containing pumice moistened with sulphuric acid; (2) through two series of Geissler Liebig potash bulbs containing potash solution; (3) through three U-tubes containing pumice wet with a solution of caustic potash and (4) through two small U-tubes containing pumice and sulphuric acid. Six separate experiments were made. In the first, six small transparent stones of a pale yellow color were used; in the second, eight small dark stones; in the third, one large dark stone; in the fourth, four dark stones; in the fifth, four colorless stones, and in the sixth a piece of the black diamond known as carbonado. Assuming Stas' atomic weight for oxygen 15.96, the values obtained for carbon in the six experiments were as follows: 11.970, 11.978, 11.970, 11.976, 11.966, 11.995; mean, 11.9757. The mean value obtained by Dumas and Stas in 1840 is 11.9708. With the exception of the sixth experiment, in which the black variety of carbon was used, the hydrogen obtained did not exceed as a mean one seven-thousandth part of the weight of the diamond, and was probably derived from moisture in the apparatus. In presenting this memoir to the Academy, Dumas called attention to the fact that if the atomic weight of oxygen be assumed as 16, that of carbon is 12 002, or within one-six-thousandth of a whole number.

BREAKFAST BISCUIT.—Take one quart of sweet milk, half a cupful of melted butter, a little salt, two teaspoonfuls of baking powder, flour enough to make a stiff batter; do not knead in dough, but drop in buttered tins from a spoon; bake in a hot oven; unless it is hot they will not be light or tender. They can be baked in fifteen minutes and are excellent as a change.

DISCARDED NUTRIMENT.—Immediately beneath the outer surface or skin of every kernel of grain, particularly of wheat, there is a thin layer of nutritious and valuable matter for the sustenance and health of the animal system. In milling this is discarded as the hull. It constitutes about 12% of the whole matter of the bran, and is more useful for the promotion of nutrition than that portion of the grain ground into flour. This substance consists of a compound vegetable ferment called cerealine, and of vegetable casein, similar in form to the thin pellicle between the shell and the albumen of the egg. This may be readily obtained by infusing the bran in cold water and precipitating with alcohol, or evaporating the water. Its office is to bring the other constituents of the flour taken into the stomach with it, into an appropriate state for assimilation by the organ of nutrition. This substance and linseed meal have been dried with marked success in the case of impaired nutrition, and in diminishing the number of cases of consumption. As a test, a soup was made of two ounces of meal, one ounce of bran, and a quart of water: this was boiled for two hours and then strained, to which lean beef was added, and the whole made into a soup with vegetables. Under this diet the frequency of consumption greatly diminished among the inmates of the city hospital. It would seem as if impaired nutrition was really one antecedent to the fell disease.—*Rural New Yorker.*

TO PREVENT THE SKIN FROM DISCOLORING AFTER A BLOW OR FALL.—Take a little dry starch or arrowroot, and merely moisten it with cold water, and lay it on the injured part. This must be done immediately, so as to prevent the action of the air upon the skin. However, it may be applied some hours afterwards with effect. I learned this when resident in France. It may already be known here, but have met with none among my own acquaintances, who seem to have heard of it. Raw meat is not always at hand, and some children have an insurmountable repugnance to let it be applied. I always make use of the above when my children meet with an accident, and find that it keeps down swelling, and cleanses and facilitates the healing of scratches, when they happen to fall on the gravel in the garden.

The Pacific Rural Press.

[Established in San Francisco in 1870.]

This is the leading farming journal on the western half of the continent, and second to none in America. It is well printed and illustrated weekly. Contains an unusual amount of fresh, original farm, household and family circle literature. Careful attention is paid to giving full and reliable weekly market reports. The following are among its ably conducted departments: Editorials on agricultural and other timely and important subjects of live interest to farmers and their families; agricultural, and other useful and ornamental illustrations; correspondence from various quarters of our new and rich developing fields of agriculture on the Pacific coast, embracing new hints and ideas from progressive men and women in all branches of rural industry; Horticulture; Floriculture; The Garden; The Home Circle; The Grange, Young Folks; Domestic Economy, Good Health; Entomological; Sheep and Wool; The Dairy; The Stock Yard; Poultry Yard; The Swine Yard; The Apiary; The Vineyard; Queries and Replies; New Inventions (and illustrations of new and improved machinery); Agricultural Notes, Items of General News, etc. Its columns are studiously filled with chaste, interesting, fresh and useful reading, devoid of questionable literature for old or young and fancifully alluring clap-trap advertisements. Send for sample copies.

Subscriptions, *in advance*, $3 a year. Agents wanted, on liberal pay DEWEY & CO., Publishers.

DEWEY & CO.'S

Scientific Press  **Patent Agency.**

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

Important to All Officers of the A. O. U. W.

We have sent a large number of extra copies of the WATCHMAN to the various officers and members of the A. O U. W. We ask as a special favor that the officers who are intrusted with much of the success of the various Lodges will lend us a helping hand in increasing our circulation. Nothing contributes more to the successful working of the A. O. U. W. than the circulation of general fraternity news, and the best way to secure this is through the WATCHMAN, which is an able and faithful advocate. It is to the interest of the A. O. U. W. that the WATCHMAN be placed in the hands of every Workman, and to accomplish this we must rely in a large measure upon the Lodge officers.

Liberal inducements will be offered to active and reliable members who will canvass for subscriptions. Sample copies will be mailed free on application to Workmen, all of whom are invited to endeavor to assist in extending the circulation of the WATCHMAN.

Let every Workman into whose hands this notice may come, if not already a subscriber, fill out the subscription blank below, enclose two dollars, and send it to us for a year's subscription.

VOL. 6.—NO. 22. SAN FRANCISCO, CALIFORNIA, NOVEMBER 15, 1882. { In advance, $2 a year / Single copies, 10 cents

Our Annual Thanksgiving.

Once more the people of this republic are called upon to give thanks that another year of prosperity has blessed us; that the star of our hope is yet in the ascendant, and that the nation has taken an onward march. The custom of observing one particular day in the year for returning thanks to the Giver of all good and perfect gifts is as beautiful as it is appropriate. And the legacy which our Puritan fathers left us, of a day of thanksgiving, is one which we, as a people, should maintain and observe. There is nothing as mean as ungratefulness. That our nation in the years of the past, when our liberties were assailed, and we battled with our mother country, and during all those early years of trial and misgiving, when our republic was forming, and later, during those years of dark and hideous war, when the North fought for the freedom of the slave, and finally loosened the shackles and chains from that benighted race, and on up through the years of our greatness and grandeur, has been blessed as no nation of history, it is useless to deny. This is a Christian nation, and it is but right that such a public announcement of our thankfulness for prosperity to that God who rules the universe should be made. The old customs of observing the day are largely disappearing. In fact, we are fast departing from the ways our fathers trod, and are living as becomes a nation of unexampled progress. But it is a question of considerable doubt whether in the long run we are the gainers. As a nation we need more holidays, and Thanksgiving Day should by no means be forgotten in this rush of the times.

On this page we present an ideal engraving of the fruitage of our land, which has been gathered ere this. Fitting are these symbols of the tranquility and prosperity which dwell within our borders at the present time. Lovely flowers and delicious fruit have been accepted as types of the world's best deeds for man since Eden's trees blossomed and cast down their treasure. We cannot, therefore, select more fitting emblems to emphasize the occasion of Thanksgiving than those which our frontispiece presents.

In California such a view of loveliness and abundance has special pertinence, for in this State Thanksgiving tables can be arrayed in flowers and laden with nearly all kinds of fruit, all grown without the intervention of sheltering glass between them and an angry sky. It is true that in parts of the State many flowers have disappeared before the stern north winds and sharp frosts, and in other parts there is now nothing green save the constant conifers; but still within a wide California there are blooming flowers untouched by frost, and tender berries still find in November suns enough of warmth to elaborate their sugar. At such a time, therefore, we can all borrow the treasures of our most favored regions, and call their genial November ours, while we unite in a tribute of thanksgiving for our glorious commonwealth; and while there is abundance and plenty in our own State, it is gratifying to remember that our whole country is similarly blessed. Prosperity seems now to be the word most frequently spoken in all parts of the nation.

NATURE'S SUGGESTIVE THANKSGIVING OFFERING.

WE hope that every member of the A. O. U. W. and every reader of the WATCHMAN will read and consider the official letter of our Grand Master Workman, which appears in this issue. Considerable good work can be done during the winter. We should like to see the Grand Master Workman call a meeting of the members of our Order in this jurisdiction sometime in the near future, for the purpose of getting the brotherhood together and have a friendly and fraternal consultation as to how best advance the interests of the A. O. U. W. Such a gathering would, doubtless, do much good.

IN the jurisdiction of Illinois but one death was reported in October, to pay which there was a sufficient surplus in the Beneficiary Fund, so that no assessment was necessary for November. Consequently, the Grand Officers of the Empire State of the West rejoice exceedingly, and actually shout for joy. It is certainly remarkable that out of a membership of 11,000 but one death should occur in a month. It shows Illinois to be a healthy State, and the membership of the A. O. U. W. to be made up of carefully selected material. We congratulate our brethren of the land of the prairies.

THE London *Lancet* has taken up the warfare against cigarette smoking.

THE Author's Carnival for the San Francisco charities netted over $20,000.

Awake to Action.

Now that the election is over, and the country presumably saved again, our brethren will no doubt find more interest in their Lodge meetings than for some time heretofore. We have now almost 15,000 M. W. in good standing in this jurisdiction. Notwithstanding the fact that the ground has been pretty well worked over, it is safe to say that not half the available and desirable material at our command has been enrolled upon our records. All that is needed now to gather it in is a little effort on the part of the membership individually and collectively.

The Grand Master, who has been quite seriously indisposed for some time, seems to have entirely recovered, and by a circular sent out to all our Lodges, a copy of which is printed in this issue, signifies his willingness to put his talents and energy again into the work of strengthening up our lodges, and from the past we know what great results are likely to follow. But he cannot do all the work alone. His efforts must be seconded by the membership in order to realize that success which is desirable. It is now nearly six months until the next session of the Grand Lodge. By that time we should have at least 16,000 good and true Workmen in our ranks, and we can have them just as well as not if we try. Let us try! But our zeal must not outrun our discretion. We must carefully select the material out of which our ranks are to be swollen. And this brings us to say that the character of this material must, of necessity, depend almost entirely on the Lodges and Lodge physicians. The Examining Board, at best, can only pass upon the material presented, and such action, while important in some regards, in the main is of but secondary importance. The main province of the Board is simply to determine the eligibility of a candidate under the rules of the Order, guided solely by the report of the Lodge Physician. If such report shows the candidate to come within the requirements, the Board must approve; if not, it must reject. There is but little room for the exercise of discretion when one has to pass simply upon a report concerning a man, and not on the man himself. We wish we could have our old system back again, where the responsibility in the selection of members was made to rest almost solely where it properly belongs—at the threshold. That under it we got better men and better risks, we believe to be indisputable. The death record and the harmony that characterizes our old Lodges are sufficient proof of this position. But we must make the best of things as we have them. Energy and good conscience will accomplish wonders, even under a system essentially bad, which that we have is not; it is only not so good as it might be. Remember that a good and healthy increase means a reduction of our assessments, and a power to resist any sudden strain, as the result of a great calamity or epidemic that would shiver to atoms a jurisdiction weak in point of numbers.

Home Miscellany.

By the Cow-Yard Bars.

While the kine looked on with reproachful eyes,
And waited outside of the cow-yard barn,
On the dewy grass, at the milking hour,
He lay, as he gazed at the dawning stars.
And who knows what they were saying to him
For his wondering eyes grew bright—grew dim,
While they danced in glee, and seemed to keep time
To his quickened heart with its throbbing rhyme.

"Is the milking done?" said his father's voice;
"What! here are the cattle outside the bars.
And that stupid boy lies there in the dew,
With his face upturned to the moon and stars!"
And the boy stood up, and was scolded well;
For, how could the father, impatient, tell
Of the hights to which he would some day rise,
His stupid boy with the dreamy eyes.

How could the father, my children, know
That the greatest astronomer earth can show,
Stood faltering there in his little son,
Who was late in getting the milking done?
But, weary of honors in after years,
A man looked back through smiles and tears
To the old home scene and the silver stars,
And the dreaming boy by the cow-yard bars.

Little Companies—Parlor Games and How to Play Them.

Persons living in small towns or villages away from the stream of popular amusements, to be found in the theater, lecture-room, or concert hall of the larger cities, are more dependant upon their own resources for having "a good time" than their more fortunate fellow creatures, to whom all these entertainments come as a matter of course without any especial seeking of their own.

In the absence of these things, the cultivation of social amenities in small towns becomes a matter of the utmost importance to the young people of the community. Their appreciation of them, however, depends greatly upon the ability of the village host or hostess to successfully entertain the guests whom their hospitality gathers, from time to time, under their roof. It often happens in one of these out-of-the-way places, where her parlors are too small for dancing (even if that were not overdone elsewhere), that the hostess, dependant upon home resources entirely, is at her wit's end to know how best to amuse and amalgamate a little company of a dozen or more young folks into perfect harmony with each other, and send them all home, with every pulse of their young hearts tingling with enjoyment, to report to their mothers that they have had a "lovely time" and "lots of fun."

The question, therefore, constantly recurs to the genial hostess, who delights to invite a few friends "from half-past seven to twelve P. M.," as to what shall be done for their amusement during the evening. Of course, there are the time-honored stand-bys of whist, cribbage, cassino, backgammon and checkers, in the way of household games, some one of which almost everybody plays. Chess, though delightful to its devotees, is too serious and absorbing a game to be at all admissible under the circumstances. Any of the former, however, may be used if one is in deperate straits and happens to have so ill-assorted a company that it is not possible to mix them with any hope of their ultimate amalgamation.

Sometimes an unfortunate hostess finds herself in this awkward situation, through no want of care in the issuing of her invitations, and her only help for it is then to exert all the ingenuity of which she is possessed to prevent any unpleasant clashing of antagonistic parties. In such a case, separate little tables for whist, with congenial groups around them, may assist her in solving her difficulties by keeping the belligerents apart during the evening.

Should such an unpleasant situation occur through the thoughtlessness of the hostess in selecting her company so as to be congenial to each other, she really deserves to suffer for her temerity; and it is greatly to be hoped that she may insist upon Mr. Jones taking Miss Smith down to supper until the unfortunate young man is obliged to confess that the young lady in question declines to speak to him, or some other such mortifying event occurs, to teach her that until she has learned to assort her company more carefully she had better not attempt to have any. It were far better to divide the community up into congenial groups, and take each in turn, than attempt to "kill two birds with one stone" by inviting together parties between whom no assimilation is possible. Without forethought in this respect, the hostess may be inveigling her friends into situations which may cause them the utmost annoyance and discomfort, instead of contributing to their pleasure, as no doubt she had intended her little company should do.

Let us concede that all these preliminaries have been properly attended to. The invited guests are known to be congenial. Our hostess has given her finishing touches to the table, and her floral decorations are eminently to her satisfaction, as she takes a final review of them whilst awaiting the arrival of her guests—let us say from twelve to twenty young friends. Although this number may seem small, and scarcely deserving the name of "a company" at all, to some people, yet to the average American housewife, with the average American servant and the average American house, it is as many as her small parlor will accommodate, her table pleasantly seat, or her servant conveniently wait upon. There is nothing more vulgar than to invite to one's house more guests than one has room to entertain, causing, after all one's trouble in their behalf, the miserable, unsatisfied crowd to go home gnashing their teeth as they repeat the old adage, "Fools make feasts," etc.

A small company is, in many respects, more manageable than a large one. The hostess has them all under her own eye, and can give her personal supervision to their entertainment, drawing out the diffident, preventing the woes of the wall-flowers, and inviting only true musicians to favor the company with music.

Our hostess has settled upon a sort of a programme, subject to variations, of course, for the entertainment of her guests, which if she have bright sons and daughters to assist her in carrying out, simplifies her labors very much. If not, some bright girl is elected in her mind as her aid-de-camp for the evening; or some rollicking fellow is taken aside, and greatly complimented by being asked by his hostess to help her give vim and spirit to the games she has chosen for the evening, which he knows so well how to lead, etc. The young man will lend his assistance with pleasure! There is a great deal dependent upon the manner in which you *put things* to people!

Half past seven has arrived, and soon after all the guests come pouring in. Among them, of course, are those pleasant people, Misses White, Brown and Black with Messrs. Jones, Smith, etc., without whose presence the pleasure of no little company is complete, as they are the "general utility" people of society. Our hostess seldom receives "regrets" from those she honors with her invitations; for all feel assured of spending a pleasant evening by the consideration exercised before hand in making out the list of her guests, and the care bestowed upon them when they are once under her hospitable roof.

The gentlemen leave their hats on the rack in the broad, well-lighted hall. The girls are conducted upstairs to the pretty spare room, fragrant with flowers and the sweet incense of exquisite freshness, from the snowy bed with its lace pillow-shams to the dainty accessories of the bureau and toilet stands.

There they take off their wraps, dust a little more violet powder on their fresh young faces, give their frizzes a loving pat here and there, with a "how do I look?" to some sister or friend. To this question common charity demands, under all circumstances, an affirmative answer. That is, something after this fashion: "I never saw you look so well;" "too sweet for anything"; "too too, you dear, and you know it," "Just like a picture," is often a great resource to a girl troubled with conscientious scruples, and bound to maintain at the same time both her suavity and her integrity, leaving the type of picture represented to be supplied by the imagination of her hearers, who will invariably construe it in a complimentary sense. This form is entirely safe, and one need have no hesitancy about using it in all questionable cases. And why not say pleasant things like this when one can, when the temper of the world is sweetened so marvelously thereby?

Bye and bye the girls flock down into the parlor like a bevy of bright birds, whereon the usual social interchanges take place with their hostess, each other and the gentlemen whom they join. The observant eye of the hostess notes everything and sees that all are enjoying themselves, while she listens with interest to a criticism upon some late works from one of the gentlemen, brought forth by the sight of the new novels, magazines and illustrated works, spread with careless profusion upon the library table. These have been skillfully culled from out her treasures by the provident hostess and placed here as topics of interest to assist the diffident, amuse the silent and afford entertainment to all.

As before remarked, the parlor or sitting-room of the ordinary American house is not arranged for the accommodation of dancing parties, and it is ridiculous to attempt such a performance in a small, crowded room to the uncertain music of a hastily impressed amateur pianist. Our hostess is too wise to make a mistake of this kind. As the evening wears on and conversation begins to lag, she gives a bright glance to her foreordained assistants, and suggests that they all forget for awhile that they are grown up people, and sit in a circle around the room (the largest one, whether it be sitting-room or parlor), while they try what fun may be had from some old-fashioned parlor games. The proposition is heartily received, the circle soon formed, and looks of expectation illumine every face.

"Perfection in playing games is a matter of practice and progression," announced their hostess, "so we will begin with the simplest. I suppose," looking doubtfully around, "that all here know their A B C's, nor would hesitate a second to mention, if called upon, a word beginning with any ordinary letter of the alphabet. Mr. Jones"—to her lieutenant—"will you take this parlor ball," (a pretty conceit, crochetted of bright wool and stuffed with horse hair, or a rolled up handkerchief will answer every purpose), "and we will inaugurate the game."

"My ship comes laden with"—

"A," we will take in this instance. You toss the ball to any one you choose, crying,

"My ship comes laden with"—— when the person struck must answer, before one can count ten, the name of some article commencing with "A;" as apples, axes, etc., and instantly toss it on to some one else, with the same formula. Those failing to give a word in the required time pay a forfeit. The same word is not to be given twice in the same game. The faster the ball flies the merrier the game."

"Attention! Ready," cries Mr. Jones, as he tosses the ball to a pretty girl behind him. "My ship comes laden with—one—two—three—"

"Alligators!" she exclaims. "My ship comes laden with ——," as she tosses it on.

"All-spice!" answers another, and so the ball goes bounding on, from one to another, in all directions, whilst "apples" and "ale," almonds and artichokes, ammonia and asafœtida are bestowed upon the company, until at last words beginning with "a" begin to get scarce, and "ale" and "alcohol" are ruled out a score of times, whilst many ludicrous mistakes occur; as, when a pretty girl throws the ball into the arms of a poor fellow without another "a" in his brain, counting rapidly, "one, two, three, four, five, six, seven," until at last he shouts out in his despair: "Pies!" in vain attempting to explain, amid the laugh that followed, that of course he meant "apple pies."

It is needless to say that his answer was ruled out. He then threw the ball into the lap of the girl nearest him, who seemed equally uneasy as she vainly sought to find some other inappropriate word beginning with "a," whilst several of the company begin to count, "one, two, three, four, five," until at last in desperation she tosses the ball clear out of sight into the other room, declaring the game ended, as there was not another word beginning with 'a" left in the English language.

Other variations of the same old game were tried, called "Earth, Air and Water," and "Fish, Flesh or Fowl." Taking the first, for instance, the leader throwing the ball at any one he may fancy, cries "Air!" or "Water!"; when the party struck must instantly name some animal inhabiting that sphere—as "air," "eagles;" "water," "whales," etc. These games, however, were quickly laid aside for others more intellectual.

Magic Music

Wherein one person is required to leave the room. The rest remaining, secretly agree upon something that he must do, or article that he must touch upon his return. The music of the piano, played all the while, is to guide him in his actions; growing very loud when he is near the wished-for goal, and dying away to the faintest whisper of sound when he is going in the wrong direction, until, at last, under its "magic influence" he touches or does the thing appointed by the company. Having a fine musician at the piano in one of the girl guests added wonderfully to the enjoyment of this game, aside from all the fun created by the individual under its inspiration.

After this the curly-headed aid-de-camp, Miss White, proposed that they try a curious game she had seen in her last visit to the city, called

Mind Willing.

Wherein the subject of operation leaves the room until it is agreed upon what he shall do upon his return; when those supposed to be most mesmeric, or possessing most *will* power among the company, stand around him and make the mesmeric chain in this fashion: Both hands of each person are spread to their fullest extent upon his chest, with the little finger and thumb of each hand crossing those of the hand next to it, until the circle extends entirely around his breast, when the "mesmeric chain" is complete, and those forming it, with the whole company in absolute silence, *will intensely* that he shall do the thing appointed. The person to be operated upon is charged beforehand to think of nothing, and be as receptial and sympathetic in mind as possible.

The result of this experiment was really astonishing, as the person chosen was placed in the center of the room, securely blind-folded, after which he was turned round and round for several times, so as to utterly confuse his ideas of locality concerning the room, its inmates, etc., when, with the chosen circle around him with their linked hands upon his breast, the operation commenced. It had been decided that the gentlemen should go to a mantle at the other side of the room and ring the small silver bell that stood upon it. Silence reigned. After standing motionless and confused for a little while, the subject began to turn around, and with slow uncertain steps, followed always by the circle surrounding him, with their hands upon him, and in utter silence, gradually drawing nearer and nearer to the mantle, where he stood a while, then slowly raised his hand, touched the bell and rung it, to the amazement of all present. The experiment was tried upon other members of the company with variable results. The girls, without exception, seemed to understand, clairvoyantly, what was expected of them, with much more readiness than any of the gentlemen, whilst it was found impossible to move some of the subjects from their original positions. This the pretty *aide de camp* explained to an obdurate old bachelor, by saying that he had hardened his heart against woman's influence so long, that it had changed to adamant with him, and lett him now, past all help or hope from their administration.

After the enforced silence of this game it was a relief to take up that bright old play, the pet of many a rythmic heart, which allows so much larger scope for ingenious puzzling than is usually supposed to belong to the game called

"I think of a word and it rhymes with"—

"Nigh," let us say. The player is not to ask "Is it sigh?" but must put his question to the leader in as puzzling a manner as possible, as, for instance, after this fashion: "Is it that unwritten expression of the soul when burdened with sorrow?" To which the leader, after guessing the word selected by the player, answers, "No, it is not sigh!"

Should the leader fail to guess the player's word, that person takes his place, and in his turn thinks of a word that rhymes with—anything he chooses, until some player guesses at the word thought of, when he takes the leadership. As an example of this play, from which all false rhyme is barred, let us take the following one. Among the young people included in our hostess' invitation was a bright young German, speaking English fluently, but with a slightly foreign accent. Karl was delighted with the game, and very quick at guessing the words. It soon became his turn, when he announced that he had thought of a word which rhymed with "bed."

"Is it some of the most fashionable colors of the day?" Asked one of the girls.

"No, it is not red," answered Karl.

"Is it the feeling that would overcome a person who should see a ghost?" asked another. "A ghost? A feeling of terror? Ah! no; it is not dread. Is it what so many heroes have done for their country? Heroes! fought and bled! No, it is not bled."

"Is it that indispensible article of commerce which assists in clothing the whole world?" asked Miss White.

This came very near being a puzzler, even to quick-witted Karl; but, at last he guessed her meaning, and answered triumphantly, "No, it is not thread.'"

And so the game ran on, until, like the poetess in Edward Egleston's "New Timothy," they commenced at the beginning of the alphabet, and ran through it, "bed," "dead," "fed," etc., failing, however, to find the word Karl had thought of.

"It is so strange you do not guess it," cried the German. "It is a gardener's implement, in every-day use."

"Why, I guessed sled," says one of the girls.

"Ah, but it is not sled," said he.

After a few more ineffectual trials all gave it up, and demanded that he should tell the word of which he had thought.

"Well," laughed he, "I thought you would have guessed it the first round. The word is 'sped;' the tool the gardener uses to 'sped' up his flower beds," he explained, as they looked from one to another, inquiringly.

A burst of laughter, loud and long, from all present, greeted the innocent German, and it was a good while before any one was serious enough to explain to him the reason of their merriment, or his mispronunciation of the English word "spade."

"Ah!" cried one of the young men, "let's change the game before Karl gives us any more "garden implements."

Dumb Crambo"

Was next introduced, which game is like the last one in some respects, but with this difference: In the latter the company divide into two parts, one going into the adjoining room, whilst those remaining select a word to be guessed, rhyming with "Jet," let us say, which they announce to the other party. These then come in, one by one, and *act out* their guesses, instead of speaking them, just as they would in acting charades. For instance, a girl comes in with an open umbrella, dressed in a long waterproof cloak, with her rubbers on her feet, and steps, carefully lifting her skirts, over imaginary puddles of water. The first party, guessing her meaning, declare at once that the word is not "Wet." A gentleman then comes in with an old blue army coat on, a bandage over one eye, one arm in a sling—hobbling along as if he could scarcely walk, even with the help of the heavy cane upon which he leaned, as he went from one to another holding out his hand, begging charity. "It is evident he wishes us to take him for a 'vet,'" laughed one of the men, "but it's no go, old fellow. We know you to be an outrageous tramp. So off with you." The joke was all the more appreciated by those present as the pretended "veteran" was known by all to be an enthusiastic pedestrian. Another young man comes in, hastily rigged out as a fisherman, with a net (cleverly improvised with a lace shawl, with imitation corks cut from brown wrapping paper, pinned around it,) thrown over his shoulders. He is soon sent back by the declaration that the word is not "net." Then a pretty girl comes in who personifies "a woman in a pet," which happened to be the right one; when the other side go out and take their turn at acting guesses. "Dumb Crambo" is, after all, only a variety of *Acting Charades*, which, being familiar to all, needs no description here, though the suggestion may be of service, that almost any leaf of the dictionary will furnish a number of words easily acted out in impromptu affairs of this kind.

[TO BE CONTINUED.]

THE VIOLIN.—Fashion now thoroughly admits the violin as an instrument for women. At the late competition at the Paris Conservatory of Music seven female pupils were admitted to compete with the men on the violin, and one of them — Mille. Hillemacher — was fortunate enough to carry off one of the three first prizes, while another young lady took a first accessit—a sort of honorable mention. There are a number of women in both violin classes at the Conservatory.

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

I am composed of 38 letters:
My 3, 26, 36 is a descendant.
My 21, 4, 10 is a weight.
My 1, 34, 37, 27 is a satellite.
My 17, 13, 2 is to make an effort.
My 8, 22, 24 is a personal pronoun.
My 7, 18, 5 is a part of a fish.
My 6, 11, 16 is a tavern.
My 38, 29, 30 is a number.
My 28, 15, 31, 33 is a masculine name.
My 25, 12, 36, 32 is a coin.
My 14, 19, 13, 20, 23, 30 is to hide.
My 1, 35, 14, 29 is to think.
My 33, 9, 31 is to strike.
My whole is a proverb of Solomon. A. B. C.

Curtailments.

1. Curtail a title and leave a part of the head.
2. Curtail a coin and leave obscure.
3. Curtail a luminous body and leave to approach.
4. Curtail a plant and leave a noise. JERRY.

Biblical Acrostic.

Each name will read alike forward and backward:
1. The mother of Samuel.
2. A prophetess.
3. Midday.
4. The father of Joshua.
5. A king of Judah.
6. The mother of Samuel.

The primals and finals will each give a name that will read forward and backward the same. W. H.

Metagram.

I am composed of four letters, but I am the most useful and yet the most destructive thing in the world; beheaded, I am wrath; place on my head and curtail me, I am a tree; again curtail and read backward, I am one of the most important words in the English language. What am I? AUNT SARAH.

Syncopations.

1. Syncopate terror and obtain at a distance.
2. Syncopate a numeral and obtain in place of.
3. Syncopate willingly and obtain the organ of locomotion of a certain class of animals.

MELANCTHON.

DECAPITATIONS.—1. Ospray, spray. 2. Hawk, awk. 3. Finch, inch. 4. Spike, pike. 5. Keel, eel.

Dora's Neighbors.

"Mamma," said Dora May, rushing, quite out of breath, into her mother's neat sitting room, "our new neighbor's little girls were at school to-day, and I feel sure they are just the sort of children you would wish me to associate with. They wore beautiful dresses trimmed with wide embroidery, and then their names; they must be genteel people, the oldest girl is Maud Lily, and the youngest, Ethel May."

"So, then, you think that names express character? In that case a little girl who is called Theodora, (the gift of God), ought to be very good indeed in order to merit her name." Dora blushed as she answered: "You know, Mamma, you told us that as we cannot see into people's hearts, our imperfect idea of their characters must be gained from outward appearances, and that we judge of the refinement and culture of people and of nations by their dress, manners and surroundings."

"You remembered very well," said Mrs. May, "and I dare say time will tell us all about our neighbors, and I hope your anticipations of enjoyment in their society will be realized."

It will be easily seen that Dora was prone to believe that all well-dressed, good-mannered people were possessed of moral qualities to match, and that shabby, awkward persons expressed their want of virtue outwardly.

At school Dora took the Spencer girls under her own particular care, and they walked, and talked, and studied their lessons together for several weeks. But after awhile, almost imperceptibly, the intimacy waned as all too violent friendships do.

The final cooling of Dora's affection for her new neighbors occurred in this wise: Miss Monroe, the teacher, asked one morning quite unexpectedly,

"Who is sharpening a slate pencil?"

Nobody answered, of course, and Miss Monroe had no alternative but to question each pupil separately, asking,

"Was it you, Dora?"

"Was it you, Mary?"

And so on through the school, and received negative replies from each girl, and also from the culprit, Ethel May Spencer, who answered quite boldly,

"No, ma'am."

Dora's conscience was hurt by this equivocation; she herself might not have had the nonesty and moral courage to speak out boldly and avow her breaking of the rule, but she never would have told a direct falsehood when questioned.

She avoided Ethel the rest of the day. It began to dawn upon her for the first time that beautiful dresses, sweet faces and pretty ways were not all that she desired in a friend. She did not feel very perfect herself. She was conscious of many little faults which she had not yet overcome, and she did not feel capable of acting as monitor to these girls, but still less could she renew her intimacy with them when she knew now, by many little indications, that they had not been taught to respect the truth. Dora's altered manner at first excited the concern of her friends, but being bright girls, they soon detected the element of disapprobation in her treatment of them, nor were they long, for school-girls are notoriously frank, in eliciting her objections to their conduct.

"Mamma says," said Dora bravely, although a bright spot burned in her cheek, "that no one can put any confidence in us or have any respect for us at all, unless we are altogether truthful."

Ethel turned away, and linking her arm within that of a passing schoolmate, walked off with much assumed dignity, assuring her new friend in a loud tone of voice, "that for her part, she never intended to speak to that stuck up Dora May again." Maud fired a parting shot which hit the center of the target exactly. "I think, Dora May, your mamma must be an exceedingly tiresome old woman."

"Tiresome!" "Old woman!" Dora's outraged heart prompted her to return an angry reply, but at first she could not find words enough to hurl at the offender, and when this feeling subsided she dried her streaming eyes and resolved to seek from her mother a solution of this mystery, for surely these people were well-looking and surrounded by all the appliances of polite life.

Her mamma answered to her questions:

"Culture, like all good things, may be imitated, but true refinement springs irom the heart, and if the heart is not true within, is the refinement genuine?"

Kind Words.

If we only knew how, by a little thought and patience, we could make many a poor tired soul happy, we ought to try. So many think that if a person does one wrong act he ought to be shunned and despised; but is it going to make them better? Is it very encouraging? Stop and think a moment. Kind and encouraging words cost but little, and do so much good we ought to be willing to give them.

I hardly think there are many lives so badly wrecked that they cannot be made better; that is, if they have a desire to improve. Many are impressed with the idea, that as no one cares for them, what difference does it make how they act, or what they do? But I am certain there is One who cares for us all, and we ought to strive harder to please Him than anyone else. Do your best and what is right and you will be sure to be happy and make others happy without being aware of it. But if in the first attempt at being good to others you do not succeed, don't give up. It is really no sign that a person is mean at heart because he offends or hurts others' feelings. We often do things with the best intention, but before we are aware of it we have injured some one's feelings, and we would be glad to recall the words. But often, so often, very dear friends are made bitter enemies for one little mistake. Do not haste to take offense. Do not throw away your friends for one mistake. What would we do if our Heavenly Father should give us but one trial to become better? I am thinking we would soon go to destruction.

Mason valley, Nevada.

CHILDREN'S CHANCES OF LIFE.—An English writer on vital statistics calculates that of ten children born in Norway a little over seven reach their 20th year; that in England and the United States somewhat less than seven reach that age, while in France only five reach it, and in Ireland less than five. It is also ascertained that in Norway out of 10,000 born, rather more than one out of three reaches the age of 70; in England one out of four; in the United States, if both sexes be computed, less than one out of four; in France less than one out of eight, and in Ireland less than one out of 11. Further, it appears that in Norway the average length of life, or the effective population, is 39; in England, 35½; in France not quite 33 years, and in Ireland not quite 29.

WHAT GIRLS SHOULD LEARN.—By all means let the girls learn how to cook. What right has a girl to marry and go into a house of her own unless she knows how to superintend every branch of housekeeping, and she cannot properly superintend unless she has some practical knowledge herself. Almost every man marries without thinking whether the woman of his choice is capable of cooking him a meal, and it is a pity he is so short-sighted, as his health, his cheerfulness, and indeed his success in life, depend in a great measure on the kind of food he eats; in fact, the whole household is influenced by its diet. Feed them on fried cake, fried meat, hot bread, and other indigestible viands, day by day, and they will soon need medicine to make them well. A man will take alcohol to counteract the evil effects of such food, and the wife and children must be physicked. Let all girls have a share in housekeeping at home before they marry; let each superintend some department by turns. It need not occupy half the time to see that the house has been properly swept, dusted, and put in order, to prepare puddings and make dishes, that many young ladies spend in reading novels that enervate both mind and body, and unfit them for every day life. Women do not, as a general rule, get pale faces doing housework. Their sedentary habits, in overheated rooms, combined with ill-chosen food, are to blame for bad health. Our mothers used to pride themselves on their housekeeping and fine needlework,

Health Column.

EXERCISE AND REST.—Exercise can kill as well as cure. To be taken advantageously, it should be done with judgment. Sometimes a particular part of the body needs exercise, but the whole body is too weak to give it. In such cases only the part needing it should have it. But there is one rule which is applicable to all—never go against the instincts. Many persons have hurried themselves into the grave by endeavoring to "keep up" when they ought to be in bed; and they do keep up, too, for so long a time that when they take to their beds their strength is so completely exhausted that the system has no power to rise, and they fall into a typhoid condition and all is lost. When anything serious is the matter with domestic animals they court quietude and perfect rest. Sometimes we feel indisposed to exercise from sheer laziness; in all loose conditions of the bowels, debility, an instrictive desire to sit down and stay there, is universal. In most of such cases quietude is cure. But there is one safe cure for all under all circumstances; if every step you take is with an effort, do no take another—go to bed; if you feel the better for a walk, then walk, but stop short of great fatigue.—*Dr. W. W. Hall.*

BITTEN BY A TARANTULA—Louis Gurado, an Italian fruit vender, who keeps a stand at Second avenue and Fourth street, was bitten on Saturday by a tarantula, and was nearly frightened to death. He was in the act of cutting a banana from a bunch on his stand, when the insect, which was evidently hidden on the stalk of the bunch, stung him on the right thumb. Gurado struck at the insect and killed it. Soon after he felt a sharp pain in his thumb, began to feel dizzy and uncomfortable, and in a few minutes fell on the pavement like a man under the influence of liquor. His hand and arm swelled to nearly twice their natural size, and the swelling increased and communicated to his face and neck. His wife, who was with him at the stand, became alarmed and cried out that her husband was dying. A crowd collected about the man, and this attracted a policeman. An ambulance was summoned, and Gurado was sent to Bellevue Hospital. When he arrived at the hospital the swelling had already begun to subside. A cooling salve was applied to the wounded thumb, and yesterday morning, having fully recovered, he was allowed to go to his home.—*N. Y. Times*, October 9th.

THE MEDICAL PROFESSION.—There is no department of human effort and study that is held in a higher degree of honor at the present day than the medical profession; nor is there any other that contributes more materially to the happiness and welfare of mankind. To noble minds there has always been a great charm in the pursuit of the healing art, and it has been the chosen study of some of the most brilliant minds that have made their mark upon the history of the world. In this new world the science of medicine has outgrown many of the trammels that bound it in the old, and year by year its resources become richer and more varied, and its capabilities greater. To what ultimate pitch of perfection it may come it is not given to man to forsee.

DEATH FROM SEA SICKNESS.—A recent Boston paper states that a gentleman, whose name is not given, but who is said to be well known in the Western States and connected by marriage with the late Congressman, Thos. Allen, of St Louis, after spending a few weeks at Nantucket, accompanied by his family, joined a fishing party, and while on the excursion had a violent attack of sea sickness, which passed into convulsions, in which he died.

PNEUMONIA AN INFECTIOUS DISEASE.—That acute lobar, croupous pneumonia is considered by some an infectious fever, with evedint tendency to the lungs, or as now better expressed, a zymotic disease, caused by the inbalation of bacilli, which accumulate mostly in a lower lobe of one lung, we have often had occasion to note. The proofs of this statement accumulate daily. Dr. Kohnborn found that the disease had become epidemic in one of the barracks at Wisel. Occasionally it broke out as a local epidemic. The regiment stationed there had suffered frequently from the disease. Not a year passed without many falling a victim to pneumonia. The regiment was then placed in other quarters, and no further case happened in this regiment. The barracks were torn down, the soil disinfected most thoroughly, as also all the building material. Since the regiment has been camping in these rebuilt barracks not a solitary case of pneumonia has made its appearance.—*Medical and Surgical Reporter.*

IS OBESITY A DISEASE?—Obesity, some of the French physicians claim, is a disease of the cellular-adipose tissue, and must be treated as such. It begins by fatty accumulations at normal points, whence it gradually makes its inroads on health and beauty. It first commences externally, and afterward presses from within so as to finally give rise to serious disturbances—obstruction of the lungs, palpitation of the heart, dyspepsia, lack of red corpuscles and of blood sufficiency, and some of the most nervous symptoms of trouble. The greatest point of danger is the heart, which is sometimes quadrupled in size, and filled with dark, jelly-like substance. Out of 57 people examined after death who were obese, 50 were found to have dangerous heart disease,

Household Hints

CHICKEN PIE.—Take two full-grown chickens, joint them, and cut the backbone, etc., small as convenient; boil them with a few slices of salt pork in water enough to cover them; let them boil quite tender, then take out the breast-bone. After they boil and the scum is taken off, put in a little onion cut very fine, not enough to taste distinctly, but just enough to flavor a little; rub some parsley very fine when dry, or cut fine when green; this gives a pleasant flavor. Season well with pepper and salt, and a few ounces of good fresh butter. When all is cooked well have liquid enough to cover the chicken; then beat two eggs and stir in some thick cream; line a dish with a crust, put in the chicken and liquid; then cover with a crust. Bake till the crust is done, and you will have a good chicken pie.

TOMATOES FOR SUPPER.—By this mode tomatoes are good for supper or for breakfast: For half a dozen persons take six eggs, boil four of them hard, dissolve the yelk with vinegar and about three teaspoonfuls of mustard, and mash as smooth as possible; then add the two remaining eggs raw, yelk and white, stir well; then add oil to make altogether sauce sufficient to cover the tomatoes well; add plenty of salt and cayenne pepper, and beat thoroughly till it thickens; skin and cut the tomatoes one-fourth of an inch thick, and pour the sauce over. Though a little troublesome to prepare, yet if once eaten by persons who are blessed with palates to enjoy good things, they will be pronounced to be far superior to any other mode of preparation.

BROILING FISH.—In broiling fish the gridiron should be buttered to prevent the fish sticking to it; the inside of the fish should first be seasoned with salt and pepper, and then be exposed to the fire until brown, and the skin side next browned without burning. Halibut sliced makes a nice broiling fish; trout, shad, salmon wrapped in buttered paper, large smelts split down the back, fresh mackerel, Spanish mackerel, small bass, weak-fish, perch and many others, are excellent broiling fish. One of the nicest dressings for broiled fish is *maitre d'hotel* butter, which is made by mixing together one tablespoonful each of butter and chopped parsley, one teaspoonful of lemon juice, and a little salt and pepper.

FRENCH PUFF PASTE.—To make French puff paste take one pound of flour, half pound of butter, one egg, of which use the yelk only; rub half the butter into the flour, stir the beaten egg into a cup of water, and work the flour into a stiff dough; roll out thin, add one-third of the remaining butter, fold closely, roll out again, and so on until the butter is used up; roll very thin, and set the last folded roll in a very cold place for 10 or 15 minutes before making up the crust; wash with beaten egg while hot. This paste is very nice for oyster patties, as well as for fruit pies.

VIENNA COFFEE.—Equal parts Mocha and Java coffee; allow one heaping tablespoon of coffee to each person, and two extra to make good strength; mix one egg with the grounds, pour on the coffee half as much boiling water as will be needed, let the coffee froth, then stir down the grounds, and let it boil five minutes; then let the coffee stand where it will keep hot, but not boil, for five or ten minutes, and add the rest of the water. To one pint of cream add the white of an egg, well beaten; this is to be put in the cups, with the sugar and the hot coffee added.

VEAL CAKE.—Cut a few slices from a fillet of veal. Place a layer of the meat at the bottom of a pie-dish, next some sliced cooked ham and hard-boiled eggs cut up, then another layer of veal, and so on until the dish is full. Have ready a pint of good brown gravy, well-seasoned; dissolve a quarter of an ounce of gravy in a little water, stir it into the gravy, and let it simmer over the fire for a minute or two; then add a glass of sherry, pour over the meat, and when cold turn out.

WATERPROOF BLACKING.—Dissolve one ounce of borax in water, and in this dissolve gum shellac until it is the consistency of thin paste; add lampblack to color. This makes a cheap and excellent blacking for boots, giving them the polish of new leather. The shellac makes the boots or shoes almost entirely waterproof. Camphor dissolved in alcohol, added to the blacking, makes the leather more pliable, and keeps it from cracking. One dollar will buy material enough for a gallon.

FRIED EGG-PLANT.—Pare your egg-plant; cut in slices a third of an inch thick, and lay them in strong cold salt and water for three hours, putting a plate and weight on them to keep them under the water; wipe each slice; dip in egg beaten with a tablespoonful of cold water and fine cracker crumbs; fry in boiling drippings or half lard and butter.

POTATOES A LA DUCHESSE.—Take cold, well-seasoned mashed potatoes, roll out and form into little biscuit-shaped cakes (a little flour may be used to form them, but do not mix flour with the potato); arrange cakes on a pie plate, glaze them over with beaten egg, and bake to a delicate brown.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "Good of the Order."

Olympic, 127.

On the evening of November 7th a reception was given by this Lodge. The programme consisted mainly of dancing. The regular meeting of the Lodge was first held, after which the dance was instituted, and kept up until midnight. Although the evening was an unfortunate one for an entertainment, being election day, yet a good number were present, comprising the Workmen and their families, besides numerous invited guests, who participated in the sociability and festivities of the evening. Olympic Lodge has a membership composed of good men, and is fortunate in having earnest and worthy men as officers. The brothers of Olympic have happily combined a system of business and social pleasure in their Lodge that is deserving of special commendation. It is so managed that alternate nights, in connection with Aurora Lodge, D. of H., a social is held, embracing literary exercises, with music and dancing. At the last entertainment there was a quiet, easy grace and dignity exhibited by the company, and a cordial welcome given by the leading spirits of Olympic that made this reception a very enjoyable affair. We herewith give the motto printed on the programme of dances:

Live well in the present,
Plan for the future,
And lend a helping hand whenever needed,
Are the principles of the A. O. U. W.

Bernal, 19.

For several months past matters have been enjoying a lull in this old Lodge. Several weeks ago one of the members died. A movement on the part of the members to establish a library has resulted successfully thus far. One hundred books are now on the shelves, and a regular librarian has been appointed. Besides this, $25 were recently appropriated from the funds in the treasury to make additions to the library. Considerable interest is manifested in the library, and on every meeting night the brothers can be found, long before the opening of the Lodge, in the hall, examining, reading and choosing the books. Though it is small as yet, they have an honest pride in the possession of their library. We commend their example to the various other Lodges which have not already done anything in this direction. An entertainment is being talked of to come off sometime during the latter part of the month. The membership is about 100, but is widely scattered, as the members, many of them, have moved from the vicinity of the Lodge-room. We feel sure that if there has been something of lethargy among the members in the past, that during the coming winter considerable activity will be shown.

Hercules, 53

Considerable interest is manifest among the members of this well-known Lodge at the present time. Although matters have been at somewhat of a stand-still in this Lodge for a number of months, much is promised for the future. A committee was appointed at one of the recent meetings to make arrangements for an entertainment which will be held on the third meeting night of the Lodge in the current month. Consequently, on the evening of the 17th a musical and literary entertainment will be given in the Lodge room. In former times the socials and receptions given by this Lodge were among the notable events in Workmen circles, and as this is the first, after such a long intermission, it is expected to be a great success. It was first proposed to celebrate the anniversary of the Lodge, but it was feared that this could not be made as great a success as was desired. Quite a number of candidates have been initiated lately, and the membership is now in the neighborhood of 190. A number of applications are now awaiting the action of the Lodge.

Friendship, 179

It is well known that this young Lodge was formed with many misgivings as to its permanency, considering the number of Workmen lodges already in this city. The position it now occupies has dispelled all those fears, and Friendship Lodge, with 120 enthusiastic members, bids fair to outstrip many of our older city Lodges. The meetings are well attended, and there is a feeling of harmony and true sociality exhibited that make their meetings pleasant. On Wednesday evening, Nov. 1st, one petition was received, and four candidates were given the first degree, all young men, and their appearance indicated that they would be an honor to this Lodge and our Order. The work was well done, and each officer did himself credit by the manner in which the official business was done. Under the head of "Good of the Order" several good speeches were made, and we may properly term Friendship 179 a healthy, happy-growing family of Workmen.

Burns, 68.

The brothers of Burns Lodge, of this city, have moved to Fraternity Hall, Shiel's building. On their first meeting night in their new hall the M. W. degree was conferred on one candidate, the secret work being exemplified by Deputy Poland. There was a fair attendance of members, besides several visiting brethren. There seemed to be a general satisfaction among the members with their new home, and a disposition was shown by several brothers to devise means of making the lodge room more attractive. Brothers Montgomery, P. M. W., and Corcoran, of Friendship, and several members of Burns Lodge, had kind and congratulating words to speak, and a very pleasant evening was had.

Silver Spray, 3, D. of H.

The attendance at the last meeting of this Lodge was not large, owing doubtless to the fact that a number of the leading members were to be found in the political arena. Silver Spray will give a grand reception on the evening of Monday, November 13th, to a sister Lodge, in return for a like compliment tendered the Lodge by Alta Lodge, No. 20, I. O. O. F., some time ago. A programme of readings, recitations, music and a banquet is being arranged, and a good time is anticipated.

St. John, 73.

At the last regular meeting of the St. John Lodge a commitee of five was appointed to make arrangements for celebrating the anniversary of the Lodge, which occurs about the 21st of December. The following brothers were appointed: J. G. Bastian, S. J. Fletcher, J. C. Hoag, J. D. Wheelock, and W. B. Masshutz. The exercises will be literary and musical. We may expect a very fine entertainment to be given by this Lodge.

Franklin, 44.

Franklin Lodge, No. 44, is resting. No candidates have been initiated thus far this month, but one has been elected. Several candidates are to be elected before the month ends. The members expect to do valiant work during the coming months.

Excelsior, 126

On Thursday evening, the 2d inst., one candidate received the J. W. degree, and two also on the following meeting night. In the main, matters have been rather quiet in this Lodge for several weeks. The cause is common to the majority of Lodges.

Lodge Locals.

Butte City, 206.

EDITORS WATCHMAN:—Thinking, perhaps, a few facts of the occurring events in a Lodge yet in its infancy would be interesting to our brothers and your readers, I have concluded to embody the same in a brief history, from the origin of our Lodge to the present date. In 1881 five members of the A. O. U. W., who had but a few months previous become members of the Order, conceived the idea of instituting a Lodge here, and set out proselyting. At first their effort met with little success, owing to the fact of many having an antipathy to Orders of a secret character. But with that indomitable will and energy which should characterize any good Workman to make the Order a success, the brothers persevered, and on the 15th of October of the same year an application to the Grand Lodge for a charter, with 32 charter members, was made and granted. Subsequently, D. D., Oscar Robinson, duly instituted a new Lodge, called Butte City Lodge, No. 206. Butte City being at that time only a small village, yet could boast of being one of the chief ports on the Sacramento river, as a grain depot. It was predicted by many that an Order of the kind could not be sustained, but subsequent events in relation to the Order have proven that all men are not infallible. Our chief drawback was an appropriate place to hold our weekly meetings. The only place was a vacant room above a store which was accessible to all comers, itinerant bands of played-out artists, as well as the teachings from holy writ. After a lengthy discussion which lasted till the small hours of the morning, warning us that men of honest motives and pure intention should seek rest to prepare them for the duties of the next day, the resolution looking to secure a suitable place of meeting was laid on the table. Our pecuniary resources were in a lamentable condition, so much so as to preclude all desire to build a Workman's Hall. And the skepticism of many who questioned the validity of the Order, who had means, prevented us from asking aid; yet we persevered, and we have just celebrated our first anniversary; and to every one familiar with the many obstacles we had to surmount, it was a matter of great surprise to see the Lodge room on that occasion. We have fitted up and furnished a hall second to none we have ever visited. It has a seating capacity of about 100, and the floor is covered with a fine Brussels carpet. It is a great delight to the member whose frugal home boasts of no such comfort. A glance into our books and the reports of our finance committee show a healthy condition, and from a charter membership of 32 our membership is now 46. Two members have withdrawn, and a void has been caused by the death of one who has been called to experience the realities of a future immortality. It is a pleasure to sit in our Lodge-room. We have never lacked the requisite number for a quorum when the gavel fell in calling the meeting to order. When there is no important business to engross our time some brother introduces a theme worthy of extenuation. Many of our members live 15 miles distant, and, strange as it may appear, those living at the greatest distance are the most prompt in their attendance. We boast of having some local talent, too, when a knotty question arrives; and that same talent your correspondent has frequently requested to exert itself, that once in a while our doings may be communicated to the WATCHMAN. We have often urged our members to send some views and theories worthy of being put into practical operation that would advance the good of the Order. Perhaps this same talent referred to may be constrained, should he read this prodigious, but lame effort, to let our brothers know there is one Lodge in the Order of Workmen in which its members are bound together by fraternal ties, and apologize for this hasty and abridged record of No. 206. Fraternally, yours in C. H. and P., X. Y. Z.

Somersville, 210.

From a recent communication from the M. W. of this Lodge, Bro. Charles M. Courtwright, we take the following: Our little mining camp has been very dull lately on account of a fire, which, unfortunately, broke out some time ago in the mine. But the interest in Lodge matters has not decreased. On Friday evening, Oct. 27th, one of our meeting nights, it was proposed that our Lodge visit Antioch Lodge, No. 37, of Antioch, Contra Costa county. Consequently we closed our Lodge, and procuring a stage, started for Antioch. After a drive of six miles we arrived in good time to completely take our sister Lodge by surprise. Several fine speeches were made, welcoming us under the head of "Good of the Order." We had a splendid good time, and I think the members of both Lodges were much benefited by the visit. Bros. Baker and Beede made very lengthy remarks on Lodges visiting one with the other; and after the Lodge dismissed we were invited to proceed to Bro. Johnson's dining room. We did so, and there beheld the good things to eat—fit for kings. After several toasts our party broke up. The visiting brothers were: T. Floyd, P. M. W.; C. Courtwright, M. W.; J. Butt, F.; M. Mellyn, O.; P. Brown, Recorder; Wm. Murray, Fin.; H. Habenecth, I. W.; A. Habenecth, O. W.; J. McDermott, G.; Bros. Dunton and Coyle. We then got into the stage, and good-byes were said. All in all, the visit was a most enjoyable and profitable one. When we at length arrived at Somersville, on our return, all expressed themselves as glad that we had been there.

Magnolia, 6, D. of H.

On the evening of the 30th ult. this Lodge of San Jose held one of the most sociable gatherings ever held under its auspices. The committee went out of the usual routine and had a card party, or, as is sometimes called, a "kettle-drum." The attendance was quite large, and all entered into the enjoyment of the evening with a will. The committee had supplied cards, games of authors, chess, checkers, etc., so that everyone could be suited. Miss Maud Welch and Miss Emma Bacon each gave recitations. Mrs. J. H. Baird and little Miss Weller sang. Coffee, sandwiches, and every variety of cake and fruit made up the refreshments. It was an evening that will long be remembered by all who had the good fortune to be present. The committee is to be congratulated upon the success which its novel programme attained.

Golden Star, 144

We met Bro. Jas. Dean, of Golden Star Lodge, 144, at Volcano, Amador county, on Wednesday evening, November 8th, while visiting Valley Lodge. He reports the Lodge in a healthy condition. This Lodge upholds the social feature of our Order, by devoting one night in each month to literary and musical exercises and dances. On these evenings members and neighbors are invited, and the A. O. U. W. has become one of the leading institutions of this mountain town. Their membership is now about 40 and increasing slowly.

Ashler, 165.

Every week there is some addition made to this active Lodge of Alameda. One candidate received the J. W. degree on the evening of the 7th. There are numerous other applications already awaiting action, and we are told that within a very short time about 15 more will be added to the membership. The brothers are now talking of giving a grand invitation party in about a month. We feel certain that this will be one of the notable affairs of the season in fraternity circles, if given.

Mt. Diablo, 1.

Information from this Lodge, of Walnut Creek, Contra Costa county, is to effect that everything is prosperous and the Lodge is becoming stronger every month. The membership is now about 30 and is being increased frequently. A weekly sick benefit of $8 is paid, and the Lodge owns its hall and stands at the head of the fraternal organizations of the place. We hope to hear more from this Lodge in the near future.

Stockton, 28.

We had the pleasure of visiting the brothers of Stockton Lodge, No. 23, on Friday evening, Nov. 3d. The political fever being at such a hight, there was not a large attendance. One candidate was elected to receive the degrees, who is one of the leading citizens of Stockton. The membership is now over 200, and it is expected in the near future that the number will be largely increased.

Oakland Lodge Locals.

Brooklyn, 3.

Our representative paid a visit to this old and well established Lodge on the evening of th 9th inst., and was entertained in an agreeable and pleasant manner. Seldom will there be found so many "hale fellows well met." The attendance at this meeting was not large, but sufficient to show the earnestness with which the members are possessed. The enrollment of members in good standing is about 95, and a good proportion are to be found in attendance upon the Lodge at all its meetings. Deputy Grand Recorder Watson is a member of this Lodge, and one of its staunch and reliable members. The corps of officers are well qualified for their respective positions, and carry on the proceedings of the Lodge in a dignified and satisfactory manner. The membership is largely composed of business men and those prominent in professional and business circles. A committee has been appointed and instructed to report at the next meeting night, to prepare a programme for an entertainment which the Lodge will give in the near future. It is the intention to make this a very pleasant and enjoyable affair. One prominent feature of Brooklyn Lodge, No. 3, is its sociability. The fraternal feature is marked and in striking contrast to so many of the Lodges. A feeling of brotherly consideration is prevalent, and the stranger will be impressed with it. Altogether, our visit was a very pleasant one.

Keystone, 64.

Keystone Lodge, No. 64, of Oakland, has been experiencing something of lethargy on the part of the members for several months. No doubt politics have contributed largely to the decrease of interest. We are glad to note, however, that matters are looking better. On the evening of Tuesday, the 7th, one candidate received both degrees by dispensation from the District Deputy. On the same evening a committee was appointed to take into consideration the feasibility of giving some kind of an entertainment in the near future, which committee was instructed to report at the next meeting. Keystone has a large membership, and, if the members take sufficient interest in the matter, an entertainment of considerable interest can be held. We hope the recommendations of the committee will be for the holding of some kind of an anniversary, and that it will be a success in every particular. It is also proposed, if it is found to be within the privileges of the Lodge so to do, to pass a resolution notifying all the members of the Lodge that no money for assessments will be received and credited on the books unless the member himself pays it in open Lodge. The object to be secured by this entertainment is a good one, and might do much toward securing the attendance of the brothers more often.

Occidental Lodge, 6.

This Lodge will give a grand entertainment and ball, at Hansen's Hall, West Oakland, on Wednesday evening, Nov. 29th, for the purpose of providing an entertainment fund. It is expected that this will be a recherche affair, and the money raised will be put into a fund to be known as an "Entertainment Fund," and the proceeds will be exclusively used in the future to give free socials and reunions. The price of tickets is 50 cents, and are in demand.

Honorary Members.

Some of the lodges of Canada are agitating the matter of accepting honorary members in the Order, and urging especially that delegates from lodges attending next Grand Lodge be so instructed as to urge such a change in the constitution as will give lodges power to receive honorary members. It is claimed that in every city and town there are numbers of excellent men who, by the present constitution, are debarred from joining the Order as beneficiary members, owing to their age, but who would like simply to become members of the Order for its social advantages, claiming no other privileges. These men, from their age and position, would add strength and lustre to the Order. In short, their presence would add additional attraction to the Lodge.

Opinion is honestly divided on this question among the Lodges of this country. Whether the claims set up are sufficient to make such an innovation remains to be seen. It may be that the addition of this branch of membership to the Order would not strengthen us as much as retard our work. These men could possibly have no interest in the fundamental workings and principles of the Order, because they would still be excluded from participating in its benefits. On the other hand it might have a tendency to make the fraternal feature a more prominent one, and no one can question for a moment that this is "a consummation devoutly to be wished for." The question, at least, is one for thought and consideration.

IF there is any one thing becoming the officers of our Lodges more than another, it is dignity. When the officers maintain a decorum in the chairs befitting those who are in authority, the work of the Lodge is always accomplished with more satisfaction and celerity. But, on the other hand, where weak and unofficious men occupy the chairs, the business will be retarded and the interest in the meetings decrease. Let every Lodge attend to the matter of electing only good men to office, and the Lodge will prosper, as it is impossible otherwise.

THE ruling with reference to incorporating is as follows: "Grand Lodges of the A. O. U. W. shall not become incorporated under the laws of their respective States, nor shall they permit their subordinate Lodges to be incorporated unless the articles of incorporation have been presented to the Supreme Master and approved by him."

Young Men and Fraternal Organizations.

While it is unquestionably true that our secret benevolent and fraternal societies need the old men, who by their counsel will guide our fraternal ships safely through every Sylla and Charybdes that presents itself, yet it is likewise as true that they need the young men to impart life and vigor and activity. In our fraternal societies the two classes meet on a platform of equality, but the old men are recognized as the mentors, and upon their wise counsels and suggestions the stability of the organization will depend. In appealing to the young men to become connected with some organization of this character, the *Pacific Overseer* says: "Fraternal organizations are of especial advantages to the young man—mentally, morally and financially. In no other way can he extend the circle of his friends and acquaintances, and at so small a cost of time and money. He will find in the well conducted Order true friends, upon whom in the hour of need he can depend—friends not like the summer birds who favor us with their presence and choicest music when the sun is shining brightest, and who, when the clouds obscure the brightness, taketh their flight; friends who are true as steel alike beneath the sun of prosperity and the night of adversity. You can tell the young men of the country that our Lodge teaches how to conduct debates, accustoms one to addressing audiences, and imparts a great variety of information. The Lodge is a much better place to spend an evening than at some drinking house. It is impossible for a young man to grow up surrounded by fraternal influences without being made a better man in consequence." These considerations are especially applicable to the A. O. U. W. But we have already gone far enough in this enumeration of benefits to be derived by young men from a membership, and now a word to those who are already members. Young men cannot and will not be induced to join our Lodges if our meetings are not made in some way attractive. Some plan should be devised by which the dry details of routine business may be enlivened. There are many plans—literary and musical, socials and entertainments, the latest newspapers and illustrated periodicals would help out. We heard a distinguished member of the California jurisdiction say that his Lodge most always took a recess, during which a box of cigars was set out, and all who desired partook, and the time was spent in cracking jokes and social conversation. This is one way, but there are other plans. This is a far more serious question than many readers may suppose, and we would remind them that it is useless to attempt to increase the number of members, unless such plan is adopted. The greatest danger menacing our Order is this wide-spread apathy; but this must be thrown off and new life infused into the ranks. Now is the time to begin the winter campaign; commence the work in your Lodge, and then branch out into new fields, and gather into our ranks the true, the active, the intelligent. What is needed is a general waking up all along the line."

A Contemporary's Words.

We are pleased to clip the following paragraph from the columns of the Livermore *Review* of the 4th inst.:

The WATCHMAN Publishing Company will please accept our thanks for the Pacific States WATCHMAN as an exchange. It is the best A. O. U. W. paper published. All members of the A. O. U. W. should take it and keep posted on the Order. Only $2 per year; leave your orders at the *Review* office.

As this announcement was made without any solicitation or knowledge of it whatever on our part, it goes to show that the WATCHMAN may justly claim to occupy a high position in fraternal journalism. It has been our earnest and constant endeavor to make the WATCHMAN of such real value that no Workman could afford to be without it. Whether we have succeeded or not, our friends must judge. In any undertaking, the slightest degree of appreciation from friends is gratifying, if not altogether encouraging. We are under many obligations to the *Review* for this kind public notice.

We wish to say to our friends that the WATCHMAN will continue the advocate and staunch friend of the A. O. U. W., and we hope to greatly enlarge our subscription list by adding to it the name of every Workman not already there. To those whose subscriptions are expiring, we ask a prompt renewal, so that the business of the paper will not be unduly taxed. See that the organ of the Order on the coast, the PACIFIC STATES WATCHMAN, is maintained and given a large constituency, so that workings and principles of the Order may be widely promulgated, and the influence of the Order thereby increased. This must be done wholly by individual subscriptions.

THE Kansas newspapers are agitating the subject of tree planting as a relief from cyclones. It is stated that if 10 acres of timber were grown on each quarter section in the land, and a pond constructed on each farm, the evaporation would be so great that the atmosphere would become heavy enough to prevent the wind from dancing so disastrously over the prairie.

THE secret Orders are not opposed to the church, and the idea, which prevails in some communities that this is so, is a mistake. An exchange says: "While the Order papers are quoting this text of Scripture, the church papers are continually holding before their readers the verse: 'Be ye not unequally yoked with unbelievers.' Now, can there not be some missionary work done in this direction? Can not some one manage to bring these two affinities together? They are congenial spirits, if they can but understand it so. The church should encourage beneficial Orders. When a preacher stands before his people, can he not preach from this very text concerning the man who provideth not for his own family, and in the sermon describe the *infidel*, and close his sermon by reading from Scriptures: 'Pure and undefiled religion before God and the Father is to visit the widow and the orphan in their affliction, and keep yourself unspotted from the world.' When a preacher or very religious person feels that the worldly future happiness of his family is secured, and he is quietly dropping into the treasury of some Order a dollar or two with which to gladden some sorrowing heart, and keep some hungry child from starvation, can he not say, 'My soul shall magnify the Lord; Bless the Lord, oh, my soul, and all that is with me, bless His holy name.'"

SOMETHING ABOUT COKE AND CHARCOAL.—The increase of smelting furnaces in this territory, and more especially in the southern portion thereof, has opened up a new industry that is bound to assume respectable proportions at no distant day. In conversation recently with a *Republican* reporter, Prof. Church, of the T. M. and M. Company, gave it as his opinion that coke burning could be made an extensive and profitable industry if carried on here. Nearly all the smelters in the territory are supplied from Colorado. There are not less than 12 furnaces in operation in Southern Arizona. Of these, more than half are shut down at the present time in consequence of a scarcity of coke. Forty new coke ovens have been erected at Trinidad, Col., but that number will not be able to cope with the extra demand from here. There is plenty of wood, fitted to make excellent charcoal, in the Huachucas, and Prof. Church thinks that it can be utilized as well as coke. Mesquite and iron wood, which will not be taken for boiler wood, makes excellent charcoal. The T. M. and M. Company will purchase 50 tons or more for their Charleston furnace at any time, and also contract to buy 30 tons a month thereafter. The railroad company charges exorbitant freight rates on all coke brought over the road, so that the local industry, if started, would have excellent chance of competing with the Colorado manufacture.

SEWING MACHINES IN GERMANY.—Germany is producing sewing machines more cheaply than any other country on the globe, and the quality of German machines has been greatly improved in the last ten years. German machines are provided with all the modern improvements, such as loose pulley, automatic bobbin winder, shuttle ejector, tension, liberator, etc.; while most of the old American companies refuse to introduce those essential improvements on their machines. In consequence of this fact, German machines are very often preferred. For instance, the Wheeler and Wilson machines still have the bobbin winder on the stand under the table. For this reason some dealers do not want them. German machines of the Singer pattern are sold in Berlin at from $10 to $12 wholesale, complete with all the improvements. A Berlin correspondent of the American *Sewing Machine Journal* says that the only way to introduce American machines in Germany is for American manufacturers to "branch out" as the Singer Company has done. The only competitor who has made himself felt by the German manufacturers is the general agent of this company, whose success is attributed to their method of disposing of machines in a way to create a demand among consumers, thus compelling local dealers to supply them.

HOW TO CURE DISEASE.—To attempt the cure of disease, or the restoration of health by any means not including the idea of a return to obedience to the laws of health, is to war against the author of those laws, and to accept the substitution of one disease for another instead of cure. Virulent poisons do not produce health and vigor, but waste vital force, which none can afford.—*Dr. J. H. Hanaford.*

A QUESTIONABLE FOSSIL.—At a recent meeting of the New York Microscopical Society, Oct. 10th, Dr. William B. Carpenter, of London, summarized his investigations of the structure of Eozoon Canadense, and exhibited many specimens under the microscope. Dr. Carpenter holds to the theory of the organic origin of this much disputed fossil.

THE great iron bridge of the Atlantic and Pacific railroad over the Canyon Diablo, Arizona, has recently been completed. It is 500 feet long. The hight of the bridge is 240 feet, or 14 feet higher than Bunker Hill Monument.

IN Spain and Italy the vines are expected to yield a return variously estimated at from one-sixth to one-half above the usual average. In Algeria the vintage is abundant beyond all expectation, and we are even told that vessels are not to be had in sufficient number to receive the juice of the grape.

The Musa Ensete.

[A paper read before the San Mateo Horticultural Society by JOHN MCLAREN, and furnished for publication.

The *Musa ensete*, or Abyssinian banana, a native of the east coast of Africa, is one of the grandest and noblest plants that have been introduced into our sub-tropical gardens. Its immense leaves are 13 ft. in length by 2½ ft. in width, with a very prominent mid-rib of a reddish color, and well deserves a place in every garden of note in the country where it can be grown successfully.

San Mateo is not the most favorable climate for the cultivation of large-leaved plants. I tried the *Musa cavendishii* in the same situation, but it presented a very sorrowful appearance. Its leaves were all, as soon as formed, torn into shreds by the wind. It certainly made one or two attempts at growth, but our famous trade winds came along and tore the leaves into ribbons, and in a few days they were all withered up, whereas this variety has stood the whole summer, and every leaf is perfect. It has made one leaf every week since planted out on May 15th.

For centers or foliage beds, for single specimens or groups on lawns, it is unrivaled, and gives a tropical character to the landscape peculiarly unique and beautiful. Whether it will stand the winter or not I do not know, but am satisfied that with a little protection it will, and next year will rival the magnificent specimens I have seen in European hothouses.

Its cultivation is very simple. Sow the seed in a brisk heat in January in light, leafy soil; cover the seeds to a depth of about one-fourth of an inch, and see that they do not get dry. In about three weeks they will be up. As soon as they make two leaves put them into four-inch pots in soil composed of half old hot bed manure and half light loam with a sprinkling of sand. Plunge the pots in bottom heat of 70°. In about one month more they will be ready for another shift. This time they will require eight-inch or 10-inch pots, which will serve them until planting out time.

The middle or end of May is a good time to plant them in the open ground. Select a sheltered place for them where they will get plenty of sun. Dig a hole about four ft. wide by two and one-half ft. deep; fill in with good rich soil, and after the plants have been hardened by exposure to the sun and air, plant them. After planting give a good soaking of water, and give abundance of water all summer. You will be well repaid for the trouble with enormous tropical looking leaves which will attract the attention and admiration of all lovers of handsome leaves and noble looking plants. I am not aware of another specimen of Musa Ensete growing out of doors in this country. That is my apology for giving you this paper at this time.

ARTIFICIAL WOOD.—The latest report of a patented method of making artificial wood comes from Germany, where Herr B. Harrass has invented and put into practical operation a process which consists of the manipulation of a mass consisting chiefly of cellulose and starch. Common cellulose, sold in the form of paper, is reduced to pulp in water. To this is added, after being drained through a sieve, three parts weight of starch and two parts weight of meal (wheat or maize). The mixture thoroughly mixed is put into tubes of thin metal and boiled over a water bath. When done the allotted time and turned out after cooling the mass resembles glue, which is then mixed with the same quantity of sawdust. This mass is rolled and left to dry in a hot room, and is now ready for use. For pressing into the desired shape iron or steel molds are used heated to 120°, and the mass is subjected to enormous pressure. After cooling the article resembles wood and can be treated in every respect as such, becoming with age bone hard. It can be worked with the saw or file, can be colored, polished, and, when desired, covered with veneer.

GUNPOWDER ENGINE.—A powder engine has been patented in Germany by Herr Beck. In it a piston is forced to and fro in a horizontal cylinder by small quantities of powder ignited on either side alternately. Powder pans are provided on the bottom within, on which, at the proper moment, powder falls through passages from two holders which rest on distribution slides. The igniting of the powder is effected by means of a spirit or gas flame from the cylinder cover, drawn in through an oblique aperture by the suction force of the piston. The access is regulated by slides. The gases of explosion are expelled through holes furnished with slides, on return of the piston. The heavy residues are pushed by the piston into bags, which are emptied at intervals. It is claimed for the new motor that, with small occupied space, it is very effective, and easily set at work. The consumption of powder is comparatively small, and the engine regulates itself. The danger is represented as slight.

PARIS AS A SEAPORT.—There has been recently a revival of the project of making a seaport of Paris. It is said to be seriously entertained in French engineering circles. If accomplished, the channel from Havre to Poissy will be cut down to allow ocean steamers to go up to the latter point, which will deepen the harbor at Poissy, and there will be a series of locks that will convey the vessels to Paris. The plan is regarded as feasible, and it is estimated that the outlay would not exceed fifty millions of dollars.

The Season.

Rain has fallen in unusual quantities. vember bids fair to rival October in gen downpours. The soil over wide areas of the State have been thoroughly drenched, and whenever the skies clear will be ready for active work by the cultivators. Already much has been done in the field, and preparations for an unusually large planting of trees and vines are under way. Our California seedsmen and nurserymen are full of business, and are displaying commendable enterprise in getting their supplies into good shape for the long and active demand, which bids fair to continue for several months, because conditions are so favorable for an early beginning. There will also be a large call for Eastern seeds and trees, no doubt, for it is well known that the local supplies of several favorite kinds of fruit trees will not nearly reach the demand; in fact, orders are already booked for a large percentage of the stock which will be available this winter from California propagators.

There is one thing which those who are used to the marked seasons of the Eastern States, and their alternating periods of activity and repose which they occasion, cannot fully understand with reference to California. They cannot realize that a man, who has will and water, can find some profitable outdoor work to do every month of the year. As they have often to fight the elements to get in the seed at the limited season which should include the sowing, they cannot appreciate the fact that we have half the year in which many seeds and plants can be safely confided to the soil. So, too, they have to put forth the sickle when the rain cloud still is in sight, and rush the grain to cover in an hour, while we often have four months of harvest without a threat of danger. The length of the planting season is a great boon to the grower of many crops. It enables him to catch up with his work and to carry out many plantings which would be otherwise quite impossible. The advantage of a succession of growths of the same variety of seed need not be enlarged upon. One feature of the long planting season in this State is the longer duration of trade in seeds, trees and plants. Our Eastern seedsmen who advertise for California trade are often, doubtless, surprised at the orders they get for seed for "immediate planting," which continue to reach them during half the year. The length of our planting season will explain it to them. They need not be surprised to find their trade beginning in October and continuing until April, and during all this period they should not fail to keep their desirable things in the planter's view.

There are many reasons to expect an active trade this fall and winter in nearly all kinds of useful and ornamental plants and trees. The increasing prosperity of the people is leading to a general disposition toward home adornment, within and without. The hosts of new and beautiful houses, both small and great, which are fast replacing the rude shelters of early settlement, must have an environment of leaf and bloom. The new wells and new ditches are yielding water to doorways hitherto dry, and the shrub and flower must follow. Added to these facilities for garden is the wider appreciations of gardening in its esthetic aspects, which is the result of the earnest tributes to the beautiful which have been read by all eyes and heard by all ears.

The disposition toward the planting of useful growths is also very active. There will be a most notable increase of our orchard and vineyard area this winter.

The demand for canning has continued, and the output of canned goods in California has been greater this year than ever before. It is true that prices have not been as satisfactory as in the two preceding years, but fruit growers have made some money and have full confidence in their business. The chance for successful and profitable work with evaporators was never more generally appreciated, and it will be the safeguard if the canners should be surfeited.

Vine planting will be pursued beyond any measure that can at present be made. Already there have been contracts for cuttings of certain favorite grapes, which will clean up nearly all the prunings of large vineyards. There is a disposition also to make many trials of the resisting vines in the phylloxera districts. In short, there is discernible on all hands a disposition to plant permanent growths this year. Large fruits and small fruits are all sharing in the accounts of new plantations which are hinted to us in conversation and correspondence, and we expect that all trustworthy propagators, both at home and at the East, will find the California trade very satisfactory this year, if people succeed in finding out what good things they have ready for introduction.

UPPER ROOMS HEALTHIEST.—At a recent sanitary Congress in England the Hon. F. A. Russell said that it was found that in the upper rooms of a house a drier atmosphere prevailed than was found in lower levels. Such rooms are also more comfortable in cold or foggy weather. The practical conclusions seemed to be that invalids and delicate persons should generally be placed in high and sheltered situations, in the highest rooms of a house, and by no means on the ground floor; that every house ought to be built on arches, or thoroughly ventilated underneath; that no house not so ventilated should be considered habitable.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi-annually in advance. If errors or omissions are noticed, please write the office direct.

The Secret of Success.

It is well known that both France and England produce much more to the acre of cereal and vegetable products than is realized from the same area in the United States. The estimate for France is fifty per cent. more, and a much larger per cent. for England. Why is this? How is it that English farmers can so exceed our own—especially when we consider the many centuries during which English farms have been under cultivation, in excess of those of this country?

The secret of their success is due to greater care which they exercise in raising and selecting seeds and in all the various processes of cultivation. American farmers appear to think that anything will do for seed; that drainage is of but little account; that heavy manuring will damage the soil and "burn out" the crops; that deep plowing is hurtful and careful cultivation will not pay for the extra labor. In California a farmer has been heard to boast of a new and valuable labor saving process which he had introduced on his farm in turning a small stream through his stable and stock-yard by which he was enabled to "sluice out" the manure and get rid of it much cheaper than by use of the shovel and cart! It is full time that such folly was done away with; it has had its day. Let our farmers adopt the more reasonable plan of feeding the land, that it in turn may feed the crops. When that is done we shall have no more of worn-out lands, and our average wheat crop will go up to the English standard of thirty or thirty-five bushels to the acre, instead of the present yield of only fifteen.

No one quality is more needed by the average Californian than carefulness. Our people waste enough to support comfortably another population equal to the present one. This wastefulness which is manifested in almost everything is what keeps the majority of our people comparatively poor. We ought to be the most prosperous people on the globe, and the reason we are not so is because of the endless little leaks which we certainly permit if we do not indeed encourage.

To go back in our remarks to the farm—Manure lost is money lost; and yet we go on throwing it away, or at least the great bulk of it, year after year, as though it was of no value. The Chinese and many of the Italian gardeners are exceptions to the rule, and they realize from an acre of ground fully double the value which an average American will obtain.

Take the case of farm produce; the past month tells a story of carelessness which is absolutely astonishing to a resident of even the Atlantic States. Take our stock ranges, innocent almost entirely of anything in the shape of shelter from winter rains and cold. In addition to a large percentage of actual loss from exposure, those that survive require about double the amount of food which would be needed for stock properly sheltered. The animals are compelled to generate the heat from food, which is radiated from their bodies by lack of shelter. That much food is lost for all practical purposes.

In regard to our grain crops, there is not one farm or ranch in twenty which produces anything like the yield which might be derived from a more careful cultivation and proper preparation of the soil. There is also much unnecessary waste in harvesting.

Then, again, there is great carelessness and loss in and about the farmer's home. His wagons and farm tools are too often allowed to needlessly deteriorate by reason of exposure to the weather. The same carelessness is quite too often seen in the house and especially in the kitchen. The custom of driving two horses instead of one in a single buggy is also oftentimes a reckless wear of horses and horseflesh. Shelterless homes, *sans* trees, *sans* shrubbery, *sans* garden, *sans* paint or whitewash are too often the rule, where cosy cottages, shaded with trees and covered with vines and flowers might beautify the landscape and add immensely to the pleasure and prosperity of our farming community. A well kept house and a well tilled farm is a comfortable living and a fair competence to any man; while on the other hand slackness and carelessness about the house and farm is an almost sure cause of poverty, which is too often the parent of wretchedness, if not of crime.

CLEANLINESS.—If "cleanliness is next to godliness," filthiness renders one incapable of reaching the highest type of spiritual growth. Cleanliness is naturaly favorable to the best development of our physical, mental and moral natures. Filthiness is accidental, and wars against our highest welfare, while the sun, air, water and other natural forces are harmoniously laboring for the removal of the filth, which necessarily results from breathing, decay, combustion. We may learn important lessons, may learn to breathe clean air, eat clean and wholesome food, keep the body clean, thus avoiding the influence of filth to dwarf the body, stultify the mind and contaminate the soul.—*Dr. J. H. Hanaford.*

A NEW GLASS, transparent and more brilliant than common crystal, but containing no silex, potash, soba, lime or borax has been invented by a chemist in Vienna. It can be cut and polished, and when fused adheres to iron, bronze and zinc.

THE General Manager of the Tehuantepec railroad, who is an American, has left the City of Mexico for the Isthmus. Work begins at once on the Pacific side.

Hints to Young Folks.

A father talking to his careless daughter said: "I want to speak to you of your mother. It may be that you have noticed a careworn look upon her face lately. Of course it has not been brought there by any act of yours, still it is your duty to chase it away. I want you to get up to-morrow morning and get breakfast, and when your mother comes and begins to express her surprise, go right up to her and kiss her on the mouth. You can't imagine how it will brighten her dear face. Besides you owe her a kiss or two. Away back when you were a little girl, she kissed you when no one was tempted by your fever-tainted breath and swollen face. You were not so attractive then as you are now. And through these years of childish sunshine and shadows, she was always ready to cure, by the magic of a mother's kiss, the little dirty chubby hands whenever they were injured in those first skirmishes with the rough old world. And then the midnight kiss with which she routed so many bad dreams, as she leaned over your restless pillow, have all been on interest these long, long years. Of course she is not so pretty and kissable as you are, but if you had done your share of the work during the last 10 years the contrast would not now be so marked. Her face has more wrinkles than yours—far more— and yet if you were sick, that face would appear far more beautiful than an angel's as it hovered over you, watching every opportunity to minister to your comfort, and every one of those wrinkles would seem to be bright wavelets of sunshine chasing each other over the dear face. She will leave you one of these days. These burdens, if not lifted from her shoulders, will break her down. Those rough, hard hands that have done so many necessary things for you will be closed upon her lifeless breast. Those neglected lips that gave you your first baby kiss will be forever closed, and those sad, tired eyes will have opened in eternity, and then you will appreciate your mother; but it will be too late.

THANKSGIVING DAY IN THE EAST.

THE Austrian Government has granted concessions to an English company to build an elevated railroad in Vienna, and contracts for most of the 150,000 tons of iron which will be needed for the work, have been already awarded to Austrian foundries.

Mrs Mary Austin, who lately died at Washington, had 44 male children, 11 of whom survive. She had triplets six times. She was a doctor of medicine and a surgeon, and served through the war with the rank of major.

Chaff.

A boy came from school very much excited and told his father that he believed all human beings were descended from apes, which made the old man so mad that he replied angrily: "That may be the case with you, but it aint with me; I can tell you that now."

Tommy was a little rogue, whom his mother had hard work to manage. Their house in the country was raised a few feet from the ground, and Tommy, to escape a well-deserved whipping, ran from his mother and crept under the house. Presently the father came home, and hearing where the boy had taken refuge, crept under to bring him out. As he approached on his hands and knees, Tommy said, "Sh! Is she after you, too?"

A poor memory is a very inconvenient thing. So a poor man found it who lately called on a friend, and in the course of the conversation asked him how his good father was. "He is dead; did you not know it?" answered the friend. "Indeed! I am distressed to hear it," said the visitor, "I had no idea of it." And he proceeded to express his sympathy. A year after, he called again, and forgetfully asked, "And how is your poor father?" The clever reply was, "Still dead."

A BIBULOUS parson was introduced to a lady who had been represented to him as quite a talented artist. He greeted her by saying: "I understand, madam, that you paint?" She started, blushed deeply, and, recovering herself after a few seconds, said, with as much acidity of tone and style as she could command: "Well, if I do paint, I don't make any mistake and put it on my nose."

"I DIDN'T like our minister's sermon last Sunday," said a deacon who had slept all the sermon time, to a brother deacon, "Didn't like it, Brother A.? Why, I saw you nodding assent to every proposition of the parson."

AMELIA: "You may talk about your city fellows, but give me a beau from the country." Juliet: "And why do you want a country beau, I should love to hear?' Amelia: "Because, sis, he's very likely to become a husbandman."

A COMPANY of settlers, in naming their new town, called it Dictionary, because, as they said, "that's the only place where peace, prosperity and happiness are always found."

LEAVING local traffic out of the calculation, it is said that more travelers use the railway station in Kansas City than any other in America, a number of important lines coming together at that point. The keeper of the restaurant has to pay a rental of $20,000 a year.

Boys' and Girls' Aid Society.

This association is one which deserves aid and encouragement on account of its practical results. Since May 1st, a period of only 24 weeks, it has given 1300 lodgings and 4411 meals to friendless children. It has also distributed among these homeless ones 906 articles of clothing. It has found employment for 98 boys and girls in this city, and has found homes for 132 others; 70 of the latter were taken directly from the courts or prisons.

Its objects are worthy, and it saves many children who otherwise would soon have been numbered among our criminals. Until suitable homes can be found for these neglected children, it provides quarters with which are connected reading-rooms, baths, a gymnasium, savings banks, a school of cookery, a sewing school, a class in music and classes for instruction in other branches. Lectures and entertainments are given for the instruction and amusement of the children, and a temperance organization is connected with the society.

At present the society is greatly in need of money for the prosecution of the work; also, homes and employment for children. Clothing for both sexes, and all ages, is earnestly requested. Ladies and gentlemen in every town to whom the society can look for information in regard to applicants for children, and through whom children placed in their vicinity may communicate with the society are greatly needed. The society is situated in the midst of our city and should receive the attention of the creditably disposed. Communications or parcels should be addressed to 68 Clementina street, S. F.

The Influence of Association.

The books we read have much to do with the current of our thoughts, and even our lives. If we read only books that are good and pure, our thoughts will naturally be led in that direction. Books are now so cheap that every farmer's wife can afford sufficient reading matter, and how pleasant, when one is tired, to take a good book and have a quiet hour with the author. Even the reading of history can be made very pleasant and profitable in our homes by reading it aloud winter evenings, and having the children who are old enough read it with us, and the next morning, during breakfast hour, talk over what was read the evening before, and ask questions and see what has been remembered. We will find that each one has something to say to instruct and help us to remember the past events. All good books of poems improve the reader; and while stories of different kinds will interest us, they do not rest one so much, as there is generally some anxiety or curiosity to finish, and unless the author is well known to write stories of the character of which we have no doubt, our time is not always well spent that is consumed in reading them. The stories of T. S. Arthur and Virginia F. Townsend, which carry with them household morals, always furnish us pleasant thoughts, and tend to make us happier and better.

If one has ever drawn the comparison between an hour spent with a newsy person, or an hour with a good book, it will not take long to decide which was the greater benefit. While we do not object to news, we should be careful that in repeating what we have heard, not to tell what would injure another, and never to repeat what we think to be incorrect, no matter who our authority may be. In speaking of anyone let it really and truly be our motto to speak of all the good we can, and if we can say no good, in charity let us keep silent.

THE STEPMOTHER.—It is time that the cruel prejudice against stepmothers should die out. Novels do much toward fostering this feeling; but surely writers should now be wiser in this respect. Cold-heartedness and oppression toward the children of one who has preceded her in heart and home are no doubt at times to be met with; but cannot many households tell another tale—a tale of love and gentleness, and mutual affection and peace? And cannot, too, some homes tell a third story, where the sufferer is the one who is looked upon as an interloper? Are there not cases where a man whose hearth has been early desolated, and who is left with little ones whom he cannot look after, with a heart still yearning for affection, brings home some warm-hearted girl, ready to pour out no stinted measure of love on the motherless ones; and what do he and she find on settling down to their daily life? That foolish relatives have already poisoned the baby minds against their second mother, and that her efforts to win their affection and trust are blighted by the influence that has been wielded. And when other little children come, too often, instead of being welcomed with brotherly or sisterly love, they are greeted with feelings of bitterness and jealousy. And yet many homes are held together by the stepmother alone. We might tell of sick beds watched with all a mother's devotion; of dying hours soothed with all a mother's faithful self-forgetfulness; of the young spirit sinking to the grave, clinging with fond affection to the representative of that real parent whom it was soon to greet in the spirit land; and we turn with just anger from pictures laid before us as false as they are ill-judged. Let us hope that this only prejudice may soon be unfelt amongst us.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50

Give it a Trial.

A suggestion has been made by one of our exchanges to effect that all the different Lodges in the various districts, together form a debating society, and have semi-monthly meetings—meetings in each Lodge-room in turn. And we are impressed with the belief that it is worthy of a trial. We have in our own late issues endeavored to impress the various Lodges with the importance of doing something now towards making the winter's work not only interesting, but profitable. The political campaign is now over, the public officials have been elected, and interest in these matters has ended, for the present at least. It is high time, therefore, that all fraternal men come back to their Lodge organization, with a fixed determination to do his full share in furthering the interests of his Order. Were the average Lodge members half as active in the campaign which is calculated to make additions to the membership of this Order, and make the Lodge not only of profit to himself, but his brothers as well, as he is in the political campaign, grander results would be accomplished, and the individual, as well as the organization, would be benefited to a much greater extent.

Of course, suggestions are cheap, but we shall endeavor to recommend something for the various lodges calculated to strengthen and stimulate them in the future.

Some may be inclined to think lightly on the suggestion concerning the formation of debating clubs among the Lodges in each district; but upon a second thought the matter will present itself in a different light. There are few things as beneficial for culture and improvement as a friendly debate. Then it is possible for us to use the stock of knowledge which may have been accumulating in our dormant brains for many years. It is a singular fact that the man eager for information can learn something from everybody with whom he may come in contact. In a thousand ways such debates could be made of advantage to our members. Next to the advantage intellectually must come that of sociability, and if there is anything our Lodges need, it is the latter. Every Lodge should adopt some means of making the meetings interesting, and one of the best ways of doing this is the cultivation of a fraternal spirit.

THE *Fraternal Censor* says that politics have interfered very seriously with the attendance of the meetings of the Lodges in New York State. California has not been alone in this matter.

REPRESENTATIVES to the Grand Lodge must be elected on the first meeting night in January. The Grand Lodge meets in April.

The A. O. U. W. as an Element in Society.

To deny the fact that the A. O. U. W. stands among the foremost of the benevolent and fraternal societies, is to deny that which can be easily proved. But the influence of this organization in the community at large is about as easily demonstrable to be considerable. Formed, as it is, upon the foundation stones of Charity, Hope and Protection, as upon adamantine rocks, it has become a power in society of great moment.

The principles of the Order are easily understood. "Its grand design," as another has expressed it, "is to establish upon a sound foundation an association that will meet the want long felt by many upright and honorable people who have been imposed upon by insurance companies and corporations who absorb their money and with it made rich men richer, and discriminated against the policy-holder for their own aggrandizement." Supplementing this feature, and closely allied with it, is that spirit of brotherhood and fraternity which has for its object the elevation of man above the selfishness of the world. These two noble impulses are the standards and aims of the true Workman.

It should not be a matter of surprise, therefore, that in every community where the A. O. U. W. has become established that the Order should be looked upon as a feature of considerable moment in society.

The matter of selection, which is closely regarded in this organization, whereby only men of good moral and physical qualifications can affiliate, is of itself a safeguard against its degeneracy. On the other hand, it is evidence on the face of it that the principles will be maintained.

Every organization or individual that has for its object the amelioration of mankind, and faithfully carries out these purposes, cannot but become beneficial. The A. O. U. W. encourages industry and frugality. It makes man care for more than the present, for it takes into consideration the welfare of his family in the future. It raises the standard of morals. While the Order is not a religious body in the sense that it maintains any creed or particular belief in ecclesiastical matters, yet the caring for those about us and helping those in distress and encouraging correct living are the purposes, and with these as results it has much to back up its claim. In the Order reputation is of more value than gold or diamonds.

Men possessing these qualifications are always at a premium in society. They are the ones who mold and shape the thought of the masses; such men are fit to be models after which life and living may be modeled.

To-day the A. O. U. W. has over 2,000 Lodges in existence, the great majority of which are exercising the beneficial influence in society already hinted at. The membership is now over 100,000, although it has been in existence but little over 14 years.

Such, then, is its position in society to-day, and no Workman who is proud of his title can but rejoice that he is a partner in it all. What society needs to-day is pure, moral and right living men. The times are important. One event crowds upon another in rapid succession, and the tendency is to give a loose to immorality. The fraternal society of the day is one of the safeguards of our nation. It is molding character aright, and the day must come when this will be recognized. The A. O. U. W., then, has a lofty mission to perform in society that it may accomplish all within its possibilities.

Questions Answered.

A correspondent from Downey, Cal., desires to know the number of Grand Lodges and subordinated A. O. U. W. Lodges in the United States. There were, on September 1, 1882, 22 Grand and 2340 subordinate Lodges.

Another Workman desires to know whether the Master Workman has the absolute power to enforce the attendance of a brother in the Lodge-room. As expressed, the point is: In one of our city Lodges, after the second degree had been conferred, a recess of 25 minutes (an unusual and unreasonable time, as our questioner thinks) was taken. He did not wish to be the cause of a general exit, and so deferred until after the initiation, then asked the M. W. permission to retire, it being a case of necessity. The permission to do so was not granted, but the member was told that he could go after the recess. To substantiate his ruling the M. W. said this was the ruling of the G. M. W. Now, we are asked whether the M. W. has the power to compel a brother to remain during a recess of 25 minutes, and refuse to accept any just excuse.

In reply we are authorized in saying that although it is customary in Lodges to have what is called a "recess," no such intermission is legally known in the Order. From the time a Lodge opens until it closes it is in charge of its officers, and the room can be entered and retired from only in the regular manner. The M. W., under the law, has the right and power to grant or refuse departures. It is a question of order, and a local one, with which the G. M. W. has not and will not interfere.

We Respond.

We are waiting to see the reply of the *Protector* or WATCHMAN to our conundrum relative to the action of the Knights of Honor in reducing the age limit from 55 to 50 years. Come, gentlemen, do not be bashful.—*Michigan Herald.*

We should like to oblige the *Herald*, but really its conundrum is too heavy for us. We give it up. As to the Knights of Honor grade assessments, one of two things seems to be plain. Either the system proved to be wrong, or else the Knights of Honor did wrong in reducing the age of eligibility. We cannot tell which. For the life of us we cannot see why men should not be taken in up to the most extreme old age, if the tables of expectancy are just and reliable, and the candidates willing to pay assessments accordingly.

If you grade payments according to expectancy of life, and the expectancy of a man at 21 is 41½ years, and the expectancy of one at 95 is 3 years, why not as readily take the man of 95 as the other, if he be willing to pay $14 while the other pays $1? True, judging from the results of actual experience, he would have to pay but about $600 during his remaining days to realize $2,000, but did ever a man admitted at 21 pay more than that, or would he be likely to if he remained in the Order during his full expectancy of life? Then why make a maximum limit to the age of eligibility? Why not take a centenarian but a few weeks this side the grave, let him pay the $600, and pass away, leaving the organization to reconcile the difference between $600 and $2 000 the best way it could according to the Rule of Expectancy *vs.* Actual Experience?

Now, lest the *Herald*, as usual, should claim this as an argument for its side of the question, it may be well to say that it proves:

First: That a graded system, based on expectancy of life, is unreliable and essentially wrong.

Second: In order fo correct this wrong in a measure, or at least to cover it up out of plain sight, the age limit of eligibility must be put a long distance on this side of probable death.

It seems to us that the *Herald* shows a disposition to treat us a little unfairly in stating the position of the WATCHMAN. We will try to make our views so plain that henceforth there can be no misunderstanding.

First: We do not believe, comparatively speaking, that old men are as good insurance risks as young men; in other words, we do not believe a man at 55, or even 50, is so good a risk as one at 21, all things other than age being equal.

Second: We do believe, however, that many a man at 50 is a better risk than many another at 21. That's because other things than age are not equal, and here we have one of the reasons why the expectancy tables prove a delusion and a snare.

Third: We believe, in our Order, a young man between the ages of 21 and 31 is a considerably better risk than one between 31 and 50, but that between these latter two ages there is but little difference in that regard.

Fourth: We believe that notwithstanding the fact that the young are better risks than the middle-aged, they are not more desirable as members. An Order composed solely of members admitted at ages from 21 to 31 would be likely to fail. "Old men for counsel, etc." Even though young men pay a little more than their proportion of our financial burdens, they get a full equivalent in the way of assured permanence of the Order, wise counsels, instruction, etc.; nor do they complain, so far as we know.

Fifth: If a system of graded assessments be admitted as desirable, we do not know how it should be done, nor can we, till we have compiled statistics from our own Order, so that by the past we may judge the future.

Sixth: Any system based alone on age at an admission would be about as unjust a contrivance as man could possibly devise, for of two healthy men, one at 21 and the other at 55, the latter may be by far the best risk, on account of occupation, residence, habits and family history. More than this, no gradual system can even approximate justice that does not grade the members every year at least. If the risk increases with age or other circumstance, payments should also increase. This applies with especial force to organizations that create no reserve fund, but use all the beneficiary money they receive to pay to beneficiaries as they go along, keeping nothing back.

Now we submit that, to construct a system which would be just, and at the same time practical, would be an impossibility. It never has been done, and never will be done. Seeing and knowing this, we most stoutly contend in favor of the system we now have. It is more simple than any other, and works admirably. The average age of our accessions is, so far as we can any of us see, as low as that of any other Order. Why, then, seek after something we know we cannot get, when even the seeking provokes a spirit of distrust and unrest?

THERE is a wise and foolish economy in the matter of management of a Lodge. It is not false economy to make the Lodge known by holding a few socials or entertainments during the year, and especially during the winter season.

Sensible Conclusions.

From an ably written article in the *Knights of Honor Reporter* by Rev. Jesse A. Gilbert, A. M., we take the three conclusions drawn:

1. The old line companies with their expensive buildings, heavy commissions and figure-head presidents, promise too much. Co operative insurance is less expensive than any other kind, and yet it costs something. If water be drawn from the well or cistern, it must in some way be replenished.

2. They are careless in taking risks. They offer to insure everybody and anybody. Such a course must, as surely as the sun shines, be speedy failure.

3. They often decry all other companies and Orders. This is neither wise nor generous. I admit this matter of co-operative insurance may be overdone. There may be too many in the field, so that we shall antagonize and destroy each other, yet with a population of 50,000,000, and rapidly increasing at that, I fail to see why there may not be in the United States at least as many co-operative societies as there are old line companies. So far as sound and true co-operative societies are concerned, our motto should be "live and let live." Let us never forget that "United we stand, and divided we fall." We can truly say that "we be brethren."

But in this matter every man wants to stand on solid ground. Worthless insurance is worse than none. In such an important matter, we cannot afford to lean upon a broken reed. The interest of our loved ones, of those nearer and dearer to us than life itself, depends upon our action.

November Assessments.

For the current month two assessments have been levied upon the Lodges. The list of deaths numbers 13. After the payment of these claims, the balance which will remain in the hands of your Grand officers will be considerable—sufficient, it is confidently expected, that only one assessment need be levied in December. Counting these two assessments, Nos. 17 and 18, there have been 19 during the year. Many of the members, no doubt, will think this somewhat heavy, but it is far from excessive, although in no year since the establishment of the Order in this State has the number been higher.

Had the number of assessments reached 20, it would still have taken 100 years for the members to have paid in as much as they expect to receive in case of death. And no man measures his length of days by a century. A glance at the causes of the 13 deaths reveals the fact that two were from pneumonia, two from paralysis, two from suicide, both being the result of poisoning, and one from the accidental discharging of a pistol. That the deaths are of this character rather than of diseases which might have come with the members by faulty medical examination is a good omen. Consumption or other hereditary disease, against which the Lodges and medical examiners should be particularly cautious, do not figure in these deaths. The year has been one, thus far, of great advancement in the Order.

How to Become a Member.

It is by no means a difficult thing to join the A. O. U. W. Any one desiring to become a member of the Order can make his wish known to some one who is already a member, who, if he thinks it advisable for you to join, will procure a blank application for membership. This you can sign and present to the Medical Examiner of the Lodge, who will make a thorough examination of your physical condition, just as would be done were you to take out a policy in any of the life insurance companies. This application is then sent to the Lodge for approval or rejection. If the ballot results favorably, you will be notified when to appear for initiation, which will be within two meetings at most from the time the application is made.

When once you have joined you will make those dear ones dependent upon your labors rejoice that they are now protected in case of an unforeseen calamity. "There is something grandly sweet and touching in making such a sacrifice in life that those with whom you have lived while on earth will receive the benefit of your unselfish kindness when you have passed away. In most Lodges it will only cost you about $15 to join, after which about $1.50 per month at the highest."

BRO. JOHN E. MCCULLOCH, who is master of one of the vessels plying between this city and the Sandwich Islands, has just returned from a trip. There is quite a number of Workmen residents of the Islands, and are very desirous of forming a Lodge. If, as he suggests, a Lodge cannot be formed, it would be well to establish what might be termed a clearing-house for the payment of dues and assessments.

OUR worthy contemporary, the *Protector*, is seriously considering the propriety of enlarging to an eight-page paper.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

WM. C. FLINT, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

LODGES desiring to purchase new rituals to replace those worn out or lost, should send in the rituals or a certificate of the Master Workman under seal to the fact of destruction. Under the law we cannot allow any Lodge to have more than five rituals in its possession at one time.

VERY few of the Semi-Annual reports for last term were correctly made out, the blanks being somehow misunderstood. The new ones to be sent out will be changed in a few particulars and accompanied by a circular of instructions, so that it is hoped full and accurate reports will at once be sent in by all Lodges after the close of the present term. Such are badly needed for statistical purposes, and to correct any errors that may have gotten upon our records from any cause.

A new edition of the constitution will soon be issued. Lodges desiring copies can be supplied in any amount. The price will be as heretofore, five cents per copy.

SEVERAL of our old Lodges should cast aside their old regalia and procure badges. It is time we had uniformity in this regard.

WE shall have one assessment for November, probably not more. This will be 19 for the year.

Official Letter from the Grand Master Workman.

OFFICE GRAND MASTER WORKMAN OF CAL.,
525 Montg'y St., S. F., Nov. 8, 1882.

To the Subordinate Lodges of the A. O. U. W. of California.—OFFICERS AND BROTHERS: Now that the election in the State has passed by, and consequently a large proportion of our membership, which have been more or less interested in the same, have now more leisure to attend to Lodge and fraternal matters, I earnestly invite you to assist in increasing our numbers with good and true men. Let us see if we cannot, by united action, add at least 10% to our membership between this and the last of March. If only one member in ten will bring in a new member, the result will be accomplished.

Notwithstanding the political excitement during the first six months of the present term, we have initiated over 1,000 members. I believe, with a unanimous and systematic effort, it can be doubled in the last half of the term.

So far as in my power lies, I will aid you in any manner that I can by visitation, public addresses, etc., and I commend to you the practice of public gatherings, in order that the outside world may have its attention called to our admirable system, and the grand practical results that have been and are being accomplished.

To localities where no Degree of Honor Lodges have been established, I earnestly urge the formation of such as one of the most valuable auxiliaries to the success of the subordinate Lodge, and will herewith give, in brief, the practice, in some cases, which has not only made very social gatherings, but beyond all doubt added members and strength to the subordinate Lodge.

1. Fifteen petitioners, consisting of Master Workmen, their wives, daughters, mothers and sisters, can obtain a dispensation for a Degree of Honor Lodge.

2. The cost for dispensation, rituals, odes and installation books, all told, is only $15.

3. To save expense to such D. of H. Lodge, I would recommend that where subordinate Lodges meet weekly, that said Lodge devote one of its nights, say the third week in the month, to the D. of H. Lodge; let the subordinate Lodge meet early on said evening, go through its routine business, and close early, so that the D. of H. Lodge can take possession of the hall. You will find that this will not only interest your families in the work, but it will bring out a large attendance of the members, who will take said occasion to pay assessments and dues, and the interest of the gatherings will also be an incentive to those outside to desire to become members.

4. The G. M. W. and his Deputies will take pleasure in instituting such Lodges for you on application.

Grateful for the past and present prosperity of the Order, and again earnestly requesting every member to aid in carrying it forward to a greater success, with sincere wishes for your individual and collective happiness and prosperity, I am, Fraternally yours,

WM. H. BARNES, G. M. W.

IT is feared by the Workmen and many members of the various other beneficiary benevolent organizations in existence in New York State, that an Insurance Commissioner hostile to co-operative insurance will now be appointed, owing to the election of Cleveland as Governor. The appointment is expected to be John A. McCall, the present deputy, who is outspoken in favor of the regular companies, as opposed to the "co-ops."

The A. O. U. W. in Kansas and St. Louis.

DEAR WATCHMAN:—Here we are in the future metropolis of the Western world, the city of big bridges, great tunnels, monstrous water works, mammoth structures, plenty of mud and great thunderstorms, the paradise of rogues, thieves and cutthroats. While on our way here we stopped in Kansas and found several Lodges of our beloved Order. Kansas, like California, is selecting her material with considerable care, consequently is laying a foundation for a permanent future structure. She has been a separate jurisdiction for some two years, and now has a membership of a little over 3,000. I know of no better field for a good, live Deputy than Kansas. The Lodges which I visited were composed of good, true, noble-hearted men, and were plodding along as best they could with every form imperfect, every ceremony, every element of secret work defective; they, conscious of it, deeply regretting it, and yet without a remedy. This is the climax of cruelty to a Lodge, and should be remedied by compelling the organizer to revisit the Lodge of his own creation until it became familiar with the ritualistic and secret work of the Order.

I got to St. Louis without the semi-annual pass-word. I have written Oak Leaf, 35, something less than half a dozen times to send it to me, or authorize me to get it, and I got no answer. Are they asleep, and need to be awakened? Are they pursuing, and need to be recalled? Or are they—are they—Oh yes, are they *"non est inventus?"* Well, pass-word or no pass-word, I went to Anville Lodge, No. 75, and was admitted on an examination. I found a Lodge of splendid fellows, but imperfect rituals. Under Good of the Order I told them what a splendid membership we had in California, assuring them that our best material staid at home. They are earnest, enthusiastic workers, devoted to the advancement of the Order, though I find some among them who, in looking at the comet, claimed to see two tails. I suppose one is attached to the comet, and the other to a confused brain.

Then I visited Security, No. 44. Grand Master Workman Rodgers was present, who was acquainted with our California Jordan, Fish, Barnes and others, and gave me a most cordial greeting. There are some 28 Lodges, I understand, in St. Louis. They are holding monthly meetings to perfect themselves in the secret work, which is badly needed. In security Lodge I found a new feature. St. Louis being the center of the tobacco interest of the world, everybody smokes. A box of cigars was passed round before the Lodge opened, and I think every man, save myself, took a cigar. This box was passed round three times. The Grand Master, his Deputy Master Workman, officers and members puffed—puffed till, O, ye gods protect us from such foul fumes of empyreumatic oil! If I cannot attend a Lodge without being nauseated with tobacco fumes, I pray thee have me excused, for I shall not go. But more anon. Yours in C., H. & P.,

J. A. MILLER.

Order Notes.

ALL the secret societies of New York which pay weekly sick or death benefits, now see the necessity of standing by each other and working for the repeal of the obnoxious and ruinous insurance law passed at the last session of the New York legislature at the instance of the old line insurance companies. Unless this law is repealed the effect will be to wipe out all the fraternal societies in the State. The orders in other States should be on their guard.

THE whole number of deaths in this Order since its introduction into this State has been 340 and the number of assessments so far levied 67. This shows that the handsome sum of $134,060 has been paid out to the widows and orphans of deceased brethren in a few years in this State alone.

SEVERAL Degree of Honor Lodges are being talked of, and one for Sacramento has supplies ready for its institution.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation etc., to the publishers of this paper.

PALMER'S,

726, 728 and 730 Market Street, S. F.

NEW DEPARTMENT added, with a full line of GENTS' FURNISHING GOODS. Our usual variety of Novelties in Millinery and FANCY GOODS and LADIES' FURNISHING GOODS.

Kid Gloves a Specialty.

FURNITURE.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

Aims, Objects and Regulations of the Ancient Order of United Workmen.

The Ancient Order of United Workmen is a general organization for the mutual benefit of its members and their families. It embraces in its membership men of every vocation, profession and occupation—employers and employees—workers of all classes, whether their labor be mental or physical. It has no connection with any religious sect, political party, or organization for affecting the prices of labor or commodities, but is designed to promote fraternity, mental and social improvement, and mutual assistance.

BENEFICIARY FUND.

The most distinctive feature of the Order is what is designated as the Beneficiary Fund—a carefully-devised, well-guarded, economical and beneficial system, by means of which the sum of

TWO THOUSAND DOLLARS

Is secured to each member's family, or such person or persons as he may choose to designate. During the several years since the Order has been established this sum has been promptly paid in full in each case of death, to the persons entitled to receive it, within a few weeks, and without any litigation or troublesome formalities. A careful examination of the working of the system will satisfy any intelligent person that such will continue to be the case.

HOW ASSESSMENTS ARE PAID.

Each person who becomes a member of the Order pays to the Receiver of his Lodge one dollar for the Beneficiary Fund. Every Lodge has on hand, at the beginning of the month, ready for a call, one dollar of Beneficiary Fund for each member. When a death occurs, if there is a sufficient amount of the Fund in the Grand Lodge to meet the required payment of $2,000, no call is made upon the Subordinate Lodges, but if there is not a sufficient surplus from the last assessment, then the Lodges are notified at the first of the month to forward their portion of the Fund on hand ($1 for each member), and an assessment is made to replace the amount forwarded. By this means the Beneficiary Fund of the Lodge is again replenished, ready for a call at the first of the next month, if it should be made. Assessments are only made on the members at the first meeting night in each month, and a written and printed notice is sent to each member, bearing date of such meeting night. Twenty days time is given from that date to meet the payment. Thus the payments are made at such intervals, and are called for in such manner that they may be easily provided for and met without inconvenience even by persons of small income.

HOW MUCH DOES IT COST?

In the first year of the working of the Supreme Lodge (1873-4), the number of assessments made upon the members of the Lodges directly under its jurisdiction, was 20; second year, 14; third year, 15; fourth year, 15; fifth year, 14; sixth year, 16. Since that time, the average has remained about the same, and these figures will also apply to the Jurisdiction of California. It is probable that the future average will remain about the same. The average cost to each member, therefore, has been $15.66 per year; being a little more than four cents per day as the cost of a completely-secured guarantee of $2,000, to be paid on the death of a member. Can any man who is in circumstances to avail himself of this system be justifiable in neglecting to give to his family the security which it affords? Does not prudence and affection dictate that he should secure for them the protection thus offered? A number of States, having over 2,000 members in each, collect and disburse the Beneficiary Fund separately through their Grand Lodges, instead of through the Supreme Lodge. In these, the cost per year has been, in some cases less and in others greater than that given above, but the average has been about the same.

California was set apart as a separate Beneficiary Jurisdiction in July, 1878, and at the end of July, 1879, had levied and collected ten assessments for deaths occurring in the State, and for the months of August and September three more, making a total for 14 months of 13 assessments, or an average of a little less than 93 cents a month for each member. During 1880, 16 assessments were levied in California, and for 1881, it is estimated there will probably be 14 assessments.

ADVANTAGES OF THE SYSTEM.

The A. O. U. W. Beneficial system is simple, easily understood, economical in its workings, and in all its details comes under the direct observation and care of the members who meet weekly in their Lodges, where the business is transacted, and where they enjoy the advantages of social and fraternal intercourse, and of mental improvement. These Lodges are governed by officers regularly elected by the members—the financial affairs are under the proper guards and restrictions, and a careful system of checks prevents fraud or betrayal of trust.

PROTECTION AT NET COST.

All money paid on assessments for the Beneficiary Fund goes to the payment of death benefits without reduction even for expenses, these being provided for out of a General Fund raised in each Lodge. This fund is made up from initiation fees (usually about $15 for each member, with sometimes an advanced rate, according to age), and weekly dues of not less than 25 cents per month. The advantage which each member derives from the social, fraternal and educational features of the Order, and the good which is accomplished by it in these respects, afford a more than ample return for the sum he pays into the General Fund, which meets all the expenses of the Order, leaving the entire Beneficiary Fund intact for the beneficent purpose for which it is intended. There are no commissions, fees or salaries to be paid out of it, but the entire amount paid in goes to the widows, orphans and other heirs of deceased brethren. Thus the Beneficiary system may be fairly said to be carried on absolutely without any working expenses, and, at the same time, is more closely under the observation of those interested in it, and more carefully guarded than any other method adopted for similar purposes.

REQUIREMENTS FOR ADMISSION.

A medical examination is required under such rules as are generally adopted by life insurance companies. The character of the applicant must also be investigated, and the Lodge pass upon his application by ballot. Persons between the ages of 21 and 50 only are admitted.

BENEFITS OF SICK OR DISABLED MEMBERS.

The payment of weekly sick benefits to members is a matter left to the control of each Subordinate Lodge. Some provide in their By-Laws for such benefits—others do not. If sick benefits are to be paid, the initiation fees and weekly dues are fixed at an amount sufficient to cover the expense—each Lodge having the power to fix the fees and dues at such sums (not below $15 for initiation and degrees, and $2 for Beneficiary Fund and certificate, and 25 cents per month for dues) as may be determined upon.

GENERAL FEATURES OF THE ORDER.

The A. O. U. W. is a secret Order, having two degrees, with appropriate initiation ceremonies. These are simple, but impressive. The teachings are calculated to strengthen the character and elevate the moral principles of the members.

The Order is composed of Subordinate Lodges, Grand Lodges and a Supreme Lodge. Subordinate Lodges in States or Territories where no Grand Lodge has been established, are under the immediate jurisdiction of and report to the Supreme Lodge, until a Grand Lodge is established.

When a Grand Lodge has over 2,000 members under its jurisdiction, it can be set apart as a separate Beneficiary district if desired. In this case the members are assessed for the deaths which occur within such district or jurisdiction, and the Grand Lodge collects the assessments and pays the death benefits under the laws and regulations adopted by the Supreme Lodge. The Grand Lodges of Pennsylvania, New York, Illinois, Iowa, Missouri, Minnesota, Tennessee, Indiana, Michigan, California, Wisconsin, Kansas, Oregon and Ontario have been thus set apart as to the Beneficiary Fund. In all other respects they remain integral parts of the Order.

PROGRESS OF THE ORDER.

The A. O. U. W. was started in Pennsylvania in 1868 but was not sufficiently established to pay the $2,000 benefit until 1873, from which time up to the 1st of January, 1880, the Grand Lodge of that State alone has paid over $546,000 of Beneficiary Fund.

The Supreme Lodge, up to June, 1881 had paid out $919,172.90 on deaths of members of Lodges under its immediate jurisdiction. The amount paid by the Order during the year 1880, was $1,305,887 00.

The membership reported on the first of March, 1881, was 97,179, with Grand Lodges established in the States of Pennsylvania, Ohio, Kentucky, Indiana, Iowa, New York, Illinois, Missouri, Minnesota, Wisconsin, Tennessee, Michigan, California, Georgia, Kansas, Ontario (Canada), Oregon and Washington Territories, Massachusetts, Nevada, and Subordinate Lodges in a number of other States. In all these States the Order is steadily and rapidly growing. With the increase already since the above date, it is safe to say that before the close of the year 1881 it will number over 125,000 members.

The Order was founded by a few earnest, honest men, for fraternal and beneficent purposes. Its sphere of usefulness has been enlarged, and it has been faithfully conducted as its founders designed it to be—not to subserve the selfish interest of a few, but for the mutual benefit of all. Thoughtful and prudent men join it because they can thus provide, without present embarrassment, for the contingencies arising from the uncertainties of life, and at the same time aid each other in mutual improvement and the elevation of humanity.

CHARITY, HOPE AND PROTECTION.

To every loyal brother of the A. O. U. W. these words symbolize the greatness of an organization which, to-day, is doing good commensurate with the loftiness of its mission. Charity, hope and protection are the three cardinal principles of our Order. By a combination in the character of each member of these three attributes, we have men of noble mien working together for a common good. Our field is a world-wide philanthropy, where the merits so combine as to make of every member a true man. Selfishness is no part of the A. O. U. W. system. It is a departure from it as much as is possible. The true Workman has none other than charity for a brother, hope for the good of the future, and protection for the helpless in time of sore trial and distress. These are the three talismanic words and objects of the Order, and he who cannot affiliate with those whose aims are embraced in these, cannot be, in word and deed, a true Workman.

ADVANTAGES OF THE A. O. U. W. SYSTEM.

Some one has epitomized the prominent reasons for joining the Ancient Order of United Workmen about as follows:

1. Because insurance benefits are furnished to all the members at cost. Having had 11 years or more of practical experience and trial, during which hundreds of thousands of dollars have been paid to widows and orphans at less than half cost of insurance in stock companies, it is worth more than a trial.

2. The A. O. U. W. offers more benefits than any other Order.

3. Because the cost of all the above large benefits is less than one half of a corresponding insurance in the ordinary insurance companies.

4. Because the assessments are based on the "Actuaria Tables of Costs of Orders."

5. Because the Order is steadily and rapidly growing.

6. Because the whole number hip is taken into full confidence as to the management, and in the monthly published reports of the officers every member can see what has been done with every dollar received by the Order, and the financial officers have given adequate bonds; and lastly, because

The Supreme Court of the A. O. U. W. will not take advantage of any technicalities, but will pay all claims promptly, whenever they arise.

Further information cheerfully given by applying to H. G. PRATT, Grand Recorder, S. F., Cal.

Forest Trees of California.*

The Great Sugar Pine.

(*Pinus Lambertiana.*)

"Beneath the forest's skirt I rest—
Where [illegible] pines rise dark and high,
And hear the breezes of the west
At [illegible] the rustling foliage sigh."—*Bryant.*

One of the most magnificent pines the world ever saw is the Great Sugar Pine of California! From 150 to 300 ft. high, 10 to 15 ft. in diameter, the body remarkably elegant and even of surface; for the fine water-line ramæ only serve to smooth and soften the neutral tint bark of this tallest priestly pine; and what a wonderful column! perfectly cylindrical, clean of branch or knot for hundreds of feet—usually two-thirds of the total hight—as it stands conspicuously in the midst of the forest, denizened among other wildwoods, yet exalted above them; and high up over all his kindred pines, in some remote degree, like the lofty palm tree of the tropics. Among the trees, a mountaineer of the most decided and commanding character, his top in sylvan glory and radiating its open but exceedingly long arms, widely spread afar towards the horizon, oft as one vast long bow at ease, upwardly curving, exhilerant and free; and yet they are neither naked nor lank in the best types, but side-plumed and grandly fringed by relatively short, lateral, and successively diminishing branches and branchlets to their main extremity's end, whence pend from one to three, or even five, very long cones tasseling their tips, from one to one and one-half feet long and three to five inches in diameter, suspended by stems four to five inches long; color of cone light cinnamon-brown or ripe-yellowish; thinnish scales loosely overlapped, oblong fan-form, without prickles, etc.; seeds oval, a little compressed, lines long, wings widest below the middle, obtuse; cotyledons, 13 to 15.

These long horizontal limbs may depend somewhat, more or less in old age, like the bow still on its back, not altogether unstrung, but they are never massed nor at all crowded, but always open so as to allow the wind—of the prominent storm-exposed head—free passage through, or, in extreme cases, only bending them leeward almost double, like a true Damascus blade—hilt to point. This remarkable length of limb, so tolerant of the tempest and vigor of recoil with returning calm; or, in other words, toughened strength with elasticity, is quite characteristic.

The wild red man of the wood is quick to perceive and apt to apply this and similar knowledge to the science of his own use, for no sooner does the harvest of the coveted *pinon* arrive, than ape-like, he climbs and clambers out astride the branch, and, teetering to the required sway, when, with a short timely jerk, the heavy cones are snapped off. The great use of the seed as Indian food we omit.

The rich dark plumes of vigorous blue-green foliage very much resemble the beautiful white pine of the East (*P. strobus*), especially when young—at length all further resemblance of form ceases. The needle-like leaf-straws are rather short, and somewhat twisted in age, from three to five inches long, very finely toothed on their edges, five in each tiny bootee, which is at length shed off like the white pine; these little bundles, in most cone-bearers, are more manifestly inserted in spiral order around the ultimate twigs.

The timber is not quite so soft, light and white as the white pine itself, but closely resembles it, and is alike in use and value, and, in some respects, superior, as it combines greater strength with elasticity.

Where the surface is burned the oozing sap concretes into a white manna-like sugar, sometimes nearly as crystalline and pure as refined loaf sugar, very sweet, with scarcely an appreciable pine-resin flavor; hence the common name sugar pine. If this could be obtained in quantity, its laxative and balsamic properties, apart from the palatable and nutritive, would highly commend itself to the attention of the medical profession. For obvious reasons, we cannot here, in all freedom, urge upon the public or the landscape artist the full claims of this expressive tree. To the bald scientific or the mere lucre-loving plod, any esthetic estimation of arboreal nature whatever might be deemed too poetic, imaginative, discursive, fanciful, or what not; briefly, irrelevant to the subject in hand. And what if we own no property in that royal realm, why should we be indifferent? And even our aversion may be suppressed. Is it not one of those occasions for tolerance and charity, and all the renowned and universal virtues among men? With due deference, therefore, to these varied tastes, always to be anticipated, we frankly confess our great surprise that even some few are found disparaging this noble pine on account of its open-hearted port, nor in our fascinated simplicity did it ever occur that the lack of leafage was a defect in this unique type of trees, being in no way amenable to any gross, massive or tumuloid standard of judgment. Set it down, then, to our fault, that we have no preconceived, abstract, and arbitrary notion of propriety for all the trees; that we do not even bow down and worship the almighty *Scissors!* Perchance the peculiar charms of this tree in our eye may, to some extent, be borrowed from the striking contrast with other associated trees, for it is rarely in forests of its own, being mostly interspersed in all the Alpine, and some of the sub-alpine regions of the coast. To our taste, the great sugar pine hath the far-extended oratorical gesture and open magnanimous spread from the breast and top of a tall and representative, or corresponding type of some sacred benediction of "good will towards men," for trees always display in their bearings types of human attributes.

On the tablelands of middle Yuba a fair sample of a grove may be seen; indeed, almost anywhere in the common belt of about 6,300 to 7,000 ft. altitude, always excepting that peculiar medium coast-tempered belt that connects the Coast Range mountains and Sierras, above and around the head of Sacramento valley, where a few come down lower, in groups rather than groves, or very much more sparsely, where, also, they develop but few cones, comparatively, even in favorable fruitful seasons, and most of these, say two or more, become abortive, and it is well if even one of the number matures; besides, it should be noted the cones are smaller, yet always characteristic. Found more or less in all parts of the State, namely, on the Sierras from 3,000 to 8,000 ft. of both slopes, and a few in the highest points of the Coast ranges from Santa Lucia mountains to Humboldt county, and so on northward to the Columbia river.

Between the two forks of the Stanislaus river may be seen a tree 3,000 ft. high, and abont 15 or 16 ft. in diameter.

Western Weymouth Mountain Pine.

(*Pinus Monticola.*)

* * * "Seemed an osprey,
Hovering above his prey—and yon tall pines,
Their tops half mantled in a snowy veil."

The far western mountain pine of the Pacific bears the strongest resemblance to the great sugar pine, of which it seems almost like a smaller variety of the same species (hence designated little sugar pine). The general contour and expression of the tree is scarce at all like the white pine (*P. strobus*) of the eastern Atlantic; true, it has the common cone characters of the thin scaled strobus section, and five-clustered needles as in Lambert's sugar pine also, but the port and form, as indicated, is as distinct as it well can be for one of the same subdivision of pines. Before the tree has attained to its true matured and distinctive type, it has the common closer form of many other species, but at length, when of age, and aloft from 75 to 100, or sometimes 175 ft. high, and from two to five feet in diameter, in full bearing, its long horizontal branches well poised and nicely plumed with little laterals and closed around with faintly softened sea-green leaves, two and one half to three inches short; and then there is the selfsame free spread of the great sugar pine, only peculiar to these two species; the five-leafed clusters of needles are set close together in short fugacious boots, points sharp and edges keen, margins finely but remotely toothed, two sides channeled; the short but exceedingly slender foliage thrills very sensitively and delicately, the softer celestial echoes from off the blissful shores, to lull and soothe the sense to peace. Let other pines chaunt louder and grosser songs from their sylvan choirs where old Æolus dwells; these are of the higher angels who are wont to whisper their love notes low and still, as from the far away isles of the blest, soft as morning zephyrs gently roll the grain-clad dells. The form and size of the cones that cluster and tassel the tips of the branches are quite like those of the white pine (sometimes called the soft California white pine)—oftener a little longer; herein the resemblance is nearly perfect, being alike on short stems, cylindroid, four to eight inches long, one to two thick and stiffly curved; scales smooth, thin, loose, abrupt and mucro-pointed, but not prickly; seeds small, one fourth of an inch long or so, mottled or spattered with brown; wings from two to three times as long, widest near the middle, diagonally pointed, translucent-creamy, and more or less striped with brown; cotyledons, six to nine.

Contemplating these conifers, distant from their alpine eyrie, we behold the great sugar pine stretching his wide wing-branches against the sky, like a vast sylvan condor soaring aloft high up over all contiguous trees; so, also, is seen this lesser mountain pine as a sylvan osprey sailing serenely o'er the mountains—tree-hawk of the hills, circumspecting the groves!

The soft pine of the Pacific is found sparsely distributed over the Sierra Nevada mountains, at from four to eight or nine thousand feet altitude; timber similar to the white pine, but neither quite so white or soft, and the texture somewhat tougher.

* From "The Forest Trees of California," by A. Kellogg, M. D. Published by the State Mining Bureau, State Printing Office, Sacramento.

The Conductivity of Wire—At a recent meeting of the British Association, Prof. George Forbes read an interesting paper on some experiments undertaken by him to ascertain whether or not it was true that a wire of twice the sectional area would convey an electric current of twice the intensity. It might be expected that if one wire would carry a current of one volt, two similar wires would carry two volts. This would be so if the currents were far apart; but Professor Forbes finds that when the currents are near together the radiating surface has to be taken into account. He finds by experiment that if there is a departure from the law of the square of the diameter, the law is almost proportional to the diameter of the wire. "If," he says, "you can carry a definite amount of current through a wire a millimeter in thickness, without heating it over a temperature of 150°, then if you want to carry a current twice as great through a wire you must have one or two mm. diameter, i. e., of four times the section." This result has an important bearing on the extension of electric lighting.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the Watchman's progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tell whether the Watchman has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the Watchman family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the Watchman.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

The Roberts Buddle.—The Georgetown (Col.) *Courier* says: "Last Saturday we stopped at the Mansfield Co.'s mill, at Dumont, to witness the operation of the Roberts buddle, and are free to confess that we believe it is the best slime table, without exception, ever invented. This buddle does not revolve, as is the case with the old style, but instead the water jets revolve. The stream that carries the slimes is so weak, that after reaching the table it only has force enough to carry off the lightest portion of the tailings, which is washed into a compartment at the outer edge of the table and thence to the creek. This stream is followed by a stronger water jet which washes off the remaining tailings, and also takes some ore with them. This product is known as "seconds," and is washed into another compartment, and thence by elevator is taken up and conveyed to the buddle again for another treatment. A much stronger stream of water follows the second jet and thoroughly cleans the table of the remaining ore, which is conveyed to a third compartment and makes the headings, which are an excellent smelting product, and entirely free from gangue material. It is claimed that by this process a closer saving can be made with the product of stamps than can be made by crushing coarse and treating in Hartz jigs."

Artificial Wood.—The latest report of a patented method of making artificial wood comes from Germany, where Herr B. Harrass has invented and put into practical operation a process which consists of the manipulation of a mass consisting chiefly of cellulose and starch. Common cellulose, sold in the form of paper, is reduced to pulp in water. To this is added, after being drained through a sieve, three parts weight of starch and two parts weight of meal (wheat or maize). The mixture thoroughly mixed is put into tubes of thin metal and boiled over a water bath. When done the allotted time and turned out after cooling the mass resembles glue, which is then mixed with the same quantity of sawdust. This mass is rolled and left to dry in a hot room, and is now ready for use. For pressing into the desired shape iron or steel molds are used heated to 120°, and the mass is subjected to enormous pressure. After cooling the article resembles wood and can be treated in every respect as such, becoming with age bone hard. It can be worked with the saw or file, can be colored, polished, and, when desired, covered with veneer.

Locomotive Pulling.—A correspondent of the *Scientific American* asks, Can a locomotive pull more than its own weight? Example: If a ton engine had 70 tons of solid matter on one cart attached to it, could it draw it? If so, could it pull it more easily than if it were put into seven cars of 10 tons each, the engine not to use any substance to assist it, the track to be straight and level? That paper replies: Yes, the friction and resistance of air, etc. are less to one car than to a larger number. The pull of a locomotive is not the dead weight of the load, but merely the resistance due to friction, resistance of air, etc.

Estimates have been prepared for the pay and mileage of the members of the Forty-eighth Congress. There will be 325 members and eight delegates for that pay. There has been asked $1,650,000 and $25,000 for contestants, and for mileage $125,000 is estimated, making a total of $1,800,000.

A geological map of the Russian empire is being prepared under the supervision of the geological society of Russia.

About Obtaining Patents.

Patents Are Virtually Contracts

Between inventors and the public. The consideration flowing from both parties to the contract is expressly fixed by statute. The Government requires the following consideration in every case: First, that an applicant for a patent shall disclose a new and useful improvement, of which he is the first and original inventor. Second, that the invention has not been patented, or published in a printed publication, prior to the date of his *invention*. Third, that the invention has not been in public use, or on sale, more than two years prior to his application for a patent. Fourth, that the invention shall be properly described and claimed in the specification forming a part of the patent. Provided an inventor complies strictly with these conditions, the Government guarantees that the inventor shall have the exclusive right to make, use and sell the thing invented for the term of 17 years.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. This question can often be answered gratuitously by us immediately on receiving full information of the invention, by reason of our long and extensive practice as patent solicitors and editors and publishers of first-class scientific and industrial journals during the past 20 years and over. When the question of priority of invention is not so readily to be determined, it is generally best to make what is called a "preliminary examination," by searching through the patent office reports among the patents in the class to which the invention relates, and referring to our extensive patent library, containing complete sets of special classes of American and foreign patents, mechanical dictionaries, scientific encyclopedias, files of scientific and mechanical newspapers, and an immense number of patent applications by inventors of the Pacific coast, carefully filed by this office since 1860.

If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive for the small fee of $5 for the examination a verbal or written report showing definitely whether he is entitled to a patent, thereby saving him further expense, and perhaps much time, useless delay, anxiety, etc.

To avoid all unnecessary delay, however, in securing patents at the earliest moment practicable, inventors will do well to forward a model, drawing, or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with $15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately, and forwarded to the inventor for his signature. When the inventor receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps to be taken.] When the patent is allowed, the inventor will be duly notified, and on sending the final Government fee of $20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretence of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give a case up as long as there is a chance to obtain a patent. The Agency charge is from $25 to $30, or sometimes more, if the invention is intricate or complicated, or requires much labor. Drawings cost from $5 upward, according to their number and the time employed; and, if a model is sent, the express charges upon this and the papers must be added. The total cost, in addition to Government fees, rarely exceeds $40, and for this we do all we can without appealing the case.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients sufficient to make the experiment, and also of the manufactured article itself must be furnished.

Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are considered more satisfactory to the Patent Office than the old and more cumbersome system of storing up an immense bulk of almost numberless models.

Drawings or sketches sufficient to illustrate clearly the invention, with a sufficient description to enable us to make a full set of perfect drawings for the Patent Office is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it for our use.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or very poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sales had the invention been fully portrayed by artistic and skillfully executed drawings. Again, when patents of this character are brought into court, the uncertainty and ambiguity of the drawings enable the opposing experts to mystify the judges as to the construction or combination of parts intended to be covered by the patentee. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken that the invention is fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

In the Patent Office

The application is assigned to the Examiner having charge of the class to which the invention relates. The case must then take its turn with others in the order of filing, and in due time is carefully examined to test the novelty of the invention. If the Examiner fails to find any thing that anticipates the invention, a patent is immediately allowed, provided the specification and claims are drafted in proper form. Should the Examiner find a prior patent which, in his opinion, anticipates one or more of the claims in the application, a letter of rejection is sent to the attorney in charge of the case; and if the attorney coincides with the views of the Examiner, the claims rejected are erased. In preparing applications for patents, an attorney should be careful to familiarize himself with the class of inventions to which the application pertains, so that the specification and claims may be drafted as nearly perfect in the first instance as is possible. This course saves much time in prosecuting the application to a patent.

When claims are improperly rejected on patents which do not anticipate the spirit or wording of the claims, proper steps are immediately taken to convince the Examiner of his error. This is done, in most part, by personal arguments, as the differences in construction, operation, function and results are more readily discovered and appreciated by an oral presentation of the facts than can possibly be done by relying solely on written arguments. In order that the Patent Office record of the patent shall be complete, an oral argument is generally supplemented by a manuscript brief, that others, in examining the files at any future time, may clearly comprehend the position taken by the Examiner and attorney in prosecuting the case to patent.

In addition to our own personal attention to the interests of our clients here, we have, for over 12 years past, had constantly in association with us in Washington, one of the soundest legal counselors and ablest of practitioners in patent business in this country, who carefully attends in person to our business at the Patent Office and has attained success in a most marked degree.

Perfect Claims.

The value and force of a patent are dependent on its claims. A patent may disclose to the public the most important and valuable invention, and yet the claim be of such meager scope that the patent is actually worthless. When the claims of a patent are so loosely drafted that infringers can flood the market with improvements differing from the improvement disclosed by the patent only in slight changes in construction and arrangements of parts, such a patent is valueless to the owner, as it fails to afford him that exclusive and complete protection guaranteed by the Patent Law. Hence it is that the greatest care, skill and perseverance are required, first in properly drafting the claims in the first instance, and, second, in prosecuting the application before the Patent Office, and maintaining the rights of the inventor to claims as broad and sweeping as the invention will warrant. This latter is no easy task. The Examiners of the Patent Office serve in the capacity of attorneys guarding the interests of the public. It is their sworn duty to exercise the greatest care and watchfulness, that patentees do not secure claims of greater scope than they are justly entitled to. It is but natural that Examiners are sometimes in error as to just what scope should be accredited an invention. Although the Examiners act under honest convictions in cases where they refuse an inventor his just rights, yet it is the duty of the attorney to maintain the claims of his client, if he is convinced that they are just and proper. To succeed in this requires the display of tact, firmness and ability; and when the Examiner is made to see that the inventor is honestly and fairly entitled to the claims which have been rejected, he will almost invariably recede from his former action, and allow the case.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. (continuously editors and publishers of the MINING AND SCIETIFIC PRESS, nearly from its early commencement in 1860) offer comparatively far better facilities to the local inventors of the Pacific States and Territories than are possessed by any other agents in America. Members of the firm give personal attention to the applications entrusted to their care. They have been longer in practice in patent soliciting than most agents who are still personally engaged in the business. They have secured more U. S. and foreign patents in the past 20 years (with very few exceptions) than any other firm still existing. Their practice has been so successful and long continued that the great majority of inventions on this side of the American continent have been patented through their agency, thus affording them great and valuable experience, by thorough information of the true principles and points of novelty in the inventions, whether general in character or peculiarly local to this coast.

The extensive business combination and experience of this firm is undoubtedly one of the most fortunate in existence for affording inventors prompt and reliable advice and the best possible facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention in one or more of our influential and reliable newspapers, affording just the circulation that is best calculated to widely inform the class of readers most specially interested in the subject of his invention.

Saving of Time, Etc.

Inventors on this coast will find that owing to our familiarity with inventions and local affairs of this coast, we can more readily and fully comprehend their wants, and thus save much of the time ordinarily consumed in preliminary writing back and forth when distant agencies are employed.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee is $10 additional.

To enable us to prepare caveat papers, we only require a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves, or for them by other agents), who desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so.

DEWEY & CO.,
Patent Solicitors, Office of MINING AND SCIENTIFIC PRESS,
252 Market St. Elevator entrance, No. 12 Front St., S. F.
GEO. H. STRONG. W. B. EWER. A. T. DEWEY.

Agents Now Wanted.

Extra inducements will be offered for a few active canvassers, who will give their whole attention (for a while at least) to our business. Apply soon, or address this office, giving address, age, experience and reference.

DEWEY & CO., Publishers,
No. 252 Market St., S. F.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P. OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
L. L. WOODMANSEE—Nevada State.
B. W. CROWELL—Los Angeles county.
L. WALKER—Butte, Tehama and Shasta counties.
E. A. WILLIAMS—San Francisco.

Extra Type For Sale.

We offer Scotch brevier type, (same as used on this paper) for sale in any quantity from 100 lbs. to 1,000 lbs., for 25 cents per lb., if ordered soon. Also, several hundred pounds of nonpareil at favorable rates. The type is in good condition and is of a very durable character.

DEWEY & CO.

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

IMPORTANT additions are being continually made in Woodward's Gardens. The grotto walled with aquaria is constantly receiving accessions of new fish and other marine life. The number of sea lions is increased and there is a better chance to study their actions. The pavilion has new varieties of performances. The floral department is replete and the wild animals in good vigor. A day at Woodward's Gardens is a day well spent.

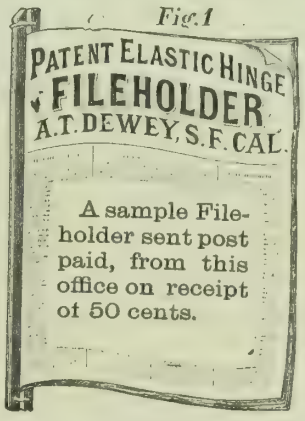
House Furnishing.

Indianapolis Chair Man'fg Co.

F. RENTCHLER, C. WOLLPERT, J. SCHWERDT.

Large invoice of latest styles just arrived from our factory, Indianapolis. Our rents are low, we manufacture our own furniture, and buyers can save

15 to 25 Per Cent.



A full line of CARPETS, newest style and latest patterns at the lowest prices.

The INDIANAPOLIS PATENT SOFA BED is something new. Can be used in parlor or bedroom. Kept in stock or made to order from $35 to $50.

SALESROOMS:
160 New Montgomery St., near Howard, S. F.
Factory, Indianapolis, Indiana.

BUY LAND
Where you can get a crop every year; where you will make something every season; where you are sure of having a crop when prices are high; where you have a healthy place to live; where you can raise semi-tropical as well as other fruits; where you can raise a diversity of grain and vegetables and get a good price for them. Go and see the old Reading Grant (in the upper Sacramento Valley), and you will find such land for sale in sub-divisions to suit purchasers—at very low rates and on easy terms. There are 12,000 acres at from $3 to $30 per acre, including pasturage, vine, fruit land and grain land. Will sell the whole tract at a great bargain. Send stamp for map and circular to EDWARD FRISBIE, proprietor, (on the Grant), Anderson, Shasta Co., Cal.

POTRERO RANCH DAIRY.
Pure Country Milk at Lowest Rates.
Families wishing milk from one cow can have it. Orders addressed, WM. SCHLOTHAN, Potrero Ranch, DEPOT, Third and Howard, will be promptly filled.

BUGGIES AND WAGONS.

BUGGIES Side and Triple Spring, four spring Country WAGONS, Milk and Grocery Wagons, in stock and made to order. Painting and Repairing in all its branches promptly and reasonably done.
Call and examine my stock.
JAMES WYLIE,
20 and 22 Seventh St., near Market, S. F.

The Age of Seeds

Some twenty years ago a few grains of wheat were found in the tombs of some ancient mummies in the south of France, supposed to have been fully 2,000 years old. It is said that this wheat was planted and produced the astonishing yield of 1,200 grains to one, and the French government assumed charge of the matter, and when the product had increased sufficiently, this new wheat was distributed throughout the empire. The result, according to official reports, showed an immense increase over the yield of the ordinary varieties. As a natural result quite a craze ensued in regard to sowing old seeds of other plants. The excitement reached the United States, and some agriculturists commenced saving melon, beet, corn and other seeds until they became four, six and eight years old, and upwards. The theory was that a rest of years, instead of months, gave the seeds unusual vitality and more prolific powers of reproduction. Many of the experiments proved utter failures, and no remarkable degree of success seemed to attend on any. Much surprise was expressed in some quarters at such results, especially as the reports of the unusual productiveness of the mummy wheat appeared to be genuine. Those who had carefully noted the progress of the matter, referred the wheat success to the fact that each package of wheat sent out by the French government contained detailed instructions in regard to the best mode of cultivation, which all recipients were enjoined to pursue faithfully.

It may reasonably be doubted whether any wheat from the case of a mummy ever sprouted at all; but the lesson in improved agriculture was sent abroad all the same, and performed its work remarkably well. If the wheat cultivators of California would take more pains to procure good seed, and cultivate their fields and harvest their crops with due care, there would be no need that they should look to the catacombs of Egypt for seed with which to secure a marked increase in the yield of their fields.

THE MICROSCOPE AT HOME.—In a lecture on the use of the microscope at home, by Henry Pocklington, the following directions are given for using the instrument to detect adulterated dry goods. Most people like to be sure that they get what they pay for. The microscope, in many cases, places the possibility of certainty on this point within the reach of its owner. Suppose, for example, that the lady of the house wishes to know whether the piece of silk she has set her heart upon for a dress is all silk, or a mixture with cotton, jute, or China-grass, and, if all silk, whether it has been loaded with dye and dressing. The microscope will set her mind at rest. Take a pattern of the silk, unravel the warp and weft, and examine it under the quarter-inch objective, and you will at any rate see whether all the little fibres of which the weft and warp are comprised look alike. That, of course, will not tell you whether the material is silk; but if you procure a piece of known silk, good raw silk, and study its appearance, and compare it with the suspected specimen, you will come to a sound conclusion very soon. Then take a little cotton and examine it to find that it consists of flattened tubes, curiously twisted, quite unlike the long cylindrical tubes of silk, and different again from the long consistent tubes of flax, with their attenuated ends and marked walls. Take wool and hairs of different kinds and examine then carefully, noting their peculiarities, and you will soon be able to tell whether your coat is all wool, or, as is much more probable, not; whether your wife's sable muff or seal jacket is what it professes to be, and will not improbably learn a lesson in the department of trade morality.

DANGERS OF WOODEN STRUCTURES.—The unsanitary condition of certain towns in this country has drawn attention to the fact that wooden houses and especially wooden foundations are liable after a certain time to cause malarious symptoms. So many malarious attacks have been experienced of late years in San Francisco, that the medical men began to suspect the buildings, especially as the structures themselves, which are nearly all built on wooden foundations, began to show disturbances, cracks appearing in the walls and the floors settling. Scientific investigation into the causes of these troubles points to the fact that the wood used in the foundations became decayed by contact with the sand, which destroys its fibers and leaves it porous and brittle. The next stage in the process is the formation of a fungus growth from the edge of the wood, composed of infinitesimal insect life, which burrows the remaining wood until its vitality is gone, and the insect itself dies. Physicians attribute many of the unpleasant smells and the bad health that hang about the inhabitants of these dwellings to this malarial condition, which to a great extent disappears as soon as proper foundations are substituted for those of wood.

A poor memory is a very inconvenient thing. So a poor man found it who lately called on a friend, and in the course of the conversation asked him how his good father was. "He is dead; did you not know it?" answered the friend. "Indeed! I am distressed to hear it," said the visitor, "I had no idea of it." And he proceeded to express his sympathy. A year after, he called again, and forgetfully asked, "And how is your poor father?" The clever reply was, "Still dead."

The Poultry Interest.

Poultry raising on this coast is but in its infancy. The enormous quantities of eggs and poultry shipped into the San Francisco market from Eastern points demonstrates that the home supply falls far short of the demand, and to be convinced that our own production is greatly preferred, one only need to examine the market reports. Prices the last season have ruled higher than for several years, and we anticipate no depreciation in prices, at least until the home supply equals the demand, which is a problem for future years to solve.

Senator Miller, in a conversation with the editor of the New York *Graphic*, said: "California, which has a population of 850,000, can support from 8,000,000 to 10,000,000 people, and I predict that within a few years, under the stimulus of immigration, it will rank with some of the more populous of the Eastern States. All that is required for the development of the thousands of acres of tillable land is good bone and muscle, and this we will get, now the vexed Chinese question is practically settled." Sharing in this view of California's future we see no danger of the demand being lessened, nor can we conceive any legitimate line of pursuit wherein the profits are so great for the amount of capital invested, and it is a matter of surprise the farming community of the State are not more universally engaged in poultry raising. True, there has been for all time a little indefinable stigma attached to poultry raising, but were our people fully aware of the status of this industry it would forevermore vanish.

The United States Census reports of 1870 showed the total annual products of eggs and poultry to be upward of $600,000,000, and it has grown enormously with each succeeding year. This is more than all our great wheat crop, one-third more than our cotton crop, one-third more than the sum total of beef, mutton and pork, nearly double that of all the butter and cheese made. A nice little pill for those to swallow who regard the "chicken business" as unworthy of their notice. We take the following from the *Journal of Applied Science:* "Besides our foreign supplies, the home production is considerable. The Midland Railway brings up 150 tons of eggs, and the Great Eastern over 5,000 tons of poultry and game annually. But this is a mere fleabite in the course of a year. It is no uncommon thing in the early spring months for the Aylesbury Railway to carry two or three tons weight of ducklings and eggs in one night to London, and nearly $100,000 per annum is returned for ducks to the neighborhood of Aylesbury alone. Ireland produces 500,000,000 eggs, and the Continent supplies us with about 785,000,000, and if to this is added the annual production of Great Britain the enormous consumption may be approximately estimated."

The egg traffic of the United States is now exceedingly large. Large as is, however, the production, the imports of eggs reach 6 000,000 dozens a year, chiefly from Canada. Over 20,000 carloads of live and dressed poultry are carried into New York city yearly, and 25,500,000 dozens of eggs go to the same market. Not a bad showing for one city. With these glaring facts staring us in the face, we ask, why should an industry of so vast importance be regarded by some as not altogether a manly occupation? Away with the idea that it is only child's play! Some of the best and ablest men and women of our land are numbered among those who, by energy, toil and indefatigable effort, have succeeded in raising to its present status and enormous proportions this pleasant, as well as profitable industry.

While hands have found plenty to do, the inventive mind of the age has not ignored this field, but has added to this vast industry new life and vitality. The incubator of to-day plays no small part in the experienced breeders', as well as the poulterers' yards. Since my first venture with artificial incubators they have been greatly simplified. I have used different machines aiming to keep apace of the times; and while some have been little better than no machine at all, others have done well. I can say of the one in use at present at my yards (not manufactured by myself), that it is of the most simple, and as near perfect as can well be attained; and I would not dispense with its use under any consideration. Just as we people learn more about their principles will they be more universally adopted.—*L. C. Byce, in Rural Press.*

THE report of Lieutenant Healy, Commander of the revenue cutter Corwin, has been received. He gives an account of his cruise in the Arctic, and recommends that a line of soundings be made along the coast from Point Barrow to the Mackenzie river. He says that the Corwin has steamed within a short distance of Point Barrow, and found clear water as far as he could see. He ventures the opinion that if he had only been prepared, and had any object in making the attempt, that he could have taken the vessel directly through to New York.

A LINE of steamships will shortly be established between San Francisco and Liverpool, which it is thought will divert some of the traffic of the Southern Pacific. One iron steamer of 3,800 tons has been launched for this service at Middlesborough, and another is being built.

THIRTY-FIVE registered distilleries in Los Angeles county.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in DEWEY & Co.'s SCIENTIFIC PRESS PATENT AGENCY, 252 Market St., S. F.

FOR THE WEEK ENDING OCTOBER 31 1882

266,748.—SHIRT—D. P. Belknap, S. F.

266,758.—COMBINED LOCK AND LATCH—R. F. Bridewell, S. F.

266,678.—HAME CLIP—Charlie M. Derrick, Howland Flat, Cal.

266,841.—MAGNETIC GOLD SEPARATOR—H. Kenton, Albany, Oregon.

266,701.—HEADER AND THRASHING MACHINE—A. H. Lightall, S. F.

266,702.—GRAIN SEPARATOR—A. H. Lightall, S. F.

266,858.—GRAFTING WAX—Thos. McLoughlin, Judsonville, Cal.

266,873.—CORN CRUSHER—Geo. C. Mueller, S. F.

266,885.—LUBRICATING CUP FOR STEAM ENGINE—E. L. Reese, Alameda Co., Cal.

266,886.—LUBRICATING OIL CUP—E. L. Reese, Alameda Co., Cal.

266,908.—BUCKLE—D. W. Smith, Port Townsend, W. T.

266,922.—WATER WHEEL—M. C. Taylor, Grass Valley, Cal.

266,662.—ORE STAMP BATTERY—A. J. Van Drake, S. F.

266,633.—BED OR CRIB—C. McWayne, Colfax, Cal.

266,630.—LEG AND FOOT REST—J. M. P. Jambers, Nevada City, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS American and Foreign Patent Agency, the following are worthy of special mention:

GRAFTING-WAX.—Thomas McLoughlin, Judsonville, Contra Costa county, Cal. No. 266,858. Dated Oct. 31, 1882. This composition or this grafting-wax consists of certain peculiar ingredients, combined in the specified proportions. In using this wax it is applied while in liquid state, by means of a brush, to the graft. When cool it becomes hardened upon the graft. In grafting the scion is tied to its place on the stock by means of a cloth bandage, and the wax used is put over and around the bandage. There are two main requirements in the use and formation of all grafting wax. First, it must, when applied to the cut, completely exclude the air; second, it must be weather-proof to resist the action of the sun and rain. There is a composition in general use for this purpose in which the ingredients are beeswax, resin and tallow, combined in various proportions. This composition serves the purpose very well; but it has been found by experience that by adding black pitch, honey and pine-pitch to these ingredients, all in certain proportions, a better wax is obtained, more economical because of the increase in bulk caused by cheap materials, and more efficient because of greater durability. The black pitch is the ordinary pitch of commerce, and its presence adds to the bulk, makes the composition stiffer when cooled, and renders it more durable and better adapted to withstand the elements. The honey makes it more homogeneous, and the pine-pitch, which should be gathered fresh from the trees, adds its turpentine to render it more capable of being molded or pressed around the graft. The composition may be preserved indefinitely, and when about to be used has but to be melted again. When around the graft and hardened by cooling, it makes an air-tight covering and will not soften in the heat of the sun, nor be beaten off or dissolved by the rain. It is clean to handle, is not sticky, and may be packed in cans or boxes to advantage. Compositions of similar character have been made before, but this of Mr. McLoughlin is a peculiar one..

HAME-CLIP.—Charles M. Derrick, Howland Flat, Sierra Co., Cal. No. 266,678. Dated Oct. 31, 1882. This invention relates to an improved hame-clip for harness, and more particularly to a novel means for vertically adjusting and securing the tug thereon. The invention consists in a vertical pintle held between supports from the hame, and in two hooks sliding on said pintle, the ends of which are adapted to engage in a series of holes in the hame when the pintle is in place. Between the hooks the tug is held upon the pintle. The object of this invention is to provide an improved means for vertically adjusting the tug for high or low draft.

WANDERINGS OF A NEEDLE.—Several years ago Police Captain P. H. Leary, of the Butler street police in Brooklyn, unconsciously swallowed a needle. It lodged in his stomach, and for two years was a constant source of suffering. He was treated for dyspepsia, catarrh of the stomach, and other diseases, but the medicine did no good. Suddenly, after he had ceased to take medicine, the pain disappeared. Recently his ankle began to swell, and then it as mysteriously got well, and the side of his left foot began to pain him. He treated the swelling as a bunion, but the trouble did not cease. Inflammation followed and extended to his knee. A few days ago a physician, in making an examination, found the point of the needle protruding from the side of the foot, and he drew it out with a pair of pincers. Since then all pain has disappeared. The needle was covered with rust.—*N. Y. Sun, Oct. 16th.*

MELVILLE stated his belief that the Jeannette was entirely seaworthy, and fully capable of making the voyage. Referring to Da Long's discipline, he said that it was very severe.

Thanksgiving.

A Proclamation by the President of the United States.

In conformity with custom, the annual observance of which is justly held in honor by this people, I, Chester A. Arthur, President of the United States, do hereby set apart Thursday, the 30th day of November next, as a day of public Thanksgiving—for the blessings demanding our gratitude are numerous and varied—for the peace and amity which subsist between this Republic and all the nations of the world; for freedom from internal discord and violence; for the increasing friendship between the different sections of the land; for Liberty, Justice and Constitutional Government; for the devotion of the people to our free institutions, and their cheerful obedience to mild laws; for the constantly increasing strength of the Republic while extending its privileges to their fellow men who come to us; for improved means of internal communication, and increased facilities of intercourse with other nations; for the general prevailing health of the year; for the prosperity of all our industries; for the liberal return for the mechanic's toil; for affording a market for the abundant harvests of the husbandmen; for the preservation of the national faith and credit; for a wise and generous provision to effect the intellectual and moral education of our youth; for the influence upon conscience of a restraining and transforming religion, and for the joys of home. For these and many other blessings we should give thanks.

Wherefore, I do recommend that the day above designated be observed throughout the country as a day of national thanksgiving and prayer, and that the people, ceasing from their daily labor, and meeting in accordance with their several forms of worship, draw near to the throne of Almighty God, and offer to Him praise and gratitude for the manifold good which He has vouchsafed to us, and praying that His blessings and mercies may continue.

And I do further recommend that the day thus appointed may be made a special occasion for the deeds of kindness and charity to the suffering and needy, so that all that dwell within the land may rejoice and be glad in this season of national thanksgiving.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the City of Washington this 25th day of October, in the year of our Lord, 1882, and the 107th of the Independence of the United States.

CHESTER A. ARTHUR.

By the President. FRED'K. T. FRELINGHUYSEN,
Secretary of State.

Progressive and Substantial Patent Agency.

The SCIENTIFIC PRESS Patent Agency was established in 1860, and has ever since been the leading Patent Agency on this side of the continent. Thousands of patents have been secured through this old and reliable Agency; and from personal experience, most of the leading inventors of this coast can testify their great satisfaction at the promptness and dispatch with which their business has been put through, and the best patent claims admissible obtained.

There are few solicitors of Patents in the United States who have been as largely, or so continuously and successfully engaged in the soliciting of patents.

As editors and publishers of leading scientific, mechanical and industrial newspapers for the past 20 years on this coast, Dewey & Co. have superior facilities for acquiring and giving information upon all subjects of discovery, whether in the line of the farmer, the miner, the manufacturer, the mechanic or the scientific inventor.

Their files of illustrated, scientific and mechanical publications afford an encyclopædia of useful knowledge pertaining to the development of all branches of business upon this coast for many years past.

Their library of books on home and foreign patent laws; United States and Foreign Patent Office Reports; mechanical, industrial, and scientific text books, encyclopædias, etc., is one of the most complete for reference in patent matters, in the United States outside of Washington.

Here an inventor can secure a knowledge of the State of the art, in any particular class he wishes to investigate and improve in, that will greatly aid him in his work of inventing.

They also mail (free, on receipt of postage stamp) a reliable pamphlet containing valuable information for inventors and patentees.

Geo. H. Strong, W. B. Ewer and A. T. Dewey comprise the firm of Dewey & Co., Patent Solicitors. Their Patent Agency is favorably located and connected with the MINING AND SCIENTIFIC PRESS and the PACIFIC RURAL PRESS offices, at No. 252 Market St., S. F., journals that are well known among the ably conducted and widely circulated progressive American weeklies of the day.

Extra Type for Sale.

We offer Scotch brevier type (same as used on this paper) for sale in any quantity from 100 lbs. to 1,000 lbs., for 25 cents per lb., if ordered soon. Also, several hundred pounds of nonpareil at favorable rates. The type is in good condition and is of a very durable character.

DEWEY & CO.

Pay in Advance.

Our terms for subscription are in advance, and we desire no new names on our list without prepayment.

Shorthand Writer.

A young lady who can give the best of reference wishes a situation as phonographic reporter or amanuensis in a first-class newspaper, law or business office, on very reasonable salary. Writes a good hand and is accustomed to correspondence. Address W., Box 2361, S. F.

HOW TO STOP THIS PAPER.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*

The Cultivation and Encouragement of a Love of the Beautiful in Nature.

[Prepared for the California State Grange by MRS. W. L. OVERHISER.]

Let us open the gate-called the "Beautiful," and enter the Temple of Nature. Even a hasty survey of the wonders of this temple shows us beauty everywhere above, around us and beneath our feet. Each day and night brings beauty to our vision. We see a joyous beauty in the morning, when the rising sun wakens man to praise and to labor; we see it at midday, and when the declining sun throws lights and shadows on hillside and valley. And beautiful are the sunset clouds, which poet's verse has never yet truly sung nor painter's brush imitated. Beauty still lingers "When Twilight with her gray sandals treads out the last sparks of light." And how beautiful is Night!

"When Heaven's ebon vault,
Studded with stars, unutterably bright,
Through which the moon's unclouded grandeur rolls,
Seems like a canopy which Love has spread
To curtain her sleeping world."

The changing seasons each in its turn bring to our view the beautiful objects of Nature. Beautiful are the flowers and blossoms of Spring, the blushing fruit and golden grain of Summer.

"And now comes Autumn, artist bold and free,
Exceeding rich in brightest tints that be,
And with a skill that tells of power divine
Paints a vast landscape wonderfully fine.
Over the chestnut cloth of golds he throws,
Turns the ash purple, cheers with scarlet glows
The lonely sumac, that erstwhile was seen
Clad in dull foliage of a sombre green;
Where daisies bloomed, gives golden-rod instead,
Stains every oak leaf with the darkest red,
Sets all the woodbine's waving sprays on fire,
And leaves them flaming from the cedar's spire."

Beautiful, also, are the snowflakes and frost work of Winter. All are beautiful in their time. There is beauty in the dewdrop dancing in the morning sunlight, rivaling in brightness the rarest gems; beauty in the murmuring brook, in the rushing river, and the ever restless waves of the ocean. There is beauty in the smallest grass blade, in the lovely flowers, the delicately painted sea-shell, and in the snow-crowned mountain. Why was this, our earthly home, made so beautiful? The all-wise Creator, when he fashioned this temple in which man lives, not only gave to him faculties by which he could behold and study the works of nature, but implanted also in his soul an innate love of its beauties. Encourage, then, this love of nature in your children, and if the cares and struggles of life have banished it from *your* heart, call it back. Nowhere in the wide world, than in the sunset land, are there more beautiful formations of the mountains; nowhere are there more magnificent or loftier forest trees; and yet man, in his greed for gold, has brought even the forces of nature to aid him in tearing down these, throwing them into the river, and causing destruction and ruin to fair fields, beautiful gardens and homes of his brother-man. The woodman, and the farmer even, have applied the axe of destruction to the forest trees, on the mountains and on the plains, destroying the beauty of the landscape, and leaving the animals, who should be cared for by man, without that protection from the summer sun which *was* provided for them by nature. An inordinate love of gold is debasing. The love of nature is elevating. Matrons, teach your children to avoid the former and encourage them in the latter. Let the study of nature enter into your plans of education. Surround your homes, as much as possible, with the bright and beautiful objects of nature, so that, by constant intercourse with them, your children will learn to adorn their lives by those traits of character which they will see symbolized in nature's works. They will learn to catch the sunbeams of cheerfulness, to love harmony and order, to be charitable, hopeful, faithful, industrious and economical. The study of nature's works will also lead the thoughts of your children "through nature up to nature's God."

PHOTOGRAPHING AN EXPLOSION.—The United States Engineers recently photographed the explosion of a wreck, which was blown to pieces by submarine charges of dynamite, to ascertain, among other things, how long the spectacle really lasted. The result was exceedingly interesting. There were six cameras employed, and the instant of the explosion, as also the several instants when the exposures were made by shutter, were electrically timed by a chronograph. A photograph taken one-tenth of a second after the explosion showed the vessel broken, and a column of water 70 feet high; a photograph secured 1:5 seconds after the explosion showed a column of water 160 feet high; a third photograph, taken 2:3 seconds after, showed the column at its full hight of 180 feet, while fragments of wreckage were in the air, but none had fallen to disturb the surface of the water; a fourth picture, taken 3:3 seconds after, showed the column falling, and the surface of the water disturbed; while a fifth photograph, secured 4:3 seconds after, showed that all was over.

TO CLEAN MARBLE.—Mix one-quarter of a pound of soft-soap with the same of pounded whiting, one ounce of soda and a piece of stone blue the size of a walnut; boil these together for 15 minutes, and then, while hot, rub it over the marble with a piece of flannel, and leave it on for 24 hours; then wash it off with clean water, and polish the marble with a piece of coarse flannel, or what is better, a piece of an old felt hat.

The Flowers at the Santa Cruz Fair.

[Report of MARTHA WILSON, Superintendent of the Floral Committee of Santa Cruz County Fair, and requested for publication in the PACIFIC RURAL PRESS by the meeting of Executive Committee and Superintendents of Departments, held Oct. 28, 1882.]

On the right hand as you enter the fruit-room is an ivy-wreated arch, with the inscription over it, in letters of evergreen and immortelles, "Floral Hall;" and I stand entranced with delight and wonder at the bewildering vision of floral beauty spread out before my eyes.

First we came to the tables of Mr. Doeltz, covered with rare palms, dracenas (*Ficus Australis*), coffee trees, variegated oleanders, manderbus ferns, caleus, bouvardias, begonias, and many other choice plants; also a perfect gem of an aquarium, constructed by Mr. Doeltz. The stand is of manzanita, with the moss and tiny ferns growing on it, surmounted by the aquarium, set in a conglomerate of shells and pebbles, with spaces for aquatic plants. The design is most unique, and would be an ornament to parlor or garden.

Next are the tables of Mr. Thompson, filled with a wealth of green and hot-house plants. Amongst them were *Stephanotis. Campsidiums, Crotons, Melalencas, Justicias, Echeverias*, rare palms, *Peperomias, Eulalias, Aspleniums, Aralias*, roses, and a host of rare plants, together with a collection of exquisite pansies. The front of Mr. Thompson's tables were covered with wood moss, starred with flowers in beautiful designs.

And now we come to the tables of the Ladies' Floral Committee. I have seen floral displays in the largest cities of the Old World and the New, but never have mine eyes beheld any display that would equal this in the great variety, beauty and boundless profusion of the flowers, all of them grown in the outdoor gardens of Santa Cruz, and arranged with the most exquisite taste in hundreds of beautiful designs. There were pyramids, stars, crosses, butterflies, hummingbirds; there were white doves resting on flowery sprays that branched over fountains of flowers, and harps in scarlet and white, with the golden strings wreathed in smilax. All these were composed of beautiful flowers, arranged with the most artistic skill as to color and blending. Then there were baskets of rare and beautiful roses, interspersed with fern and smilax and choice foliage plants, and that queen of California's wild flowers, the *Romneya;* and these were veiled, but not hidden, with the little fairy *Zypsaphilla;* and all these flower baskets and beautiful designs were sitting on beds of soft, green wood moss, bordered around with flowers and white redwood in Grecian bric-a-brac and Arabesque designs of exquisite beauty.

Behind these tables were rustic brackets, wreathed in verdure, supporting rare plants belonging to the Ladies' Committee. Amongst them were caleus, banrardias, begonias, farfuginms and cactus. Over the tables were luxuriant hanging baskets of lycopodium and rare ferns. Then there were many choice plants from our citizens; noticeable amongst these was a fine specimen of the amaryllis refulgens, from Judge Logan, and from Mrs. Wilkin, of the Germania Hotel, a rare plant of the lily family, with foliage resembling the feathers of the grouse, and some of Mr. Matthews' rare pelargonium and magnolias.

At the further end of this Floral Hall, which is some 75 feet in length, is the fernery, composed entirely of our Santa Cruz wild flowers. This fernery was designed by Mrs. A. M. Smith, and executed, under her directions, by her father, Mr. E. B. Cahoon. It is one of the most perfect representations of nature that I ever saw. There are the mossy overhanging rocks, the old logs and gnarled roots covered with their native moss and ferns, and the clear, cool cave-like spring, with the pearly drops trickling down from the crags overhead. The ferns are there from the tallest to the little fairy ones, growing on the logs and springing from the crevices in the rocks, adorning them with a mild beauty that is indescribable. On one of the logs lies a young alligator brought from the Nile, and the little children exclaim: "Don't you see him move? I saw him wink just then." As I turn to retrace my steps through this Eden of beauty, this foretaste of the sweet bye-and-bye, I wonder who are the artists that have produced such exquisite results, and am answered, the Ladies' Floral Committee, consisting of Mrs. C. B. Younger, Mrs. Delamater, Mrs. Cahoon, Mrs. A. M. Smith and Miss Mamie Perkins, and assisted by a number of the ladies and sweet young girls of Santa Cruz, who volunteered their services.

[Mrs. Wilson, although assuming no credit to herself for the wonderful Floral Hall, which she comes as near describing as any one can in words, really deserves no little credit for the energy which she infused into this admirable committee, and which made such a pleasing and captivating feature of the fair.—REPORTER.]

LABOR AND MATERIAL.—A Cincinnati paper tells (perhaps) a big story of a walnut tree. In 1864 an Indiana man, as the story runs, bought the tree for $1, and he subsequently sold it for $65. The buyer sold it to a Cincinnati lumber dealer for $700; the Cincinnati dealer sold it to a New Yorker for $2,200, and he cut it up into veneering, which he sold for $10,000.

A METRIC GUIDE.—A fact little known is that the United States nickel five-cent piece furnishes a key to metric measures and weights. This coin is two centimetres in diameter, and its weight is five grammes.

The Black Wattle.

Among the Australian trees which have been brought to California is the black wattle (*acacia decurreus*) which has shown its adaptation to our conditions by making a very satisfactory growth. The specimens now growing on the University grounds at Berkeley show that the growth is rapid and satisfactory. The *acacia decurreus* or black wattle is the source of the bark largely used for tanning in Australia and elsewhere, and the trees are becoming so scarce that plantations are urged even to the lands where the tree is indigenous. The present price of the bark in the London market is from $50 to $65 per ton, with every prospect of an increase. As a source of supply for bark for tanning purposes the black wattle tree is much superior to the oak tree. It grows far more rapidly, and the bark it produces contains a larger percentage of tannin than oak bark. In the course of five or six years after planting a small supply of bark would be available for sale from the thinnings of the plantation. The quantity would increase yearly for some time if the plantation were properly managed, and it could be so arranged that a succession of trees would be ready for stripping every year. The return for the outlay would thus become available at a much earlier stage than is the case generally with the planting of forest trees. The timber is hard and well adapted for turners' work, and also makes the best of firewood. This last would be a great consideration in many districts where firewood is scarce and a coal supply not available.

OFFENSIVE BREATH.—This is generally an annoyance to the person who has it, and is especially annoying and disgusting to his friends. Sometimes it is caused by decaying teeth. If so, it is unwholesome, for the person who has it inhales with every breath putrid particles that are absorbing into his blood. A good dentist should be seen, and if the offensive odor is caused by decaying teeth, he can soon "abate the nuisance." But quite often bad breath is caused by the blood's being loaded with waste matter, which ought to have been separated—eliminated—from it by the liver and other glands. Waste in the body must be gotten rid of somehow, as certainly as the waste of our dwellings must be taken away, if we would have them healthy. Nature has provided glands whose office is just this, and whose powers, in health, are fully equal to it. In case these fail somewhat of their work—if they failed in full, speedy death would result—it is done in part by other glands, which are then said to act vicariously. Thus, the skin can come to the relief of sluggish kidneys. The kidneys, in turn, can aid the skin when its pores are closed by a cold or a fever. So, also, matter which should be separated from the blood by that great gland, the liver, and by other intestinal glands, is taken from it by the mucous glands of the mouth and air-passages. In the process, however, it is more or less changed chemically, and gives the breath its disagreeable odor. To correct this disorder it is necessary to arouse the proper glands to a higher activity. The stimulus should be slight and continued for some time. As all the excretory organs aid each other, it is well to stimulate the skin and kidneys, also, for a short time at least. As the trouble in the first place often brings with overeating, the diet should be diminished and regulated.—*Ex*

GROWING TREES TOO SLOW BUSINESS.—Artificial substitutes for the natural products of the forests have been attracting much attention for two or three years past. Our readers are already informed in regard to the manufacture of straw lumber, and now we are informed that a new company for this business has been formed at Joplin, Missouri. The *Daily News*, of that town, says: "A series of experiments were made with samples of the lumber in the presence of a number of stock-holders and others, all of which were satisfactory in the extreme. There having been expressed some curiosity as to whether the patent lumber could be worked with carpenters' tools with the same facility as any other lumber, the party all repared to the shop of Hoyt & Chickering, where it was demonstrated that it would saw and also dress with a plane just as well as pine or walnut, and that it was susceptible to just as smooth a finish as any other lumber. It was also tested by fire, and failed to burn with the readiness of wood. Those who were somewhat doubtful about the utility of the new invention were fully reassured by these several tests, and there is no question but that straw lumber will, in a few years, to a certain extent, take the place of other kinds for inside finishing, and in the manufacture of furniture. The demand is already in excess of the facilities of the one factory, and the company organized here is confident it will have no difficulty in finding a ready sale for all that may be manufactured."

GLYCERINE IN GLUE.—Herr. Puscher, a German chemist, has reported that the value of glue is greatly increased by the addition of 25% of glycerine, all cleaving and breaking of the glue being thus prevented.

TEETH FACTORIES.—There are at present in the United States 12 large factories for the production of artificial teeth, turning out between them 10,000,000 teeth a year. The gold used in stopping decayed teeth in America amounts to $2,500,000 yearly.

CHANGES ON THE MOON'S SURFACE.—Prof. M. W. Harrington refers to two kinds of changes on the moon's surface which may be regarded as fairly established. The first is the land slides, which may doubtless be caused by the great alterations of temperature to which the moon is subject. Many of these slides may be easily recognized with good telescopes. The second form of change is illustrated by craters, which have been proven to be different in size and shape from what they were recorded by earlier observers. Many other changes have been suspected, but they are of a more uncertain and doubtful character.

HIGHT OF BUILDINGS.—In the *Insurance Cyclopedia*, Mr. Walford mentions the Swedish law which came into force in 1875, and which prohibited the erection of buildings in cities and towns of a hight more than five feet above the width of the street on which they are built. A wise precaution, says the *American Exchange*, to secure proper ventilation and avert the spread of conflagrations, and which somewhat qualifies Capt. Shaw's rule that the safety or saving of the individual ignited building is indirectly in the ratio of the hight to area or cubic content under equal combustible conditions otherwise. This is part of the question, whether we shall in the future build *cities*, or continue, as in the past, to build capacious individual structures.

THE Prince of Wales has consented to act as Chairman of the Longfellow Memorial Committee.

Face the Music, Brothers.

If there are any more able Workmen still *receiving* the WATCHMAN, who have not and do not intend to pay for it (if they can avoid it), they are earnestly requested to notify us by postal card before their indebtedness further increases. We do not wish, and never have intended to send the paper to a single person who does not want it, but, when sent in good faith to a brother on our part, we cannot afford to be cheated out of our honest dues, and shall not if we can, by fair and legal means, prevent it. We are ever ready to allow for any real mistake on the part of one, but we have little confidence in the good faith of any man who will receive the paper month after month with the deliberate intention of not paying for it, when three minutes' writing and a one-cent postal card would stop it.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P. OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
L. L. WOODMANSEE—Nevada State.
B. W. CROWELL—Los Angeles county.
L. WALKER—Butte, Tehama and Shasta counties.
E. A. WILLIAMS—San Francisco.
JAMES MCHOLME.
S. E. BAKER—Eastern States.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Promptness Displayed, Etc.

MESSRS. DEWEY & CO., Patent Agents:—The Canadian patent obtained through you is at hand. This makes three patents received within a month. The ability, energy and promptness displayed by your firm must certainly be gratifying to your numerous patrons—as it assuredly is to

Yours respectfully,
THORPE & BELLOMI.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

W. DAVIS, of No. 410 Market St., S. F., announces his prices for harness in our advertising columns. The proprietors of this journal have used Mr. Davis' harnesses for several years past, with full satisfaction as to prices, good looks and wearing qualities of his goods.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

A TURNED LEAF will point out the article supposed to be of special interest to persons receiving sample copies of this paper.

A Curious Accoustic Phenomena.

A correspondent of the *Manufacturer and Builder* writes to that paper as follows: I would like you to explain a very curious thing that I have noticed, if you can. About a week ago I was doing a piece of soldering, and carelessly laid my iron down, when I heard a clear humming noise, which would keep on for a while, then stop, and then commence again. I found at last that it came from the iron. To make sure I lifted it up, when the sound stopped. I laid it down again in the same place, the handle on the zinc-lined top of my work-table, and the copper bit resting on the edge of a lead anvil, when the singing noise commenced again. I have asked some friends about it, but they cannot explain it. I have tried repeatedly to make the iron sing for the satisfaction of the thing, but I cannot always succeed, though once in a while, when I happen to lay it down right, and the bit is the right heat, it starts off at once, and keeps it up for 5 or 10 minutes—a singing soldering iron.

To the above, the editor of the journal addressed replies as follows:

This correspondent has accidentally struck just the right conditions for performing one of the most curious acoustical experiments. The experiment in question is a familiar one in the physical lecture-room, where it is known as Trevelyan's rocker. The cause of the singing sound is the contact of two metals of different temperatures. The resting of the heated iron on the edge of the lead plate causes the lead to expand, raising a slight elevation in its surface at the point of contact; this slightly tilts the iron, and another contact is made with the lead, which expands and tilts it back to its first position. Thus a rocking motion is imparted to the iron. These vibrations will be imperceptible to the eye, but they follow each other so rapidly that they produce a musical note. Mr. Trevelyan, who first observed this phenomenon accidentally, like this inquirer, studied the subject carefully, and devised the instrument called "Trevelyan's Recker," by which the experiment can be performed very satisfactorily. It consists of a bar of iron, one side of which is beveled and provided with a groove along its whole length, forming two sharp edges. The bar is provided with a long handle. When this device, which resembles a poker, is heated and laid across a block of cold metal, with the end of the handle resting on the table, it at once commences to sing, like our inquirer's soldering-iron. As the poker gradually loses its heat the singing becomes weaker and weaker, and finally ceases. By placing an iron rod, terminated by two knobs across the poker (thus weighing it), the weight of the rod causes the vibrations of the poker to become slower, and the rocking motion which causes the sound will be made visible to the eye by the movements of the rod and its knobs.

APPARENT SIZE OF MAGNIFIED OBJECTS.—Professor W. H. Brewer reported to the American Association concerning some experiments he had made upon the estimation by different persons of the size of images of objects seen through the microscope. More than 100 persons, of all ages, classes and occupations, gave very many different estimates. A common louse was used as the test-object, and the magnified image was projected at ten inches. By far the larger number of persons underestimated the size value theoretically given the image by scientific microscopists, which was about 4–66 inches. Two estimates were of only an inch; several were of more than a foot. One student likened the figure to a cockroach, another to a lobster. Mechanics and artesans generally overestimate. A draughtsman, who was accustomed to measure and draw all his work, after careful examination, said the image was at least five feet long! A professor of physics said he could make the image look of any size he wished.

THE MILK TREE.—A French chemist has analyzed the juice of the so-called milk tree of Central America, to the nutritive qualities of which attention was first drawn by Humboldt, and has found that the vegetable product really possesses many of the characteristics of cow's milk.

THE PACIFIC RURAL PRESS,
AN ILLUSTRATED
AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.
Because it is the largest and best agricultural weekly west of the Rocky mountains
That Patrons may be reliably informed on the progress of the Order in this and other fields.
That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.
That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress
That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.
That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements
That the RURAL after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information concerning subscription, etc., on application
Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

Mining and Scientific Press.

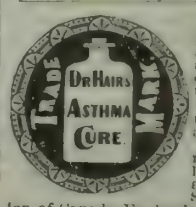
THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.



As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

Oxygen from the Air.

A method of obtaining oxygen from air for technical purposes has been recently devised by M. Maigis, of Paris. The principle is that of dialysis or diffusion under pressure. Atmospheric air being forced against a first caoutchouc membrane by suction, a mixture of about 40% of oxygen and 60% of nitrogen is obtained on the other side. A second membrane increases the proportion of oxygen to 60%, that of the nitrogen being reduced to 40. A third gives 80% of oxygen; a fourth 95%. M Maigis prepares his membranes by immersing taffeta in a solution containing sulphide of carbon (or light petroleum ether), spirit of wine ether and caoutchouc. After drying the taffeta has a fine layer of caoutchouc on it.

A bag of the membrane, with a framework of rings of galvanized iron wire is placed in a cylindrical iron vessel admitting air. It is connected by means of strengthened caoutchouc tube with the suction apparatus, which is (preferably) formed of a cylinder containing a series of conical cups with small spaces between. Steam is forced through these, and draws in the gas obtained from the first diffusion, passing on with it through a cooler, where the steam is condensed and the gas separated for its second diffusion. This latter occurs through a similar apparatus, except that the space round the bag is provided with a tube passing down into the water. The pressure can thus be regulated, and the superfluous gas let off. Four sets of the apparatus are generally used (as already indicated), and the final gas, with 95% of oxygen is collected in a holder.

THE MOON'S INFLUENCE.—Those who yet cling to the old-time faith in the moon's influence upon the weather may be interested to learn that so eminent a scientist as Sir William Thomson has recently felt called upon to declare that careful observation with the barometer, thermometer and anemometer have failed to establish any such influence, and have proved, on the contrary, that if there is any dependence of the weather upon the phases of the moon it is only in a degree so slight as to be quite imperceptible to ordinary observation.

DANGERS OF WOODEN STRUCTURES.—The unsanitary condition of certain towns in this country has drawn attention to the fact that wooden houses and especially wooden foundations are liable after a certain time to cause malarious symptoms. So many malarious attacks have been experienced of late years in San Francisco, that the medical men began to suspect the buildings, especially as the structures themselves, which are nearly all built on wooden foundations, began to show disturbances, cracks appearing in the walls and the floors settling. Scientific investigation into the causes of these troubles points to the fact that the wood used in the foundations became decayed by contact with the sand, which destroys its fibers and leaves it porous and brittle. The next stage in the process is the formation of a fungus growth from the edge of the wood, composed of infinitesimal insect life, which burrows the remaining wood until its vitality is gone, and the insect itself dies. Physicians attribute many of the unpleasant smells and the bad health that hang about the inhabitants of these dwellings to this malarial condition, which to a great extent disappears as soon as proper foundations are substituted for those of wood.

CHANGES ON THE MOON'S SURFACE.—Prof. M. W. Harrington refers to two kinds of changes on the moon's surface which may be regarded as fairly established. The first is the land slides, which may doubtless be caused by the great alterations of temperature to which the moon is subject. Many of these slides may be easily recognized with good telescopes. The second form of change is illustrated by craters, which have been proven to be different in size and shape from what they were recorded by earlier observers. Many other changes have been suspected, but they are of a more uncertain and doubtful character.

GREAT BRITAIN produced in 1881 55,128 tons of ore, from which 3,000 tons of copper were produced. This was at the rate of one ton of pure metal for every 14¼ tons of ore. In 1880 they mined 52,556, and got a return of 3,875 tons of fine copper. This is at the rate of 12⅝ tons of ore to one of fine copper. The great bulk of this ore comes from Cornwall and Devonshire.

Orange Culture in California.

With Appendix on Grape Culture.

An Important Work.

This book is written by Thos. A. Garey, of Los Angeles, after many years of practical experience and observation in orange culture. The subject is an interesting as well as important one, containing information which all reading Californians should possess, whether engaged in orange or grape culture or not.

There are few writers in America who could have contributed more richly or abundantly on this subject than has the author.

The book is issued in good style and print, and convenient form. It contains 225 pages, 12mo.

Printed and Sold at the Office of the "Pacific Rural Press," San Francisco.

Mailed (postpaid), in stiff cloth binding, for $1.25; in flexible cloth, $1. Agents wanted for this and other books.

E. MAIN, 315 Folsom Street,

Makes to order Gents' Fine French Calf Boots from $6 to $10; Gaiters from $3 to $6; Alexis from $3.50 to $5; Men's Heavy Kip Boots, $6; Oxford Ties, French Calf, $4; California Leather, $3.50; Men's Working Shoes from $2.50 to $3; Children's Shoes made to order. Persons in the country ordering to the amount of $12, I pay the express charges. I sell nothing but my own manufacture. Cheapest repairing shop in the city.

DEWEY & CO.'S

Scientific Press  Patent Agency.

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

Important to All Officers of the A. O. U. W.

We have sent a large number of extra copies of the WATCHMAN to the various officers and members of the A. O. U. W. We ask as a special favor that the officers who are intrusted with much of the success of the various Lodges will lend us a helping hand in increasing our circulation. Nothing contributes more to the successful working of the A. O. U. W. than the circulation of general fraternity news, and the best way to secure this is through the WATCHMAN, which is an able and faithful advocate. It is to the interest of the A. O. U. W. that the WATCHMAN be placed in the hands of every Workman, and to accomplish this we must rely in a large measure upon the Lodge officers.

Liberal inducements will be offered to active and reliable members who will canvass for subscriptions. Sample copies will be mailed free on application to Workmen, all of whom are invited to endeavor to assist in extending the circulation of the WATCHMAN.

Let every Workman into whose hands this notice may come, if not already a subscriber, fill out the subscription blank below, enclose two dollars, and send it to us for a year's subscription.

Mirror Lake.

Few localities are as famous the world over for beauty and sublimity of scenery as the Yosemite valley. Description and illustration inadequately picture the scenes. It seems as if nature outdid herself in forming this retreat of rare beauty. Without attempting any description of the valley in general, it will be sufficient to speak of Mirror lake, which is so beautifully pictured in the illustration on this page. Some distance from El Capitan up the canyon of the Tenaya is the lake called "Mirror lake," an expansion of the Tenaya fork, which flows down the canyon of the same name. The lake is small and deep, and lies in one of the grandest spots of the valley, at the foot of the fine rounded precipice called the Washington Column. From the reflections in its still waters of this and other great hights in its vicinity, such as the North and South Domes, and particularly Mt. Watkins, it has been called the Mirror lake. The proper time to see the reflections is early in the morning, when the sun makes its first appearance in the valley over the crest of Mt. Watkins.

The lake is embedded amongst the wildest scenery possible. In the rocky sides of the mountains opposite and overhanging the lake can be seen by an exercise of the imagination, contortions and crevices, much resembling an eagle, a lion and a crane. Amongst other curious formations on the face of the mountain may be seen an elephant without his trunk, a pig without legs, the head of a second elephant on one part of the cliff, and its hinder quarters and tail on another portion of the cliff, an engine and two carriages turned upside down on the mountain, but right side up when seen reflected in the water, with the addition of a station into which the train was on the point of entering; a clothes line with three articles of wearing apparel depending from it; a cross, a man's head with a braid, an angel supposed to be flying, but without wings, a rooster, a cow with half a head, a sheep, and a bottle lying on its side pouring liquid on to George Washington's head, the part of his physiognomy besprinkled being his left cheek. Two lovers are also pointed out to the visitor. They were supposed to be standing and gazing into each other's faces.

MIRROR LAKE, YOSEMITE VALLEY.

To a spectator viewing the reflections from a boat in the lake, when the sun is brilliant, the glare becomes very blinding. By degrees, however, one becomes accustomed to the light, and the longer one looks into the water the clearer becomes the objects reflected in it. All the surrounding heights are lit up in a remarkable manner; every tree comes out in the reflection most marvellously clear. Were it not for the fact that the objects are reversed in the water, it would be very difficult to tell which one looks at—the original or its reflection.

The visitor may amuse and interest himself in the vicinity of Mirror lake for many hours. No one who visits the Yosemite valley should fail seeing this wonderful little body of water. No doubt before the advent of the white man this valley was visited frequently by the Indians.

Home Miscellany.

Don't Leave the Farm.

Come, boys, I have something to tell you;
Come near, I would whisper it low
You are thinking of leaving the homestead,
Don't be in a hurry to go.

The city has many attractions,
But think of the vices and sin;
When once in the vortex of fashion,
How soon the coarse downward begins

You talk of the mines, boys—
They are wealthy in gold, no doubt;
But, ah! there is gold in the farm, boys,
If only you'll shovel it out.

The mercantile trade is a hazard—
The gains are first high and then low.
Better risk the old farm awhile longer;
Don't be in a hurry to go.

The farm is the safest and surest.
The orchards are loaded to-day;
You're as free as the air in the mountains,
And monarch of all you survey.

Better on the farm awhile longer,
Though the profits come in rather slow;
Remember, you're not going to risk, boys,
Don't be in a hurry to go.

C. E. M. Breen

A Mountain Spring.

I knelt as kneels before a shrine, a soul
All worn and burdened with such sins as roll
Deep torture to the heart, and troubled so,
Before th' Immanuel fountain boweth low.
How gray my garments with the dust! My feet,
How burned and weary with the wayside heat!
With dust upon my brow, I cry "Unclean,"
And lave my heated hands beneath the stream
A mountain spring, cool, crystalled to the brink,
Out-flinging jets of diamonds as I drink,
And circled round by green, wide, polished leaves,
And low-boughed hazels and the cedar trees.

An altar perfected in Nature's love
By unsealed fountains from the hights above.
The music of the place, in sacred tones,
Soft measures keep upon the granite stones.
Calm, holy symphonies to being start,
And make sweet pleadings to my downcast heart.
The water, shade, the scarlet flowers that grow,
Quick shafts of gladness to my being throw.
I rise, baptized with coolness and with rest,
And pluck the scarlet blossoms for my breast.

E. E.

Romance of House-Cleaning.

"Is she coming to visit you?" said Eric Hale, with a slight grimace, "that simpering fine lady, with the useless white hands and the shallow little society laugh? Oh, Aunt Delia, pack my portmanteau, and let me be off on a lecturing tour, until Flora Lee's visit comes to an end!"

Mrs. Dove looked a little disappointed. To confess the truth, she had especially arranged this visit with reference to her nephew, Eric.

"He's a fine young fellow," she had said to herself, with true feminine diplomacy, "with an excellent parish and fine prospects—and it's high time he was settled in life with a wife. And I think Flora Lee would suit him exactly."

And here was the young man himself upsetting this charming little castle in the air, without the least scruple of science, like the modern iconoclast that he was.

"Well, Eric," said Mrs. Dove despairingly, "I'll write to her not to come. Of course I don't want to put you out, just when you're so busy, too, with that course of lectures on the Book of Revelations. But I really thought Flora would make the house lively."

"She's a deal too lively to suit me," said Eric Hale. "Ask her to come in June, when I shall be off to Omaha and Nevada on that conference business. But as for a visitor, I should prefer little Polly Peppercorn's big wax doll with the silk black hair and staring black eyes that open and shut by machinery."

So Mrs. Dove, choking back the tears of disappointment, for she had been nursing this pet scheme in secret for a long while, sat down and wrote a letter to her friend, Miss Lee, postponing the proposed sojourn at Cedarborough farm until roses should be in bloom and strawberries beginning to ripen.

"Adonijah," said she to the hired man, "take this letter to the post office."

"Yes, 'um," said Adonijah, and he put it in his pocket and straightway forgot all about it.

It was a dismal, rainy morning in April, the yellow jonquils beaten to the ground, the very wild violets shutting up their eyes as if in unmitigated disgust at the unpromising state of the weather. Overhead racks of gray clouds scudded across the heavens, and the little sheet of silver lakelet under the hill was dotted and dimpled all over with the falling rain, as if pierced with a thousand tiny javelins.

"It's no use trying," said Mrs. Dove plaintively; "the fates themselves have conspired against me!"

The carpets were up, the pails of white-wash stood steaming in the middle of the parlor floor, and Mrs. Dove herself, with her gray curls tied up in a yellow damask pocket handkerchief, which her great uncle had brought from China half a century ago, sat crying on the lower edge of a step ladder. For Betsey, the help, had fallen down the cellar stairs and broken her leg, and Mrs. Mulrony, the charwoman, had sent a message that her eldest son had broken out "wid de maizles, sure—speckled all over like a shower of red pepper, and sorra a bit of clanin' could she undertake for until the wake's over."

"And these three days of all others," sighed Mrs. Dove, "when Eric had exchanged pulpits with Mr. Washburne! And he so dislikes house-cleaning; and —"

"Dear me, Mrs. Dove, what is the matter?"

Mrs. Dove started to her feet with a little scream—for there, exactly as if she had been rained down out of the gray zenith, stood Flora Lee herself in a trim brown traveling dress, with a neat little hand-bag, a gossamer waterproof cloak and silk umbrella.

"Why, Flora!" cried she, "how came you here?"

"By the train, of course," said Miss Lee, "and I walked from the station."

"I wrote you not to come," said Mrs. Dove, in consternation.

"But I never received any such letter," said Miss Lee. "Shall I go again?"

"No, you darling, you shall do nothing of the sort," said Mrs. Dove, enthusiastically. It was only because—because we were house-cleaning."

"I'm not afraid of house-cleaning," said Flora. "I see how it is," with a comprehensive glance around the scene of confusion, "and I'm going to help you through with it."

"You?" said Mrs. Dove.

"Yes, I," said Flora. "Why not? Just lend me one of Betsey's old dresses. Where is Betsey, by the way?"

"Her father has just carried her home in the wagon," said Mrs. Dove. "She broke her leg."

"And your charwoman?"

"Oh, dear! oh, dear!" said Mrs. Dove. "She has got a visitation of the measles, or small-pox, or some other horrid disease in her family. And my nephew, Eric, is to be gone for three days; and I made sure I could finish the house-cleaning while he was absent."

"And we will," said Flora, cheerily.

"How can we?"

"Oh, you shall see," nodded Miss Lee.

And, despite all though she was, Mrs. Dove began to feel the mercury rise in her mental thermometer at once.

And Flora Lee arrayed herself in one of Betsey's cast-off calicoes. tied her rippled brown tresses up in a cambric sweeping-cap, and went vigorously to work with a scrubbing-brush, while Mrs. Dove lent her attention to the window-glass, and Adonijah, with more zeal than discretion, splashed whitewash over himself and the floor, with laudable impartiality.

"Wal," said Adonijah, afterward, "I never did see no cricket work spryer than that city young lady. By gracious, she beats Betsey all holler at it! And she's got such an up-an'-down, pretty way of doings, too. I declare I couldn't hardly take my eyes off her all the time I was in whitewashin'."

Mrs. Dove, however, was unused to the severe exertions incident upon house cleaning time, and went to bed with the sick headache in the middle of the afternoon.

"Never mind, Mrs. Dove," said Flora; "I'll get tea, and I'll make some of those cream waffles, and a short-cake for Mr. Dove, and you shall see how nicely I can fry oysters."

"Indeed, indeed, I don't know what I should do without you, Flora!" said Mrs. Dove fervently.

But, as it happened, Mr. Daniel Dove was unexpectedly detained on business at Whiskill, a neighboring town, and, instead of him, who should walk debonairly into the little sitting-room, flinging down his carpet bag, but Eric Hale himself, just as the rainy dusk closed in, and the delicious oysters and Mocha coffee filled the house.

"Hello!" said Eric. "So you're cleaning house—eh, Betsey?"

"Yes, sir," a demure voice responded from the kitchen.

"And where's my aunt?"

"She has retired with a sick headache."

"The natural consequence of cleaning house, I suppose," said Eric Hale, with a shrug of the shoulders. "Dear old Aunt Delia! Why shouldn't she be contented to leave things as they were? Tell her, Betsey, that Mr. Washburne has concluded not to exchange until next week, and that, now I'm in the midst of the melee, I'll lend a hand with the business to-morrow."

"Yes, sir."

"And Betsey—"

"Sir?"

"Where did you learn to make such delicious coffee? Bring me a cup at once. Bring me a cup at once; I'm ready to drop with weariness; and it is like a dream of Arabia."

And Flora Lee, with the flapping edge of her sunbonnet concealing the amused dimples around her mouth, brought in the oysters and coffee, flanked by a pile of feather light waffles.

"I declare, Betsey," cried the Rev. Eric, facetiously, "if you were a trifle younger and prettier, I'd marry you myself, to make sure of coffee and waffles like this every night."

"Would you, sir!" said the soubrant Betsey.

"And we'll make a compact, Betsey," merily went on the young clergyman, as he helped himself to butter, "to finish the house cleaning ourselves to-morrow, and save Aunt Delia the worry and work of it."

"Yes, sir," said Betsey. "But, please, sir, it's all done except the tacking down of the carpets."

"Who did it?"

"I, sir, please, and Mrs. Dove, and Adonijah. And please, sir, I'm going to finish it myself to-morrow, and please, sir," flinging back her sunbonnet and disclosing a coronal of bronze-brown braids, a pair of very rosy cheeks, and eyes full of sparkling, hazel mischief—"I'm not Betsey at all, but Flora Lee, entirely at your service."

The Rev. Eric Hale stared with round-eyed surprise, not unmingled with dismay.

"Miss Lee!" he repeated.

"Exactly," nodded the young lady.

"Did you make the coffee?"

"I did."

"And fry these brown-jacked oysters and stir up these waffles?"

"No one else, Mr. Hale."

"And scrub these rooms?" glancing around.

"Yes, sir, and dusted the cornices, and washed the window glass, and took down all the picture frames, and put the lace curtains in soak, besides other items too numerous to mention," mischievously added Flora, rather enjoying the discomfiture of the young clergyman.

"Miss Lee," said Eric. "I beg your pardon."

"What for, Mr. Hale?"

"For always having regarded you as the most useless of creatures. I recant. I own that you are equal to any emergency."

And when, later in the evening, Mrs. Dove crept out with her head tied up in *eau de Cologne*, she found her nephew and Flora Lee playing chess together by the fire in the most amiable manner imaginable.

"It's all right," said Mrs. Dove to herself.

It was all right. And Mrs. Eric Hale won her frank, unconventional husband, not through the medium of dress, or jewels, or waltzes, or flower-shows, but through the grim realities of house-cleaning.

"I wanted a genuine helpmeet," says the Rev. Eric, "and have got one."

Women's Work in Farming.

A certain wicked but witty jurist, whenever a culprit was brought before him for trial, invariably asked: "Who is the woman in this case?" A slight measure of truth underlies this repartee, as indeed, must be the case under all satires on weak human nature, else they would not be so keenly felt. The broader and more comprehensive truth in this connection is, that woman is really the basis of most that is good and successful. There is scarcely a leading business man in any vocation who will not gratefully acknowledge his success as being in large part due to his wife. In no occupation is this more apparent than in that of the farmer. All over the country the men who have succeeded in accumulating competency or wealth in farming have had sensible, industrious and economical wives. Because woman does not work in the fields is no reason that her services are not important. On large farms the master himself often does little of the manual labor. He can hire it performed nearly as well as he can do it himself, while his services in overseeing the proper performance of the work are worth far more than anything his own hands are capable of performing. In this labor of supervision the wife's services are quite as effective as those of her husband.

There are several leading departments which, by common consent, are relegated to the sphere of the wife. Embraced in her special department is the management of the household expenses, and, unless dairying is made the chief business of the farm, she has usually the entire care of the dairy. A story is told of one of the early pioneers in a new country, who, with his wife, commenced farming on a tract of 100 acres of wild land, only partially paid for. Year after year they prospered, the 100 acres were paid for, in large part, by the hard earned money which the wife had secured through sales of butter and cheese. Again and again the question was asked by the husband, "Shall I buy another 100 acres?" and the answer by his good wife was always ready and always the same: "Get me 15 more cows and you may safely buy the land." When, in their old age, a fine farm of 500 acres were paid for, the wife could rightfully boast that it was her labor, quite as much as that of her husband, which had paid for their broad acres. The law, which has been called the perfection of human reason, partially concedes the rights of woman in securing one-third of all real estate to the widow for her use during life, and making it impossible for a married man to alienate their home, by sale or mortgage, without his wife's free signature.

More men would have remained prosperous owners of farms, now lost through bad management or other improvidence, if they had listened to the advice of their wives. A faithful wife is in every situation the best counsellor her husband can have. In farming she is usually the conservative partner in the direction, dissuading against extravagant expenditures and doubtful experiments. It may be and doubtless is otherwise in cities, but girls born in the country and accustomed at their fathers' firesides to hear the failures and successes of their neighbors discussed, are often more economical than their husbands. The latter, associating with other men, often have their heads turned, if they are not themselves misled into questionable and extravagant habits. It may seem to the farmer, as he reluctantly counts out the dollars, which his wife has often to fairly beg of him, that his better half is very extravagant. In nine cases out of ten, however, if he will figure up the useless and often injurious expenses incurred by himself, the sum will amount to more than his wife's allowance for necessary personal expenses. The fact that the husband is more frequently away from home than the wife perhaps gives greater occasion for the expenditure of money, yet even this does not change the importance of a mutual understanding concerning money matters.—*American Cultivator.*

Chaff.

A GENTLEMAN, noted for his extravagant assertions, contended that the flogging of children was morally injurious, and went on to prove it. "My father," he said, "once flogged me very severely when I was telling the truth." "Wal, now," observed another American at the other end of the table, "I have known you since you growed up, and it appears to me that your father cured you."

WHEN Cousin Mary was three years old she attended church for the first time with her aunt. During the sermon she heard the minister mention the name of God several times, and acted as if she knew he was doing something wrong. At last she could stand it no longer. The next time he said it she rose up in her seat, and pointing her chubby finger at him, said in impressive tones, "Man, 'top your swearin'."

THERE is a story of Solomon not contained in the "Book of Kings." Two of his court damsels had a row as to precedence. Solomon looked kindly and said: "Let the oldest go first;" and the damsels embraced, and went back together with entwined arms.

AT one of the stations on the Erie Railway lives a New York book-keeper, who is fond of green food. A gentleman recently presented him with a pine apple, which he gleefully took home. The next day the gentleman asked him how he liked it. "Well," said he, "we boiled it for two hours with a chunk of corned beef, but I can't say it was as good as cabbage."

A LAWYER recently lost a bride in a peculiar way. He appeared at the wedding, but on being called to the ceremony, from sheer force of habit protested that he was not ready to proceed and demanded delay. And so the bride got mad and shipped him.

ON the Rue St. Lazarre the other day a chair was seen on which lay a hat with the following notice: "Please don't forgot the poor beggar, who is just taking his breakfast."

A LITTLE boy went to a shop for some eggs. Before reaching home he dropped them. In answer to his mother, who asked, "Did you break any?" he replied, "No. I didn't break any; but the shells came off from some of them."

JUST down the intervale where the brake ferns grow rank, she placed her easel and sat down by it, sketching from Nature:—"Please, ma'am is that me you're drawing milking that cow in the picture?" "Why, yes, my little man, but I didn't know you were looking." "Cos if it's me," continued the boy, unmindful of the artist's confusion, "you've put me on the wrong side of the cow, and I'll get kicked way off the lot."

IS FINGAL'S CAVE THE WORK OF MAN?—At a recent meeting of the Geological section of the New York Academy of Sciences, Mr. F. C. Whitehouse exhibited, by means of the magic lantern, a large number of views of caves on the island of Staffa, the most interesting of which was a view of the famous Fingal's Cave. After fully describing their form, size, etc., Mr. W. surprised his audience by affirming his belief in the theory that they were not, as generally supposed, formed by natural causes, but that they are really artificial caves, made by the hand of man at some very early period. The speaker gave as a reason for his conclusion the shape of the roofs, which, in all known natural caves, are low and flatly arched; but here, in all cases, high, with Gothic arches like a Catholic church. Moreover, the rocks in which these caves are found do not crumble into irregular pieces, but keep their columnar form. If the caves had been excavated by action of the sea waves, their columnar remains would have been much more abundant as debris in the vicinity. They were probably taken out carefully and carried off, probably to Scotland, where many are found. The members were not generally prepared to accept the theory, but were very much interested in the discussion which was raised in regard to it. The subject affords abundant food for research and thought.

ARTIFICIAL SILK.—E. Stutzer, of Berlin, has devised a method for producing goods with a beautiful silky luster by mixing wool with vegetable fibers, such as flax, hemp, jute, etc. It is well known that in bleaching and dyeing in the ordinary way, vegetable fibers require an entirely different treatment from those of animal origin; but Stutzer has found that this unequal dyeing is due to the presence of a gummy substance in the cells of plant fibers, and he has devised a peculiar boiling process, with chemicals, which remove the gum and admits of uniform dyeing. It is also well known that when silk is to be mixed with vegetable fibers a similar difficulty is met with in dyeing the mixture; but Agache and Imbs, of France, overcame this difficulty by softening the vegetable fibers in an emulsion of animal oils with a solution of soda, and then piling them up in heaps until fermentation takes place. The plant fibers are moderated in this way, and then when mixed with waste silk can be spun like flax, wet or dry.

FRUIT CAKE.—One pound of flour, one pound of sugar, one and one-eighth pounds of butter, one-half pound candied citron, four pounds of currants, four pounds of raisins stoned and chopped, nine eggs, one tablespoonful each of ground cloves, cinnamon, mace and nutmeg, and three gills new milk.

For our Boys and Girls.

Five Little Chickens.

Said the first little chicken,
With a queer little squirm,
"Oh, I wish I could find
A fat little worm!"

Said the next little chicken,
With an old little shrug,
"Oh, I wish I could find
A fat little bug!"

Said the third little chicken,
With a sharp little squeal,
"Oh, I wish I could find
Some nice yellow meal!"

Said the fourth little chicken,
With a small sigh of grief,
"Oh, I wish I could find
A green little leaf!"

Said the fifth little chicken,
With a faint little moan,
"Oh, I wish I could find
A wee gravel stone!"

"Now, see here," said the mother,
From the green garden patch,
"If you want any breakfast,
You just come and scratch!"

—*American Kindergarten Magazine.*

No Babies.

It was a warm summer morning. Little Nellie was busy rocking the baby's cradle. How cool and clean it looked with its white sheet and pillow; while baby Grace in her blue lawn dress looked like a sweet dolly lying there so still under the pink netting. But somehow Nellie liked her little sister better when the blue eyes were wide open, sparkling with smiles and the rosy lips prattling some new word.

"Is she a goin' to sleep all day? There—one, two, three, four, five, six, seven, eight, nine, ten, why, I thought the clock would wake her sure. Dear, dear, a whole hour yet till dinner," said Nellie.

Her mother was very busy in the kitchen preparing an early dinner for the men in the hay field, so you see Nellie was a little country girl. She kept looking out of the window, and each time she looked back the neat sitting-room looked darker and hotter than before. How cool it must be in the shade of the big beech where papa had lately made a swing for her and a rustic seat for mamma. She wished the afternoon would hurry and come, for then mamma would take her sewing and sit out there; Gracie would tumble about on the velvety grass and she would swing and swing.

Bye and bye the little fat foot slipped off the rocker, and it was very easy for it to keep slipping off after that. Still the baby slept, and soon Nellie tip-toed softly out of the room for just one swing.

"I guess mamma didn't hear!" thought Nellie, naughtily, thus showing that the careful tip-toeing was not for baby's sake alone. She climbed into the swing, but it was warm even there, and conscience whispered: "Better go back and mind the baby when mamma is so busy."

"Wish I could go where there are no babies this hot weather," she answered, angrily.

"I'll take you there," said a queer little man, who seemed to rise out of the ground at Nellie's feet.

"Where?" asked Nellie, in a frightened voice.

"Why, to 'No Babyland,' to be sure," answered the stranger.

Then he placed Nellie on his shoulder, and strode away across the sweet clover meadows and golden wheat fields and through a thick, dark woods, where he turned round and round so many times that Nellie felt that she could never find the way home again. At last he crossed some high hills and they came into an open country, where Nellie saw a great many fine houses, but somehow they did not look pretty like her father's white cottage, with its vine-wreathed windows. Here no birds were singing in cages in the long porches, no downy ducklings played in the green grass, no puffy yellow chicks followed the lonely looking old hens, no funny spotted pigs and calves nor snowy lambs frolicked in the barn-yard.

"Only grown-up people here! Don't allow no little things around. Expect they'll drive me off with you," chuckled the little man, "or throw you clear away, back over those high hills."

Nellie clung to his neck with terror as she saw some people approaching them, but the old man stroked her hair softly, until she dwindled to a tiny midget and crept down into his breast pocket.

"Now I'll take you into one of these fine houses," said her strange companion.

How stiff and cold everything looked, and everybody was so cross; she looked in vain for a woman with a lovely, smiling face and sweet eyes like mamma's. There were no dainty cribs, no little chairs nor dresses, no toys nor picture books to be seen anywhere. Then everything was so dismally quiet, not a ripple of laughter nor snatch of song broke the stillness.

"Would you rather go home and be bothered with baby than to try to live here?" asked the old man.

"Yes," whispered Nellie.

Then the old man turned his pocket wrong side out, and she fell down—down on the soft grass under the swing.

"Oh!" she cried, rubbing her eyes and looking hard at the house to make sure that it was really her home after all. Then she ran to it as fast as the chubby feet would carry her.

"You're the dearest, darlingest baby that ever was—you are," said she, as she stood on the round of Gracie's high chair and hugged and kissed her.

Mamma looked at her soberly, and said: "You did not love her so well awhile ago when you ran away to swing and left her to fall out of the cradle and bump her head."

"I've been to 'No Babyland,'" she said, "but I'll never go again—I—"

"To where?" laughed papa, and all the men at the tidy dinner table joined him.

"Never mind," said mamma, gently, as the tears rolled over Nellie's fat rosy cheeks, "my little girl's been dreaming, that's all. After dinner she may tell me about it."

Then she helped Nellie to her chair beside papa, hiding a quiet smile as she filled the little plate.—*Emma Stout in Western Rural.*

THE BOY HAD THEM!—A lad in Boston, rather small for his age, works in an office as an errand boy for four gentlemen who do business there. One day, the gentlemen, chaffing him a little about being so small, said to him:

"You can never amount to much, you never can do much business, you are too small."

The little fellow looked at them.

"Well," said he, "as small as I am, I can do something that neither of you four men can do."

"What can you do?"

"I can keep from swearing," said the little fellow.

There were some blushes on four manly faces, and there seemed to be very little anxiety for further information on the point.—*Ex.*

Health Column.

Hot and Cold Drinks.

A correspondent of *Knowledge* calls attention to some of the disadvantages of hot drinks. Cold drinks, he says, are natural to man, though most people nowadays are so used to hot drinks that they do not feel satisfaction—really stimulation—unless they have them. Hot drinks are injurious to the tongue, for they deaden its sensation, and, after taking hot soup or drink, the tongue becomes quite numb and unable to taste the fine flavors of a dish. The teeth are greatly injured by them, and many dentists say caries (decay) is due to them alone. They crack the enamel, and thus allow caries to set in. When caries has once set in, hot drinks are a common cause of neuralgia.

Hot drinks are especially hurtful to the stomach. They cause irritation of the nerves of the stomach, and consequent mild inflammation of that organ, so that after a hot drink the stomach is red and congested. In time a debilitated condition is set up. A temperature of 100° Fahr. also destroys the active ferment of the gastric juice—pepsin—and so leads to indigestion. If the stomach is at all disordered, hot drinks give rise to much griping pain, and in many cases to vomiting. In cases of diarrhœa, too, hot drinks only increase it, while cold ones tend to lessen it.

Thirst is not common in winter, unless sugary, or hot spiced foods have been taken. In cold weather the air contains more moisture than in hot, and in cold weather there is less perspiration. Hot drinks increase the volume of heat in the body, and if that is not required it is quickly got rid of by the skin. Water is the best thirst quencher, but if simple food be taken, the need of drinks will be small. Many vegetarians drink nothing from month to month, the only fluid they get being the juices of the fruits which they eat. But pleasant drinks, like tea, coffee, etc., may be taken lukewarm for a time with little apparent damage. The least injurious is cocoa, made with plenty of milk, and allowed to stand until nearly cool. A good test is to apply the little finger to the drink, and if it be not too hot to it, then it may safely be taken.

REMARKABLE SURGICAL OPERATION.—The Paris Academy of Medicine was recently informed by the operator that the young man on whom an operation was performed for the extraction of a spoon from his stomach has completely recovered from the effects of the hazardous operation, and is now enjoying his usual health. Interesting particulars are given of this operation, which was performed by Dr. Felizet. By the use of the Faucher tube, introduced through the mouth, the stomach was cleansed prior to the novel operation, which prevented the risk of peritonitis. An incision was then made in the epigastric region. In order to render the coat of the stomach easily accessible, M. Felizet employed the following contrivance: To the end projecting from the man's mouth he fitted a spherical vessel containing ether. This he heated by submersion in water of 60° temperature. The ether vapor rushing through the tube filled the stomach, which, becoming distended, was brought forward to the wound effected by the operator's knife. The spoon was thus readily found and extracted. It measured over nine inches. It had been accidentally swallowed by the man, a waiter at a *cafe*, in the attempt to imitate the feats of the famous sword swallower.—*Paris Cor. London Standard.*

Worth Knowing.

American Inventions in the English Army.

The English army was largely indebted to American inventors for the accomplishment of their recent triumph in Egypt.

The most effective work was done by their turreted vessels—an American invention. All their war ships were supplied with the Brush electric lights, invented in Cleveland, Ohio. These lights were of very great utility. They not only indicated the points of attack by night, but also directed the movements of the ships, and were of special advantage in watching for and guarding against night surprises both upon ocean and land.

The American machine guns proved a most efficient arm for the invading forces. One vessel fired 6,000 pounds of shot from Gatling guns the first day of the bombardment. A handful of marines, with guns of this type, were able to disperse the Alexandria "looters," and restore order in the afflicted city, where many times their number would have failed without such aid.

In the subsequent skirmishing with Arabi's troops about Alexandria, and later in the capture of Shaluf and other fortified places along the Suez canal, the same gunboats and on shore have been in constant use.

Many of the small arms of the English soldiers are but slightly modified American guns, made with machinery patented after that developed in the shops of Springfield, Mass. The system of fixed ammunition for small arms also, and the machine by which such cartridges are made, are all of American origin.

Even all this does not exhaust the indebtedness of the British army to American inventors. Among the great quantity of supplies for the British army in Egypt mention is made of driving apparatus, tubing and pumps for 200 "Abyssinian wells," by which name American drive wells are known in England, from the circumstance that they were first used by the British army in the Abyssinian war. It is estimated that 200 wells of the capacity ordered will furnish from 2,000,000 to 3,000,000 gallons of water a day, and make the army independent of the surface water sources of the country. Seeing that the fresh water canals are largely in the control of Arabi, the success of the invasion may be largely contingent upon the ability which drive wells give of obtaining water anywhere in the desert.

Adhesive Power of Nails and Screws.

The extensive use to which nails and screws are put in construction lends considerable interest to any records of experience tending to discover their holding power. Haupt, in his "Military Bridges," gives a table of the holding power of wrought-iron rod nails, 77 to the pound, and about three inches long. The nails were driven through a one-inch board into a block and the board was then dragged in a direction prependicular to the length of the nails. Taking a pine plank nailed to a pine block with eight nails to the square foot, the average breaking weight per nail was found to be 380 lbs. Similar experiments with oak showed the breaking weight to be 415 lbs. With 12 nails to the foot square the holding power was 542½ pounds, and with six nails in pine 463½ pounds. The highest result obtained was for 12 nails to the square foot in pine, the breaking weight being in this case 612 pounds per nail. The average strength decreases with the increase of surface. Tredgold gives the force in pounds required to extract 3d. brads from dry Christiana deal at right angles to the grain of the wood as 58 pounds. The force required to draw a wrought-iron 6d. nail was 187 pounds, the length forced into the wood being one inch. The relative adhesion when driven tranversely and longitudinally is, in deal, about two to one. To extract a common 6d. nail from a depth of one inch in dry beech, across grain, required 167 pounds, in dry Christiana deal, across grain, 187 pounds, and with grain 87 pounds. In elm the force required was 327 pounds across grain, and 257 with grain. In oak the figure given was 507 pounds across grain. From further experiments it would appear that the holding power of spike-nails in fir is from 460 to 730 pounds per inch in length, while the adhesive power of screws two inches long, .22 inch in diameter at the exterior of the threads, 12 to the inch, driven into ½ inch board, was 790 pounds in hard wood and about one-half of that amount in soft wood.

CRYSTALLIZATION OF SILICA FROM FUSED METALS.—Dr. R. S. Marsden, on an examination of microscopic sections of some Berlin porcelain crucible which had been used in experiments with fused silver and amorphous carbon at a temperature considerably above the melting point of the former, found that, while the alumina part of the crucibles had undergone little change, the glaze had become a "mass of little crystals of a hexagonal form." Similar prisms were separated from the silver. The crystals quietly dissolved in hydrofluoric acid, while not acted on by nitric or hydrochloric acid. There were also leaf-like forms, apparently silica, which are not yet fully explained.

Household Hints

SNOW FOR DESSERT.—A quart of rich milk, four good tablespoonfuls of corn starch, whites of four eggs, a cup of powdered sugar, a spoonful of butter, lemon or vanilla and a little salt. Bring the milk to a boil, stir in the starch, which has been wet up to a thin paste with a little cold milk, cook until it thickens, add sugar (careful not to burn bottom of dish), draw to the back of the range, stir all the time, let stand five minutes longer, turn out and beat in the butter. Stir occasionally until cold, then beat in the whites, which should be whipped to a stiff froth, flavor, turn into a wet mold and set in a cool place. Make the day before you wish it.

BONED HAM.—Soak a rather small ham in water over night; in the morning boil until perfectly tender in two waters, adding a cupful of brown sugar each water. When done let cool, then carefully remove bone. Fill the opening with cold minced chicken, veal or mutton, well seasoned. Press into shape; tie with tape if necessary; put back into the pot; just bring to a boil; remove pot from fire, and let ham remain in until liquid is cold. Skin; cover the top with the whites of two eggs beaten to a froth, and sprinkle over cracker dust. Set in the oven until nicely browned. Do not slice until cold.

COFFEE CUSTARD.—Take a large cup of fresh ground coffee, break an egg into it, mix it up well, put it into a coffee pot with a pint of boiling water. Boil it five minutes, add a cup of cold water, and let it stand ten minutes. Turn it off very clear into a saucepan, add a pint of cream, and give it one boil. Have ready eight eggs well beaten, one and a half cups of sugar. Turn the coffee and cream, boiling hot, on the eggs, stirring all the time. Put the custard into a pitcher, set it in boiling water, and stir it all the time till it thickens. Serve in cups to eat cold.

PRUNE PUDDING.—One pound of prunes, one quart of milk, six eggs, eight large tablespoonfuls of sifted flour, a little salt. Wash the prunes, and let swell in hot water until soft. Drain, take out the stones, spread on a dish and dredge with flour. Take a little of the milk and mix the flour smooth with it. Beat the eggs very light, add to the mixed flour; pour in the rest of the milk, add the prunes, stir all together, pour into a buttered dish and steam two and a half hours.

BOILED CABBAGE.—Select a firm cabbage, boil until tender and let get perfectly cold. Then chop fine, add two beaten eggs, half a cup of milk, a tablespoonful of butter, and season with pepper and salt. Mix well, press tightly into a buttered baking dish, cover, bake half an hour, uncover and bake 15 minutes longer. Turn on to a hot dish, pour over a cup of drawn butter and send to table.

GERMAN CRISPS.—Two cups of sugar, one cup of butter, the rind and juice of one lemon; mix thoroughly, either with a spoon or with the hand, adding sufficient flour to make them thick enough to roll out; roll very thin, and cut in small cakes with a cutter; after placing in a pan, rub the tops with eggs and sprinkle with white sugar; two eggs are enough for the tops of the cakes; they only require a few minutes to bake.

SQUASH PIE.—Pare, take out the seeds, and stew the squash till it is very soft and dry. Strain it through a colander. Mix milk with it till it is thin as batter, and add sugar to taste. Allow three eggs to a quart of milk, beat the eggs well and add them to the squash; season with rose water, cinnamon or nutmeg. Line a pie plate with crust, fill and bake till the center of the pie rises up, forming an oval.

CHEESE PATTIES.—Roll out puff paste quite thin; strew over it some good grated cheese, and fold it over; repeat this three times, rolling it out each time; then cut the paste into square or fancy forms, brush them over with the yolk of a well-beaten egg, and bake in a quick oven about fifteen minutes. To be served when done in a hot napkin and eaten at once.

FRIED WHOLE POTATOES.—Select those the size of an egg. Peel and boil in salted water. Take from the fire as soon as tender, so that they may remain whole. Have ready a beaten egg and some powdered cracker. First roll the potatoes in the egg and then in the cracker dust and drop into boiling lard. Cook until quite a deep brown.

FRENCH FRIED POTATOES.—This is an excellent way to use up small potatoes. Pare the little ones, cut in half, then in quarter. Put into a wire frying basket and cook in hot fat for 10 or 12 minutes. Drain, sprinkle with salt and serve.

SWEET POTATO PIE.—Select those potatoes which you know to be dry and mealy. Boil, pare, and mash very smooth. To a quart of the potatoes add a quart of rich new milk, three eggs, nutmeg or cinnamon, a little salt and sugar, to taste. Bake with an undercrust.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "Good of the Order."

Magnolia, 41.

Laurel hall, Shiel's building, was filled to its full capacity, nothing but standing room being left, on Monday evening, Nov 20th, by delegations from Unity, No. 27, Friendship, No. 179, and Spartan, No. 36, together with a large number of Workmen from the different Lodges of the city, and several visiting brothers from the country. Each delegation was received with honors. An address of welcome was made by M. W., Bro. Terry, and a response from the chairman of the several delegations. The business was transacted with due care, a part of which was to receive and act upon four petitions for the degrees. After the routine business of Lodge work was concluded, Bro. Terry, M. W., introduced Deputy Danforth, who, in a terse and succinct manner, gave some important statistical facts in relation to the heavy mortality in this city during the year 1882. A noticeable feature of his remarks was the startling fact "that the mortality has increased 100% in this city during the year 1882, and it is the opinion of men who have made this subject a study, attributable in a proportion to the bad sanitary condition of this great city. We hope and believe that for self protection and humanity's sake our brother Workmen who have been elected Senators and legislators will use their best efforts to remedy this gigantic evil." Wm. H. Barnes, G. M. W., then made one of his interesting and instructive speeches, in which humor, pathos, eloquence and fraternity were blended. His effort was one of the best we have listened to during the year. The song by Dr. Hoskins, of Magnolia, and Assistant Secretary of the Board of Health, was excellent. It was then announced that we would be favored by "our mutual friend," which proved to be Havanas of the finest quality, being the favorites of Bro. Julius A. Stamper, of Magnolia. Humorous song by Bros. J. F. Osburn, of Magnolia, and song (baritone) by Bro. Jas. W. Hughes then followed. The recitation by E. M. Reading, Sec'y of the Guarantee Fund, was listened to with close attention and was well received. The speeches of S. T. Dodson, P. M. W. of Watsonville Lodge, and B. F. Jacobs, P. M. W. of Magnolia, were well timed, appropriate and just suited to this occasion.

Dr. Jewell, P. M. W., and resident physician of the Inebriate Asylum, was quite happy in his remarks, and paid a fine compliment to Magnolia, the mother of Friendship. Bros. Martin, the veteran financier of Unity; I. E. Alexander, M. W. of Spartan; D. C. Breed, P. M. W. of old San Francisco, No. 4; Chas. Nelson, M. W. of Unity, made short speeches that were well received. Bro. Caleb Brind, P. M. W. of Magnolia, closed the literary exercises of the evening. A banquet followed. The attendance was so large that sections of 50 or more had to sit down at once. It was certainly a very unique entertainment. At a late hour the exercises were brought to a happy end. All agreed, and so expressed themselves, that this was one of the best Workmen's meetings of the season.

Presentation in St. John Lodge.

After the business of St. John Lodge had been finished, at their last regular meeting, Bro. W. B. Marshuty, now acting as Recorder, which office he has held for three consecutive years, and thereby won his P. M. W. degree, was presented with a fine gold P. M. W.'s jewel of the usual pattern, with square hand-worked edges on the badge, and two gold cross pens suspended from the Holy Bible. On the back of the badge the following letters are engraved: "Presented to Bro. W. B. Marshuty, P. M. W., of St. John Lodge, No. 73, A. O. U. W., in token of his faithfulness in office and our esteeem for him as a brother, Nov. 23, 1882." This really artistic and beautiful souvenir was manufactured by Bro. R. W. Jackson, the well-known manufacturing jeweler and abalone shell worker, 614 Market street. Bros. J. O. Jephson, P. M. W.. in very apt and well-spoken words made the presentation speech. Bro. Marshuty received this token with evident satisfaction, and pledged anew his fealty to the brothers of St. John Lodge, and hoped he would be able to write up in the future, as he had in the past, the history of St. John Lodge, No. 73.

Hercules, 53.

On the third meeting night of November the brothers of Hercules held what might be termed a family reunion. The exercises were musical, literary and speech-making, and were principally carried out by themselves and members of their families. The following was the programme rendered: Piano solo, Prof. Kerr; recitation, Miss Nellie O. Mally; song (comic), Sam Booth, P. M. W. of Excelsior, for which he, as usual, received a hearty encore; song, Bro. John Taylor; song, Bro. R. B. Baker; song, Miss Annie Miller, daughter of Bro. Miller, M. W.; song, Miss Adie Hill; song, Miss Minnie Northey; sentimental song, Miss Minnie Tower; recitation, Miss Lizzie Taylor. Bros. S. P. Veasey, P. M. W., Chas. C. Carroll, P. M. W., W. R. Morrison, P. M. W., all of Hercules, and A. Montgomery, P. M. W. of Unity, No. 27, made felicitous and congratulatory speeches that were well received. The occasion was so successful and pleasing to all that hereafter on the third meeting night of each month similar entertainments will be repeated. The next one will take place on Dec. 15th, and the Grand Master has signified his intention to be present.

Bay View, 159

A District meeting was held at South San Francisco, in the Lodge-room of Bay View, No. 159, on Friday evening, November 18th. There was a full attendance of the members of the Lodge, and a very large delegation from Triumph and Golden Gate, besides small delegations from St. John, Olympic and several other of the city Lodges. The Lodge-room of Bay View is one of the largest and best equipped halls in this city, and the corps of officers for this term reflects credit upon this thriving Lodge. The business was transacted with quick dispatch and careful consideration. Three petitions were received for the degrees, after which a recess was had, and social converse and old time acquaintances renewed. At half-past 8 o'clock the delegations from Triumph and Golden Gate Lodges were received with honors. The number was so large that many appeared without badges. In fact, there were so many visitors that a requisition had to be made for chairs. There was a recess, and mutual congratulations indulged in. Then the intellectual feast was commenced by an overture by Harry J. Lask, G. F., who was introduced by B. F. Eflis, P. M. W. Bro. Lask was given a hearty ovation for his fine and artistic performance. Deputy McKay made some very pleasant remarks, in the course of which he said that such a large concourse of brothers in attendance was an agreeable surprise. George White, M. W. of Triumph, made a short speech, laying particular stress on the fraternal duties we owe to each other. A sentimental and humorous song was then rendered by Bro. Smallman, Foreman of Triumph. For an encore he fairly convulsed his audience with a character song. Bro. Winns, of Triumph, also sang. By request, Bro. Sheridan, the young brother of Triumph, gave some specialities. The reading by Bro. Lask on society manners was very appropriate, and well received. Bro. Shaw, P. M. W., as usual, made a speech that had in it the true ring of a Workman. This was the speech of the evening. A song by Bro. McNess, of Triumph, and a recitation by Prof. Eastman, closed the literary exercises of the evening. An adjournment was then had to the banquet hall. A spread of good things appeared in full keeping with the past reputation of Bay View Lodge. After the feast and the cigars had been passed, toasts, songs, jokes and congratulations were indulged in while waiting for the special car chartered for the occasion. A goodly number of the veterans were out, including Bros. Seawell Thomson, P. M. W. of Noe Valley, Harms, Linton, Lochner, who helped to enliven and grace this grand meeting. Take this visitation all in all, it was one of the best of the season.

Valley, 30.

On Wednesday evening, Nov. 22d, there was one petition received for the degrees, two admitted by card, two were elected to receive the J. W. degree, and the M. W. degree was conferred on 11 candidates, making 920 members of the Lodge in good standing. It being the last meeting night in the month, it was a noticeable feature of the evening to see a line of 50 Workmen or more take their turn to pay current assessments. This Lodge has had unexampled prosperity, and a list of officers that have been very efficient in their duties and an honor to this Lodge. The present corps of officers, F. D. Wells, M. W., and his co-workers, are worthy of the exalted positions they occupy, and on this evening gave the M. W. degree with dignity, and almost with absolute perfection. Bros. A. G. Lyle, Rdr., C. Waller, Rvr., and J. M. Camp have held their respective offices for years, and in efficiency and attention to their duties are the equal of any team that any Lodge of Workmen ever had. The 11 candidates admitted to this Lodge on this evening were representative men, and certainly bring honor to the Lodge by their membership. Under the head of the "Good of the Order" Henry Hoeber, P. M. W., made some well-timed remarks in relation to the duties we owe as Workmen to attend to the last sad rites of burial. E. F. Loud, Deputy Grand Master, seconded the views expressed, and showed conclusively that the spirit and duty of every Workman, if possible, is to attend the funeral of any member of his own Lodge.

Spartan, 36.

We had the pleasure of meeting the worthy brethren of Spartan Lodge in their cosy lodge-room on Friday evening, November 10th. There was not a large attendance, but the business of the Lodge was thoroughly and systematically done, among which was to give the M. W. degree to one candidate, and caring for not only the brethren, but the widows of the deceased brothers. Under the head "Good of the Order" Deputy Danforth made some pertinent remarks, and stated that there would be a district meeting in Magnolia Lodge on Monday evening, November 20th. Bro. Perkins, organist, the very efficient M. W., I. E. Alexander, Bro. Clements and Bro. Jordan, P. M. W., made short speeches, the gist of which was that, the great political questions of the day having been settled, attention would be given to the affairs of the A. O. U. W., and that Spartan Lodge would increase her membership to the 200 mark before the next session of the Grand Lodge. It is always a pleasure to visit Spartan, 36.

Yerba Buena, 14.

Among the honored pioneers of Workmen Yerba Buena, 14, in many respects, has a record without a parallel in this Order. This is one of the Lodges that pay sick benefits at the rate of $10 per week, and also $100 at the death of a brother or his wife. There is now a membership of over 250, representing a leading class in the active pursuits of this great commercial and manufacturing city. As a rule their meetings are largely attended, and a marked degree of kindly attention and fraternal regard for each other, especially in sickness and misfortune. By wise administration and prudence united with extensive and wide-spread charities and generosity, they still have over $5,000 in their general fund. On Friday evening there was a good meeting. A feature quite noticeable was the careful and painstaking care extended to the sick and distressed members of this Lodge. At this meeting a case of distress was reported of one member, and the sum of $20 was appropriated.

The meeting of this Lodge, held on Friday night, Nov. 22d, was a fine one. One candidate received the M. W. degree, and one petition was received for the degrees. Bro. J. G. Severance, P. M. W., and C. H. M. Curry, P. M. W., made cordial and happy speeches. There was also some fine singing by several of the young and talented musicians of the Lodge.

Unity, 27.

This Lodge is steadily growing and increasing in membership. The officers are very efficient in their work, untiring in their industry, and indefatigable in their zeal to make it one of the best Lodges in the State. The general attendance of its members is good and constantly improving; its meetings are interesting and attractive. It boasts of many able and fluent speakers, who participate in debating all questions relating to the business and welfare of the Order. Old Unity contemplates celebrating its approaching quarterly and district meeting, on the 12th of December, in regal style and splendor. A most cordial invitation is extended the members of sister Lodges to be present. Songs, speeches, recitations, music, dancing, etc., and a collation will be the order of the evening. Come one, come all, and enjoy this festive occasion.—T. P. Williams, Recorder.

Harmony Lodge, 9

Harmony Lodge, No. 9, at its last regular meeting changed the place of meeting from Pythian Castle to Washington hall, in Washington building, corner Mason and Eddy streets. This is one of the finest halls on the Pacific coast, and it may be expected that the meetings of Harmony at its new hall will be very interesting.

Franklin, 44

This old pioneer, from which the neuclei for several of our city Lodges was derived, is now in a prosperous condition, and increasing its membership slowly. On Friday evening, Nov. 22d, one candidate was given the M. W. and one the J. W. degree.

Lodge Locals.

Fortuna, 13.

Editors Watchman:—Having been appointed by my Lodge to write a brief history of Fortuna, No. 13, for the Watchman, I take the opportunity of furnishing your readers some of the items of interest concerning this Lodge. As indicated by its number, it was the thirteenth instituted in the State, and the first outside the counties of Alameda and San Francisco.

Five years ago, on the 20th of next December, in a dingy and dusty back room, with only a pine table for an altar, and not a chair in the room, with a band of only 12 men, Fortuna Lodge, No. 13, A. O. U. W., was organized and started on its mission of charity. For several weeks the Lodge met in the room in which it was organized, after which it moved into the Good Templars' Hall, where the charter was closed with a membership of about 40.

All the time gradually increasing in membership, we soon found it necessary to move into still more commodious quarters; and one year from the date of our institution found us in the spacious Odd Fellows' Hall, our present meeting place, having grown from a membership of 12 to 138 in good standing, our present membership.

Since our organization we have performed the last sad rites over four deceased brothers, one of which, viz: Bro. Willis Crowe, was on every meeting night previous to his death entertaining our Lodge with the very early history of the United States, and his exertions with other members of the Lodge in the same direction caused us to have a large attendance at every meeting. Our membership is made up from all classes of our citizens, representing the different trades and professions, as well as those engaged in the mercantile and agricultural pursuits of our thriving city and vicinity, and stands at the head, in point of membership, of any secret organization in the city.

Fortuna Lodge has made a wonderful growth and is still growing. First, because it has an organization adapted to the soil in which it was planted; secondly, and not least, because its members have realized and acted on the truth that the life of the whole thing depends on the vitality of its parts.

On the evening of the 20th of December our Lodge will celebrate its fifth anniversary. A social, with music and a collation, are being prepared, and we are looking forward to an evening of enjoyment with our families, and a jolly good time generally, which the brothers of Fortuna always have on such occasions. Fortuna Lodge has a useful and a grand mission to accomplish, and I know that I but express a common wish of us all, that its growth may be great, its course ever onward and upward, no looking back. May good fortune attend her. Respectfully in C., H. and P.—W. W., Napa City, Cal., Nov. 24, 1882

[We should be pleased to receive accounts from every A. O. U. W. Lodge similar to the above. We would suggest that some one be appointed to prepare such a sketch from every Lodge. Our columns are open.—Eds. Watchman

Forest City, 124.

Editors Watchman:—Thinking that you would give place in your valuable paper to a rambling letter from a member of the Ancient Order of United Workmen, I take this opportunity to tell you something about the Order, and how it is flourishing away up here in the now beautifully snow-clad Sierras. Forest Lodge, No. 124, was instituted by Bro. Oliver, in the year 1878. I think we had at that time 16 charter members; we have now a membership of 60 in good standing in the Order, and only three lapses since the Lodge was instituted. Under the mild and efficient government of our present Master Workman, and the strict attention to duty by our Recorder and Financier, the Lodge is rapidly advancing to the front (in point of numbers) among secret Orders in this place. Certainly no one would attempt to contest the rank of the A. O. U. W. when the question of merit is considered. Thanks to glorious old Uncle Upchurch for conceiving and propagating so great a benficiary for humanity. I deem it not egotism in me to say now and here that the membership of Forest Lodge will compare favorably with any Lodge of the A. O. U. W. or of any other institution. If, as sometimes happens in the best regulated institutions of human affairs, we admit a member that is a little too much given to indulge in the social habit, a salutary feature of our by-laws regulates him nicely. A fine is imposed, thus compelling him to lay a dollar or two aside for the possible future use of himself or family, and should he persist in giving his dollars to those who never assist others, only to *ruin*, we persist in fining him. Is not this the best thing we can do with those that simply for the sake of being called good fellows, and helping that sleek fellow behind the bar to keep himself thus, that he may the more effectively do the work of his Master? Downieville Lodge, No. 123, was instituted, as the number indicates, before Forest. They have material for a good Lodge, and are prospering. Sierra City, No. 125, situated at Sierra City, and Snow, 139, situated at Gibsonville, comprise all the Lodges in Sierra county. Both the latter have good material for a Lodge, but I fear that the diversity of nationalities at Sierra City is a drawback to the success of the A. O. U. W.; then I hope that I am mistaken in this, for there is no nationality that will not make good Workmen, the only trouble is to get them to fraternize.—A P. M. W. of Forest Lodge, No. 124, A. O. U. W.

Gold Hill (Nev.), 2.

Editors Watchman:—Being a constant reader of your valuable paper, and desirous of seeing it live and thrive, I can in no way attest my high appreciation of it as well as by uttering a word of encouragement now. Many of our members here are subscribers, and a host of our friends read it. I believe I am as hard and as sincere a worker in the cause of the A. O. U. W. as can be found advocating any cause. But I must acknowledge that without the assistance of such an intelligent, honest, straightforward paper as yours is, no cause, no matter how meritorious, can expect to succeed. It is my aim always in enlisting the sympathy and friendship of a person to do so in as great a degree as possible, and this is when the good old Watchman has its influence. It is conservative in tone, elevating in principle, moral in its teachings, sympathetic in its effort to enlist and to embrace within the lines of charity, hope and protection all true and good men. It permits not religious or political prejudices to interfere. The Order in California, as well as in Nevada, has reason for holding that good and faithful stewardship in the past is sufficient recommendation for continuity in the future. This is but a bare reflection of the sentiments of Gold Lodge, No. 2; and now a word for ourselves: We, like a turtle, have nine lives. The number of assessments levied upon us by the Supreme Lodge has nearly killed some. The low ebb of our chief industry has ruined many, and a misconceived lack of confidence with others for the future has left us with but one hope—that of securing separate jurisdiction. Our worthy Deputy, Bro. Kinsly, is doing most efficient work. He has many obstacles to contend with, but gets around them in grand style. We number 1,200 at present, and feel confident of greater success. Gold Hill Lodge numbers about 151, and still we grow. I have encroached too much upon your valuable space already, so will close for this time. More anon.—H., Gold Hill, Nev., Nov. 18, 1882.

Enterprise, 17.

Bro. Henry Mitchell, Guide of Enterprise, No. 17, called on us Nov. 20th. He brings good reports from San Jose. Everything in and around this thriving town is prosperous and growing; especially is this true of the A. O. U. W. At the last meeting of Enterprise there was one proposition received and the M. W. degree conferred on three candidates. Bro. Mitchell assures us that, with the present membership, amounting to 270, it will likely reach 300 by Jan. 1, 1883.

Ball Given by Gridley Lodge.

The ball and entertainment given by Gridley Lodge, No. 67, at Gridley, Butte county, on the evening of the 17th inst. was a signal success in every particular. The decorations and appearance of the hall were especially noticeable. The ante-room had been prepared as a waiting and dressing-room for the ladies, and, being of sufficient size, was a favorite resort between dances. The music was furnished by a Marysville orchestra, and was commented on by all as unusually fine. Bro. C. M. Dustin was floor manager. To him and his efficient assistants the participants could not feel otherwise than thankful for the unalloyed social enjoyment characterizing the event. Ingle supplied the company with one of his incomparable ball suppers at midnight, of which all who partook speak in terms of great praise. It was after 4 o'clock Saturday morning when the strains of "Home, Sweet Home," warned the merry crowd that it was time to go there. The event was a success in every particular, and the members of the Order have the satisfaction of knowing that their efforts to improve upon previous anniversaries were successful.

San Jose Lodges Visit Protection, 16.

From a communication from Bro. Wm. Osterman we learn that District Deputy A. B. Hamilton, with a delegation from Mt. Hamilton Lodge, No. 43, and Enterprise, No. 17, visited Protection, No. 16, at Santa Clara recently. This Lodge was found located very comfortably in a nice hall. The attendance was small. The membership of Protection is 52, and, it is said, the average attendance is only about 10 or 12. The meetings are held semi-monthly. The routine of business was soon finished, and under "Good of the Order" an interesting time was had. The following brothers from Mt. Hamilton and Enterprise Lodges made speeches and enlivened the occasion: District Deputy A. B. Hamilton, P. M. W.'s J. B. Finch and W. Osterman, M. W.'s Wm. Winter, J. Hall and Bros. W. B. Hardy, J. Ickes and A. Greeninger. After spending considerable time in becoming acquainted the meeting adjourned. The visiting and visited brothers both feel well repaid for spending the evening together, and expressed the desire that a similar gathering might be had again in the near future

New D. of H. Lodge.

Grand Master Workman Wm. H. Barnes instituted Lily of the Valley Lodge, No. 11, at Sacramento, on Wednesday evening, Nov. 22d, assisted by Deputies O. N. Cronkite and Dr. G. W. Davis, who acted as Secretary. Forty charter members presented themselves and received the degree, after which the following officers were elected and installed: Mrs. N. A. Ellis, P. W. S. of H.; Mrs. S. Roth, W. S. of H.; Mrs. D. M. Blank, S. H. of H.; Mrs. G. H. Francis, S. C.; Miss Belle Ellis, Secretary; Mrs. F. Dustman, Treasurer; Miss Anna Ash, S. M.; Mrs. S. A. Wolf and Mrs. J. W. Guthrie, M. of H.; Deputy O. M. Cronkite and S. Roth, advisors. This Lodge starts with good prospects under the auspices of Union, No. 21, and Sacramento, No. 80, and we expect it will be one of the shining lights in this grand organization.

Proposed District Meeting.

We are informed that a district meeting will be held by District Deputy A. B. Hamilton in his jurisdiction on December 6th. At that time the unwritten work of the Order will be exemplified by conferring the degrees. A literary and musical programme is also being prepared. A supper will also be given. It is expected that the meeting will be one of unusual interest and profit.

Proposed Social.

A correspondent from the Lodge at Emigrant Gap, Placer county, writes us of a contemplated grand good time which the Lodge will have on the evening of the 14th of December. The evening will be spent in a social and pleasant manner, including a supper and dance. Bro. S. A. Jordan has charge of the supper, and we are assured that this will be of the best kind. All the neighboring Lodges have been invited, and a time long to be remembered is expected.

Chico Lodge, 58.

We met Bro. J. C. Hunt, of Chico Lodge, 58, in Spartan Lodge on Friday evening, Nov. 23d. Although the Lodge now numbers 90 members, things are very quiet in Workmen circles there. It is expected that matters will brighten up soon.

The Grand Master is making arrangements to pay official visits to Marysville, Wheatland, Vallejo, and many otther points in the interior.

Acknowledgment.—We are in receipt of an invitation to attend the grand ball to be given by Reliance Lodge, of Alvarado, on Thanksgiving evening. Preparations are making for a splendid time. Grand Master Barnes has signified his intention of being present.

Change of Residence.—We are pleased to learn that Bro. S. T. Dodson, P. M. W. of Watsonville Lodge, No. 45, has concluded to make San Francisco his home. He has associated himself with the old and reliable Ætna Fire Insurance Co., of Hartford, as local agent. Bro. Dodson is a genial man and an enthusiastic Workman, and we hope he will find it profitable, as we know it will be pleasant, to represent this well-known company in this city.

Resolutions of Respect.

[In Memoriam.]

Hall of Oskaloosa Lodge, No 152, A. O. U. W., Oskaloosa, Iowa, Oct. 11, 1882.

Since God, in His mysterious wisdom, has, by death, removed from among us our much-loved and esteemed brother, Horace W. Fisher; therefore, be it

Resolved, By the members of this Lodge, that, in his death, we feel that our Order has lost a faithful and highly respected member; this community an energetic, useful and upright citizen, and his family a most kind, considerate and devoted husband, brother and son.

Resolved, That we extend to the relatives of our departed brother our deep and heartfelt sympathy in their great and sudden affliction.

Resolved, That a copy of these proceedings be spread on the records of this Lodge, that they be published in the city papers, and that a copy of the same be given to the family of our deceased brother by the Recorder of the Lodge.

W. A. Lindly, F. H. Loring, J. B. McCurdy, } Com.

Bro. Fisher was a paymaster on one of the divisions of the Union Pacific railroad, and is spoken of as a gentleman of many excellent qualities. He joined the Order August 2, 1878, and died September 6, 1882. In the discharge of his obligations as a Workman he was conscientious, and his loss is felt in the community where he lived and associated.

[In Memoriam.]

The following resolutions of respect and condolence to the memory of J. J. Breeding, who was an efficient officer and a charter member of Hanford Lodge, No. 189, A. O. U. W., were unanimously adopted at their regular meeting, Monday, October 30, 1882:

Whereas, Death has invaded our fraternal home and bereft us of our esteemed brother, J. J. Breeding; therefore, be it

Resolved, That, by his death, this Lodge has lost an efficient officer and a worthy member, his family an affectionate husband and loving father, and the community an honorable and useful citizen.

Resolved, That, while we mourn the departure from our midst of a beloved brother, and drop the tear of sympathy with those whose loss is greater than ours, we will ever cherish his memory.

Resolved, That this Lodge extend to her who has been the partner of his joys and sorrows, his hopes and his losses, its sincere and heartfelt sympathy; and to their children its love and sincere hopes and best wishes for their future welfare.

Resolved, That our Lodge room be draped in mourning for the period of one month.

Resolved, That a copy of these resolutions be copied into the minutes of this Lodge, and a copy sent to the family of our deceased brother.

Resolved, That the Recorder be instructed to forward a copy of these resolutions to the various local newspapers of our county and one to the Pacific States Watchman.

John McKelvey, B. A. Fassett, C. J. Beckwith, } Com.

Jas. A. Hill, R'd'r Hanford Lodge, No. 189, A. O. U. W.

[In Memoriam.]

To the Master Workman, Officers and Members of Main Top Lodge, No. 156, A. O. U. W.:—We, your committee, appointed to draft resolutions of regret in regard to our late brother, D. D. G. M. W., Charles Campbell, beg leave to submit the following:

Whereas, It is with sadness that we are obliged to notice the death of a member of this Lodge. A faithful brother has fallen, a well-known voice is hushed, and a loved form is missing from our Lodge room. Charles Campbell has been summoned from time to eternity. His work is done, and it has been well done; and, while our human hearts can but sorrow over his loss from our councils, we do not deem it necessary at this particular time to eulogize at length the well-known name that death has stricken from our roll. His grandest monument is the love in the hearts of his brethren. We merely desire to put formaly upon record our keen sense of the loss we have sustained; and, therefore, be it

Resolved, That, in the death of Bro. Charles Campbell, a member of this Lodge, this Order has sustained the loss of an efficient brother, the State a good citizen and his family an affectionate husband and father.

Resolved, That a page of our records be devoted to his memory, and a tablet page, properly inscribed, be sent to the family of our deceased brother and to the *Placer Herald*, *Placer Argus* and Pacific States Watchman.

Resolved, That this Lodge tender its sympathies and condolence to his bereaved family, and assure them that we shall cherish and love them for the sake of our honored brother who is gone.

Resolved, That the members of this Lodge wear the usual badge of mourning for 30 days, and that the charter of this Lodge be draped in mourning for the same period.

C. E. Purington, Al. Dixon, Max Fielder, } Com.

[In Memoriam.]

Hall of California Lodge, No. 1, A. O. U. W., West Oakland, Cal., Nov. 22, 1882.

To the Master Workman, Officers and Members of California Lodge, No. 1, A. O. U. W.—Dear Sirs and Brothers: Your committee, appointed to draft resolutions of respect to the memory of our deceased brother, J. J. Lawler, beg leave to submit the following:

Whereas, It has pleased Almighty God, the Supreme Master Workman of the universe, in His infinite wisdom, to take from among us our well-beloved brother, J. J. Lawler. That while we bow in humble submission to His holy will, yet we deeply deplore the loss of this brother, who was a true Workman, and whose face we shall no more see on earth.

Whereas, In view of the loss this Lodge has sustained by the death of so worthy a brother and officer, and by the still greater loss sustained by those that were nearest and dearest to him; therefore, be it

Resolved, That it is but a just and fitting tribute to the memory of the departed to say that, in regretting his removal from our midst, we mourn for one who was in every way worthy of our highest respect and regard; an active member, an efficient officer, whose utmost endeavors were exerted for the good and welfare of our beloved Order; a good citizen, friend and companion, loved and respected by all who knew him.

Resolved, That by the death of Bro. Lawler, his beloved wife and children have lost an affectionate and noble husband and father, and we, the members of California Lodge, extend to the widow and family our heartfelt sympathy in this their great affliction; and commend them to our Heavenly Father, who doeth all things well, and who is ever our strong hope and protection at all times and in all places.

Resolved, That this heart-felt testimonial of sympathy and sorrow be spread in full upon the records of this Lodge; that the charter be draped in mourning for 30 days, and that a copy of these resolutions be sent to the family of our deceased brother and published in the Pacific States Watchman.

Geo. Hadsell, Joe Hollywood, Geo. N. Berdan, } Com.

At a regular meeting of Oak Leaf Lodge, No. 35, A. O. U. W., Oakland, held Oct. 30, 1882, the following resolutions were adopted and placed on the minutes of the Lodge:

[In Memoriam.]

REV. THOS. GUARD.

Once more the alarm has been sounded, the mystic circle invaded, and one of our beloved brothers has been called from his earthly field of usefulness and summoned to appear at the bar of judgment and in the presence of the Supreme Master Workman of the universe. The angel of death has taken from among us our brother, Rev. Thomas Guard.

Resolved, That in the death of Bro. Guard the ministry has suffered the loss of one of its most illustrious members, America one of her most eloquent and gifted citizens, and the world one of its able teachers.

A master mind has ceased to think; a noble heart is stilled in death, an eloquent tongue is forever hushed.

Resolved, That the members of Oak Leaf Lodge, No. 35, A. O. U. W., sincerely mourn the loss they have sustained in the death of our departed brother. He was imbued with the true principles of our beloved Order, and was a worthy exponent of its illustrious tenets—*Charity, Hope and Protection*. The many virtues of the dead will long be remembered and cherished by the living.

Resolved, That we do hereby tender to the surviving family and relatives of our deceased brother our sincere and heartfelt sympathy in their sad affliction, and in token of our sincerity we order these preambles and resolutions spread in full upon the minutes of this Lodge.

That a copy be sent to the bereaved family, and that the charter of this Lodge be draped in mourning for the period of thirty days.

D. S. Hirshberg, C. H. Dunton, J. W. Mackie, } Com.

M. I. Baker, Recorder.

Saddened Hearts Made to Rejoice.

Charity is one of the foundation stones of the Workman organization. There is scarcely another attribute of humanity so grand and noble as this. That charity which cares for those in distress, and provides for the helpless, borders on true philanthrophy. Such a charity organization is the A. O. U. W. The purposes of this Order appeal at once to those who are not wealthy in this world's goods, and the satisfaction that comes from providing means of sustenance for a family or widow who has been bereaved by the death of a father and husband, and whose fortune was such that his only only legacy left behind was a certificate entitling him to the beneficiary benefits of our Order, is real and satisfactory. Every week some brother is laid away, "to sleep the sleep that knows no waking." Then the saddened heart of the widow is cheered when she knows that the departed one has provided for her and hers. The tears of gladness with which the widow receives the money to support her in her single estate, are recompense enough for all the trouble and expense occasioned. The following letters explain themselves:

Winnemucca, Nev., Nov. 6, 1882.

To Mrs. Susan Miller:—We are charged by the Ancient Order of United Workmen with the duty of paying over to you the sum of two thousand dollars on the beneficiary certificate of your late husband, our worthy brother, Geo. M. Miller, deceased.

This is not considered by our fraternity as charity. We, as Workmen, have united together in the bonds of true brotherhood, so that while in good sound health, and capable of earning a livelihood for ourselves and families, we may the better make provision to protect those dependent upon us from pecuniary want and distress when we shall have passed from this life to another.

As our worthy and lamented deceased brother promptly met the calls made upon him to raise the sum pledged to the families of our brothers who went before him, so now the surviving membership have cheerfully discharged their obligations to those dear ones he has left behind, by forwarding to you the beneficiary named—the sum of $2,000.

We now have the pleasure of handing you this sum—your due.

We beg you and yours to be assured, not only of our personal sympathy and lasting friendship, but that of the Order throughout the jurisdiction of the Supreme Lodge.

Yours most respectfully, M. S. Bonnifield, D. D. G. M. W.; R. W. Wood, P. G. M. W.; T. C. Hanson, P. M. W.; A. C. McAlpin, O.; Chas. J. Currier, Recorder.

Winnemucca, Nev., Nov. 6, 1882.

To the officers and members of St. James Lodge, No. 9, A. O. U. W., and to the fraternity throughout the jurisdiction of the Supreme Lodge:—Allow me to more formally express to you and to the Order which you represent my sincere thanks for the sum of $2,000, this day handed to me, in full payment of the beneficiary certificate named by you.

The kindness shown to my late husband and to myself and family by the members of your Order, and the kind expressions of sympathy on your part and in behalf of the fraternity, are dearer to my heart than the sum of gold.—Yours truly, S. S. Miller.

Our Duty as Master Workman

In our last issue was published the late official letter of the Grand Master Workman relative to the work of the Order throughout the State during the winter. The suggestions were good and seasonable, and we now see the Grand Lodge officials following this up and endeavoring to exemplify the practicability of the same. What is now being aimed at more particularly, by both Grand Lodge officers and the fraternal press, is to arouse the subordinate Lodges to more activity. The ways and means of doing this are the uppermost considerations. We are of those who believe that our Lodges will grow the faster and become the stronger as we cultivate fraternity, which is undoubtedly a most essential feature of our organization. The A. O. U. W. is not solely a business corporation, but a charitable and benevolent institution. The laws by which we are organized show this. We feel that there are many in the Order who are there from mercenary and business motives alone. They care no more for the perpetuation of the Order as a fraternal institution than if they were not members. There are doubtless many, also, who think that the Lodge meeting is a useless institution, and that the A. O. U. W. would live and be as healthy without it. For this reason they remain habitually away from the meetings, take no interest whatever in the affairs of their Lodge, and only pay their dues and assessments into the subordinate body because in case of death this body must see that the $2,000 is paid to the family.

The perpetuation and success of our Order does not owe its existence to either of the above classes. Were these the moving, controlling spirits, the Order would not stand where it does to-day. From the nature of the case it could not. Indifference and coldness never fostered a great and grand institution.

It must be acknowledged that there is no return directly in dollars and cents for a cultivation of the fraternal and social features of our Order. But there is more than this. Money will not buy friends and true happiness, and this feature of the Order contemplates the securing of both. Without such organizations as the A. O. U. W. and the various other benevolent and fraternal organizations in the church and society, man would be devoured with selfishness.

No doubt this subject falls heavily upon the ears of many of our readers, for it must be acknowledged that many of our membership are indifferent to the matter. But the matter is a live and very important one, and it will not do to idly sit by and do nothing. Now that the Grand Master Workman has appealed to the Lodges, it will be timely for everyone to do all in their power to build up the Order.

Business Notices.

A Reasonable Suggestion.—Now that the winter season is near, it would be a sensible and wise policy to go to Bro. John Henderson Jr., 116 O'Farrell street, and lay in a stock of coal and wood while it is cheap. If delivered in bulk from ship you can have 2,240 lbs. for a ton.

Bro. Wm. Statham, piano manufacturer, 765 Mission street, received the gold medal at the Mechanics' fair of 1882 for the best pianos. The demand for Statham's upright pianos has been so great that it will take many months yet to fill orders already booked. Bro. Statham intends to enlarge his factory to meet the demand soon.

Bro. Chas. Franco, the artistic and skilled upholsterer, presented his Lodge, Triumph, 180, with a cushion or ornamental pillow to be placed on their pedestal, on Tuesday evening, Nov. 22d. Accompanying this gift was a richly worked cover, being the work of his wife. The usual congratulations and an engrossed letter of thanks to sister Franco, Bro. Franco's wife, were passed.

Oregon and Washington Jurisdiction.—Bro. C. H. M. Curry, P. M. W. of Yerba Buena, has just returned from an extended tour in Oregon, Washington Territory and Victoria, B. C. He speaks in glowing terms of our organization in that jurisdiction. He says the leading citizens are members, and the Grand officers are active, energetic and efficient in their several duties. In an interesting speech made in his own Lodge, Yerba Buena, he said that the spirit of fraternity is the most prominent feature, and we must look to our laurels, or that jurisdiction will yet outshine us.

In our advertising columns will be found the announcement of M. J. Healey, an old and favorably known artist and merchant tailor. Having worn his clothes, we know them to be first-class. For good work and fair dealings this establishment can be recommended. It is a pleasure to see him leading in superior work. Reasonable prices bring him much work, and the satisfaction given induces all old customers to continue.

Grand Lodge Report.—An artistically printed volume of the proceedings of the Grand Lodge, A. O. U. W., of Oregon and Washington Territory, held at Olympia, W. T., July 12 and 13, 1882, has been received. The report of the proceedings is complete and satisfactory in all particulars. The transactions of the Grand Lodge were important and numerous.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi-annually in advance. If errors or omissions are noticed, please write the office direct.

Little Companies—Parlor Games and How to Play Them.

[By Lucy Underwood McCann.]

A game that has furnished considerable entertainment to those who are familiar with playing it is known as "The Foreign Traveler." The game is played as follows: The person selected as the traveler leaves the room, when the company determine on the country he is to visit, and prepare themselves accordingly. Upon a given signal the traveler comes in and must guess the country represented from the scene before him. Let us suppose the tableau taken to be a Turkish one, which may be simply represented by a lady in a turban, reclining on a sofa cushion, or the accessories may be as rich and elaborate as the properties of the house allow, and as many as see fit may take part in it. In this case choose some handsome dark-haired man (the longer his beard the better). Twist a bright silk scarf or gay light shawl into a turban for his head. Let him take off his coat and vest; drape another shawl around him to represent the full Eastern costume. Convert your modern sofa into a divan by putting all the cushions you can find around and upon it. (Pillows covered with shawls will answer if you run short). Let your Turk recline amongst these, while the extension drop light from the gas with its stand makes no bad imitation of an Eastern pipe. As many pretty slaves may be introduced as you have effective beauties to display. Some of them may be fanning the Turk with feather dusters, if no better substitute can be found for peacock plumes among the properties. Whilst others sit on cushions on the floor, grouped in the most effective manner around the Turk who should be the prominent figure of the tableau.

So with the scenes from other lands. You may represent them in as simple and rapid a manner as you choose; for instance, Germany, by a student with a long pipe, a book and spectacles; Lapland with a tent and natives sitting around the fire. The tent may be made, or suggested rather, by a few chairs turned upside down and a sheet or shawl thrown over it, the natives wrapped in shawls and firs, etc. Switzerland with the apple scene from William Tell, and so on. Or the scenes may be made far more elaborate if thought best, the time taken in their preparation being the only objection to this effective method.

Their hostess now announced that refreshments were in order, which fact the delicious aroma of the coffeee had already foreshadowed, and that if each gentleman would select one of the slips of paper from the pretty card-basket she held, he would find thereon the name of the lady whom fate had ordained he should escort to supper. The drawing of names and new groupings that it caused among them all gave a merry turn to the stiff and stupid pairing off for refreshments, and the dainty perfection of the dainty little supper, with its oysters, coffee and cream. Ham sandwiches, cakes and confections were duly appreciated and enjoyed by all the happy guests. Refreshed and mentally invigorated by that "cup that cheers but not inebriates," they return to the parlor, where, after some songs from the girls, a tenor solo from Karl's sweet German voice, and a few jolly chorus songs, like "Nancy Lee" and "St. Patrick's Day Parade," in which all that were musical joined heartily, it was proposed that they return to their games, as the young lady from the city had thought of one she was sure they would like, called

Historical Characters,

Which she immediately inaugurated by sending one of the gentlemen from the room with the information that he was to be named for some historical personage, and was to guess from their questions upon his return what character had been assigned to him. They choose for him that of Christopher Columbus, when he was called into the room again.

"How did the queen receive you?" asked one girl.

"It redounds to the honor of our sex forever that your merit was first recognized by a woman," said another of them.

"Did you have any difficulty in getting your crew?" asked one of the men.

"Was not your ship accomodations rather small for so long and uncertain a voyage?"

"Is it Sir John Franklin?" ventured the young man who had been weighing the various questions in his mind before hazarding a guess.

"No, it is not Sir John," was answered. "Were you not terrible anxious in those last days with the dread of a mutiny before you to ruin all your hopes?" asked the hostes, who joined in all their games,

"Say," said Karl, "how did you like the color of the natives?"

"Christopher Columbus!" exclaimed our historical representative. "I guessed it at the question of my anxiety from our hostess, so she must take my place," which she did by retiring to the adjoining room until called out.

"I say," said one of the gentlemen, "let's name her the wife of John Rogers, who had 'nine small children and one at the breast.'" For they all knew that their hostess had quite a band of bright little ones, and as the girls said, "the dearest little baby in the world," all of whom were the pride and delight of her heart. When she came in she was greeted with, "How in the world do you manage so nicely with the whole nine of them?" by Miss White.

"I should think you should have a government pension to support them all," said a gentleman.

"Ah! I know," exclaimed the hostess. "I am the living representative of the old lady who lived in a shoe, with so many children she didn't know what to do!"

"No, you are wrong; but tell us truly, does John think as much of them as you do? He can't really, you know," laughed the young man.

Many were the funny questions her character gave rise to, causing a great deal of merriment among them all and infinite confusion in the mind of the hostess, in her endeavor to place herself in history, until at last some one asked, "Were there really only nine of them, or did the one at the breast make ten?" when, of course, she guessed it at once.

"Let us try the game of

"Compliments,"

Suggested she. "I long to get even with you all for the many nice things you have said of me! Who will go out to be complimented?"

"Oh! Do let me!" cried a bright young fellow, "I do love compliments, and I get so few!" he added pathetically.

"Yes! Do let him!" said another of the men who knew how the game was played. "He will get enough this time to last him the rest of his life;" at which all the rest laughed delightedly. When he had left the room, the hostess went around and collected the compliments so liberally bestowed upon him, writing them down upon a slip of paper as she went. When all were done, the exile was recalled, and she began:

"Who said your tongue was originally intended for a buzz-saw, but by mistake was set up in your head?"

All laughed heartily as, singling out one of the men, he answered, "Of course that was Karl. He has long been envious of the eloquence he could not imitate!" His guess proved to be wrong—nor does the game allow him to be told the author of any compliment unless he happens to guess rightly, when that person whose compliment he has guessed goes out in his stead.

"Who said you were the glass of fashion and the mould of form?"

"Ah! Miss Brown; I always knew you were a lady of great discernment. Thank you for the compliment," said the young man.

"Those have always been my sentiments, sir," laughed the girl, "but modesty has prevented the expression of my thoughts, so it is not to me that you are indebted."

"Who said you were the perfect coroboration of Darwin's theory, minus the caudal appendage?"

"Some beastly fellow whose sweetheart must be in love with me," laughed the irrepressible young man.

"Who said, had you lived in those days, the ancients had never chosen Apollo Belvidere as the type of manly beauty?"

He threw a loving glance at the pretty girl whose escort he was that evening, which caused her to blush a rosy red, whilst all the others laughed as she denied the "soft impeachment."

"Who said that if your mouth had been around in Goliah's time he might have mistaken it for the whale's, and never got to Nineveh at all?"

"That is the most unkindest cut of all," cried Mr. Jones. "If I am proud of any one thing above all others it is my classic mouth. All women appreciate its beauty. Some envious man said that, and I'll settle with the wretch when I find him out."

So the game went on, as he was greeted with chaffing from the men and compliments from the girls, until at last he guesses the right one, when that person takes his place and runs the gauntlet of their wit and humor in his stead. After playing compliments a few more rounds, it was proposed to try the game of

Scandal,

as nearest akin to it. All the players sit round in a circle, and the first person starts the game by whispering a secret in the ear of the person on the right hand. The sentence should be rather long in which the secret is told, as it makes more fun in the game. The player to whom the secret has been confided tells it to his right-hand neighbor, as he understands it from the rapid whispering in his ear, and so on it goes all around the ring until it reaches the last person, who repeats aloud what was told to him. Then the originator of the scandal gives out the sentence as he first told it to his neighbor. It will generally be found that in passing from one to another the whole sentence has been so changed that its author would have every right to declare that he had "never said any such thing." This game, though only the merry pastime of an hour, bears within it a moral so grave and potent that he who "runs may read" and learn a lesson to cast the mantle of charity around the scandal that he hears, and to "take heed lest he offend with his tongue."

GRANDPA'S VISIT.

As the budding plants in the garden respond to the sunshine, so do the little shoots in the household revel in the sunny warmth spread through the home by the coming of a loving grandparent. "Grandpa's come" will rally the children from all direction and cause them to dance about in joyous glee, for grandpa shows by his greeting that he loves the little ones, and they know him as a devoted friend. Grandpa's visit is a notable event in every household.

Plant Figs.—Let us urge the planting of figs in variety and plentifully in all homesteads in California where the fig will mature. Children seven years old can plant cuttings of fig trees that will bless them and the older members of their families bountifully when 10 and 12 years of age. It pains us to ride over one of God's most fruitful countries in the dry and thirsty season and find only one place in many where people have blessed themselves with tree of any kind. Thousands are shadeless and without fruit in our great valleys who can in three to five years have plenty of bearing fig trees by sticking a few cuttings in the ground this fall and taking a little pains only with these sources of healthy food. Plant fig trees!

What the Wrinkles Tell.

The *Phrenological Journal* has the following bit of face lore: The faculty of truth—that is, the love of it—is indicated by the muscle which surrounds the eye, causing folds and wrinkles. Justice is indicated by the muscle which causes perpendicular wrinkles between the eyebrows. Fullness and wrinkles under the eye, for which some persons are remarkable, indicate the love of mathematical accuracy; and wrinkles curving upward from the outer angle of the eye and eyebrow indicate probity or personal truthfulness. There are three degrees of the faculty of justice. The first is a kind of exactness or strict honesty in small money matters, which some people would call closeness, and is indicated by a singular perpendicular wrinkle or line between the eyebrows. The second is the disposition to require justice in others, and is indicated by two perpendicular lines or wrinkles, one on each side of the center—a very common sign. The third degree is conscientiousness, or a disposition to apply the rule of justice to one's self, and is indicated by three or more wrinkles or lines, especially noticeable, extending above the eyebrows when the muscle is in action. The love of command is indicated by one or more short transverse wrinkles across the root of the nose, exactly between the eyes. It may be seen in great military commanders, in masters and teachers, and in those generally who are fond of exercising authority. In those who are wanting in the power to command, and have no desire for responsibility, this sign is also absent. The faculty of command frequently acts with that part of justice which reprimands or requires others to do right, and both together produce that frowning and lowering brow which is so terrible to evil-doers, or to those who love to be approved rather than condemned.

A Hornet's Housekeeping.

Two little girls coming from school stopped to watch a blue-black hornet which had captured a green worm about one inch long, and was trying to store it away. Dragging it along the edge of the board sidewalk till he reached the ground, he proceeded very rapidly to dig, apparently with his head and forelegs, a deep hole. If the worm, which was still alive, moved a little, the hornet returned to it, and buzzing about, appeared to suck the blood of his victim. When, after many interruptions, he considered his hole deep enough, at three or four inches, he backed slowly down, drawing the hapless worm after him. He remained a few minutes busily doing something which could not be seen, and then came up, rolled a few little stones to the entrance of his storehouse, and flew away. The children, curious to explore, dug down to see what had been done, and found the worm all cut into small pieces; just then the hornet returned, and, finding his quarters invaded, made a great ado, buzzing loudly and running angrily about here and there to collect the fragments of his feast. One of the girls took her slate pencil and quickly bored a new hole for him, which, after some demur, he accepted, and this time was allowed to store and cover without further disturbance.

Some Golden Facts.—One cubic inch of pure gold weighs 11,144 ounces or .6965 lbs. avoirdupois. One cubic foot contains 1,728 cubic inches, and therefore weighs 1,203 552 lbs. avoirdupois, or 1,462.65 lbs. troy weight. One pound troy is equal to 12 ounces, hence, one cubic foot equals 17 451 80 ounces. One ounce pure gold is worth 20.67183 dollars, and one ounce U. S. standard gold is equal to 18.604 dollars. It is plain by comparing the two figures next above that the alloy in gold coin amounts to 10%, or 1,000 parts of standard gold contain 100 parts of alloy. Yet it must be remembered that this amount of alloy has nothing to do with the real value of the coin, except to make it more durable, and that the same consists in the pure metal only, and not in the compound. The Government, therefore, receives no compensation for the manufacture of gold coin. If the estimated amount of gold produced in California since 1850—1,700 millions of dollars—is correct, it would be equal to a solid mass of 4,712½ cubic ft., or to a cube of 16 ft. 8 inches, or nearly 37 cords if piled like wood. It weighs 5,640,428 lbs. avoirdupois, or 2,820¼ tons, which would require 8 locomotives at least to haul it over the Central Pacific railroad. In double eagles, if laid close together, it would cover completely an area of 40 acres, and in single file would girt an orbit of 576¼ miles.

A Random Shot.—The Tuscarora *Times-Review* says: An accidental shot, shattering the foot-wall on the 300 level of the Independence mine this morning, disclosed the fact that the porphyry, to the depth of from one to two and a half feet, is strongly impregnated with ruby sulphurets, assaying from $600 to $1,000 per ton.

Idaho Dividend.—The Idaho Gold Mining Company has declared another dividend. This makes 161 dividends which this mine has declared. The dividend amounted to $2 per share on the capital stock. The ledge for a time has been rather poor, but now a very rich ledge has been struck in the lower levels.—*G. V. Tidings.*

PACIFIC STATES WATCHMAN.

Issued on the 1st and 15th of each month.

At No. 252 Market Street, San Francisco, Cal.

☞ *Take Elevator No. 12 Front Street.*

Subscription (in Advance) - - - $2 a Year.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the Pacific States Watchman our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and Watchman together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

Whereas, the Pacific States Watchman, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the Watchman as liberally as circumstances will justify.

ADVERTISING RATES.

One Square (¼ inch), per issue	$ .75
One Square per month	1,25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (¼ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

WATCHMAN PUBLISHING CO.

Entered at San Francisco P. O. as second-class matter.

San Francisco, December 1, 1882.

Business Announcements.

Whitmore's Gear—E. Whitmore, San Francisco.
Agricultural Implements—George Bull & Co., S. F.
Furniture—F. S. Chadbourne & Co., S. F.
Merchant Tailor—M. J. Healey, Oakland, Cal.
Commission Merchant—Richard D. Mowry, S. F.
Millinery Goods—Bassler & Hevener, S. F.
Art Gallery—H. Hellwegen, S. F.
Boot Maker—Charles Dietle, San Francisco.

The General Relief Committee.

It is well, by way of remembrance, to call the attention of our brethren to the doings of the General Relief Committee. Although this humane and worthy institution has only a *quasi* recognition from the Grand Lodge, yet by common consent it is regarded as a part of our system of charity, and work that has been done and the record that has been made is such that we are justly proud of it. This committee is composed of one member selected from each Lodge, and their regular monthly meetings are held in Pythian Castle, and oftener when occasion requires. Their relief fund is made up of voluntary gifts of individuals and Lodges, together with moneys raised at each annual picnic.

Supreme Lodge Statement.

The circular showing the official transactions of the Supreme Recorder's office from Oct. 1, 1882, has been issued. From this we glean the following points: Balance in hands Supreme Recorder, Oct. 2, 1882, $952.26; receipts to Nov. 1, 1882, $18,163; total, $20,537.26. The disbursements amounted to $20,000, which was paid on warrants No. 605 to 614 inclusive. The grand total of beneficiary received for the month of September, 1882, was $141,278. Of this amount California contributed $27,699, more than any other State. New York paid $17,517. The total beneficiary disbursed for the same month was $141,497.67, of which this State received $28,000. The total membership as reported by the Supreme Recorder is 111,747.

Officers Elected.—Among the many members of our Order wh o have been elected to different State and county offices are: David McClure, G. F., Senator; Timothy McCarty, Senator; Lewis F. Holtz, Assessor, all of Spartan Lodge; Bro. D. J. Toohey, of Franklin, Superior Judge; Clay M. Taylor, P. G. M. W., of Shasta, Senator; P. W. Fisher, P. M. W., County Superintendent of Schools, Alameda county; G. W. T. Carter, P. M. W., Assemblyman from Contra Costa county; and A. G. Booth, Senator elect.

Encouraging Words.—Bro. P. McGivern, of Harmony Lodge, has just returned from an extended visit in Chihuahua, Mexico. While there he received the Pacific States Watchman, which, as he says, was one of the most welcome visitors he had while in that country.

The Excellence of the System.

We do not believe that the system or form of government of the A. O. U. W. is so nearly perfect that it is not susceptible to improvement. Nor do we believe that the laws made thereunder need no revision or alteration; but we do believe that no other society of which we have any knowledge approaches it, so to speak, in this direction. To substantiate this declaration it is not necessary to dilate on each particular feature of excellence, and contrast them with those of other organizations having in view substantially the same objects; nor is it, perhaps, prudent to do so, for we know how sensitive some people are, and we would not stir up a spirit of bitterness. Nor would we build our structure upon the ruins of some other organization equally honorable, but desire only to show how superior is the A. O. U. W. on general principles, that others may the more readily profit by our example and learn wisdom by our experience.

It is plain that our system is better than any other, or else a republican form of goverment is inferior to a despotism. If this be not so, then it is better that the few should rule than the many; that centralization of power is better than its distribution; that somebody else knows our wants and our necessities and can meet them better than we can ourselves; that a few on guard are better than a host; that while many may be dishonest and need constant watching, the few are honest and above temptation; in short, that one-man power is the only correct and safe form of government, and that, too, in this 19th century. This sort of doctrine we do not believe. It is not the American idea, is unreasonable, and a libel upon the civilization and intelligence of the age.

It is not enough in its support to say that points of weakness have been developed in the A. O. U. W.,—weaknesses that almost proved fatal. Does the history of despotism show that strength is its crowning attribute? Despotism may be a necessity for a condition of barbarism, but civilization has other needs, else it were better not to civilize.

So much by way of expressing the faith that is in us. No doubt other beneficial socities will grow and increase and do good, and find their admirers, not less honest nor enthusiastic than we. For this we have no cause of quarrel—only honorable difference of opinion. Time must show who is right and who wrong. We believe in, work and plead for the A. O. U. W., and may God's sunshine ever illumine her banner.

The Rise of the A. O. U. W.

Looking back over the past fourteen years, and noting the course of the A. O. U. W., we are filled with wonder and admiration at the great work accomplished by the Order. It opened a new field. Men of means had been able to insure their lives, and so protect their families against the grim wolf of want when they should be called hence; but the poor man could not afford so great a cost as this involved. To provide for the present wants of himself and family was all that his means justified, and yet there was more real necessity that the poor man's home should be shielded in this way than the rich man's. The one could be preserved without this help. The other, alas! in too many instances could not, and the poor-house or house of crime stood yawning before them. It was reserved for the A. O. U. W. to present to the world the possibility of protecting the homes of the common people, at a cost which even the poor could afford—a cost so small, and divided into such little payments, that it is scarcely felt by any.

When the A. O. U. W. had shown to the world the way, men were not slow to perceive; but many believed that great improvement were possible in the details or machinery by which the grand idea was to be carried out. And they were right. Some sought, rather than to attempt any improvement in the parent society, to found ones, but others were content to hold fast that which had proven to be good and eliminate the evil from their first love so far as experience should develop that quality.

This fact has made the A. O. U. W. at once radical and conservative to the last degree—radical in preserving those features of the organization which worked satisfactorily, and radical in fearlessly striking out into domains new and untried, leaving behind fields barren and unprofitable, as tested by experience. We feel now as if we stood on solid ground. It is with satisfaction that we look upon the beautiful structure of our building—a structure well befitting all true Master Workmen.

Good News.

From all portions of the State members of the A. O. U. W. have been elected to fill important positions of trust and profit. In the law-making department we are gratified to know that among the legislators, Clay W. Taylor, of Shasta, P. M. W., and David McClure, G. O., San Francisco, have been elected to the Senate, and A. G. Booth, of this city, P. M. W., as a member of the Assembly. In view of the attempted hostile legislation to our Order in the past, it is well to have such men and Workmen in the legislative halls of this State.

A Righteous Decision.

The decision of Judge Waymire, of this city, in the case of Tillie P. Oliver vs. the Supreme Lodge of the American Legion of Honor, the full text of which we give elsewhere, meets, so far as we have learned, with unqualified approval from all members of beneficial societies, including those of the organization most directly interested in the result. We presume, in the face of the legal grounds on which the decision is based, there will be no appeal, and that the judgment will be promptly responded to.

It is a frequent error committed by societies to legislate in such a manner that they cannot be sustained by the courts of the country in case of litigation. Executive officers of societies are often guilty of acting with like indiscretion. This was so in the Oliver case, which, in justice, should have been settled without contest in the courts. The equity of the claim was admitted by an appeal from the Supreme head to the membership, to raise by voluntary contribution what was denied as a legal responsiiblity. We always like to feel the ground on which we stand. Henceforth we shall know that in this State, at least, the rights of our individual members cannot be impaired by the errors or neglect of duty on the part of the officers. We can make our own laws and compel our members to be subject to them, provided we first fullfil all the obligations they impose upon us, but we cannot be derelict in duty towards an individual member, and then make such dereliction work to his hurt, nor should we. The legal maxim alluded to by the Judge is right and just, and his decision such a one as we had a right to expect from a good and upright Judge.

In this connection we copy the following from the *California Journal of the American Legion of Honor:*

We believe that this decision is just, and that the Supreme Council should have paid this money promptly when notified of the death of Companion Oliver. The fact that Dr. M. W. Fish, Medical Examiner of the Council, corrected the application and duly mailed it, that all trace of the letter was lost after it was mailed, and that it has never been returned from the dead letter office, is conclusive evidence that it was duly received by the late Supreme Secretary, and through the confusion consequent upon the incompetency of that officer, that it was mislaid or lost.

The Secretary of Union Council, No. 168, wrote repeatedly asking for the beneficiary certificate. Companion Oliver's assessments were duly forwarded, and no answer could be obtained as to his standing; neither was the Council notified of the payments not being applied until after his death.

When the Supreme Commander was written to on the subject, he returned a contemptuous and insulting answer, and it was with difficulty that the remaining members were restrained from throwing up the charter.

After a "charity call" was issued and nearly $1,000 obtained, the Supreme Commander held the money for over eight months. This, we believe, was the real cause of the suit having been brought.

There is now a case in Kaweah Council, No. 843, for which the beneficiaries are about to bring suit because they cannot get their benefits paid, owing to the same incompetency of the late Supreme Secretary. It behooves the officers elected at the last session to take up all unfinished matter of this nature and settle them at once, and thereby remove all cause of complaint.

Confidence can only be inspired and retained by the prompt and faithful disharge of their duties.

Establishment of D. of H. Lodges.

From a private letter from Grand Master Workman Barnes we take the following:

Numerous inquiries are being received in relation to establishing Lodges of the Degree of Honor. As stated in a recent circular addressed to the Lodges, I believe the formation of such Lodges will be of great benefit to subordinate Lodges, and earnestly recommend their institution, and the setting apart by the subordinates of the third week of each month for a Degree of Honor night, etc.

All that is necessary is for 15 persons to apply for a dispensation for a Lodge of the D. of H. in their locality. These 15 can be composed of the M. W.'s of the Lodge, their wives, mothers, sisters and daughters. Upon the reception of such a petition, I will take measures to have the Lodge instituted and thoroughly instructed, either personally or by deputy.

The expense for charter, rituals, odes, etc., is only $15, and I trust to see a large number instituted during the next few months of the term.

Grand Master Barnes, we are pleased to learn, has fully recovered from the intermittent fever, which he contracted while traveling East, and consequently will resume his customary visits to all parts of this jurisdiction. On Thanksgiving night he will deliver a short address at Alvarado, at the celebration of Reliance, No. 93. It is expected that this will be a grand affair.

A Faithful Officer.

There falls to us a fitting and pleasant duty. It is to pay appropriate tribute to the faithful and efficient services to the Order rendered by Bro. G. Winehill, P. M. W. of Unity Lodge, No. 27, while acting as a member and officer of the General Relief Committee. For a long period Bro. Winehill has held the office of Treasurer of that committee with honor to himself and satisfaction generally. While in this position he never ceased his labors with a mere perfunctory performance of his duties, but his conduct was such that, with zeal and kindness and generosity, he won the confidence and esteem of his fellow members, and did honor to the Lodge from which he was sent on his mission of relief to suffering and impoverished brethren of the Order.

At the October meeting of the committee Bro. Winehill resigned the office to which he has long been an ornament and pride, and received a passing vote of thanks for his past services. During the interval between this meeting, however, and the meeting of Saturday evening, Nov. 11th, held at Pythian Castle, a copy of handsomely engrossed resolutions had been secretly prepared by the other members of the committee as a testimonial of esteem for presentation to Bro. Winehill. Imagine, therefore, Bro. Winehill's surprise on receiving this just and well-timed tribute to the years of labor and attention he has given in the interest of humanity while Treasurer of the General Relief Committee.

The resolutions are highly ornamented, Bro. Winehill's photograph being set at the top, and the whole is enclosed in an elegant frame. They recite the long continued services of Bro. Winehill, and testify that the committee parts with a faithful, zealous and efficient officer. Bro. Reading made the presentation in a handsome speech, excelling himself on this occasion, and doing credit to the oratorical ability of the Board.

Bro. Winehill replied in feeling language, and invited the members of the committee to a royal banquet, where, with a few invited friends, a jovial and long to be remembered time was spent. We hope and trust that life may always be as pleasant to Bro. Winehill as it must have been on this particular evening.

Lodge Officers.

Very soon our Lodges will elect officers again. "Good officers make a good Lodge" has become a maxim in fraternal societies. It is rare that the maxim proves false in any considerable degree. True, it is possible to have a good Lodge with poor officers, and *vice versa*, and yet barely possible. This being true, the importance of selecting good and qualified men for official position cannot be overestimated. Few Lodges on organization are able to get their best men in ten respective offices. The highest officers are usually well chosen, but the Recorder, Financier and Receiver are frequently indifferent men, and often, from the necessity of the case, as there are so few in attendance from which to choose. This matter, however, is usually pretty thoroughly righted in the course of a few terms, and then the Lodge sees the necessity of keeping their clerical and financial officers as fixtures of their respective positions. By rare wisdom, the Supreme Lodge has made it possible for these faithful and efficient officers to remain in their places and still realize the highest honors of the Order. Three years' service makes them eligible to receive the Grand Lodge degree, and it is safe to say that, except in extreme cases, the Grand Lodge will never refuse to bestow that honor. Such of these officers as may be eligible should procure certificates from their Lodges and send them to the Grand Recorder, or present them in person to the Grand Lodge at the opening of the next session.

The Grand Master Workman of Ohio is holding meetings in various portions of the State. These meetings are made special meetings for the purpose of receiving applications and conferring degrees on the same night, under the resolution adopted at the last session of the Supreme Lodge, as follows: "That in the several Grand Jurisdictions the degrees of the Order may be conferred at special meetings called by the Grand Master Workman for the purpose.' Under these calls applications will be acted upon by the Lodges separately, that is if there is an application for membership in No. 20, also in No. 25 and in No. 38. Only members of No. 20 will vote for the applicant in No. 20, and only members of No. 25 will vote for the applicant in No. 25; but the degrees will be conferred upon all at one time. The degrees, however, cannot be be conferred at these special meetings upon any one who has not passed the required medical examination and been approved by the Grand Medical Inspector. The only advantage of an application being presented at these meetings is that it does not have to be presented for two weeks before the degrees can be conferred.—*Ohio A. O. U. W. Journal*

Bro. Fink, 50 and 51 Washington market, is the sole agent for the sale of L. K. Baldwin's dairy butter. This article is well known for its excellence.

Bro. Robert Matthey is proprietor of the Palace bakery, 1523 Mission street. He delivers bread to all parts of the city.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

RECORDERS do not all seem to appreciate the importance of being prompt in making their monthly reports. The law contemplates that once each month the Lodge registers in the Grand Recorder's office shall be an exact duplicate of that of each Lodge in the jurisdiction, so that each individual member's standing in this jurisdiction can be known by reference to that officer's books. It is also necessary to know of all transfers into or out of the Lodges, admissions by initiation, deaths, rejections and number of M. W's. in good standing on last of each month, for the report to the Supreme Lodge as well as for our own purposes. Only a little while ago a death report was received, and the member's name did not appear on the roster of the Lodge to which it was stated he belonged. He had joined by card, and the fact had never been reported to this office. Likely other facts, only a little less important, should have been reported, but were not, for no report of any kind was made for some months. Of course nothing can be done with the report until further information is received.

SEMI ANNUAL reports will be in order on the first of next month. They should be sent not later than the end of the first week in the month, whether the officers be installed or not. The duplicate can be shown the Deputy, and he can examine, and if correct, collect per capita tax accordingly. It is the duty of the Recorder to send forward the report, and of the Deputy to collect and transmit the tax.

Valley, No. 30, is a large Lodge. It is second in size to but one in the Order. While it has about its fair proportion of death losses, yet it did not have three reported in November, although the assessment notice reads that way. Bro. Frank D. Mead was a member of Vallejo Lodge, No. 75, and not of Valley. The error was the result of too much haste in printing. Recorders and Financiers will please write the correction on their notices.

ALL Lodges elect and install officers, whether they meet weekly or semi-monthly, the only exception being such as may have been organized less than 13 weeks before January 1st next. All pay the semi-annual installment of the per capita tax of 30 cents per member, no matter when organized, and all are members who have been admitted, and have not been finally suspended, expelled or died.

An Important Decision.

The full text of the decision rendered by Judge Maguire in the case of Tillie P. Oliver against the American Legion of Honor, as it appeared in the *Examiner* of Sunday, Nov. 19th, is as follows:

Tillie P. Oliver, plaintiff, vs. Supreme Council, American Legion of Honor, defendant—Action to recover $5,000 claimed to be due the widow and beneficiary of H. G. Oliver, by virture of an obligation incurred by defendant under the following circumstances:

The defendant is a mutual benefit society, incorporated under the laws of Massachusetts, having as one of its objects the establishment of a benefit fund, from which, on the satisfactory evidence of the death of a member of the Order, who has complied with all its lawful requirements, a sum not exceeding $5,000 is to be paid to the family, orphans or descendants of the members, as he may direct. The corporation has its principal place of business in Boston, where its chief agents, Supreme Commander, Secretary, Treasurer and Medical Examiner-in-Chief have their offices. There are subordinate societies called Councils established in the several States, and those who are admitted to membership in the Councils become members of the defendant—the American Legion of Honor—either honorary or beneficiary. Any person so admitted to membership, who is duly qualified as to moral character, physical soundness and ability to earn a living, may, upon paying a fee, according to age and degree, and upon application, accompanied by the certificate of a medical examiner, showing that he is an insurable risk, become a "beneficiary member."

There are six degrees of such membership, the highest of which entitles the family, or other dependents of the member, upon his death, to the sum of $5,000. This sum is raised by assessments upon all the beneficiary members in proportion to the amount of their insurance and age.

On April 13, 1880, a Council of the Order was instituted at East Oakland, Alameda county, known as Union Council, No. 168. H. G. Oliver applied to become a charter member thereof, and complied with all the laws of the Order regulating the admission of such members. He was examined by Dr. Fish, the Deputy Supreme Commander and Medical Examiner appointed by the defendant. The examination was reduced to writing in questions and answers, upon a form furnished by the defendant. A copy of this paper, with a certificate annexed, to the effect that Oliver was a good insurable risk, was forwarded to Dr. Wilson, the Supreme Commander and Medical Examiner-in-Chief at Boston. One of the questions prescribed in the form was as follows: "Is the character of the respiration full, easy and regular, and the murmur clear and distinct over both lungs?" The answer to this question was written down by Dr. Fish, "No." When Dr. Wilson came to examine the paper, he discovered this. It was his custom to approve the report of an examination, if satisfactory, and thereupon the insurance was deemed complete, and the applicant became a member. If not satisfactory he would indorse on the paper "rejected," and then the fee would be returned to the applicant, and he would not be recognized as a beneficiary member. If he discovered some clerical or other error susceptible of correction, he would stamp the word "irregular" opposite the error, and return the paper to the Council from which it came. In this case the certificate that the applicant was an insurable risk being inconsistent with the answer "no," it was evident that a clerical mistake had been made by Dr. Fish; hence Dr. Wilson stamped the word "irregular" opposite the word "no," given as the answer to the question quoted above, and returned the paper to Union Council. It was then referred to Dr. Fish, who on May 6, 1880, received it, and, immediately seeing that it was a clerical mistake, erased the word "no," inserted "yes" and deposited the paper in the mail addressed to Dr. Wilson, at Boston, postage paid. This was the last known of the paper, so far as the evidence shows. Dr. Wilson testified that he did not receive it a second time. The Secretary of Union Council testified that she wrote to headquarters several times, making inquiries about it, but received no answer. Oliver died Nov. 4, 1880. From the time of sending on his corrected application until his death he was treated as a beneficiary member of Union Council, and called on to pay assessments as other beneficiary members. He paid three assesments—all that were levied—and the money was fowarded to the Supreme Secretary. The money was received without objection, and no notification was ever given that he was not considered a beneficiary member by the Supreme Council till after his death. Oliver was appointed a Deputy Supreme Commander, and during the summer of 1880 he instituted many Councils of the Order in California, being in constant correspondence with the authorities at Boston. He died under the belief that he was insured.

The defendant resists payment of the money on the ground chiefly that the application of Oliver was never in fact approved by the Medical Examiner-in-Chief, nor any certificate of insurance issued to him, relying upon the following provision of their laws: "Each person admitted as a charter member, subject to approval by the Medical Examiner-in-Chief, must deposit one assessment with the collector, to be returned if rejected, and credited if approved. Such persons will not be subject to assessments or entitled to benefits until their examinations are approved, but will become beneficiary members on the day of approval by the Medical Examiner-in-Chief, and they must be credited with their assessments on the date of approval as above." (p. 33) Mutual benefit societies which obligate themselves to pay money on the death of members to their beneficiaries are regarded in law as ordinary insurance companies, subject to the same rules. (May on Insurance, Section 550; State vs. Merchant's Exchange Benevolent Society, 10 Ins. L. J. 59.) One of the rules applicable is that "whenever two constructions equally fair may be given that which gives the greater indemnity shall prevail." (May on Insurance, Sec. 174.) A contract of insurance is complete when the insurer offers to insure on certain terms, and the offer is accepted by the applicant. The contract need not be in writing, unless the law expressly requires it. (Hallock vs. Insurance Company, 26 N. J. [law] 281. May on Insurance, Secs. 14-23. Insurance Company vs. Colt, 20 Wall, 560.) A contract of insurance may be made through the medium of the mail, and terms offered and accepted upon the posting by one party of a letter to that effect addressed to the other. (C. C., Secs. 1581-3. Tayloe vs. M. F. Insurance Company, 9 How, 390.) In this case the defendant offered to insure on certain terms, payment of a fee, good moral character and physical condition of the applicant to be shown by the certificate of a physician. Oliver complied fully with the requirements. He accepted the offer and did all he could do. The error in the answer was not his act. It was the fault of defendant's agent. It has not injured the defendant. If it had, the defendant could not be heard to complain of its own negligence. The failure of defendant's agents to issue the beneficiary certificate is immaterial. The certificate is not the contract. It is only evidence of it. The Medical Examiner-in-Chief has no right to arbitrarily reject an application made in good faith and after compliance with the requirements of defendant. He has no power to change the by-laws. He is merely an executive officer, authorized to see that applicants are qualified. In this case it is conceded that the applicant was qualified in every respect. It was the duty of the Examiner-in-Chief to approve the application. "That which ought to have been done is to be regarded as done in favor of him to whom, and against him from whom, performance is due." This is a favorite maxim of the law which has been expressly incorporated into our Code. (C. C., Sec. 3529).

Judgment for plaintiff. WAYMIRE, J.

Boone & Miller for plaintiff. J. G. McCallum for defendant.

California Death Record.

The following official circular, bearing date of Dec. 1, 1882, has been issued by the Grand Recorder, Pratt:

To Recorders and Financiers of Subordinate Lodges:—You, and each of you, are hereby notified of the following deaths occuring in our Order, in the State of California:

Death No. 123—No Assessment.—Bro. Patrick Cavanagh, of Harmony Lodge, No. 9, San Francisco, died Oct. 3, 1882, of consumption, aged 45. Joined the Order Jan. 19, 1882. Payment from surplus.

Death No. 124—No Assessment.—Bro. Jas. H. Smith, of Fidelity Lodge, No. 136, San Francisco, died Oct. 5, 1882, of drowning, aged 44 years. Joined the Order Oct. 13, 1879. Payment from surplus.

Death No. 125—No Assessment.—Bro. Jas. McCourt, of Valley Lodge, No. 30, San Francisco, died Oct. 10, 1882, of typhoid fever, aged 44 years. Joined the Order Aug 17, 1881. Payment from surplus.

Death No. 126—No Assessment.—Bro. John Godsil, of Spartan Lodge, No. 36, San Francisco, died Oct. 12, 1882, of rheumatism, aged 47 years. Joined the Order Aug. 1, 1878. Payment from surplus.

Death No. 127--Assessment No. 19.—Bro. Frank Jones, of Pacific Lodge, No. 7, Oakland, died Oct. 16, 1882, of suicide, aged 26 years. Joined the Order April 3, 1879.

Death No. 128—No Assessment.—Bro. Job Wheat, of Merced Lodge, No. 74, died Oct. 19, 1882, of typho-malarial fever, aged 48 years. Joined the Order Oct. 18, 1880. Payment from surplus.

Death No. 129—No Assessment.—Bro. Bernhard Levy, of Sacramento Lodge, No. 80, died Oct. 21, 1882, of sporadic cholera, aged 43 years. Joined the Order Feb. 21, 1879. Payment from surplus.

Death No. 130—No Assessment.—Bro. Frank D. Mead, of Valley Lodge, No. 30, San Francisco, died Oct. 27, 1882, of abcess of the liver, aged 37 years. Joined the Order Feb. 5, 1879. Payment from surplus.

Death No. 131—No Assessment.—Bro. Geo. A. Morrow, of Spartan Lodge, No. 36, San Francisco, died Oct. 30, 1882, of consumption, aged 32 years. Joined the Order May 27, 1881. Payment from surplus.

Death No. 132—No Assessment.—Bro. Chas. Campbell, of Main Top Lodge, No. 156, Michigan Bluff, died Nov. 2, 1882, of typhoid pneumonia, aged 51 years. Joined the Order Jan. 19, 1880. Payment from surplus.

Death No. 133—No Assessment.—Bro. H. D. Jameson, of Valley Lodge No. 30, San Francisco, died Nov. 10, 1882, of Bright's disease of the kidneys, aged 49 years. Joined the Order Jan. 26, 1881. Payment from surplus.

The above losses are officially reported as having occurred at the dates in the notice above given, and of the causes therein mentioned, and said brothers were M. W. degree members in good standing in their Lodges, and entitled to participate in the Beneficiary Fund.

The Death Record.

The circular from the Supreme Recorder announcing assessments Nos. 17 and 18, and the deaths for the month of November, 1882, is at hand. We give the death record:

Death No. 84—Assessment No. 17.—Brother William Reynolds, Jr., of Golden Lodge, No. 3, Santa Fe, New Mexico, who died on the 23d day of August, 1882, of cirrhosis of the liver; aged 42 years. Joined the Order January 10, 1882.

Death No. 85—To be paid from surplus: Bro. Thomas A. Love, of Mineola Lodge, No. 15, Mineola, Texas, who died on the 13th day of August, 1882, of malarial fever, aged 48 years. Joined the Order April 17, 1882.

Death No. 86—To be paid from surplus; Bro. Leonidas A. Campbell, of Hill City Lodge, No. 10, Vicksburg, Miss., who died on the 7th day of September, 1882, of enteritis, with perforation of the bowels; aged 47 years. Joined the Order September 28, 1880.

Death No. 87—To be paid from surplus: Brother Henry Kraemer, of Schiller Lodge, No. 33, Brenham, Texas, who died on the 1st day of October, 1882, of suicide (supposed to be); aged 36. Joined the Order March 21, 1881.

Death No. 88—Assessment No. 18: Brother William James, of Lucille Lodge, No. 8, Sutro, Nevada, who died on the 10th day of September, 1882, of inflamation of the brain; aged 43 years. Joined the Order August 27, 1881.

Death No. 89—To be paid from surplus: Brother John Markle, of Capitol City Lodge, No. 56, Columbus, Ohio, who died on the 11th day of September, 1882, of accident received by fall from buggy; aged 37 years. Joined the Order May 26, 1880.

Death No. 90—To be paid from surplus: Brother J. C. Criss, of Bayou Lodge, No. 34, Houston, Texas, who died on the 9th day of October, 1882, of acute dysentery; aged 42 years. Joined the Order April 7, 1881.

Death No. 91—To be paid from surplus: Brother John F. Bradford, of Cincinnati Lodge, No. 10, Cincinnati, Ohio, who died on the 26th day of September, 1882, of congestion of the brain; aged 36 years. Joined the Order April 13, 1875.

Death No. 92—To be paid from surplus: Brother George D. Davenport, of Starkville, Mississippi, who died on the 25th day of September, 1882, of inflammation of the brain; aged 34 years. Joined the Order December 23, 1879.

Death No. 93—To be paid from surplus: Brother Robert S. Turner, of Starkville Lodge, No. 9, Starkville, Mississippi, who died on the 18th day of August, 1882, of Bright's disease; age 49 years. Joined the Order December 23, 1879.

Death No. 94—To be paid from surplus: Brother Frederick Dister, of Curry Lodge, No. 26, Cincinnati, Ohio, who died on the 4th day of October, 1882, of consumption; aged 47 years. Joined the Order January 14, 1875.

The attention of the Grand Recorders of the Grand Lodges, under the immediate jurisdiction of the Supreme Lodge, is called to the fact that strict compliance with the law will hereafter be required; and their monthly report on all assessments due, together with remittances, will be expected to be received not later than the 20th of each month.

The attention of subordinate Lodges under the immediate jurisdiction of the Supreme Lodge is hereby called to the fact that assessment No. 17 is due and payable at the office of the Supreme Secretary during the first week in this month (November), and assessment No. 18 not later than the first day of December. Strict compliance will be required, or a second notice will issue as provided by the constitution.

Among Our Exchanges.

THE Grand Recorder of Illinois says no assessment for November. There is over $700,000 balance in the beneficiary fund, and hence that official feels good over it and asks the brotherhood to sound it all along the line. Over 11,000 members and no assessment for November is a good record, and we extend our congratulations to Illinois.—*Michigan Herald.*

THERE were 72 beneficiary certificates issued during October in Michigan.

THE Grand Lodge of Missouri has had a system of medical supervision with a Grand Medical Examiner that has been in operation for two years. This system is identical with that of the Supreme Lodge, and antedates it about a year. The Grand Medical Examiner says in his report:

Like all new and sweeping innovations tending to great reforms, the operation of the law was at first somewhat inharmonious, and there were many loud imprecations against the barrier that arrested the stream of bad risks which had begun to pour in upon us as a deluge, and which for a time had threatened the very life and perpetuity of our Grand Brotherhood of Benevolence.

Things, however, soon adjusted themselves, and when it was found out that the law would be enforced to the very letter, in spite of covert evasions and open defiance, the influx of bad material, from which we had suffered so long, was diverted from us and drifted into new channels. The result of my two years' work shows that there have been 160 rejections, saving to the Grand Lodge, I feel confident, in the near future, over a quarter of a million of dollars, or in round figures, the sum of $320,000.—*Michigan Herald.*

THE old Iowa Grand Lodge seems to hold its own. Grand Recorder Whitaker reports the receipt of $8 873 for assessement No. 10 during the month of September. We have, as yet, seen no report of the new Grand Lodge of Iowa.

AT the meeting of Albany City Lodge last Monday evening, "Legislation, its Necessity and Objects," was taken up and discussed by the G. M. W. and Lodge. It was an interesting meeting.

THE first Grand Lodge of the Ancient Order of United Workmen in the West met in Denver, October 10th, with a very large representation from Colorado, New Mexico and Arizona. The local Lodge extended hospitalities.—*Fraternal Censor.*

BRO. JACOB GUMPERTZ, 328 Sutter street, is one of the leading decorators in fresco work. He also manufactures fine window shades. In artistic designing, Bro. Gumpertz is very successful. He carries a large stock of goods.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation etc., to the publishers of this paper.

PALMER'S,

726, 728 and 730 Market Street, S. F.

NEW DEPARTMENT added, with a full line of GENTS' FURNISHING GOODS. Our usual variety of Novelties in Millinery and FANCY GOODS and LADIES' FURNISHING GOODS.

Kid Gloves a Specialty.

FURNITURE.

Explosives from Tar, Pitch, Coal Dust, Etc.

New Researches.

Two years ago a process was patented in Berlin for making explosives from crude tar oils, by direct nitrotions with strong acids, which mixtures, after being washed and dried, were oxygenated with chloride of potash and strong nitric acid. We give a brief digest of some further reseaches in this direction condensed from a German industrial paper—the *Zeitung*.

The success of the above process suggested the utilization of tar itself for explosives. Experiments soon proved that the treatment of tar with strong nitric acid was attended with much difficulty and danger. The subsequent use of an acid of 1 53 to 1.45 sp. qr. gave more satisfactory results.

The liquid tar is gradually stirred into the acid, the surface of which becomes covered with the tar, which on stirring settles slowly to the bottom. In about 10 minutes the mass at the bottom puffs up and gradually changes from a liquid to a pasty or solid state, until the acid has become saturated. The chemical changes do not produce any excessive heat, so that cooling is unnecessry.

The product is then thoroughly washed, and the purified product mixed with the oxygenating bodies above named. One part of the product by weight dissolves very slowly with the volution of but little heat, in three parts of nitro acid.

All the mixtures so proposed give new explosive compounds of different degrees of violence. Owing to the varying compositions of the tar, it is impossible to give the exact proportions in all cases in which the oxygenated substances should be added, but generally from two to five parts of chloride acid, or four to six parts of the salts were sufficient for one part of the nitro derivative.

The great advantages offered by this process are: Cheapness of the material to be acted upon; cheapness of the lighter acid used (a difference of 60%), and finally in the quiet and regular and safer manner in which the reactions take place, permitting the employment of more simple and less expensive apparatus, etc.

These successes led to further experiments upon the pitch, the paraffines, etc., as the mineral oils. The possibility of nitrating the latter seemed probable from their great similarity to the crude tar oils. Experiment, in fact, proved that they reacted exactly alike. But the strongest nitrating agents are required to act upon the purified mineral oils used for illumination. A mixture of equal weights of the strongest nitric and sulphuric acids, or a mixture of an alkaline nitrate with sulphuric acid was employed.

On paraffines and similar products the weaker acids are as ineffective as on purified mineral oils. By the action of the nitrating agents mentioned upon purified mineral oils, nitro-compounds were precipitated of a light yellow or light brown color having the external appearance of rancid fat. These products are difficultly soluble even in the strongest nitric acid. Pitch treated with nitric acid of 1.45 to 1.52 specific gravity, gave a yellow-brown solution, and from this light yellow to brown scales separated on washing with water. The oil and pitch from wood tar were treated with the weaker acid (1.45), and those from brown coal and stone coal with stronger acid (1.52). The products thus obtained are easily soluble in strong nitric acid with slight evolution of heat. These nitro-compounds when mixed with oxygenated bodies also form powerful explosives, but the quantity of the latter used must be two to four times greater than that added to nitro-derivatives of tar.

All the special products of the distillation of coal having been found capable of being converted into explosives by nitration, it only remained to try an experiment on the original materials, coal and peat. Wood was excluded from the list for its conversion into an explosive (pyroxyleine) had already been accomplished by Trauzl. It was found that the direct conversion of coal into an explosive by extracting the nitro-products, would involve very expensive and tedious manipulations. The coal, in form of a fine dust, was first treated with weak nitric acid, specific gravity 1.40 to 1.48; the weight of acid required was ten times that of the coal used. When stone coal was introduced slowly into the acid the rise in temperature was inconsiderable, and some hypontric acid was formed. The action was much more violent in the case of brown coal, and least so with wood coal. After the operation with any coal, a large portion of the material to be nitrated remained apparently unaffected, and formed a thick sediment on the bottom of the vessel.

The results of experiments made on peat were considerably more encouraging, different kinds being tried. A firm, solid kind called "bog peat" was tried after a small test had shown that the reaction would not be too violent. It was first subjected to the action of equal parts by weight of the strongest nitric and sulphuric acids for several hours. The substance changed color from dark brown to dark red. Ignited in the air it burned with a lively flame and strong aromatic odor. When soaked in a solution of chlorate of potash and dried, it formed a powerful explosive. If the same peat was well pounded before the nitration, so that the humus substance was separated from vegetable fibers, and a larger surface was exposed to the powerful action of the acids, the earthy humus constituents were converted into a dark brown liquid, sticky nitro-body, have the external characters of that obtained by nitrating the heaviest tar oils. Its action, when mixed with oxygenated bodies is also just like the latter. The other nitro substance, formed from the finely divided fibers left in the dry distillation that attends the formation of peat, yields an explosive without any admixture of an oxygen-bearing salt. In the open air it burns very rapidly, leaving a slight carbonaceous residue. Peat containing animal admixtures acts just like this bog peat.

The manufacture of explosives from peat, owing to the cheapness of the material and its wide dissemination, as well as the simplicity of the process, is doubtless an important step in advance.

The chief characteristics of the newly prepared nitro substances are the following: The specific gravity of all is very nearly that of water. They all possess a powerful aromatic odor, resembling the fruit ethers, which is particularly noticeable on burning them. All solutions of these substances have a strong refractive power. The greater part of them are soluble in the strongest nitric acid as well as in alcohol. They are all insoluble in water. In the open air they all burn with a bright, but more or less smoky flame. Their molecules are so slightly united that they can be exploded alone or mixed with oxygenated substances by simple ignition.

STEAM ROAD CARRIAGES.—The principal cause of the lack of success in building a practical steam road carriage is the difficulty experienced in the efforts to so "hang" the engine and boiler that the carriage may run in any direction, or over ordinary obstacles, without seriously affecting the joint and machinery connections. So says an eminent mechanical writer. Even the English acknowledge this in their efforts to run steam road carriages over the exceptionally good roads of England.

THE last edition of the *Railroad Gazette* reports the completion of 8 081 miles of railroad thus far this year, against 5 340 miles reported at the corresponding time in 1881, 4,135 miles in 1880, 2 507 miles in 1879, 1 422 miles in 1878, 1,548 miles in 1877, 1,740 miles in 1876 903 miles in 1875, 1,180 miles in 1874, and 5,147 miles in 1872.

KING ALFONSO expresses a desire that the money which would be used to celebrate the birth of the infant Spanish princess at Havana be devoted to the relief of sufferers by the cyclone in Vuelta Abajo.

Progressive and Substantial Patent Agency.

The SCIENTIFIC PRESS Patent Agency was established in 1860, and has ever since been the leading Patent Agency on this side of the continent. Thousands of patents have been secured through this old and reliable Agency; and from personal experience, most of the leading inventors of this coast can testify their great satisfaction at the promptness and dispatch with which their business has been put through, and the best patent claims admissible obtained.

There are few solicitors of Patents in the United States who have been as largely, or so continuously and successfully engaged in the soliciting of patents.

As editors and publishers of leading scientific, mechanical and industrial newspapers for the past 20 years on this coast, Dewey & Co. have superior facilities for acquiring and giving information upon all subjects of discovery, whether in the line of the farmer, the miner, the manufacturer, the mechanic or the scientific inventor.

Their files of illustrated, scientific and mechanical publications afford an encyclopœdia of useful knowledge pertaining to the development of all branches of business upon this coast for many years past.

Their library of books on home and foreign patent laws; United States and Foreign Patent Office Reports; mechanical, industrial, and scientific text books, encyclopœdias, etc., is one of the most complete for reference in patent matters, in the United States outside of Washington.

Here an inventor can secure a knowledge of the State of the art, in any particular class he wishes to investigate and improve in, that will greatly aid him in his work of inventing.

They also mail (free, on receipt of postage stamp) a reliable pamphlet containing valuable information for inventors and patentees.

Geo. H. Strong, W. B. Ewer and A. T. Dewey comprise the firm of Dewey & Co., Patent Solicitors. Their Patent Agency is favorably located and connected with the MINING AND SCIENTIFIC PRESS and the PACIFIC RURAL PRESS offices, at No. 252 Market St., S. F., journals that are well known among the ably conducted and widely circulated progressive American weeklies of the day.

Extra Type for Sale

We offer Scotch brevier type (same as used on this paper) for sale in any quantity from 100 lbs. to 1,000 lbs., for 25 cents per lb., if ordered soon. Also, several hundred pounds of nonpareil at favorable rates. The type is in good condition and is of a very durable character.

DEWEY & CO.

Pay in Advance.

Our terms for subscription are in advance, and we desire no new names on our list without prepayment.

Shorthand Writer.

Compound Astigmatic Lenses Mounted to Order. Two Hours Notice.

Obstructing Navigable Streams.

A decision has just been rendered by J. F. Cowdery, City and County Attorney of San Francisco, on the obstructions in Islais creek which is of interest because of its wide bearings upon the preservation of other navigable streams. The obstructions have been ordered removed by the Board of Supervisors, thus acknowledging the truth of the position taken by Mr. Cowdery. The whole point of the matter is that by the organic act of California admitting the State to the Union, there is provision that no power shall rest in the State to obstruct navigable streams, but the same must be kept open as naturally found. This point has, of course, a direct bearing upon the debris question, and was used with good effect by Attorney-General Hart in his argument on the Gold Run case. Credit for bringing forward this important point is due to Peter T. Seculovich, President of the Islais creek property owners' association. City Attorney Cowdery in his opinion says: "It is doubtful if I would have been able to arrive at a satisfactory solution of the questions involved were it not for the assistance of Peter T. Seculovich," etc. The service of this gentleman in aiding to place the preservation of our navigable streams and our grand harbor on an irrefragable basis is worthy of general recognition.

Pacific Coast Lumber Interest.

Later announcements have been issued from the census bureau giving the statistics of forestry of the State of California and Oregon and of Washington Territory. With regard to California the bulletin says: The principal trees of the State are redwood, red fir, tide water spruce, chestnut and oak on the Coast Range, and sugar pine, yellow pine and red fir on the Sierra Nevada. Any estimate of the actual amount of lumber standing in the State, except redwood, is not possible with the existing knowledge of the country. The principal lumber industry is confined to the redwood belt on the line of the Central Pacific Railroad on both slopes of the Sierra Nevada, to points in Butte, Tehama and Mono counties, and in the San Bernardino mountains. The total product of the State for the census year was 304,795 000 ft. of lumber 242 400 000 laths, 138 718,000 shingles, 2,063 000 staves and 1,203,000 sets of barrel headings.

In Oregon the most valuable trees are in the order as set down; red fir, tide water, spruce, red cedar, hemlock, Port Orford cedar, white oak, sugar pine, chestnut, oak, larch and scrub pine. The principal lumber industry centers near Portland and Empire City. The product of the coast regions for the census year was 151,443 000 ft. of lumber, 17,950,000 laths and 2 745,000 shingles. The product of the State east of the Cascade Range was 25 798 000 ft. of lumber, 295,000 laths and 2,295,000 shingles.

Washington Territory, according to the bulletin, is covered west of the Cascade mountains by the heaviest belt of forest growth in the United States. The most valuable trees of this region are red and yellow fir (covering about seven-tenths of the forest growth), red cedar, hemlock and water tide spruce. East of the Cascade mountains the most valuable trees are red fir, yellow and white pine larch, red cedar and hemlock. The principal lumber region is confined to the shores of Puget Sound. The product of this region for the census year was 144,387,000 ft. of lumber, 6,550,000 laths, 710,000 shingles and 2 366,000 staves. The product of the coast outside of the Puget Sound region was 9,599 000 ft. of lumber and 200,000 shingles, and of the Territory east of the Cascade Range, 6,190,006 ft. of lumber and 2,700,000 shingles.

How People Die.—Miss Nightingale has pointed out how constantly the mental state of the dying depends on their physical condition. As a rule, she tells us, in acute cases interest in their own danger is rarely felt. "Indifference, excepting with regard to bodily suffering, or to some duty the dying man desires to perform, is the far more usual state. But patients who die of consumption very frequently die in a state of seraphic joy and peace; the countenance almost expresses rapture. Patients who die of cholera, peritonitis, etc., on the contrary, often die in a state approaching despair. In dysentery, diarrhœa, or fever, the patient often dies in a state of indifference." Those who have carefully examined the dead on a battle-field, or in the streets after an *emeute*, are struck with the fact that while the expression on the faces of those who have died by gunshot wounds is one of agony and distress, the dead by sword have a calmer expression, though their wounds often seem more painful to the eye. A very careful observer, who was through the Indian mutiny, entirely confirms this. After giving several instances, he says: "A rapid death by steel is almost painless. Saber edge or point divides the nerves so quickly as to give little pain. A bullet lacerates."—*London Spectator.*

Saw Teeth Tipped With Iridium.—Mr. John Holland, whose discoveries and improvements in the working of iridium were noticed not long ago, has now made a circular saw with teeth tipped with that hard and refractory metal. The saw is 12 inches in diameter, end is to be used for sawing hard woods.

Transmission of Power by Wire Ropes.

According to a recent treatise on the transmission of power by wire ropes, issued by the William Orton Manufacturing Company, of Sterling, Ills., the distance to which wire rope transmissions may be applied ranges from 50 or 60 feet up to several miles. As an example of long transmission, attention is directed to that of Schaffhausen, Switzerland, at the Falls of the Rhine. Here 800 horse-power is carried diagonally across the line, and extended for a distance of two miles, and there distributed among 50 different manufactories situated in every imaginable position, and embracing all the varied arrangements of changing directions. Wire rope transmission comes into use at the point where a belt or line of shafting becomes too long to be used profitably. In point of economy it is much cheaper than its equivalent, either in shafting or belting. This method has been extensively introduced in Europe, and with great success for several years past. It is now receiving a rapid development in this country. It has the advantage of transmitting power in any direction, up or down hill, across rivers, around buildings or obstructions of any kind, and thus make available many sources of power which are otherwise useless. The ropes hang free in air, and require no protection from the weather, except an occasional coat of warm coal tar, which may be applied to the rope by pouring from a can into the grooves of the wheel while running. Instead of coal tar, raw linseed oil may be swabbed on the rope to keep it from rusting, and thereby preserve it. The ropes run perfectly smooth and noiseless on vulcanized rubber filling, and are not affected in the least by wet or cold, snow or ice.

The Sorghum Prizes.—It will be remembered that the U. S. Commissioner of Agriculture early last summer made an offer to the farmers of the country of liberal prizes for essays upon the cultivation of sorghum and sugar beet and the production of sugar from the same. The Department has recently received notice of more than a hundred competitors for the several prizes, but it appears that the accounting officers have raised a point as to the power of the Commissioner of Agriculture to make such expenditure of money, and the office of the First Controller, Judge Lawrence, has intimated to the Department of Agriculture that it would be wise to make no awards as proposed until the First Controller shall have definitely reached his conclusion. The terms of the appropriation act are held by the Treasury accounting officers, it is said, to authorize payment of money from this fund for no other purpose than "continuing experiments in sorghum culture." Commissioner Loring's idea was to advance the interests of this particular branch of his department's work by increasing the stock of knowledge respecting it, and it was with this view that the prizes were offered. The essays which have been called forth by this offer contain a great deal of valuable information, and it would be very embarrassing if, owing to the construction of a Treasury official, he shall have to return them without the promised prizes. It is to be hoped that current reports are incorrect.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the Watchman's progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tell whether the Watchman has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the Watchman family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the Watchman.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Cement to Withstand Petroleum.—Gelatine (glue) mixed with glycerine forms a compound which can be liquified by heating, but which solidifies on cooling, and forms a tough, elastic solution, having somewhat the appearance and character of india rubber. This compound is entirely insoluble in petroleum or benzine, and any vessel coated or painted with it becomes impervious to these liquids.

Mining and Scientific Press.

The Mining and Scientific Press is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The Press gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

GENERAL FRATERNITY NEWS.

Knights of Pythias.

JURISDICTION OF PENNSYLVANIA.—Bro. Geo. Hawkes, Grand K. of R. and S. of the jurisdiction of Pennsylvania, has issued his annual statement or journal. It is a well gotten up, comprehensive and altogether satisfactory showing of the status of the Order in that State. The tabular statements are complete and reliable. From this we learn that 11 new Lodges were instituted during the year, the last one being Hyndman Lodge, No. 483, which was organized July 26th, and works in the German language.

Ed. Roth, K. of R. and S. of La Fraternite Lodge, No. 79 (French baby), of Los Angeles, paid this city a visit recently, and was the guest of Deputy Frank Mitchell. Bro. Roth is a genial gentleman, and succeeded in making many warm friends during his short stay amongst us. He reports No. 79 as on the high road to prosperity, doing work at each convention, and he states that the Lodge will certainly have a membership of 100 before January next.

THE monthly meeting of the Board of the Bureau of Relief, held at the Castle, Nov. 6th, was one of the best for some time. Considerable business was transacted, among which was the providing for the relief of the immediate wants of sojourning brethren. The managers and officers of this Board are deserving of special commendation for the able and systamatic manner in which they have conducted the business for the last two or three years.

Black Diamond Lodge, No. 29, of Nortonville, gave a grand masquerade ball on the occasion of its ninth anniversary. The attendance was very large, among those present being the Grand Chancellor. A splendid supper was served at the Black Diamond hotel, and the whole affair was an immense success.

PROPOSED BALL.—On the evening of Monday, December 4th, the thirteenth anniversay party will be given by Excelsior Lodge, No. 12, at Covenant hall, 121 Eddy street. The grand march will begin at 9 o'clock. The entertainment promises to be one of the most enjoyable, and a large number will be present.

BRO. J. C. MARTIN, late K. of R. and S. of Golden City Lodge, No. 63, has gone to Prescott, Arizona, to take charge of one of the newspapers of that city. The Lodge has thereby lost a zealous member and a faithful officer. We wish him every success in his new field.

A man by the name of J. C. Cameron, formerly a member of the Knights of Pythias in Oregon, has been practicing a disreputable business in this community, and this notice should warn all brothers not to hold any fraternal communications with him whatever.

LOS ALAMOS LODGE, No. 73, is represented in this city by Bro. John S. Bell. He reports that his Lodge, which was instituted last June, has a membership of about 50, and good prospects for an increase before the close of the term.

PAST CHANCELLOR SCHAFFNER informs us he has now about 80 names on a petition for a new division of the Uniform Rank in this city. Until 100 are secured no effort will be made to institute it.

BRO. E. I. WOLFE, the efficient Keeper of Records and Seals of Garfield Lodge, was married on the 12th inst. to Miss Leonora Lipman. We extend to them our warmest congratulations.

Independent Order of Chosen Friends.

Grand Secretary Lang has sent the following notice to the various Councils. It is for assessment No. 11, and death No 28:

The Relief Fund of this Order being reduced below the sum of $3,000, you will immediately foward the money, now in your treasury, contributed by each member, or due from him or her, on or before the 2d day of November, 1882, the date of the last death, less 10%, which you will transfer to your reserve fund.

Notice has been received at this office of the following deaths:

No. 26, Hans C. Lang, of Cosmopolitan Council, No. 52, San Francisco. Admitted April 28, 1882, aged 48; died Oct. 27, 1882. Class 2d. Death from typhoid fever. Paid in Relief fund, $9.

No. 27, Dennis Geary, of Bohemian, No. 23, San Francisco. Admitted Dec. 15, 1881, aged 48; died Nov. 2, 1882. Class 3d. Death from anesthesia. Paid in the Relief fund, $24.75.

No. 28, Chas. Campbell, of Michigan Bluff, No. 75, Michigan Bluff, Cal. Admitted April 28, 1882, aged 51; died Nov. 2, 1882. Class 3d. Death caused by pneumonia. Paid into the Relief fund, $21. The following statement of Relief fund is made:

October 21, Balance on hand,		$ 642 32
Received on Assessment No. 7,		4.01
" " " " 8,		144 44
" " " " 9,		750 81
" " " " 10,		5,176.83
Total,		$6,718.41
Paid Death No. 17,	$3,000.00	
" " " 25,	3,000.00	6,000.00
Balance on hand,		$718.41

Assessment No. 11 has, or should have been, collected in all subordinate Councils. It is delinquent upon all members on the 20th of November, and if not paid by that time the members delinquent must be suspended at the first regular meeting thereafter, and the full amount immediately forwarded to the Grand Secretary. On the 8th of December it will be one year since the formation of our Order, prior to which it is not anticipated to levy another assessment, thus making but 11 assessments called into the Grand Treasury in 12 months. Prompt payment by the Councils of this assessment will obviate the necessity of calling in an assessment before the 21st of December. The Financier will proceed to collect assessment No. 12 from all members in good standing on the 2d day of November, 1882.

VALLEY COUNCIL, No. 60, of Sacramento, will soon be one of the strongest Councils of our Order. It is composed of male members only, but not a meeting night passes by but from one to seven new members are initiated.

The first anniversary of the Order will be celebrated on Wednesday evening, December 20th, at B'nai B'rith hall, at which time a literary and musical entertainment will be given in first-class style.

ALHAMBRA COUNCIL, which holds its meetings on the corner of Leavenworth and Pacific streets, not yet a month old, is doing well.

OFFICERS' roll books are now ready for delivery. The price is 50 cents. They are good for 10 years.

Independent Order of Odd Fellows.

A NEW PROJECT.—Articles of incorporation of the Odd Fellows' Hall Association of Oakland have been filed with the County Clerk. The purposes of the association are to own a lot and erect a building for the accommodation of Odd Fellows' Lodges, and to rent halls, Lodges, stores, etc., in the building. The Directors are Wm. H. Rouse, Alfred Taylor Eastland, A. L. Ellis, John McVey, F. M. Farwell, E. Child and George W. Lewis, all of that city. The capital stock is $16,000, divided into 1,600 shares, of which Wm. H. Rouse has subscribed 859, the remainder being divided among the other Directors.

RIDGLEY Lodge, No. 294, of Los Gatos, will give a ball and entertainment on Thanksgiving night. Tickets are placed at $1.50, and the proceeds are to be used in furnishing a new hall. A fine Thanksgiving supper will be served in the hotel. A good time is expected.

THE various encampments of San Francisco have reduced their admission fee to $10, the minimum, and consequently new members are being initiated every evening.

A SPECIAL session of the Grand Lodge, for the purpose of conferring the Grand Lodge degree, will be held in Marysville, Cal., Dec. 2d.

GRAND MASTER Freer expects to visit the Lodges in Mendocino county soon.

THERE are three or four localities where the establishment of Lodges is contemplated.

THE enthusiasm in the Encampment branch continues.

Knights of Honor.

THE Catholic Benevolent Legion has recently been organized in Brooklyn, N. Y., with the purpose of giving Roman Catholics the advantages of a beneficial society similar to the Knights of Honor. The Archbishop of Baltimore, in a letter to its managers, gives the following sensible and comprehensive advice: "To make your association a permanent success, two conditions are essential—first, the association should be governed by a wise and well matured code of laws; secondly, those rules should be rigidly and impartially enforced."

LIEUT. DANENHOWER delivered his first lecture on the 3d inst., under the auspices of Ivy Lodge, No. 2,157, in the Brooklyn Academy of Music. The Academy was filled by a very appreciative audience, who listened very quietly to the lecturer's narrative to its close, and then warmly applauded him. The lecturer was introduced by Past Grand Dictator Warnock.

MAJOR S. G. SMITH, W. Grand Dictator of the Iowa Knights of Honor, is going to spend the winter in California.

THE amount of the pay roll of the last session of the Grand Lodge was $3,866.16.

THE Iowa Knights of Honor now number about 1,000 members and increasing very fast.

THE semi-annual report of the Grand Lodge of Kentucky shows a gain during the term of three Lodges and 226 members. There are now 114 Lodges in that State, having a membership of 6,651, or an average of over 58 members.

THE Grand Dictator has decided, in effect, that a Lodge cannot fine a member for non-attendance at its meetings.

ORIENTAL LODGE, K. of H., has surrendered its charter; 24 of its members have attached themselves to Fidelity Lodge.

REV. DR. FISBE, the eminent divine of Des Moines, has been appointed Grand Chaplain of the Iowa Knights of Honor.

Improved Order of Red Men.

Great Sachem C. E. Spencer, of Sacramento, and Great Prophet, J. A. Filcher, of Auburn, were in San Francisco recently. Both officials report the Order as in a very flourishing condition all over the State. Bro. Spencer has recently visited numerous of the Tribes, and find them doing good work. He is a most enthusiastic worker, and has the interest of this great Order fully at heart. He earnestly favors the establishment of a graded beneficiary feature in the Order. With such men as leaders, almost any organization would flourish.

THE *Wampum Belt* urges every member of the Order to join the Benefit Insurance Department.

THE most encouraging reports come to us from all over the land of the progress made by the Order. The actual membership at this time cannot be far from 33,000.

The election of officers occurs in December. The newly elected officers will be raised up during the early part of January.

Several tribes are in process of establishment.

Native Sons of the Golden West.

Quite a number of the members of the Order have been prevailed upon to sacrifice themselves upon the altar of their country's good, and accept office at the will of the "dear people." Notably the following are within our notice: John W. McCarthy, of Modesto Parlor, Clerk of the Supreme Court; Charles F. McCarthy, of Modesto Parlor, County Clerk of Stanislaus Co.; J. C. Simmons, Jr., of Modesto Parlor, District Attorney of Stanislaus Co.; John H. Grady, of California Parlor, Tax Collector of San Francisco; J. J. Dunne, of California Parlor, Justice of the Peace of San Francisco; Frank M. Clough, of California Parlor, Superior Judge of San Francisco; J. J. Callahan, of California Parlor, Assemblyman from Ninth District, San Francisco; Wm. T. Sesnon, Pacific Parlor, County Clerk of San Francisco; George A. Young, Pacific Parlor, Justice of the Peace of San Francisco; S. L. Terry, Stockton Parlor, Assembly, San Joaquin Co.; Frank D. Ryan, Sacramento Parlor, Assembly, Sacramento Co.; W. M. Clark, Marysville Parlor, District Attorney of Yuba Co.; A. F. Jones, Oroville Parlor, District Attorney of Butte Co.

GRAND PRESIDENT GRADY will shortly visit all the Parlors, besides concluding the arrangements for the institution of three new Parlors immediately and several more in the near prospective. If hard work and unremitting attention to the duties of his office during the remainder of the term will accomplish that end, he is determined to leave the Order at the close of his administration stronger in membership, richer in this world's goods, and higher in standing, than ever before.

SOME of the boys are not fortunate in the selection of their residence, or perhaps it is their party affiliations that is to blame. What we mean is that some ran for office in districts wherein they were unable to overcome the majority of the party opposed to their election.

The ball given by Pacific Parlor came off on the evening of Friday November 17th, and was a perfect success in every particular.

United Ancient Order of Druids.

The following are the officers installed in the various subordinate Groves for the present term, as far as reported:

GROVES.	No.	NOBLE ARCH.	VICE ARCH.	SECRETARY.	TREASURER.
San Francisco	3	H. Mohr.	John Schmidt.	F. H. Druffel	H. Pfister.

Olema	39	L. Honetti.	Henry Richmond.	Jos. Cimoni.	T. G. Lamb.

ON Friday evening, the 17th inst., Noble Grand Arch Rohrbacher and Grand Secretary Chase left for Fisk's Mill, where they visited Plantation Grove, No. 32, on the 18th inst. At Duncan's mill they will be met by District Deputy Von Arx and Grand Marshal Eckert, and escorted to the hall, where great preparations have been made for their reception.

ON Thursday, the 23d, the Noble Grand Arch, Deputy Grand Arch, Grand Secretary, Grand Representative Adam Smith, and, it is hoped, a large delegation from this city, will make an official visit to San Joaquin Grove, No 9, Stockton.

THE Board of Endowment Directors, at their meeting held on Wednesday evening, 15th inst., levied assessments Nos. 26 and 27, of $1.50 per member, occasioned by the death of Benj. Gibhardt and Peter Linn, of San Joaquin Grove, No. 9, Stockton, who were members of the fund.

AN INVENTIVE WORKMAN.—Bro. G. Liesenden, P. M. W., of Stockton, 23, has received letters patent, through the Patent Agency of Dewey & Co., for an improved sulky plow. It is constructed on entirely different principles from the ordinary sulky plow, and the favor with which it has been received by residents of Stockton and vicinity is very flattering to our worthy brother. We shall give a cut and more extensive and elaborate descriptions of this new implement, that certainly has great advantages, and may be regarded as one of the great improvements of the season in agricultural invention.

THE Sportmen's Headquarters, 630 and 632 Montgomery street, of which Bros. Clabrough & Golcher are proprietors, has a select stock of goods. These gentlemen not only import the finest class of goods in the way of firearms, but are prepared to do good work of any pattern and kind of repairing. Hunters wishing to get a first-class outfit or fishing tackle can find here the latest and the best.

WASHINGTON BUILDING.—This well-known building has been neatly refitted and finely equipped for societies, social meetings, balls and parties. Mr. A. W. Wilson, the proprietor, is a very pleasant and accommodating gentleman, and makes all the entertainments held in his house both enjoyable and pleasant.

A SUCCESSFUL BROTHER. — Bro. Robert Thompson has just returned from the Eastern States. While there he introduced his "patent seamless foot boot." He has succeeded in establishing manufactories in all the principal cities, and the favor with which his seamless boot is received by the trade assures our worthy brother an ample fortune.

RETURNED.—Dr. Frank H. Dennis, for a long time Medical Examiner of St. John's Lodge, of this city, has returned from his tour in Europe, where he visited the hospitals of Paris, London and Vienna. He has now resumed practice, and has opened a fine office in Phelan's building.

DOES THE SUN LOSE ITS HEAT?—In a paper read by Dr. C. W. Siemens before the English Royal Society lately, the ground was taken that all the heat and energy sent from the sun find their way back to the great solar center, which thus suffers no diminution of its forces.

INCLUDING assessments 17 and 18, the whole number of deaths is 694, and the total of assessments 179.

THE FRATERNAL RECORD.

A Representative Home Journal for Fraternal Societies—Issued on the 8th and 23d of each Month. Subscription, in Advance, $2 per Year.

The FRATERNAL RECORD is recognized as a standard fraternal newspaper on the Pacific Coast and one of the leading society journals of the age. It is the official organ of several leading Orders and the recognized representative of various other prominent fraternal and beneficiary associations flourishing West of the Rocky mountains. Among the Orders represented in its columns are the following:

AMERICAN LEGION OF HONOR,
ANCIENT ORDER OF FORESTERS,
ANCIENT ORDER UNITED WORKMEN,
CHAMPIONS OF THE RED CROSS,
FREE AND ACCEPTED MASONS,
GRAND ARMY OF THE REPUBLIC,
IMPROVED ORDER OF RED MEN,
INDEPENDENT ORDER CHOSEN FRIENDS,
INDEPENDENT ORDER OF ODD FELLOWS,
KNIGHTS OF HONOR,
KNIGHTS OF PYTHIAS,
NATIVE SONS OF THE GOLDEN WEST,
ORDER CHOSEN FRIENDS,
ORDER OF EASTERN STAR,
PATRIOTIC SONS OF AMERICA,
ROYAL ARCANUM,
UNITED ANCIENT ORDER OF DRUIDS.

The RECORD is also one of the best home and family papers on the coast, being extensively and handsomely illustrated, and well filled with original and choicely selected matter, conveniently arranged and carefully condensed matter pertaining to the household, health, culinary and general information. It is a welcome visitor to every member of the household.

The RECORD is issued by reliable and experienced publishers, who are liberal and enterprising in meeting the wants of their numerous patrons. Having the countenance and support of many of the best writers and most active members of the more than ordinary class of citizens, they are enabled to make their journal superior in influence and usefulness in one of the most wide-awake and progressive portions of our Union.

The publishers will endeavor to make every number a credit to the Orders represented and a desirable representative to present to their neighbors and friends at home and abroad.

All members of the Orders represented, who are familiar with its columns, will readily see the advantage of subscribing and assisting in further enlarging the circulation and advancing the influence of the paper as rapidly as possible.

A limited number of first-class advertisements will be received at very reasonable rates for its circulation and good standing.

A Free sample copies sent, on application, to all those who desire to assist in extending its circulation.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P. OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
L. L. WOODMANSEE—Nevada State.
B. W. CROWELL—Los Angeles county.
L. WALKER—Butte, Tehama and Shasta counties.
E. A. WILLIAMS—San Francisco.
S. E. BAKER—Eastern States.
J. WILTSE, Amador county.

Agricultural Implements.

The enterprising firm of George Bull & Co., 31 Market St, have just received a carload of the "Farmers' Friend" Gang Plows, 50 of which were sold to arrive. The demand for this gang since the season opened has been very large, extending to all parts of the Pacific Coast and wherever they were used last year. Messrs. Elwood Cooper and Col. W. W. Hollister, prominent orchardists and farmers, testify to their merits, and are using them with satisfaction.

Apprentice Wanted.

Wanted, a well-recommended, able and steadfast boy, of fair education and good intellect, to thoroughly learn the printing business. None other need apply. Address this office.

BY TELEPHONE.—Subscribers, advertisers and other patrons of this office can address orders, or make appointments with the proprietors or agents by telephone, as we are connected with the central system in San Francisco.

FALL OPENING.

J. A. BILZ'S CARRIAGE MANUFACTORY,

Machine and Blacksmith Shop,

PLEASANTON, - - California.

I present above an exact representation of my new Excelsior two-wheeled Phæton, which is the result of long experiment, and with which I am willing to challenge competition by any other two-wheeled vehicle made. I guarantee that the chucking motion is entirely removed, and that for ease of riding, my Phæton is equal to any Buggy. The shafts are hung loosely in a rubber box, by which means the jar is completely removed from the axle and the horse's back. The body is also hung loosely on a round axle, and is balanced in front by two coil springs with eccentrics, which prevents the "jogging motion" that would otherwise be imparted by the horse. It is, therefore, as easy for the horse as for the rider.

The Excelsior Phæton

Is made in four different styles, ranging in price from $90 to $160. I also keep a large stock of Family Carriages, Open and Top Buggies, Spring Wagons and all kinds of Farming Implements, all of my own manufacture. I also manufacture my well-known VINEYARD and ORCHARD PLOW, which can be run close to trees without danger by the whiffletree. I am prepared to do all kinds of machine work.

N. B.—Parties from abroad who want to get the best article made, at reasonable prices, should address me for further information and reference.

Depot, Third and Howard, will be promptly served.

Are Toads Poisonous?

In answer to this query, propounded by Mr. Herbert Brown in a recent number of *Knowledge*, a decided affirmative may be returned. The toad *is* venomous, though not in the way that is implied by the general acceptation of that term as is commonly believed. Nothing can be more harmless than the bite of a common toad—if it can be said to bite, for it has no teeth. But the glands contained in the papillæ and rugosities of the skin covering the back, secrete a milky, highly acrid fluid, which is exuded profusely on irritation. Indeed, if it were not for this poisonous secretion, the poor toad would fall an easy victim to many enemies, having neither the agility of the frog or lizard to enable it to make its escape, nor the teeth and claws of other reptiles wherewith to defend itself. Cats, which are eager hunters of frogs for food, spit and foam at the mouth when they pick up the wrong batrachian by mistake; frog-eating snakes, too, detect the difference, and will not take toads as a rule. When a snake, greatly pressed by hunger, swallows one, it usually rejects it again immediately afterward, and not unfrequently dies. Those frogs which prey upon their own kind (as most frogs do) despise their ugly relative from an alimentary point of view; and, curiously enough, certain toads which devour frogs share the same antipathy to their race. Except with very small animals the poison appears to act rather as a local irritant than a toxæmic agent; it has no effect upon the sound skin, but will cause any abraded surface to inflame to extensive ulceration, while great pain results from its application to the internal mucus membranes.

Any one who can overcome his repugnance to the creature sufficiently to put his lips or tongue against the skin of an angry toad will experience an intensely acrid taste; he should shut his eyes in making such an experiment, as the glands sometimes emit their secretion in a jet. Mr. Frank Buckland quotes a case which occurred in Oxfordshire, where a drunken brute bit a toad's head off. Happily, his teeth went right through these glands, and his mouth and throat immediately became swollen and inflamed to such an extent that his life was in jeopardy for some hours. These characteristics are much more strongly marked in many of the tropical toads. My giant toads used to swelter venom when they were taken in the hands in such abundance that it would pour off their backs and drip from them, before they became tame; and I was thus enabled to collect a large amount. This species feeds on rats, and it is possible that this copious exudation may serve to prevent their prey from biting them when seized by the leg or otherwise awkwardly caught. I once put a "coribo" snake (*Dromicus fugitivus*) into a box with three of these toads for a single night, for lack of other accommodation; it was a fine, active specimen, five or six feet long, and its movements during the night so disturbed them that in the morning I found the floor of the box all awash with fluid. The snake was lying on its back, apparently dead; and, though it recovered somewhat on being plunged into a bath, it survived only a few days.—*Arthur Straddling in Knowledge.*

MAGNETIC OBSERVATIONS.—A series of magnetic observations, which are to extend over a space of 14 months, have recently been commenced at Goettingen, Germany. They will take place under the supervision of the professor of the University, on the 1st and 15th of every month at the same hours as those performed by the international expeditions sent out to the North and South Poles. Their principal object is to ascertain the magnetic condition of the earth. Experiments will also be made with respect to magnetic intensity in the garden of the observatory, in a pavilion built up of wood and brick only, iron being omitted on account of the disturbing influences which it would exert, rendering the observations practically valueless.

THE construction of nine Russian war vessels has been ordered, seven for the Baltic and two for the Black Sea ports. Cronstadt is to be greatly strengthened. This is in consequence of the lessons taught by the English bombardment at Alexandria.

AN ILLUSTRATED

AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.

Because it is the largest and best agricultural weekly west of the Rocky mountains

That Patrons may be reliably informed on the progress of the Order in this and other fields.

That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.

That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress

That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.

That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements.

That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information consubscription, etc., on application.

Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

A POISON FOR TUBERCULAR BACTERIA.—A paper was recently communicated to the Paris Academie des Sciences, by M. De Korab, on the action of helenine on the bacteria of tuberculosis. The facts mentioned deserve notice, although we fear that the hopes suggested are too bright to be realized. The bacilli was cultivated in bovine blood serum, which was daily heated for a week to effectually sterilize it, and was then coagulated by a temperature of 65° C. A guinea-pig having been rendered tubercular by inoculation and inhalation, small tubercular masses were taken from it, introduced into ten tubes containing the tubercular serum, and the tubes plugged after some helenine had been poured into three of the tubes. All were kept at a temperature of 37° C. for a week, and at the end of that time inoculation experiments showed that the organism in the tubes to which the helenine had been added no longer caused tuberculosis, which was readily produced by the contents of the other tubes.

ALBUMEN IN COWS' MILK.—Dr. Schmidt, Mulheim, has been investigating the nitrogenous bodies in cows' milk, about which so much diversity of opinion has hitherto prevailed. He says that three albuminoid substances are regularly present in the milk, viz.: caseine, albumen, and pepton. The average of seven analysis gave 2.43% of caseine, .38% of albumen, and .13% of peptone. Under certain circumstances the amount of albumen may increase until it equals that of the caseine. The pepton is formed from the caseine by a fermentative process; this ferment is destroyed by a boiling temperature, but its activity is not destroyed by salicylic or carbolic acid, so that in this respect it resembles the ferment that digests albuminoids. Since milk, on long standing, may lose 10% or more of its caseine by its conversion into peptons, it should be made use of as fresh as possible when employed for making cheese.

You often say, "How much good I would do with my money, if I were as rich as that man, or the other." How much good do you do now with what you have? "Oh, if I had only time what would I not learn?" How do you spend the time you have?—*Scattered Seeds.*

PREPARING WOOD PULP.—A pulp manufactory in Somerset county, Pa., consuming spruce and hemlock timber, instead of chopping down trees and sawing them up, in order to get the wood into the pulp mill, blows them to splinters with dynamite. An eye witness thus describes the process: "A fine large spruce was selected, and a hole was driven in about 10 inches, the chips were removed, and a dynamite cartridge was inserted. The dynamite comes in sticks like a candle, and resembles moist brown sugar. A fuse was attached, and the men sought a place of safety. In a few seconds there was a mighty roar, and the great tree was lifted up in the air about 10 feet, and then with a swoop and a crash it came to the earth, splintered half way up the trunk. Dynamite is not cheap, but taking into consideration the time, labor, and wear and tear of tools saved, is not as expensive as might be supposed." It is questionable, however, whether some standing timber not demanded by the manufactory is not seriously injured by this process.

CARE AND USE OF BELTS.—In lacing a belt, always begin at the center, keep the ends exactly in line, and lace both sides with equal tightness. The lacing should never be crossed on the side of the belt that runs next the pulley. Use thin but strong laces. Belts should never be oiled except when they become hard and dry, and even then the oil should be used very sparingly. Oil not only rots the leather, by its own decomposition, but also causes the belt to stretch. In oiling or greasing a belt use only a pure thin oil. A thick, pasty oil is not good. Such oil will soon enter upon a process of decomposition and rot the belt.

MONEY VALUE OF SCIENCE.—The Signal Service Office estimates that ships containing at least $13 000 000 of property, besides many lives, were saved from running into the disastrous cyclone last month by the warning it gave. The money thus saved in this one storm would pay the expense of the Service for ten years.

THE Philadelphia street railroad companies, roused by the complaints of passengers, have undertaken to prohibit smoking on the cars. Smokers are not tolerated even on the front platforms.

Guide to Silk Culture.

A Useful Manual for Beginners.

The "Silk Growers' Manual," by W. B. Ewer, contains, in a condensed and clear form, instructions for the sericulturist. We advise our lady friends to buy a copy.—*Fresno Expositor.*

Furnishes in a brief and explicit manner all necessary information in the matter of silk culture.—*San Jose Mercury.*

An interesting compilation to encourage home silk culture in California. Everybody should read it.—*Anderson Enterprise.*

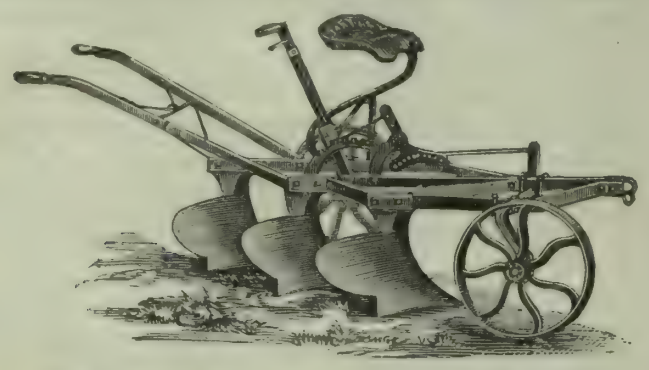
Anyone interested in silk culture will find this full of valuable information.—*San Joaquin Valley Farmer.*

Furnishes all necessary information to begin the silk business.—*Marysville Appeal.*

It is a very interesting little work, and well worth the price.—*Mendocino Beacon.*

It is worthy the perusal of all interested in silk culture.—*Concord Sun.*

Copies of "The California Silk Growers' Manual" mailed from this office for 25 cents each.



This paper is printed with Ink furnished by Chas. Eneu Johnson & Co., 509 South 10th St., Philadelphia & 59 Gold St., N. Y. Agent for Pacific Coast—Joseph H. Dorety 527 Commercial St., S. F.

Ranchers, Farmers, Orchardists and Vineyardists,

ATTENTION!

A New Era in Gang Plows, and Pacific Coast Plowing Completely Revolutionized!

2-Plow Sulky, Stockton and Orchard Plows Cast Aside.

THE "FARMERS' FRIEND" THREE-PLOW GANG.

This Plow, as will be seen by the cut, consists of three 9 inch Plows securely fastened to a wrought iron frame, and is easily adjusted by a lever to plow from three to nine inches deep.

We desire to call the attention of Agriculturists to the main advantages of this Plow over all others:

1. *Its Superior Work*, the soil being thoroughly cut up and the furrows being turned completely over, effectually covering all trash and weeds.
2. *Its Special Adaptation to Orchard and Vineyard Work*.—Being built low, it does not interfere with the branches overhead, and is easily handled around trees and vines.
3. *Its Success as a Sidehill Plow*.—Being without a pole, the Plow is enabled to follow the team; and for Sidehill Plowing we warrant it unequalled by any Plow, single or gang.
4. *Its Economy* in the saving of time and horse-flesh. This Gang is exceedingly light of draft, in common soil three horses plowing five acres a day. The "FARMERS' FRIEND" *will more than pay for itself in a single season*.
5. *Its Great Strength and Durability*.

These Gangs will skim sod two to four inches deep; plow Corn, Wheat or Oat stubble from two to eight inches deep; and in working Summer Fallow once over are more effective in killing weeds and preparing the ground for seed than three times over with the best cultivator in the market.

Our success in the introduction of this Plow is unparalleled in the Plow business, and is far surpassing our most sanguine expectations. We are receiving daily letters in praise of the "Farmers' Friend" from all parts of the State, and upon application we will mail the names of Farmers who are using these Plows, and by writing direct to them, reliable information can be obtained.

In conclusion, we would say that we will ship one of these Plows on trial, and will give the following guaranty with it: That the "FARMERS' FRIEND" GANG PLOW *will do better work, and more of it, with less horse-flesh, than any Plow on the Pacific Coast.*

PRICES:

With Steel Shares	$80
With Chilled Iron Shares	75
With Seat (Extra)	5

For Further Information Write us or Call at our Store.

Important to A. O. U. W.

We occasionally send complimentary sample copies of the WATCHMAN to the various officers and members of the A. O. U. W. We ask as a special favor that those receiving them, and all interested in the success of the various Lodges will lend us a helping hand in increasing our circulation. Nothing contributes more to the successful working of the A. O. U. W. than the circulation of general Fraternity news, and the best way to secure this is through the WATCHMAN, which is an able and faithful advocate. It is to the interest of the A. O. U. W. that the WATCHMAN be placed in the hands of every Workman, and to accomplish this we must rely in a large measure upon the voluntary efforts and subscriptions.

Liberal inducements will be offered to active and reliable members who will canvass for subscriptions. Sample copies will be mailed free on application to Workmen, all of whom are invited to endeavor to assist in extending the circulation of the WATCHMAN.

Let every Workman into whose hands this notice may come, if not already a subscriber, fill out the subscription blank below, enclose two dollars, and send it to us for a year's subscription.

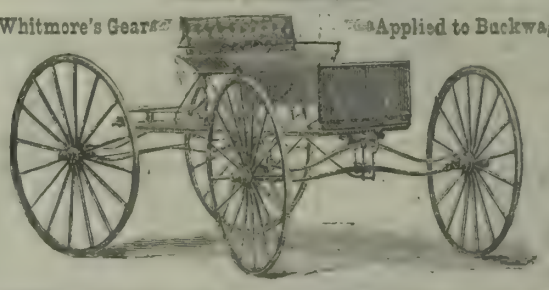
All Subscriptions at rate of $2 a year. Send registered letter, postal order or prepaid by express.

WE herewith give a front view of one of the largest furniture houses on the Pacific Coast. The house was built especially for this firm. It has a frontage of 40 ft. on Market St., and 170 ft. deep, running through to Stevenson St. The building is four stories with basement; the upper floor is used for manufacturing purposes, the third story as a warerooom, and the first and second stories as salesrooms. A large elevator is used in this building; and there are employed by this firm from 40 to 50 skilled workmen all the year. The immense stock represents all kinds of furniture used in humble life, and also of the finest class used in our palatial residences, ranging in price, for bed-room sets, from $20 to $500, and side-boards from $15 to $800, combining home manufactured goods with all the latest pattern and newest design of imported goods. Although this house deals in a general line of furniture, curtains, window draperies and lambrequins, pedestals, Louis XV. ebony furniture, etc., still they are prepared to furnish a private house or hotel from the floor up. Bro. F. S. Chadbourne is a representative Workman; one of the leading and enterprising men of this great city, and with the assistance of an able and polite corps of assistants, takes great pleasure in showing visitors through this labyrinth of furniture, etc. It is with pleasure and pride that we have frequent occasion to refer to our leading citizens and solid business men as one of the great organizations who are helping us and each other in this humanitarian work.

LEADING FEATURES OF WHITMORE'S GEAR.

(Patented November 22, 1881.)



Whitmore's Gear Applied to Buckwagon.

WHITMORE'S IMPROVED GEAR.

1—Weight carried to the extremities of the axles.

2—Long, soft, double sweep springs.

3—No side sway or pitching motion.

4—It is jointed, relieving all strain.

5—The best advantages of the side and end springs are combined in this Gear.

VOL. 6.—NO. 24. SAN FRANCISCO, CALIFORNIA, DECEMBER 15, 1882. { In advance, $2 a year / Single copies, 10 cents

Christmas Day.

Here comes the Christmas angel
All in a cloud of glory.
As once upon the plain
To sheperd boys in Jewry,
He bring good news again.
He is the young folk's Christmas;
He makes their eyes grow bright
With words of hope and tender thought,
And visions of delight.
Hail to the Christmas angel!
All peace on earth he brings;
He gathers all the youths and maids
Beneath his shining wings.

The children's holiday is at hand. It is true children have other holidays. They have a share in the Fourth of July, but the enjoyment is always subject to such parental restrictions and limitations that the youthful mind finds itself hampered almost beyond endurance. The patriotic youth asks for a pistol, and he gets a pin-whee'; it is little wonder he is conscious that the day is not all his own when he is bound down to pin-wheel patriotism. What a mockery to attempt to celebrate the Declaration of Independence when the anniversary really brings the boy nought but oppression and the pin-whee! Again, although the youth contributes much to the commemorative racket, his place is ignominious. While he fires his crackers in the back yard, his father parades the streets and assaults the sky with his oratory and pyrotechnics, and shakes the earth with his cannon. In truth, the child cuts but a small figure in the event of July.

Thanksgiving comes, but the child does not rule the day. Thanksgiving is a revel of the ancients; every thought has a backward turn. The moss is scraped from the main branches of the geneological tree, and the buds are little thought of. By day the child gnaws the "drumstick," while the ancient gorges himself with rich and savory flesh, and at dark the youth are swept to bed that the hearthstone may be clear for age to rake over the embers of antiquity.

But Christmas rights all of childhood's wrongs. Youth sits at the feast while age girds himself for attendance. From Chistmas Eve to Christmas night, the reign of childhood is unbroken. In fact, for days and sometimes for weeks before the day, the energies of the household are bent to the service of the little ones. The approach of the event casts the family beneath the yoke, and the fetter of love and devotion, which have been cautiously concealed, are worn in open view. The enthronement of the little ones is complete.

THE CHILD'S DREAM OF CHRISTMAS.

To the little ones Christmas is a pleasure both in anticipation and in realization. Carried far from childhood's thoughts as many of us have been, and bound to harsher thoughts by the burdens of life which comes with mature years, we may forget the pictures which fill the mind of the child both in waking and sleeping hours. But they should not be forgotten nor disregarded, when it lies within one's power to treat them more kindly. It is a pleasure and a duty to minister to the happiness of the little hearts entrusted to our care. It is a sin to neglect when joy is so easily given. The toys which seem priceless treasures to the child, are procured by an insignificant outlay or produced by a skillful hand in a few leasure hours. Let them not be denied. The little girl whom the engraving shows dreaming of boundless possessions of little things to gladden her waking hours, should not be permitted to open her eyes on Christmas morning without some vertifications of her dream around her.

The picture shows a lovely little girl cosily ensconced in a lovely little bed—a child surrounded by the many appliances of home comfort. There are many even in this happy land of ours who are not thus pleasantly surrounded. Do not let them be forgotten on the birthday of Him who was a friend of the poor, and did so much to alleviate their sufferings. Let it be the pleasant duty of each to spread abroad Christmas cheer. It will reward any effort which the work may cost, to think of the joy which will thus be brought into little hearts where perhaps joy seldom comes. One need not look far to find an opportunity for generous deeds. "The poor ye have always with you," saith the Saviour.

Christmas morning is a gladsome time in homes where love reigns. The hearts of the old are warmed anew by the joys of the little ones, and these joys, in youth who have been trained aright, will awaken a thankful spirit which will manifest itself in signs which make the old home glow with the light of love and affection. Then there will be a merry Christmas indeed; such, we trust, there may be in every home to which our CHRISTMAS WATCHMAN comes.

Home Miscellany.

Three Good Doctors.

The best of all the pill-box crew
Since ever time began,
Are the doctors who have most to do
With the health of a hearty man.

And so I count them up again,
And praise them as I can;
There's Dr. Diet and Dr. Quiet,
And Dr. Merryman.

There's Dr. Diet, he tries my tongue,
"I know you well," says he;
"Your stomach is poor, and your liver is sprung;
We must make your food agree."

And Dr. Quiet, he feels my wrist,
And he gravely shakes his head,
"Now, now, dear sir, I must insist
That you go at ten to bed."

But Dr. Merryman for me,
Of all the pill-box crew!
For he smiles and says, as he fobs his fee,
"Laugh on, whatever you do!"

So now I eat what I ought to eat,
And at ten I go to bed,
And I laugh in the face of cold or heat;
For thus have the doctors said:

And so I count them up again,
And praise them as I can;
There's Dr. Diet and Dr. Quiet,
And Dr. Merryman.

—*S. W. Duffield, D. D.*

Full of Grit.

"The stage has gone, sir, but there's a widder lives here—and she's got a boy, and he'll drive you over. He's a nice little fellow, and Deacon Ball lets him have his team for a trifle, and we like to get him a job whenever we can."

It was a hot day in July. Away up among the hills that make the lower slopes of the Monadnock mountains, a friend lay very ill. In order to reach his temporary home one must take an early train for the nearest station, and trust to the lumbering old dusty coach that made a daily trip to K—n. The train was late, the stage, after waiting a while, was gone. The landlord of the little white hotel appeared in his shirt sleeves, and, leaning his elbow on the balcony rail, dropped down on the hot and thirsty traveler what comfort could be extracted from the opening sentence of my sketch.

"Would he not come in and take some dinner?" "Yes." "Would he send round for the deacon's team?" "Yes." "And the boy?" "Yes."

And the dinner was eaten, and the "team" came round—an open buggy and an old white horse—and just as we were seated the door of the little house over the way opened, and out rushed the "widder's boy."

In his mouth was the last morsel of his dinner; he had evidently learned how to "eat and run." His feet were clad in last winter's much worn boots, whose wrinkled yellow legs refused to stay modestly within the limits of his narrow and faded trousers. As his legs flew forward his arms flew backward in an ineffectual struggle to get himself inside of a jacket much too short in the sleeves.

"There he is," said the hostler; "that's Widder Beebe's boy. I told him I'd hold the deacon's horse while he went home to get a bite."

The horse did not look as if he needed to be held, but the hostler got his dinner and the boy approached in time to relieve my mind as to whether he would conquer him and turn him wrong side out.

He was sun-browned and freckled, large-mouthed and red-haired, a homely, plain, patched little Yankee boy; and as we rode along through the deep summer bloom and fragrance of the shaded road winding up the long hills in the glow of the afternoon sun, I learned such a lesson from that little fellow at my side as I shall not soon forget. He did not look much like a preacher, as he sat stooping foward a little, whisking the flies from the deacon's horse, but his sermon was one which I wish might have been heard by all the boys in the land. He did not know he was preaching, or he would have stopped, I think. As it was, I had to spur him on now and then by questions, to get him to tell me all about himself.

"My father died, you see, and left mother the little brown house opposite the tavern. You saw it, didn't you, sir?—the one with lilac bushes under the window? Father was sick a long time, and when he could not work he had to raise money on the house. Deacon Ball let him have it, a little at a time, and when father was gone, mother found the money owed was nearly $300. At first she thought she would have to give up the house, but the deacon said: 'Let it wait awhile,' and he turned to me, and patted me on the head, and said: 'When Johnny gets big enough to earn something, I shall expect him to pay it.' I was only nine years old then, but now I am 13; I remember it, and I remember how mother cried, and said: 'Yes, Deacon, Johnny's my only hope now;' and I wondered what I could do. I really felt as if I ought to begin at once, and yet I could not think of anything I could do."

"Well, what did you do?" I asked quickly, for I was afraid he would stop, and I wanted to hear the rest.

"Well, at first I did very funny things for a boy. Mother used to knit socks to sell, and she sewed the rags to make rag carpets, and—I helped."

"How? What could you do?"

"Well, the people who would like a carpet could not always get time to make it. So I went from house to house among the farmers, and took home their rags, old coats, and everything they had, and out in the wood-shed I ripped and cut them up. Then mother sewed them, and sometimes I sewed some, too, and then I rolled them into balls and took them back to the owners, all ready to be woven into carpets."

"But did that pay you for your work?"

"Oh, yes; we got so much a pound, and I used to feel quite like a merchant when I weighed them out myself with one of our steelyards. But that was only one way. We have two or three old apple trees out in the backyard by the wall, and we dried the apples and sold them. Then some of the farmers who had a good many apples began to send them to us to dry, and we paid them so many pounds all dried, and then had the rest to sell."

"But you surely could not do much in ways like this?"

"No, not much, but something; and then we had the knitting."

"Did you knit?"

"Not at first, but after a while mother began to have rheumatism in her hands, and the joints became swollen and the fingers twisted, and it hurt her to move them. Then I learned to knit. Before that I always wound the yarn for her. I had to learn to sew a little, too, for mother did not like to see holes without patches."

And he looked half smiling at the specimens on his own knees.

"You did not mend those?" I asked.

"Yes, sir, but I was in a hurry and mother said it was not done as it ought to be. They had been washed, and I could not wait for them to dry."

"Who washed them?"

"I did, and ironed them, too. I can wash and iron almost as well as mother could."

"But she does not let you do it?"

"She don't mean to have me, but how can she help it? She can hardly use her hands at all, and some days her feet are so bad she cannot leave her chair. So I have had to learn to make the beds and scrub the floor, and wash the dishes, and I can cook almost as well as a girl."

"Is it possible? I shall have to take supper with you on my way back to the city, and test your skill."

Johnny blushed, and I added:

"But how do you learn your lessons? Every boy should learn something from books."

"I know just where the boys in my class are studying, and I get the lessons at home. Mother reads them to me out of the book while I am washing the dishes or doing her work, and when we come to anything we can't make out, I take it over to the teacher in the evening, and she is very kind—she tells me."

Very kind! Who would not be kind to such a boy? I felt the tears coming to my eyes at such a sudden vision of a son doing a girl's work, while his poor mother held the book in her twisted hands and tried to help him to learn.

"But all this does not earn money, Johnny. How can you hope to save if you give your time indoors?"

"Oh, I don't do girl's work all day; no indeed. I have worked out our taxes on the road. It wasn't much, but I helped the men build a stone wall down by the river, and Deacon Ball lets me do a great many days' work for him; and when I get a chance to take any one from the hotel to ride, he lets me have his team for almost nothing, and I pay to him whatever I make. And I work on the farm with the men in summer, and I have a cow of my own, and I sell milk at the tavern; and we have some hens too, and we sell the eggs. And in the fall I cut and pile the wood in the sheds for people who haven't any boys—and there's a good many people about here who haven't any boys," he added, thoughtfully, brushing a fly from the old white horse with the tip of his whip.

After this we fell into silence, and rode on through the sweet New England roads, with Monadnock rising before us ever nearer and more majestic. It impressed me with a sense of its rugged strength—one of the hills rock-ribbed and ancient as the sun; but I glanced from the mountain to the little red-headed morsel of humanity at my side with a sort of recognition of their kinship. Somehow they seemed to belong together. I felt as if the same sturdy stuff was in them both. It was only a fancy, but it was confirmed the next day, for when I came back to town, after seeing my invalid friend, I went to call on Deacon Ball. I found the deacon white-haired and kindly-faced. He kept the village store and owned a pretty house, and was very "well-to-do." Naturally we talked of Johnny, and the deacon said to me, with tears in his watery blue eyes:

"Why, bless your heart, sir, you don't think I'm going to take his money, do you? The only son of his mother, and she a widder, and all tied up into a double bow knot, with the rheumatics besides! True enough, I let the father have the money, and my wife, she says says she to me, 'Well, deacon, my dear, we've neither chick nor child, and we shall be just as well off a hundred years hence if the widder never pays a cent; but 'cording to my calklation, it's better to let the boy think he's paying.' Says she to me, 'Deacon, you might as well try to keep a barrel of vinegar from workin' as to keep that boy. It's the mother in him, and it's got to work.' We think a good deal of the widder, Mandy and me. I did, before I ever saw Mandy; but for all that, we hold the mortgage, and Johnny wants to work it out. Mandy and me, we are agoin' to let him work."

I turned away, for I was to sup at Johnny's house; but before I went I asked him how much Johnny had paid.

"Well, I don't know; Mandy knows. I pass it to her, and she keeps the book. Drop in before you go to the train, and I'll show it to you."

I dropped in, and the deacon showed me the account. It was the book of a savings bank of a neighboring town, and on its pages were credits of all the little sums the boy had earned or paid; and I saw they were standing to Widow Bebee's name. I grasped the deacon's hand. He was looking away over the housetops to where Monadnock was smiling under the good-night kisses of the sun.

"Good-bye, sir, good-bye!" he said, returning my squeeze with interest. "Much obleeged, I'm sure, Mandy and me, too; but don't you be worried about Johnny! When we see it we know the real stuff it takes to make a man—and Johnny has got it; Johnny's like that mountain over there—chuck full of grit and lots of backbone."

Housekeeping.

One of the best things about housekeeping is that it requires the exercise of the highest faculties of the human mind; we see women every day who are statesmen in the wise management of affairs, calm, independent and self-possessed in emergencies. Some of the best traits of character are constantly cultivated.

If any class of women can be said to have virtues thrust upon them, it is the housekeepers of our day. If every woman would set before her as an aim that is worthy of all that is strongest and best in her, to conduct a well ordered home, a good deal of happiness and real beauty would be gained. How many faces, once lovely, are transformed by the addition of those wicked little lines about the eyes and mouth, which come from having fretted over necessary work?—work, too, which, if properly engaged in, would not injure the doer.

There are times, probably, when the happiest wife and mother thinks with longing of Thoreau's housekeeping at Walden Pond, and admires his resolution in throwing the fragments of limestone with which he had ornamented his desk out of the window when he found they must be dusted every day; but there is absolutely no use in fretting over petty annoyances, and since the danger of falling into the habit is great, every sensible woman will endeavor to look on the bright side of all her troubles. Suppose the baked potatoes should be eaten the moment they are done, and an important member of the family, knowing the dinner hour, is late; don't worry over the matter; every such little worry indulged in is like a chisel deepening the lines already formed by some real trouble. Everybody, it is feared, knows women who never seem really to rouse up to enjoy anything, unless it is a misfortune, and who remind their guests of the dinner Charles Lamb describes, where roast lady was served with every course.—*E. W. B., in New York Post.*

An Honorable Man.

Recently there appeared among the dispatches from Washington one to the effect that Lewis W. Ayers, of Clifford, Pennsylvania, had requested that his name be stricken from the pension roll, as he did not consider himself entitled to a pension. Though suffering from disability, it did not seem to him that any soldier is honestly entitled to a pension who is able to work and provide a living for himself and family, and this he has been able to do most of the time, since his discharge from the service. This request is as singular as it is honorable. It is certainly refreshing to find a man, having anything of a claim at all, who does not want a pension. This is in such striking contrast to the unthinking majority of politicians, who consider everything right in politics, that the correspondent from the capital city thought it important enough to telegraph over the country. There are so many now, in the time of monopoly and Star Route thieving, that think anything is right as regards the Government, providing they can be sly enough not to be detected. The action of Mr. Ayers comes like a ray of sunshine out of a cloud. It shows us that there is still some honor and magnanimity left. It gives us a better idea of humanity, and convinces us that the swindlers of our Government and their nob'e(!) and high-fed counsel, who deem it a privilege to do the dirty work in upholding them and trying to throw dust in the eyes of the law and the people are only a class. In this signal action there is honor of the highest type shown, and it would be well were there more men of this kind

A Newport snob recently went rowing with a small poodle. The boat capsized, the snob was drowned, and the poodle swam ashore; and we are longing to know if this is a case of the survival of the fittest.

Nothing so helps a newspaper as the imparting of useful information. "How shall I keep ants out of the sugar bowl?" asks a correspondent. "Fill the sugar bowl with salt."

The following is told of a green son of the Evergreen Isle. He was eating green corn from the cob for the first time. He handed the cob to the waiter and asked: "Will ye plaze put some more beans upon me sthick?"

A Hint to Ingenious Men and Women.

As a matter of general interest to inventors, and which deserves to be widely known, we give place here to an account of the legacy of John Scott for the encouragement of deserving inventors.

The legacy in question consists of a considerable sum of money, which the city of Philadelphia holds in trust under the legacy of the testator, the interest of which is to be used for the encouragement of "ingenious men and women who make useful inventions." The legacy provides for the distribution of a medal inscribed "To the most deserving," and also of a money premium of twenty dollars, to such persons whose inventions shall be adjudged worthy of the same. The Board of City Trusts, who are the wardens of this fund, recognizing their inability to properly superintend its distribution in accordance with the wishes of the testator, have wisely invited the co-operation and assistance of the ancient and honored Franklin Institute, which body has accepted the responsibility, and now desires that ingenious men and women who have made useful inventions shall be advised of the existence of the bequest and of the manner in which they may be benefited.

To this end, we may explain that the Institute has delegated to its Committee on Science and the Arts the duty of investigating the merits of all inventions that may be referred to it by applicants for this award These investigations will be made by the committee free of charge, and if the verdict is a favorable one, the award of the medal and premium will be recommended to the Institute. To guard against any possibility of mistake, either of oversight on the part of the committee, or of misrepresentation on the part of the applicant, such recommendations will only be reported to the general body after having been duly advertised for the space of three months, in order to afford to possible objectors the opportunity of coming forward and making their statements to the committee. After these preliminaries have been complied with, the recommendation is reported to the Institute. Should it be approved by the general body, it is then transmitted to the Board of City Trusts, which will order the issuance of the medal and premium in the name of the city of Philadelphia.

The award of such a testimonial in the manner above described is justly held in special honor. The fact that it is awarded, not promiscuously, or by favoritism, but with judgment and discrimination, after careful examination at the hands of so eminently competent and respectable a body as the Committee on Science and the Arts of the Franklin Institute, gives it a peculiar distinction which reflects honor upon its recipient. The report of the committee conveying the recommendation of the award, and giving the reasons therefor, likewise gives it an added value.

Our object in stating these facts has been to apprise ingenious men and women who make useful inventions of this admirable opportunity of obtaining an honorable recognition of their ingenuity, without expense to themselves, and purely upon the merits of their inventions. For further information communicate with the Secretary of the Franklin Institute, Philadelphia.

What the Wrinkles Tell.

The *Phrenological Journal* has the following bit of face lore: The faculty of truth—that is, the love of it—is indicated by the muscle which surrounds the eye, causing folds and wrinkles. Justice is indicated by the muscle which causes perpendicular wrinkles between the eyebrows. Fullness and wrinkles under the eye, for which some persons are remarkable, indicate the love of mathematical accuracy; and wrinkles curving upward from the outer angle of the eye and eyebrow indicate probity or personal truthfulness. There are three degrees of the faculty of justice. The first is a kind of exactness or strict honesty in small money matters, which some people would call closeness, and is indicated by a singular perpendicular wrinkle or line between the eyebrows. The second is the disposition to require justice in others, and is indicated by two perpendicular lines or wrinkles, one on each side of the center—a very common sign. The third degree is conscientiousness, or a disposition to apply the rule of justice to one's self, and is indicated by three or more wrinkles or lines, especially noticeable, extending above the eyebrows when the muscle is in action. The love of command is indicated by one or more short transverse wrinkles across the root of the nose, exactly between the eyes. It may be seen in great military commanders, in masters and teachers, and in those generally who are fond of exercising authority. In those who are wanting in the power to command, and have no desire for responsibility, this sign is also absent. The faculty of command frequently acts with that part of justice which reprimands or requires others to do right, and both together produce that frowning and lowering brow which is so terrible to evil-doers, or to those who love to be approved rather than condemned.

Burning Gas Without Flame.—At a late soiree of the Secretary of Chemical Industry, held at Owen's College, Mr. Fletcher, of Warrington, England demonstrated the possibility of the combustion of gas without visible flame, the heat obtained from a quarter-inch gas pipe being sufficient to fuse iron into drops.

Lena's Thanksgiving Dinner.

Thanksgiving day was Lena's birthday. For two weeks Lena had begged her father to let her have a birthday party. At last her father asked her which she had rather do, give a birthday party to her rich friends, or give a large Thanksgiving dinner to 50 poor children.

Lena thought a while, deciding that she would rather give a Thanksgiving dinner.

"Because," said she, when her father asked which she was going to have, a dinner or a party, "my friends are rich and can get all they want, while these poor children are so poor they can hardly get enough to eat."

"Generous-hearted Lena," said he, "you shall give the largest Thanksgiving dinner ever given in this city, and you shall invite a hundred poor children if you want to."

The next day, Wednesday, was the day before Thanksgiving day. The servants and everybody were busy except Lena, and as she had nothing to do, she went to her room and sat down to think.

All at once a bright look came over her face, and she said, "Who is going to invite these poor children, and why could not I give each one a basketful of provisions to take away with them?"

She forgot that she had said this aloud.

But the next moment her father came in and said to her, "Lena, I heard what you said a moment ago, and if you still want that wish, you can have it."

"Oh!" cried Lena, "how shall I thank you?"

"I have received my thanks already," replied her father.

Lena was silent a moment, and then said, "Who is going to bring those poor children here to-morrow?"

"Well" said her father, "I have a friend whom I told to bring them here." Here ended the conversation. Thursday morning when Lena arose and looked out of her window, everything looked so beautiful that she exclaimed, "Oh, how pretty everything looks; just the kind of a day to have for Thanksgiving day!"

Her guests began to arrive about half-past 11 o'clock. They were poorly clad, but they had clean faces, smooth hair, and happy, loving hearts.

After they had all arrived, they sat down to dinner. After dinner they played, and had a very pleasant time. They all united in declaring it was the best time that they had ever had. Lena's Thanksgiving dinner was a success.

When Lena's friends heard that she was not going to give a party, they all declared that "they never saw anybody so mean," but Lena did not care for their remarks. For when she saw her guests going home with cheerful faces, and each one with a basket on their arm, she felt that kindness was not without its reward.
—*M. L. H. A., in Rural Press,*

A QUAINT old minister was once asked what he thought of his two sons, who were both preachers. "Well," he replied, "George has a better show in his shop window than John, but John has a larger stock in his warehouse."

A LITTLE three-year-old, after looking thoughtfully at the inside of a tea kettle thickly coated with lime, cried: "Oh, the tea kettle is all lathed and plastered."

Bless His Heart.

In a very elegant palace car entered a weary-faced, poorly dressed woman with three little children, one a babe in her arms. A look of joy crept into her face as she settled down into one of the luxurious chairs, but it was quickly dispelled as she was asked rudely to "start her boot."

A smile of amusement was seen on several faces as the frightened group hurried out to enter one of the common cars. Upon one young face, however, there was a look which shamed the countenances of the others.

"Aunty," said the boy to the lady beside him, "I am going to carry my basket of fruit and this box of sandwiches to the poor woman in the next car. You are willing, of course?"

He spoke eagerly, but she answered: "Don't be foolish, dear; you may need them yourself, and perhaps the woman is an impostor."

"No, I'll not need them," he answered, decidedly, but in a very low tone. "You know I had a hearty breakfast, and don't need a lunch. The woman looked hungry, auntie, and so tired, too, with those three little babies clinging to her. I'll be back in a minute, auntie; I know mother wouldn't like it if I didn't speak a kind word to the least of these when I meet them."

The worldly aunt brushed a tear from her eye after the boy left her, and said, audibly: "Just like his dear mother."

About five minutes later, as the lady passed the mother and the three children she saw a pretty sight—the family feasting, as perhaps they had never done before. The dainty sandwiches were eagerly eaten, the fruit basket stood open.

The eldest child, with her mouth filled with bread and butter, said, "Was the pretty boy an angel, mamma?"

"No," answered the mother, and a grateful look brightened her faded eyes, "but he is doing angels' work, bless his dear heart!" And we, too, said: "Bless his dear heart!"

What a Kansas Girl Did.

I am a young girl, fourteen years old, and I will tell you what out of door life in Kansas has done for me. We came to this State when I was eight years old. I had been sick all my life, and could never go to school more than two months at a time without being so sick that I must have a doctor.

We first went to southeastern Kansas, but I was not better there. Then we came to Graham county, and I rode an Indian pony and helped to drive some cattle all the way. I wish I could make such a trip every season. I have herded cattle every summer since we have been out here, and sometimes in the winter. Now I am a great big girl, larger than my mamma, and my health is nearly perfect.

I do not have much time to get lonesome, for besides herding, I milk five cows twice a day, help feed the calves, and do a great many other chores. I find a great many things besides fleas and mosquitoes out here. Two years ago I caught a young antelope, and I catch a good many jack-rabbits.

I read about the little girl who made money out of chickens. I think she did well, and I will tell how I am making money out of two dollars that had been given to me in silver dimes, quarters and half dollars for pocket pieces. I bought a little tiny pig, and fed it milk out of a tin cup at first, and it grew very fast. When it was large, I traded it for a heifer calf that was four years old. She has brought three calves, and her first calf had a calf this spring. So you see I have five head of cattle.

I traded two steer calves this spring for heifers, so my little herd are all females now. I am not rich, but it is a little more than the two dollars I brought to Kansas.

HELPING MOTHER.—There is a time before boys become strong enough to labor hard at farm work when they could do much to "help mother" with her too arduous duties; nor would we have them stop when they are big enough to hold a plow or ride the mowing machine. It is not necessary to mention the many, many ways that boys can "help mother" wonderfully; there are certain duties peculiar to every farm household, and there are others that differ widely; so each boy should be on the lookout for the best way to lend his assistance. In general, a mother has too much running about the house to do, and I think if a boy were to try to "save steps" for her he would be doing her an inestimable favor. Hard work at sewing and mending, at washing and ironing, at cooking and scrubbing is hard work, but will not many a mother say with me that it is the continual running about the house, here and there, up stairs and down, that tries her most? Some day mother will be bowed down in sickness and her body may be racked with pain; how gladly you will then help her; how eagerly run at her slightest nod! But why not do this for her now, and thus, it may be, ward off the sickness and pain that comes from overwork?

YOU often say, "How much good I would do with my money, if I were as rich as that man, or the other." How much good do you do now with what you have? "Oh, if I had only time what would I not learn?" How do you spend the time you have?—*Scattered Seeds.*

Health Column.

Shaving the Beard.

The more I reflect upon the mysteries of neuralogy and animal chemistry, the more confident I am that while we are the least suspecting it, trifling errors in our daily life are producing important effects upon our corporeal systems; and I declare it as my deliberate conviction, that the habit which may almost be styled American, of using the razor upon the face, is sufficient to cause a large proportion of the lamentable evils which affect the human race in this country.

It appears by experiment that the beard, if shaved, grows four to five times faster than if unshorn. In this calculation an item is omitted which it is difficult to estimate, *i. e.*, the stimulus given the beard by the first application of the razor in adolescence, the experiments being made upon beards after they have acquired an unnaturally rapid growth. The effect of this early stimulus may be fairly counted at double the natural growth; then reckoning the difference in size and weight of the fiber, which is treble, and we find the frightful truth to be that we raise 30 times the natural quantity of beard! Thus, it is evident that the true beard is exhausted at a very early age, after which the system is forced to supply a substitute. Now, nature will not submit with impunity to extraordinary demands upon her vigor, and that which requires her to produce in a lifetime, 30 times as much beard as she was first inclined to, must certainly be considered as such. She is fatigued in proportion to the effort, let the particular kind be what it may although her recuperative powers are great, she insists upon having repose, even when working at a rate chosen by herself. If that repose is denied her, she takes her revenge by breaking down the mechanism.

Lead Poison.

Of all the metallic poisons lead is perhaps the one most often taken into the human body. It is eliminated from the body with more difficulty than the other poisons, and excepting those which directly kill, its effects are the severest and most varied.

Lead may enter the human system through the mouth, in water from lead pipes, or from type held in the mouth by compositors. It may be taken in through the lungs by breathing, in lead factories of various kinds; be absorbed by the mucous membrane of the nose from snuff containing it. It may be taken in even through the unbroken skin from hair dyes and rouges, and through both skin and nostrils by painters.

Some persons are much more susceptible to it than are other persons.

Among the symptoms that show that it has been taken into the body are colic, great muscular weakness, constipation, female disorders, blindness, complete or partial, neuralgias of the head, face, joints, in the small of the back, between the ribs, or in the upper or lower limbs, loss of sensibility in the skin, alternating with over sensibility, muscular spasms, and finally and most frequently, paralysis, which may affect almost all the muscles of the body. One of the most constant signs of the presence of the poison is a blue line along the gums.

As the system, left to itself, gets rid of the lead very slowly, the lead accumulates in it until what was for a while harmless may become a fatal poison.

The treatment should aim to palliate the pains and to quicken the eliminating organs. But the fundamental thing is to invigorate and improve the general health by pure air, nutritious diet and warm baths. Cold baths injure.

There is good authority for the statement that workers in lead factories who drink milk several times a day are unaffected by the lead.
—*The Companion.*

HARD WOODS.—Chestnut and butternut are not very extensively sold for finishing, for which the better grades are selected, and their sale is dependent more on the question of taste than real superiority. The poorer stuff is used in common ways, and is best worked off when other woods used in manufacture are scarce in the dry, and the cull stocks can be employed as a substitute on a pinch. Basswood is considerably sold for use in furniture. The black or red birch, which largely resembles cherry, figures somewhat as a finishing wood. The yellow is not valuable in the same way. Beech enters into the manufacture of chairs, tool handles, brewers' shavings, etc. Elm is made into cheap furniture. Yellow pine is very slow in gaining a hold upon popular favor. It is used by a great many operators who speak highly of the lumber, but it is far from having a boom. Generally buyers do not take to it kindly. What is used is mainly for flooring and finishing. Though the boards and planks are a subject of considerable complaint on account of imperfection in manufacture, the flooring is conceded to be turned out in good shape. Where high grade flooring is wanted, yellow pine is regarded the best and cheapest, but where a low or medium grade is desired, the wood must give way to white pine. The latter is sold much cheaper than the yellow pine, for when freights are added to the price of the lower grades the yellow pine can hardly compete.—*N. W. Lumberman.*

Household Hints.

ELECTION CAKE.—Take three pounds of sifted flour, leaving out a pint to put in with fruit, and mix in warm, fresh milk till it is stiff batter; weigh one and a half pounds sugar, one pound of butter; mix them to a cream, then mix one-half of this with the batter of milk and flour, and one-half pint of good home-made yeast; beat very thoroughly together, when light, which will take several hours in winter (better mix at night and stand in a warm place till morning), add the remainder of butter and sugar with six eggs and one pound of raisins, one glass of brandy, cinnamon, mace or nutmeg, according to taste, and a little soda. It should rise the second time before putting in pans for baking. The more such cake is beaten the finer and lighter it will be.

CHOCOLATE PUDDING.—A very delicate chocolate pudding is made of one quart of milk boiled with one ounce of grated chocolate. Sweeten to suit your taste and flavor with vanilla. After it has boiled so that the chocolate is thoroughly dissolved and mixed with the milk, take it from the fire and let it cool. In about 20 minutes, and possibly in less time, it will cool enough to stir in the beaten yolks of six eggs. Put in a pudding dish and let it bake until it is of the consistency of baked custard. While it is baking beat the whites of the eggs to a stiff froth, adding six tablespoonfuls of powdered sugar; then spread this over the top of the pudding, and let it brown quickly.

TO FRY CALF'S BRAINS.—They should first be washed in three or four waters; the skin should be removed, and then they should be boiled in salt and water with a little vinegar added to it. Boil them for from 10 to 15 minutes; take them out then, and let them lie in cold water till you are ready to use them. Make a batter of the yolks of eggs and fine cracker crumbs; cut the brains in slices, dip them in the batter and fry them in very hot fat—either butter and lard mixed or beef drippings. Garnish with fried parsley, if convenient. Small beets boiled and cut in rings make a good garnish also.

GYPSY PIE.—Cut shreds of any kind of cold meat and put them in the bottom of a buttered pudding dish; cover with finely chopped onions, and a light seasoning of salt and pepper; above this put a very thick layer of quartered apples, sugar and lemon; then a thin layer of meat and onion; fill up with apple, sugar and lemon; cover with puff paste and bake till brown in a slow oven. Thinly sliced ham or veal is very nice for this pie, but beef may be used or lamb. It is sometimes called "medley" pie. Very little onion should be used.

LAMB WITH RICE.—Boil a cup of rice soft, adding a little milk at the last, and season to taste with salt; put in a buttered baking dish, and in the center lay your cold meat in good shape, and nicely trimmed; put some bits of butter over the rice; some gravy over the meat, if you have any, and a thin layer of rice on top; cover close and put in the oven till thoroughly steamed through; then remove the cover and brown. Beef may be treated the same way. A teaspoonful of curry powder mixed with the gravy before it is poured over the meat is a great addition.

MINCED VEAL.—Mince cold veal with fat and kidney. Add pepper and salt, and a little cayenne; also a small onion and a little parsley, chopped fine, some minced cold ham and a few whole oysters. Put these into a deep pie dish, lined and edged with pastry. Beat up the yolk of one egg, with water enough to moisten the meat, and pour it over. Cover it with grated bread crumbs about an inch deep. Stick very small pieces of butter on it, and bake it in an oven till it is all a light brown.

A SAVORY STEW.—Take the remains of a cold fowl, cut in pieces and put in a stew-pan. Add two ladlefuls of soup, one tablespoonful of anchovy sauce, one tablespoonful of flour, and sufficient water or stock to cover the meat; one large cut onion (first fried in butter), cayenne pepper and pickled oysters. Stir it and stew gently for two hours. Cover it close, and when serving up squeeze half a lemon over the whole.

FRUIT CAKE.—A good common sort of fruit cake is made of five cups of granulated sugar, three small cups of butter, one cup of milk, six eggs, one wineglass of wine and one of brandy, 10 cups of flour, two nutmegs grated, two pounds of raisins, one pound of English currants and one quarter of a pound of citron. This cake keeps well.

TAPIOCA CUP PUDDING.—This is very light and delicate for invalids. An even teaspoonful of best tapioca soaked for two hours in nearly a cup of new milk; stir into this the yolk of a fresh egg, a little sugar, a grain of salt, and bake it in a cup for 15 minutes. A little jelly may be eaten with it.

ONION FLAVOR.—If you wish to give a delicate and yet distinct onion flavor to the dressing for a fowl, boil the onion till tender, changing the water twice; then chop it in very small bits, just as if it were raw. Roast goose and wild duck gain to most palates by having the dressing thus flavored.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "Good of the Order."

Harmony, No 9.

This pioneer Lodge has taken a new departure, and now holds its meetings in Washington Hall, No. 35 Eddy St.—one of the finest halls on the coast. The first meeting held in the new hall was on the evening of December 2d, and a good number were in attendance, including several visitors. The first business transactted in the new hall was acting on three petitions for membership and the election of two candidates to receive the degrees. A committee, consisting of F. Blight, P. M. W., and Bros. Mitchell and Schwartz, was appointed to take steps to organize a D. of H. Lodge. Under "Good of the Order," Bro. S. S. Johnson gave a recitation; Bro. Poland made a few congratulatory remarks and recited a humorous poem; Bro. Delano, of Bernal, No. 19, made an extended address, and several of the brethren of Harmony followed, their remarks being chiefly congratulatory with regard to their new hall.

District Meeting of Bernal, 19.

District No. 4, Bro. J. D. Thompson Deputy, held a meeting in the Lodge-room of Bernal Lodge, No. 19, on Monday evening, Dec. 11th. The attendance, on account of the stormy weather, was not large, but it was a representative one, nearly every Lodge in the city being represented by a small delegation, and there was also a number of visitors from the interior present. The officers of the Grand Lodge and several of the San Francisco District Deputies were present and were admitted with the "Grand Honors." Under "Good of the Order," Bro. G. Powell, P. M. W., was selected to preside, and immediately called upon Deputy Thompson to "explain," which he did by making some practical and instructive remarks that were well received. Grand Master Barnes then gave an extended review of what we are, and probably will be in numerical strength, and the position we occupy as a great national fraternity—second to none. Among the many good things he said was this: "I am glad to meet the faithful brethren and honored Deputies of San Francisco, Bros. Thompson, Danford, McKay and Poland, as well also Bro. Cronkite, the efficient Deputy of Sacramento, here tonight with the noble brethren, and can say that with such workers there is no such word as fail." Romarks were also made by Bro. J. W. Watson, Assistant Grand Recorder, in which he gave a succinct account of the early history of the Order and the moral effect of its wise provisions. We note from his remarks the fact that we have gathered around our altars during the period of our existence in this State 17900 Master Wokmen. Through the lapse of membership and death we now number 15100 Master Workmen in good standing. By request Grand Master Workman Barnes read a humorous clipping. Deputy Cronkite, of Sacramento, being then called upon made a few well chosen remarks, in which he said that since the organization of Lily of the Valley, D. of H., the meetings of the Lodges had been better attended. The remarks were well received, Bro. Schwartz, of Harmony, No. 9, gave an overture on the piano, which received a hearty encore. Bro. Robt. McNess, of Triumph, gave a solo. The Chairman announced that the Lodge would be at ease and the hall would be turned into a banquet room. A collation was then served by six brethren of the Lodge, which was followed by Havanas. The second part of the programme opened with an original song by Sam Booth, P. M. W. of Excelsior, No. 126, which, of course, received an encore; then a sentimental song by Bro. Fay. E. M. Reading, P. M. W., Secretary of the Guarantee Fund, then discussed the status of our assessments and said that our large mortality for the year was due, to a great extent, to accidents. Out of 136 deaths 38 were from accidents. District Deputies Poland, McKay and Danforth each made short remarks and the agreeable and pleasant reunion was brought to a close a few minutes past 11 P. M.

District Meeting with Unity, 27.

On Tuesday evening, the 12th inst., one of the most pleasing and entertaining District meetings of the season was held by the Lodges of District No. 1 with Unity, 27, in Cosmopolitan hall, B'nai B'rith building. The Lodges represented were San Francisco, No. 4, Unity, No. 27, Spartan, No. 36, Magnolia, No. 41 (in two delegations), and Friendship, No. 179. The hall was entirely filled with members of the Order, there being many in attendance belonging to Lodges outside of the district, about 30 Lodges being represented. The delegates from the visiting Lodges were announced and admitted with the usual honors, Bro. Montgomery, P. M. W., presenting them. The M. W., Bro. Chas. Nelson, greeted the large delegation and called upon Bro. W. Block, Receiver, to give an address of welcome, which he did in a happy and appropriate manner. Following are the exercises: Guitar solo and encore, Prof. Bazzini; address, Deputy Danforth, who in a short congratulatory speech made instructive and useful remarks that were well received; sentimental song and encore, Bro. G. Frank Perkins, organist of Spartan Lodge. Grand Master Barnes, on being called by the Master Workman, complimented Unity on her fame and popularity in bringing together one of the largest assemblages of Workmen that he had ever attended. He congratulated Deputy Danforth and the Lodge. He then referred to California, and especially to California Workmen and their openhearted liberality, touching upon the manner in which they had contributed to the relief of Father Upchurch and of the grateful feelings of the founder of our beloved Order towards the Banner State. The Grand Master referred to the A. O. U. W. as a great practical working institution. With feelings of sadness he mentioned that during the year 133 of our members in this State had been laid under the sod by the silent messenger of death, but we could point with satisfaction to the fact that without cavil there had been paid to those they had left behind them the sum of $266,000, and that at the very small outlay to ourselves of 19 assessments of $1 each. He paid a tribute to Deputy Grand Master Workman Loud in connection with work done by him in Massachusetts. Also to the beneficial effect the district meetings were having on the Order in this city. He spoke of the present membership of the A. O. U. W. at 115,000, and prophesied a membership of 500,000 in less than 10 years under the Supreme Jurisdiction and 25,000 in California. He referred to the small commencement of 325 members in this jurisdiction, Nov., 1877, the increase to 2,000 by July 2, 1878, to 5,000 in 1879, to 8 000 in 1880, to 11,000 in 1881, to 14 000 in 1882, and predicted that at the Grand Lodge session of 1883 the membership would be 17,000. He urged every Workmen to do his duty. The address was well received, and was frequently interrupted by applause. Deputy Grand Master Loud made a few appropriate and well-timed remarks. Bros. Russel and Belcher sang "Larboard Watch." Dist. Deputy Thompson was called upon but was excused. Bro. Swan, of Friendship, gave a song and received an encore. Bro. Terry, M. W. of Magnolia, made a neat little speech. Bro. Hughes, of Magnolia, gave a comic solo. Bro. Breed, P. M. W. of San Francisco, No. 4, then made a short speech, and called the attention of the assembled brethren to the fact that old No. 4 would celebrate her sixth anniversary with a District meeting, on January 24, 1883. At the close of the remarks of Bro. Breed, Bro. Martin, P. M. W., Chairman of the entertainment committee was called upon, and gave directions to proceed to the banquet hall. On assembling in the basement there was found four tables fairly groaning with their burden of good things for the inner man, and which were served without delay. Messrs. Burke Bros. gave a duet with banjo accompaniment. Grand Recorder Pratt, the veteran of the Order on the coast was the first called upon after the supper, and made a practical little speech. Mr. Jos. Gough gave some Chinese impersonations, language and songs, that kept the company convulsed with laughter for nearly 15 minutes. Bro. W. H. Jordan, the first of California's Grand Masters, was then brought out of the corner where he had endeavored to hide, and introducing himself as "the man from the country in his old clothes" (and thereby hangs a tale of the ides of November, ask him) made one of his well-known, eloquent and fervent addresses, reviewing the early history of the Order in this State and the faithful and unselfish work of the pioneer officers and members, and especially those associated with him in the Grand Lodge work. "They Stole My Child Away," was sung by Messrs. Burke. E. M. Reading, P. M. W., of Fidelity, No. 26, made one of his most happy efforts, and, last of all, came Grand Master Barnes with pleasing and affectionate tributes for the pioneers of the Order East and West. The Master Workman tendered the thanks of Unity Lodge and himself, and thus closed a very pleasant and agreeable meeting.

District Meeting in Valley, 30.

District No. 5, Bro. McKay, Deputy, held a grand meeting Wednesday evening, December 13th, under the auspices of Valley, No. 30. At an early hour a large number of the members of Valley were in attendance and formed the line to pay the current assessment. The business of the Lodge was finished with quick dispatch, a part of which was to vote on the application of four, and appoint committees on five applications. A number of the Grand officers were admitted with the usual honors and address of welcome, by Bro. Wells, M. W. Deputy McKay opened under "Good of the Order," by making appropriate remarks on the objects and purposes of this new feature of District meetings. A recess was had and Havanas passed. The Lodge was called to order, and the entertainment of the evening commenced by a solo of much merit by Bro. Itsell, of Valley; address, Grand Master Barnes. Bro. Barnes seemed to be in haypy condition of mind, and made an eloquent and instructive speech that was received with much favor; solo, Bro. Sinton, of Golden Gate; remarks, Henry Hoeber, P. M. W., who, as usual, made some practical illustrations that were well received; humorous song, Bro. Smallman, of Triumph; comic recitation, T. H. Macdonald, P. M. W; duet, P. M. W. Fillmore and Hunt. At the close they were awarded a hearty encore; recitation, J. W. Belden, P. M. W.; select reading, Prof. Eastman, an artistic effort that was highly entertaining; speech, Bro. Shaw, P. M. W. of Bay View. His remarks were appropriate and well received; sentimental song, Bro. Hunt, P. M. W. of Valley. E. F. Loud, D. G. M., made a short trenchant speech that was full of good advice and wise counsel; remarks, Bro. Hoag, of the WATCHMAN; song, Bro. Tregay, of Nevada; remarks, Bro. Broderick, P. M. W. of Valley, giving some practical suggestions for the welfare of the Order, and especially looking to an increased interest in attendance at the Lodge meetings.

Hercules, 53

Bro. Fish, Deputy, will hold a district meeting Dec. 22. The brethren have a fine hall and we may expect one of the most enjoyable meetings of the season.

Burns, 68.

On Tuesday evening, Dec. 5th, Burns, No. 68, celebrated its fifth anniversary at California hall, 417 Kearny street, by musical and literary entertainment and dance. It was something of a new departure in the way of exercises. The first thing on the programme was dancing, which was followed by a recitation by Bro. John M. Duncan. The next on the programme was a solo by Mr, Henry Simmons; recitation, Master Duncan, son of Bro. Duncan. This was a fine effort which was received with much favor; song, Mrs. Schord, wife of L. C. Schord, P. M. W.; banjo solo, Messrs. De Boum; song, J. L. Fichtbaler, O. of Burns; piano solo, Master Vollmer, son of Bro. Vollmer, P. M. W. This was a very fine effort for one so young. Bro Gus Pohlman, well known among workmen, sang a character song, and was awarded four recalls. There was a full attendance, and the supper prepared was very fine. The festivities were prolonged until the wee' sma' hours. As a closing and fitting tribute to Burns Lodge, this happy, jovial company all joined hands and sang "Auld Lang Syne," and departing, agreed with us in declaring that the evening's entertainment was a great success.

District Meeting with Olympic, 127.

The District meeting held by Deputy Fish on Tuesday evening, December 12th, with Olympic Lodge, 127, was interesting and enjoyable, though not so well attended as might have been expected. A large delegation was noted present from Hercules Lodge, of this district, as also representatives from Fidelity, Sts. John and others. The Grand Master and Deputy Grand Master were present besides. The J. W. and M. W. degrees were conferred upon one candidate in a very impressive manner. The officers of Olympic Lodge do their work well and deserve honorable mention: Frank W. Rossbach, M. W.; David Wilder, Foreman; A. Deering, O.; Major Orton, Rdr.; W. H. Barkley, Fin.; E. Holland, Rvr.; Chas. Stillman, Guide. Good of the Order having arrived, G. M. W. Barnes made a few remarks, which were interrupted by a loud alarm at the door. Not knowing exactly whether the Lodge was about to be raided by the police or sacked by Egyptian fanatics, the rank and file of the members present were beginning to think seriously of beating a hasty retreat to some sequestered nook, safe from the dangers of worldly intrusion. Fortunately, however, the retreat had only partially begun, when it was announced by the Inside Watchman that a delegation of ladies was in waiting in the ante-room. On receipt of this pleasing intelligence, Bro. Barnes, who had ceased in the midst of a glowing period to crawl beneath the desk of the Master Workman, was seen emerging from his hiding place with a bold and defiant expression upon his countenance, while Bro. Dixon stole out of the goat stable to say he knew they were coming all the time. Grand Master Barnes, however, proved equal to the onset, and adjourning the Lodge, admitted the ladies, who proved to be the members of Aurora Lodge, D. of H., and wives of Olympic men. Sister Holland, W. S. of H., addressed the chair, and stated their object in presenting themselves there Bro. Barnes replied in a happy strain, and invited the ladies to be seated and enjoy themselves as best the time and circumstances might afford. D. G. M. Loud was then introduced and spoke briefly. Sister Holland was next called on for something entertaining, but replied that she came to be entertained and not to entertain. Several others were then called on, including H. W. Miller, M. W. of Hercules, P. M. W. Carroll, of Hercules, and P. M. W. Farley, of Fidelity. Bro. Jephson gave a recitation and Bro. Cummings a short address, after which a general intermingling was the order of the evening, and dancing the all important exercise. Bro. Dakin, Organist of Olympic, furnished the music on the fine piano, and a notable evening was enjoyably passed. Bro. David Wilder having resigned the office of Foreman, which he has filled with honor to himself, Bro. O. A. Deering, Overseer, succeeded to the office, and was installed Foreman on this evening by District Deputy Fish. A new Overseer will be elected and installed at the next meeting.

Fidelity, 136, Visits Ashler, 165.

A most enjoyable and pleasant visitation was that made by Fidelity Lodge, No. 136, of this city, to Ashler Lodge, No. 165, of Alameda, on the evening of Tuesday, Nov. 28th. Besides the large delegation from this city, who met at the direction of the Master Workman at the Narrow Guage Oakland Ferry at 7:30, there were numerous visiting brothers from other Lodges of Oakland and San Francisco. Ashler Lodge is well known for its faculty of entertaining handsomely, as no one visits this Lodge without feeling that "it was good for him to be there." Every meeting held by the Lodge is a "special occasion," in that special exercises are given, and "high jinks" furnish merriment for all. There are few Lodges so well up in fraternity as Ashler; few Lodges understand better the way to secure the highest social development among the members. As one entered the Lodge-room on this occasion an appearance of happy cheer and joviality gave life to the scene. Suspended above the Master Workman's station, reading entirely across the hall, were the words "Ashler Lodge, No. 165 A. O. U. W." Soon after 8 o'clock Fidelity, Lodge, to the number of about 30, entered the hall in a body, and were appropriately received by the M. W., Bro. Fred. Bryant. The officers of the visiting Lodge were escorted to stations of honor alongside the respective officers of Ashler. The business of the Lodge was transacted with dignity and quick dispatch. The J. W. degree was conferred on two candidates, leading citizens of Alameda. This was done in a manner that was highly creditable. Havanas of a fine quality were passed when "Good of the Order" was reached and the Master Workman had declared a recess. When called upon Bro. Chas E. Wilson, M. W. of Fidelity, made some felicitous remarks which were immediately followed by an impromptu song entitled "So Say We All." Bro. Littleton F. of Ashler, by request sang a sentimental song which was well received. The brothers of Ashler next rendered an opera, which brought down the house; being heartily encored "The Bagpipe was rendered. Bro. Wheaton, the Master of Ceremonies, related some characteristic experiences along the wharves, and then called for a musical trio from Bros. Clark, Barnes and Littleton, which was finely executed. The humerous representation by Bro. Cheminant, P. M. W., was characteristic and good. The solo by Bro. Geo. Clark showed the gentleman to be the possessor of a splendid voice and considerable musical ability. Bro. Harry H. Wheaton, to whom much of the credit for the success of the entertainment must be given, fairly convulsed his audience with song and story. Bro. Stewart, of Fidelity, sang and accompanied the same in a creditable and pleasant manner, so that he was given a recall. In the last song of the evening the whole company joined. The time having come for the departure of visitors, the meeting closed, and with numerous handshakings and well wishing the company separated. Thus ended a most happy and long to be remembered visitation. Ashler will return the visit in the near future.

Memorial's District Meeting

A District meeting was held in Fraternity hall, Shiels' building, on Nov. 27th, under the auspices of Memorial, 174 Goodly delegations were in attendance from Harmony, No. 9, Excelsior, 126, Franklin, 44, Golden Gate, 8, besides several members from others of the city Lodges, and a number of Grand officers. The cosy hall was not large enough to give seating room to all. The business of the Lodge consisted in conferring the J. W. degree on one candidate, and the M. W. degree on one. The corps of officers of Harmony Lodge conferred the J. W. degree, and the officers of Memorial, the Master Workman A. Brooks, conferred the M. W. degree on A. L. Heiman, President of the K. of P. Board of Relief. Following this came literary exercises. An overture was rendered by Prof. Yanke; a humorous reading by Harry J. Lask, G. G.; a solo by Wm. H. Voorhies, P. M. W. Speeches were made by the Grand Master, by C. W. Nevin, P. M. W., and E. F. Loud, Deputy Grand Master. A pressing invitation was then extended by Bro. C. H. Hoffman, P. M. W. of Memorial, to form in line and march to the Baldwin restaurant, where was spread a splendid collation. The banqueting over, Bros. Hoffman, Gyselaar and Nevin passed around the Havanas. Bros. Reading, P. M. W., Deputy Danforth, the WATCHMAN reporter, D. Cohen, Financier of Harmony; F. A. Brooks, M. W. of Memorial; Bros. Florence, F. of Franklin; Mauer, P. M. W. of Excelsior; Gyselaar, P. M. W., and Nevin, P. M. W., of Memorial, made pleasant and humorous speeches. Bro. Wm. H. Voorhies sang a song in his inimitable manner. H. Schaffner, Recorder of Memorial, gave a fine recitation, and Sam Booth, P. M. W. of Excelsior, read, in his peculiar and pleasing manner, a humerous poem, after which the company (standing) sang "Auld Lang Syne." It seemed to us, as the company separated from the banquet-room, each felt happy and proud that he was a Workman, and that the nobility of character exhibited by the worthy brethren of Memorial was but a miniature picture of one of the grandest organizations in the world.

Aurora, D. of H.

Aurora, D. of H., under the fostering care of the leading spirit of Olympic Lodge, of this city, has become one of our popular social institutions. On Tuesday evening, December 6th, their monthly social was held at Washington building, in Washington hall, 35 Eddy st. There was something over 100 present, including invited guests. The programe for the evening consisted of dancing and sociability. During the evening lemonade was set out for all who wished and a most enjoyable time was spent. The enjoyment was prolonged until a late hour. All left agreeing that the socials given by Aurora, D. of H., are among the best.

Silver Spray, D. of H.

On Monday evening, Nov. 27th, the brothers and sisters of Silver Spray were out in full force and held an enjoyable meeting. This being the night for nomination of officers, a large number of nominations were made and the interest in the election will secure the selection of good officials

---

We had the pleasure of a call from Bro. D. Brownstone, P. M. W. of Sycamore Lodge, No. 163, of Lemoore, Tulare county. He had purchased the furniture for the new Workmen Lodge-room, and expected the Lodge would occupy it soon. It is gratifying to know that our brethren have recuperated so soon after their disastrous fire.

Oakland Lodge Locals.

Oakland Lodge, 2.

A representative of the WATCHMAN visited this prosperous Lodge on the evening of Friday, the 1st inst. There was also present a delegation from Keystone Lodge, 64, headed by the District Deputy, Bro. Chas. E. Alden. While we did not find present a large attendance of the members, yet it was more than many of our Lodges can have. The officers of Oakland Lodge are among the best drilled and qualified to confer the degrees of any in that district. Three candidates were admitted on this occasion, one received the J. W. and two the M. W. degree. The officers as a whole understand perfectly well their duties, and the initiations were among the most impressive we have witnessed for some time. There is a feeling of unity also among the members of this Lodge that is well calculated to give the Lodge strength.

Occidental Entertainment.

Hansen's hall, of West Oakland, was the scene of joy and merriment on Thanksgiving eve. On this occasion, Occidental Lodge, No. 6, gave its public entertainment and dinner. The committee having the arrangements in charge did everything in its power to make the event a marked one, and were rewarded by seeing its efforts duly appreciated. This Lodge is among the oldest, and likewise one of the best. The members are substantial and progressive, and the successful entertainment on this occasion gave evidence of great vitality in the Lodge. Bro. Frank Zimmerman acted in the capacity of floor manager, and discharged his duties to the evident satisfaction of all. The great number of guests and Workmen who had assembled were called to order, and the Master Workman of the Lodge, Bro. J. F. Hammer, delivered the opening address. A cordial invitation was extended one and all to participate in the sociability and also the enjoyment of the evening. The following is the programme: Overture by the orchestra; opening address, Master Workman J. F. Hammer; piano solo, Miss Katie Hammer; song, Mrs. O'Brien; zither solo, Prof. M. A. Edelman; piano duet, Mr. and Mrs. Wingertner; song, Mr. Thos. Allen; Little Flora, the child wonder, in her specialties; banjo solo, Mr. S. P. Babcock; quartette, Mrs. Hawkett, Miss Webb, G. W. Carroll, W. Newcum; Josh Davis in his budget of songs. Each of the performances was well rendered and kindly received. This feature of the evening's entertainment over, dancing commenced, and the happy Workmen and their wives, cousins and sweethearts whiled the hours away until it was time to say "good night." All in all, the entertainment was a most enjoyable one, and reflects much credit upon the Lodge and members.

Hospitality of Pacific, 7.

One of the most marked and pleasant occasions in fraternal circles held in our sister city Oakland for many months was the visitation made by Occidental Lodge, No. 6, of West Oakland, to Pacific Lodge, No. 7, on the evening of Thursday, Dec. 8th. The Committee of Arrangements spared no pains to make the evening a most enjoyable one, and by the sacrifice of a little time and the expenditure of a few dollars succeeded in preparing a menu and a programme very satisfying and entertaining. As one entered the large and beautiful A. O. U. W. hall, which is located at the corner of Franklin and Twelfth street, there appeared before him six long tables spread with beautiful linen and table service, arranged arround the alter in the form of a hollow square. In all there were about 125 covers. When the gavel fell, calling the Lodge to order, the hall was comfortably filled by the members of Pacific and visiting brothers from various other Lodges of Oakland, Brooklyn and North Temescal. The routine business was transacted satisfactorily. Sick benefits were ordered paid to several unfortunate brothers, and two candidates were proposed, balloted on and elected. At this point the presence of the Grand Master Workman in the ante-room was announced, and a committee was appointed to receive him and Occidental Lodge. G. M. W. Barnes was now introduced and received with honor appropriate to his office. Occidental Lodge, to the number of 50, entered in a body, and took their seats in the Lodge, the officers being invited to take seats along side those of Pacific. The candidates were announced waiting to receive the J. W. degree, and initiations followed. The officers showed themselves to be well acquainted with the unwritten work, and acquitted themselves well in the performance of these duties. The Lodge, after the transaction of all its business, then closed, and the entertainment and sociability of the evening commenced. Master Workman O'Brien having invited all present to take seats at the table, urged that everybody "fall to," which they did with evident relish. Pork and beans, Boston brown bread, cake, coffee, fruit and many other excellent things satisfied the inner man, and then the "feast of reason and flow of soul" followed. The programme of exercises was as follows; Organ solo, in two parts, Prof. Le Noir; vocal duet, Bros. Smith and Guernsey, Prof Le. Noir presiding at the piano; vocal solo, Bro. John A. Britton; address by Bro. J. F. Hammer, M. W. of Occidental; solo and chorus, "Three Black Crows," Bro. Smith and "a gang," being loudly encored, an accompanying piece was rendered; Address by G. M. W. Barnes; reading by P. M. W. Chas. Reed; by special request, Bro. Swenerton sang a solo; P. M. W. Robinson, of Oak Leaf, being called upon, made a few remarks full of interest and feeling; solo, "Twinkle, Twinkle. Little Star," Bro. Frost, of Occidental; remarks by Bro. Munce, F. of Occidental; "Whoa Emma" was rendered by Bro. Swenerton and a quartette; the closing speech of the evening was made by Bro. Schultz, of Occidental, The instrumental solo by Prof. LeNoir, the vocal solo by Bro. Britton, the address by the Grand Master Workman, the remarks by Bro. Frost and the last musical selection were the marked features of the evening. The address by the G. M. W. was one of the finest and most interesting we have ever heard him deliver. When introduced, he was loudly applauded, and when he closed, the ovation was heartfelt. In his remarks he drew a beautiful figure as to the appropriateness of Pacific and Occidental being so closely related. These should be bound together as the Siamese twins, not only numerically but fraternally. Speaking of the jurisdiction of California and its prosperity, he said: "It is but five years since this State was made an independent jurisdiction. Then we had only about 2,000 members; now we have 15,000, marching to the music of Charity, Hope and Protection. During the past year by 19 assessments, we have sent money into dark and otherwise desolate homes." The address throughout was eloquent, full of pathos, bristling with splendid figures and intensely interesting. About 11 o'clock the exercises closed and the visitors departed, wishing success and prosperity ever to attend Pacific Lodge of Oakland.

Keystone "High Jinks."

Something in the way of an entertainment was attempted by Keystone, No. 64, at their regular meeting, held Tuesday evening, Dec. 5th. For several weeks previous the matter of an entertainment had been under consideration, and a committee was appointed to make arrangements. The original plan for giving the entertainment was not carried out, and it was subsequently decided to have no regular programme and that the exercises should consist of impromtu efforts The regular business of the Lodge was finished with something more than the usual dispatch. One candidate was introduced and received the J. W. degree. When "Good of the Order" was called the Master Workman announced "High Jinks." Cigars were passed and various brothers were prevailed upon (?) to respond. Bro. Alden, District Deputy, favored his audience with a humorous recital and a story; Bro. Carey provoked laughter by a song, which was rendered in good style. Master Workman Menges read a selection, and various other brothers responded by making pleasing and well-timed remarks. Bro. Mackey, of Oak Leaf Lodge, was present and responded by making a speech in which he urged the fraternal feature of the Order as the best means of securing good attendance upon the Lodge, and a better feeling among the brothers in general. After deciding to employ an organist, the meeting adjourned. While it was far from what the Lodge is capable of doing in this direction, yet the attempt was a fair one, and we hope that soon Keystone will decide to hold another entertainment of a public character, when all can do themselves more justice.

District Meeting at San Jose.

A grand district meeting was held at San Jose, on Wednesday evening, December 6th, in the hall of Mt. Hamilton Lodge, 43. There was a very full attendance of the members of Mt. Hamilton and Enterprise, of San Jose, as also good delegations from Santa Clara and Alviso Lodges, and a number of visitors from other portions of that district. It was arranged by Deputy Hamilton that the officers of Mt. Hamilton and Enterprise should join in exemplefying the work. After the regular business had been completed, Bro. Wm. Vinter, the efficient M. W. of Mt. Hamilton Lodge, invited the officers of Enterprise Lodge to confer the J. W. degree, which was done in a manner that reflected great credit upon them. By request, Deputy A. B. Hamilton gave the unwritten work in both degrees. The candidates were aged respectively, 23, 25 and 37 years, one of them, Bro. Branham, being the Sheriff-elect of Santa Clara county. The officers of Mt. Hamilton then conferred the Master Workman degree on the candidates with dignity, grace and correctness.

At the close, by request, the Grand Master Workman also gave the unwritten work of both degrees, and it is admitted and conceded that our G. M. W. is letter-perfect in the authorized secret work. Bro. Vinter then announced that refreshments would be served, and under the supervision of Bro. Jas. H. Baird, the caterer, and his numerous assistants Champion hall was turned into a banquet room as if by magic. In a very short time an oyster supper was ready. Bro. Hardy, as master of ceremonies, in his inimitable and pleasant manner announced the following exercises: Overture. Prof. Shook, organist of Mt. Hamilton Lodge; address, W. H. Barnes, who in a few stirring words, as usual, fairly electrified his audience. In the course of his remarks he said: "While honor and success attends us, and while our brethren, our deputies and our Grand officers have given their best efforts to promoting the interests of our Order let us not forget what we owe to the press. As a member of the press, I most cordially reccommend the PACIFIC STATES WATCHMAN. As a periodical it is one of the best managed and most ably published in the United States." Remarks by H. G. Pratt, Grand Recorder, were then made. He gave some valuable statistical facts and related something of the early history of our Order, closing with some felicitous and congratulatory remarks for the brethren of Santa Clara. By request, music by G. M. W. Barnes followed. This novel entertainment of feasting, songs, sentiment and sociability intermixed, was one of the most enjoyable meetings that we have ever attended.

Lodge Locals.

Celebration at Alvarado.

A grand ball was given under the auspices of Reliance Lodge, No. 93, at Alvarado, on Thanksgiving night. The large Odd Fellow's hall was dressed and decorated with streamers, wreaths, bunting and evergreen for this occasion. There was a large attendance, made up, from brethren of adjacent Lodges, and neighbors, who joined in with the Workmen to have a good time. Bro. Wm. T. Ralph, M. W., as Master of Ceremonies, introduced Bro. E. M. Reading, Secretary of the Guarantee Fund, who delivered an able address that was well received. Following this, Bro. Ralph and wife led in the grand march, which inaugurated the terpsichorean exercises. Dancing was continued in a spirited manner until the morning hours. The services of the well-known caterer and manager, Wm. Morris Liston, had been secured, and under his supervision the company were invited at 12 o'clock to the banquet hall, where was spread one of the Maison Doree suppers. To preserve order it was so arranged that those holding tickets up to No. 52 should sit at the first table. The company was so large that 100 persons absenting themselves did not interfere with the dance, so the feasting and dancing went on without intermission. The brethren of Reliance, with the assistance of members from other Lodges, extended every courtesy possible to all of the visitors, and made it one of the most successful parties, both financially and otherwise, that historic Alvarado has had for a long time. Their next celebration will be the anniversary, which occurs in April. The following are the several committees who managed to bring about such a grand reunion and happy termination of the successful celebration: Floor Managers—W. F. Emery, P. M. W., Wm. Wills, Antone Lee, O.; Reception Committee—Wm. T. Ralph, M. W., E. D. Anderson, R., A. J. Hare; Committee on Invitations—A. Baur, assisted by S. Sandholdt, of Centerville; Wm. Nesmith, Newark; L. E. Osgood, Washington Corners; H. Lebrecht, Mission San Jose; Aug. Harms, Pleasanton; J. Horton, Livermore; S. S. Cunningham, Haywards; W. W. Meek, San Lorenzo; W. S. Sturtevant, San Leandro; J. B. Shirk, Decoto; Wm. Mortimer, Niles; Henry Meninger, Mt. Eden.

Sonora, 197.

Concerning the recent public social and entertainment given by this Lodge the Tuolumne *Independent* says: The second annual social of Sonora Lodge, No. 197, A. O. U. W., was given on Thursday evening, Nov. 30th. The invitations had been liberal enough to pack the large hall, and the entertainment given was of the first order. An interesting address by Bro. J. T. Muanan, P. M. W., vocal and instrumental music, readings and a fine little comedy filled the programme and gave the highest satisfaction, each being of unusual excellence and most heartily appreciated. At the close the benches were cleared, and a social dance wound up this most auspicious occasion. The Workmen build well in these social structures, and always turn out a good job—a gem, not surpassed and seldom equalled. We hope and believe this noble, benevolent Order will do as good work in many generations to come.

Butte City Lodge, 206.

EDITORS WATCHMAN:—A circular emanating from the G. M. W. was read in our Lodge-room some time since, in relation to the Degree of Honor. The matter was discussed but no definite action taken. I thought a few words on the subject from a M. W. in the rural district would be of interest, and so I write to you. The Degree of Honor, if made a part of every subordinate Lodge, would, we think, have a tendency to fraternize the Order more. Why? some will ask. To answer this question in all its leading features would be to impose upon your space, but I will answer a few of the essential points at issue. I do not think there is a Lodge in the State, nay, in the whole Order, in which there are not some members who neither have mother, wife or daughter to administer to their own wants when the hand of affliction is laid upon them. And tell me, is there one man in a hundred who is capable of seeing, feeling or realizing the many needs so essential to one who may be prostrate on a bed of disease? Is it his nature? Has he been trained to it? Is his susceptibilities of so fine an order as to be able to discern or even appreciate the needs or wants of him, whose parched lips need a cooling draught, or the gentle administration of those antidotes to allay the due workings of a fevered brain? Is man in his proper sphere, when in the sick chamber, other than to be useful when his physical strength is to be called into requisition? Can, or does his touch impart any of the soothing influences as that of a mother, wife or daughter? Second, the Degree of Honor will have a tendency to fraternize the Order, in bringing together all of the members' families. How often it is that men meet in their Lodge rooms and business relation when their families are perfect strangers. This sisterhood, based upon fraternal relations and ties that bind men together, will, we think, more closely unite and weld together those sympathies which tend to one another's well-being, which, alas, is too frequently not felt in the ordinary relations of life. The bigot and egotist may say she is not fit; she is not educated to such relations; her place is at home among the family. If she is not educated to fill these spheres where does the fault lie if not at the door of him who brings these allegations against her? Educate your wives and your daughters to fill any of these relations in life that you are capable of filling. If you want a woman to talk, give her something to talk about. Let the handsome volumes of poems upon the center-table be for a short time covered with fraternal weekly and daily journals, and read and see what advancements we are making fraternally, socially, mentally and physically. She has the same mental capacity as yourself. Cultivate it by bringing her in daily contact with those relations in life which the would-be lords of creation assume to be at the head. She may have a longer lease on life than yourself, and if not fitted to manipulate those relations you leave behind, sad havoc may be the result of your undue appreciation of her capabilities, you so sadly allowed to become contracted. Yes, I proclaim it is necessary for the good of the Order to do all in our power to bring woman into these Orders. Annex to your Lodges this Degree of Honor; render it all the aid you can; facilitate it with your best efforts, and you will verify what the poet said; that woman is the attribute of God, his ministering angel on earth. And verily 'tis so, for she is graceful in all her steps, heaven's in her eye, and in every jesture there is dignity and love.—X. Y. Z. Butte City, Cal.

BRO. S. F. PURDY, P. M. W., has the reputation of being a skillful and reliable watchmaker and jeweler. Those wishing repairing or cleaning can have it done in a satisfactory manner and at very reasonable rates, by calling at 16 Fourth street, near Market. He has a fine line of holiday goods.

BRO. K. MEUSSDORFFER, 15 Kearny street, carries one of the finest and best selected stock of hats and caps in this city. His long experience and skill as a hatter places him in the front rank in his line of goods.

DECORATIONS.—Parties wishing to secure artistic paper hangings, fine window shades or esthetic decorations, should call on Bro. Jacob Gumpertz, 328 Sutter street.

AN invaluable strengthener for the nerves, muscles and digestive organs, producing strength and appetite, is Brown's Iron Bitters.

THE FRATERNAL RECORD.

A Representative Home Journal for Fraternal Societies—Issued on the 8th and 23d of each month—Subscription, in advance, $2 per year.

The FRATERNAL RECORD is recognized as a standard fraternal newspaper on the Pacific coast, and one of the leading society journals of the age. It is the official organ of several leading Orders, and the recognized representative of various other prominent fraternal and beneficiary associations flourishing west of the Rocky mountains. Among the Orders represented in its columns are the following:

AMERICAN LEGION OF HONOR,
ANCIENT ORDER OF FORESTERS,
ANCIENT ORDER UNITED WORKMEN,
CHAMPIONS OF THE RED CROSS,
FREE AND ACCEPTED MASONS,
GRAND ARMY OF THE REPUBLIC,
IMPROVED ORDER OF RED MEN,
INDEPENDENT ORDER CHOSEN FRIENDS
INDEPENDENT ORDER ODD FELLOWS,
KNIGHTS OF HONOR,
KNIGHTS OF PYTHIAS,
NATIVE SONS OF THE GOLDEN WEST,
ORDER CHOSEN FRIENDS,
ORDER OF EASTERN STAR,
PATRIOTIC SONS OF AMERICA,
ROYAL ARCANUM,
UNITED ANCIENT ORDER OF DRUIDS.

The RECORD is also one of the best home and family papers on the coast, being extensively and handsomely illustrated, and well-filled with original and choicely selected matter, conveniently arranged and carefully condensed matter pertaining to the household, health, culinary and general information. It is a welcome visitor to every member of the household.

The RECORD is issued by reliable and experienced publishers, who are liberal and enterprising in meeting the wants of their numerous patrons. Having the countenance and support of many of the best writers and most active members of the more than ordinary class of citizens, they are enabled to make their journal superior in influence and usefulness in one of the most wide-awake and progressive portions of our Union.

The publishers will endeavor to make every number a credit to the Orders represented, and a desirable representative to present to their neighbors and friends at home and abroad.

All members of the Orders represented, who are familiar with its columns, will readily see the advantage of subscribing and assisting in further enlarging the circulation and advancing the influence of the paper as rapidly as possible.

A limited number of first-class advertisements will be received at very reasonable rates for its circulation and good standing.

Free sample copies sent, on application, to all those who desire to assist in extending its circulation.

FRATERNAL RECORD PUBLISHING CO.,
252 Market St., S. F.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi annually in advance. If errors or omissions are noticed, please write the office direct.

Practical Scientific Research.

There is a growing conviction among thinking men that money is well spent in promoting really practical scientific investigations. The number of obscure points which are daily brought to the attention of busy men is much greater than might be surmised by those not called upon to meet industrial and commercial questions. The busy engineer, mechanic, electrician and chemist are sure to meet problems of great importance at almost every turn, and many are the regrets that they express that the pressure of necessary routine work renders it impossible for them to study, and perchance solve, some of the questions they are forced to ignore.

The more wide-awake business houses are beginning to see the benefit to be derived from a thorough study of processes for manufacture, from more carefully made machinery, from a more thorough utilization of mechanical and chemical forces previously wasted, and from the positive guaranty which a competent expert can give that the goods they manufacture and sell are of exactly the quality demanded.

But few business firms, however, are willing to go so far as to employ men and furnish facilities for the more elaborate and generally useful investigations; such work has usually been performed by college professors.

Notwithstanding the eminent ability of many of the men who have thus contributed to science, it must be admitted that their results are frequently more or less unsatisfactory. For this there may be several explanations; college professors are often overworked; they are often embarrassed for want of means to procure necessary books and apparatus, and, lastly, they do not, as a rule, mingle freely with the busy practical men to whom industrial and scientific questions are daily being presented. The consequence is that very many scientific professors are devoting themselves to what they term "pure research," and are carrying their theories far beyond the limits of usefulness and common sense. It seems to be true that we must look outside the colleges for a large share of the practical scientific work now waiting to be done.

Much can be accomplished if each well-trained worker will give a small portion of his own time, outside of business hours, to the investigation of some one question which he deems of real importance. Let the work be done without haste, thoroughly, conscientiously and without regard to preconceived theories; let results be minutely recorded when obtained, and, finally, let all be carefully digested and printed in some wide-awake journal for which it is appropriate.

The various scientific and trade associations can do much good in the same direction by setting apart moderate sums of money to be judiciously expended for the promotion of scientific and practical investigation of the various questions presented. Most societies have among their members men who are fully competent to conduct elaborate and useful experiments, and derive therefrom results of real value to all. It is a good sign when such work is encouraged by associations of practical men, and we are glad to note that many societies now have funds, the proceeds of which are employed for the encouragement of original research upon practical questions.—*The Sanitary Engineer.*

MISDIRECTED MECHANICAL INGENUITY.—Imprisoned criminals have accomplished most astonishing feats in their efforts to escape. A large proportion of a certain unsavory class of literature consists of the recital of feats of this character. These men, it is true, have nothing else to divert their attention, and are impelled by a motive stronger than the desire of gain in the prosecution of their purpose. An instance of this kind, which occurred very recently, is a notable example of difficulty overcome. An imprisoned convict, without tools or material, contrived to manufacture a key, with which he opened difficult locks, and effected his escape in spite of the watchfulness of his guards. He scraped lead from a water pipe which ran through his cell, made a fire of splinters from his furniture, melted the lead in his spoon, and cast the key without attracting the attention of his watchers. Men in similar condition have performed prodigies in the way of cutting iron bars, drilling through iron doors, breaking through heavy stone walls, constructing ladders, weapons, keys, files, saws, hammers and other tools. They have tunneled long distances beneath deep foundation walls, and accomplished feats which would be regarded as difficult even with the aid of the best implements. It is said also that the finest and most perfect tools known to mechanical experts have been fabricated by criminals in order to effect their depredations upon society.

STILL ANOTHER.—A new lamp, invented by Captain Radivanowski, was lately experimented with in St. Petersburg. The lamp is composed of a small rod of lime or magnesia, containing a certain quantity of carbon, or else of a very thin thread of carbon covered with a coating of lime or magnesia stem, which gives, it is said, a fine light, similar to the Drummond, but more intense. The quantity of electricity necessary to feed such a lamp, it is claimed, is less than for the Edison or Maxim; it is, besides, simpler than others and requires no vacuum.

Brain Food.

You can no more crowd intellectual food into people's minds in quality and quantity, and at times of your own choosing, than you can make the child or the animal eat whatever you desire when not hungry.

You may make a newspaper of elaborate dimensions, and fill it up with a mass of reading that but few people want, and sell it at almost any price, and but few people will take it continuously.

Again, you may fill it up with a good deal of good information, without going to the care and expense of having it nicely prepared as to variety, arrangement, seasonable news, propositions clothed in good language and prepared to good taste, and your literary duty will not be appropriated or made useful to the community if too cheaply or recklessly set forth.

Again, it is easy enough to prepare a dish that is inviting at the first taste, when one does not care a fig about what they say, except to make their paper attractive for the time being, or until the fallacy of their spicy and mis-called "enterprising" articles come to their true color in the light of true information.

He who buys his literature by the yard or pound, instead of by its true standard of real worth, regardless of bulky quantity, not only deceives himself badly, but in the most important of all considerations, for a man who cheats his heart and brain, does himself the greatest of wrongs, for it is irreparable; it is perpetual; its injury goes down the ages, multiplying its important results in its influence from individual to individual.

A man has but one life to live. If he fills his mind with poor trash, there is no means by which he can cleanse it and begin anew, for the injury mars his thought or pollutes his character forever.

It is but little, at most, that is expended for literary food compared with other expenditures for human existence. Then why should people foster second quality literature, when the saving at most can be but a few dollars a year between that and buying the best.

Why will not people take more pains to inform themselves as to which publications are the best and most suitable for advancing their minds and their material interests as well than they ordinarily do? They are often careful (yet seldom careful enough) as to what seed they sow upon their land, and why should they not be equally careful and select of the intellectual seed they secure for themselves and others in their care?

A NEW STYLE OF STEAMSHIP.—Commodore Coppin, of England, has designed an improved ocean steamship. The diagrams show a triple-hulled screw ship. There are three separate vessels below water, while above one vessel only is seen. The center hull, which is 204 feet shorter than the outside hulls, contains the engines. There are two screws or propellers at each end, either of which can be worked in case the other is disabled, or the two can be worked in unison, thus increasing the power and speed. It is claimed that this vessel will make a voyage from New York to Liverpool in five days. The vessel is designed principally for passenger traffic, all staterooms being above the water line, while if it is required, the vessel can carry as much freight as the *City of Rome*. The inventor says that seasickness in his vessel will be an impossibility, as the three hulls will prevent the rolling of the vessel, even in the heaviest sea. The hulls both forward and aft are pointed; in fact, the steamer can be run either backward or forward with equal rapidity.

The Color of Pure Water.

Considerable difference of opinion as to the color of perfectly pure water has hitherto prevailed, and the investigations of Mr. Victor Meyer, a German experimenter, may therefore not be uninteresting. In the course of his experiments he found that the color of perfectly pure water is neither blue nor green, but a shade between the two. In order to demonstrate this, he took 5 glass tubes, about .16 inch in diameter and about 5 feet in length, which he connected by means of rubber tubing, thus forming a tube about 25 feet long. Both ends of this tube were closed with glass plates fitted in metal sockets, the latter being furnished with brass nozzles for filling the tube with water. The tube itself was placed in an exactly horizontal position and covered with black cloth. Upon looking through the tube, the field of vision appeared perfectly colorless, the cloth and the metal sockets preventing the color of the glass from exerting any influence. Upon filling the tube with distilled water, however, an intense bluish-green was observed, which he considered to be the color of perfectly pure water.

Two theories have been advanced to explain the blue color of water when seen in large masses, one, held by Professor Tyndall, being that small solid particles suspended in the water do not reflect the lower or red rays of the spectrum. According to the other theory the color is due to the absorbent action of the water itself on the white light before and after reflection by these particles. The results of experiments made by Mr. John Aitken, and presented to the Royal Society, England, show that the latter theory is probably the more correct one. The greater the number of white reflecting particles the greener the water appears to be, and hence the gradual deepening of the green to blue as the shore is left. The waters of Lake Como owe their darkness to the absence of reflecting particles, as Mr. Aitken ingeniously proved by scattering finely-divided particles of chalk in the center of that lake, thereby producing a very brilliant blue. The brilliancy depends on the color of the particles, and is greatest with white particles. Among coral reefs, which are generally strewn with white sand, the water also takes a very brilliant blue or green.

TEMPLE OF BUDDHA IN JAPAN.

MECHANICAL stokers are being introduced in England. Knapp's mechanical stoker has been introduced by a company in Birmingham, England. The fuel is placed in a hopper in front of the boiler, at the bottom of which is a crusher spindle, which revolves very slowly and carries the fuel to a reciprocating bar, whence it passes to the fire bars, which have an alternate reciprocating motion. As the coal drops on the bars, it has mingled with it a free supply of air, which enters through a perforated dead-plate. Once the apparatus is adjusted, a steady feed may be relied on. It has the advantage of consuming all smoke. Another mechanical stoker is that of McDougall, of Manchester, England. The fire bars have an alternating motion upwards and downwards, and backwards and forwards, the motion being derived from a series of eccentrics on a shaft of Bessemer steel. The fuel is supplied through a hopper, in the lower part of which is a ram, which thrusts it forward at any desired rate. When the fuel enters the furnace it is received upon perforated plates, which, from their position, are kept at a red heat. In this way the fuel becomes ignited before being pushed on to the fire bars, an arrangement which commends itself at once to the practical eye. The system admits of the poorest fuel being burned without creating smoke.

A Japanese Temple.

We give on this page a picture of one of the religious edifices of the Japanese—a temple of Buddha. Buddhism was introduced into Japan from China, through Corea, in the sixth century of our era. It was persecuted for a long while, but gradually found favor, and is now the religion of the majority of the Japanese. Its temples are very numerous, and are crowded, not only on holy days, but regular and frequent sermons by day and in the evening are attended by attentive congregations These sacred edifices are sometimes very large and imposing, and always occupy commanding sites, surrounded by scenes of natural beauty. They are generally built of wood, often of cedar, and the interiors contain quaintly carved and ornamented shrines, on which are placed a variety of images, varying in size from a child's doll to a colossus like that called the Daibutz, near Yokohama, which is a magnificent bronze statue, representing Buddha seated, of excellent workmanship and admirable art, 50 ft. in hight and 96 ft. in circumference at the base.

Besides Buddhism there are many religions in Japan, The oldest, which is still the State religion, is Sintoism, the chief feature of which is the worship of the sun, of the elements and of the spirits of deified heroes. By this sect the *mikado* or emperor is regarded as an incarnate deity. The best educated and most intelligent of the people are followers of Confucius, the Socrates of China.

USEFULNESS OF TECHNICAL AND TRADE JOURNALS.—The encouragement of technical and trade journals augurs well for the advancement of manufacturing and mechanical industries. No matter how skilled may be a workman, his fellow craftmen possess secrets of which he is ignorant, and which can, as a rule, only receive the proper dissemination by being published in the specialty or technical papers that are doing so much for the elevation of the American artisans and their numerous callings, in which the public is so intensely interested. Every mechanic who prides himself in his particular line ought to subscribe regularly to a trade journal—one representing most closely the branch of work in which he is engaged. This should be read closely and carefully, and the hints and suggestions thrown out must be noted with the view of giving them practical tests. By pursuing this commendable course a greater degree of technical skill is acquired at a trifling expense of time and a small outlay of money. Then, too, a knowledge is obtained as to the better class of new textbooks appearing from time to time bearing on the exact sciences and applied mechanics. Besides all this, the general news of particular localities as to the progress thereof is an especial feature characterizing these papers, of which sight cannot be lost without detriment to the loser. To be well posted is as much stock in trade with a mechanic as it is to a merchant or professional man. The trade journal is fast becoming, under wise and faithful guidance, as much of a necessity as the daily paper. —*Western Industrial Journal.*

TIRES OF MIXED METALS.—The Chamouni works have recently begun to manufacture, says *Engineering*, tires of mixed metal—half iron and half steel—and which, it is claimed, will have the hardness of the latter without its fragility. The body of the tire is composed of a ring made of pieces of puddled steel, and inserted between two hoops of fine iron, which form the outer sides of the section. The whole is welded together by the hammer. The principles of their manufacture are as follows, but they have not been developed very far as yet: A bar of fine iron, which is to serve as the core, is first rolled, and then a hoop of fine iron is put on at each end cold. One of these hoops is afterwards to form the flange, and is composed of three coils of equal size. The other is formed of a single coil, and is to make the outer face of the tire. Wedges of puddled steel are then placed obliquely in the space between the two hoops, thus making so many spirals inclined on the axis of the tire. The arrangement brings the wedges together when the hammer is applied, and thus a complete welding is obtained. The wedges are cut from rolled bars; they should be of hard steel, but yet soft enough to weld easily with fine iron. The round pieces thus obtained are forged and welded with the hammer. Four heats are requisite to obtain a ring like those used in the ordinary processes. The welding is completed by the rolling, and it brings the inside core to such a small thickness that it disappears altogether in the boring.

THE most essential fire apparatus, after all that may be said and done, consists of a few pails of water always kept in readiness. Their importance is shown by the fact that it is a matter of record that of the losses in mills paid for by the insurance companies, twice as many fires are put out by the pails as by any other means. These pails must be kept full, and used for no other purpose whatever. The best fire pails are made of strong galvanized iron, without covers, and they will last much longer if painted with hot coal tar, asphaltum, or some of the roofing compounds. This also helps to preserve the pails, as their black color makes them easily distinguished from other pails used for washing or drinking water. It should be the duty of some individual to keep the pails full, examining them at least once each week and replenishing the whole of the water before it becomes foul.

PACIFIC STATES WATCHMAN.

Issued on the 1st and 15th of each month.

At No. 252 Market Street, San Francisco, Cal.

☞ *Take Elevator No. 12 Front Street.* ☜

Subscription (in Advance) - - - $2 a Year.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the Pacific States Watchman our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and Watchman together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

Whereas, the Pacific States Watchman, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the Watchman as liberally as circumstances will justify.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1,25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

WATCHMAN PUBLISHING CO.

Entered at San Francisco P. O. as second-class matter.

San Francisco, December 15, 1882.

Public Installations.

At the last session of the Supreme Lodge legislation was passed granting the different Grand Lodges the power to authorize public installations of the subordinate Lodge officers, but as this privilege was granted since the session of the Grand Lodge of California, public installations in the A. O. U. W. are not allowed at the commencement of the incoming term. This will be one of the questions for discussion at the next session of the Grand Lodge, and will no doubt have many advocates in its favor.

October Report.

The October monthly reports from the majority of the Lodges in this jurisdiction are now in the hands of the Grand Recorder, and from them we have prepared the following statement of the condition of the A. O. U. W. in California:

No. of new members, 110.

No. restored to the beneficiary fund, 149.

No. suspended for non-payment of dues and assessments, 216.

No. expelled from the Order, 1.

No. transferred, 15.

No. final cards granted, 8.

No. of deaths, 16.

No. rejections, 5.

No. admitted in the various Lodges by card, 26.

Total membership of the Order, in the State, according to the report of 177 Lodges, 13,310.

Taking into consideration the fact that the majority of the 216 suspended during the month will be reinstated, and the large additions being made to the membership, which, doubtless, will increase during the months before the meeting of the Grand Lodge, it is but fair to predict that the membership of 15,000, hoped to be obtained by that time, will rather fall short than over reach the mark.

The Degree of Honor.

The Degree of Honor, that has languished from the day of its birth, at the time of the formation of the Supreme Lodge, is to have a fair and thorough trial in this jurisdiction. The plan is to have the Degree Lodge formed, so far as possible, from the Workmen of some subordinate Lodge, together with the females of their families. It is intended that the subordinate Lodge will give up, to a considerable extent, one of its meeting nights, say the third in the month, to the Degree Lodge. The subordinate Lodge will meet early, dispatch its routine business, close and throw the doors open to the Degree Lodge. This will save hall expenses, make no more meeting nights, and always insure a respectable attendance. This will make a success of the Degree if anything can, as it is at present constituted.

We have long held to the opinion that nothing short of a beneficiary feature can make the Degree of Honor a pronounced and permanent success; and we still hold to the same view of the subject. But, from past experience, we are fully persuaded that no such feature can be engrafted upon it till we have first the Lodges formed, so that the effort can be backed by such Lodges in their organized capacity.

Session after session effort has been made in the Supreme Lodge to put the Degree of Honor Lodges on a thorough business basis, with constitution and laws as comprehensive and complete as those that govern the other Lodges of the Order; but in every instance the effort has resulted in a complete failure. One concession, however, has been obtained. Separate jurisdictions may attach a beneficial feature under the provisions of Section 6, Article VI, of the Supreme Lodge constitution. The consideration of such a scheme, if so desired by our D. of H. Lodges, will probably be one of the most important matters that will engage the attention of our next Grand Lodge. And here we will venture some suggestions in relation thereto.

First, two classes of members should be provided for—beneficial and non-beneficial—so that those who desire to participate in the beneficiary department may do so, if eligible, and those who do not so desire, or may not be eligible, can still be members and enjoy the social features of the degree.

Second, all pecuniary obligations incurred by the Degree should be met by the members of the Degree alone.

Third, the benefit pledged should not be a large amount—not more that $1,000. Probably $500 would be better. The great mass of our members have already about as much burden on them as they can endure without more or less inconvenience.

Fourth, the names of the officers should be changed, so that men could fill the chief offices in the Lodge if found necessary. This, however, is a matter for determination by the Supreme Lodge, from which the ritual must come. But if our Grand Lodge shall ask for such a change no doubt it will be granted.

Fifth, the general laws of the Order should be made to apply, so far as practicable, to the Lodges of the Degree of Honor, to the end that there shall be substantial uniformity in all branches of the Order.

These points suggest themselves as the most important to be considered at the present time. And now we would like to ask what reason there is or can be for supposing that the D. of H. will prove a failure, if properly habilitated, so to speak True its past history is not such as to inspire confidence, but how could it succeed with so little of method in its construction and management. It has been a child of neglect—a sort of outcast, deserted almost by the mother that brought it into the fraternal world, and left to make its way unaided and well-nigh unrecognized. It might be a source of great strength, it seems to us, and we rejoice that at least one honest effort is to be made to have it so.

Now is a good time to work for your paper; to write for it; to get subscriptions for it, and see that it is well supported. Whenever anything of interest to the A. O. U. W. occurs in your Lodge or vicinity, send us in a report. If nothing takes place, see that something is done by your Lodge that will be worth reporting. This will benefit all concerned. In doing this be sure to get up something good.

Election of Officers.

The season of annual elections is at hand. The life of the associations during the approaching term (and perhaps forever) depends much on the choice of those who are to command and work the good ship on the next voyage. All passengers should take a zealous part in securing the best officers possible. Don't let personal friendship or even dislikes interfere with the wisest and best choice.

Speak in season to your fellow members to be on hand. Numerous unfortunate elections prevail though a lack of knowledge on the part of the many of facts known by some. Do not withhold important information. Do your duty for the good of all, and do it in season too.

When you know of a modest member who is capable and always attends well to his duties, put him forward. Don't hesitate to push back any incompetent or objectionable person simply because he puts himself forward and attempts to be induly consequential. It will do such members good to wait. It will do the Order more good too. Do not let any clique rule your organizations for selfish or conceited notions. Sit down on such doings every time, hard and suddenly.

The men that take a deep and helpful interest in the workings of the Lodge are the men, who, ordinarily, will do their duty if elected. Those officers who are faithful and have done all in their power to sustain the Lodge, who have been regular in their attendance, and who, by their bearing, are fitted for their positions, should be retained. Be careful, therefore, not to discharge those who have done well. If there are those who have gone ahead while others stood back, because their activity has made them prominent or seemingly officious, don't decide to put others in their places too hastily. Those that have proven themselves good officers may well be trusted further.

A Great Fraternity.

In the breast of every human being is implanted a feeling of love for his fellow man. There is no exception to the rule. One constituted otherwise would be less than human. The strength of this inherent principle is rarely estimated in its fulness. Many a man there is whom the world regards as but a little way removed from the domain of total depravity; yet in whom is the principle so fully developed that he will risk his own life to save that of a helpless, drowning infant, though a stranger, never seen or heard of by the rescuer. It is this principle that binds men together in clans, societies, communities, States and nations. It is more pronounced in the affection we bear to those of our own kith and kin, but yet in a degree it extends to every creature that bears the image of the Creator. We call this principle fraternity. Societies formed with this principle as the chief foundation stone on which the structure is erected, are designated fraternal societies. Fraternity begets benevolence as naturally and surely as the rising sun begets the day. Nations may rise and fall; religions may flourish and decay; the seasons come and go; nature's attrition may bear the everlasting hills down into the sea, but so long as man exists, fraternity and fraternal combinations will never die.

The A. O. U. W. is the legitimate offspring of this holy principle. The better to help one another, not only in providing for present wants and necessities, but also to protect the helpless ones when the sustaining arm of the household shall fall, is the chief end for which the A. O. U. W. exists. So perfect, methodical and business like is the scheme by which this end is accomplished that many lose sight completely of the life-giving principle and look upon the Order as an ordinary business institution, based like other ordinary business institutions on selfishness. We have plenty of members who joined the Order with this view of the case. Some, no doubt, still hold to their original impression. They are not, as a rule, desirable members. They want somebody else to do the work, provided it be done for nothing; and yet these men are really better at heart than they think themselves to be. They have magnified the bad in human nature and lost sight of the good. We accept none but full-grown men. Such are apt to be firmly grounded in their opinions, and, hence, the reason for their undesirability as members. Occasionally one of these experiences a change of heart. A new light dawns on his inner consciousness, and then the chances are that he will become over zealous. One extreme follows another, as a rule. All this we have seen and experienced and contended against in the Order; but we believe the future will not be so filled with difficulties of this nature as has been the past. The fact that the A. O. U. W. is a great fraternity, with a heart that feels, and a hand strong and swift to alleviate the distressed and to bind up the broken hearted, has become so potent and so fully recognized in the light of practical experience that the selfish man avoids it, or joining, is content to appear what he really ought to be.

A Bright Outlook.

From all parts of this jurisdiction come reports of unusual life and activity in Workman circles. The office of the Grand Recorder is a busy place this month. Since the political excitement has passed away the attention of many of our membership has been turned to the Order. What is true of the A. O. U. W. is also true to a certain extent in all our fraternal and benevolent societies. Throughout the interior the Lodges are doing good work. The aims of Grand officers is to have a membership of 15,000 Master Workmen in good standing by the coming Grand Lodge meeting. There is a bright future before our Order, and we are beginning to realize something of it. Behind us is a record, than which there is none better or more honorable. Under our banners march an army of brave, true men. And to our legions others are coming every day. We are not marching to conquest, our ensigns are not of carnage and war, but of peace and kindness. To all that our talismanic words—Charity, Hope and Protection—imply we have dedicated our energies and money. There is a wide prospect before our Order, and as we go on cheering the unfortunate, drying the tears of the distressed widows and orphans and caring for those whom death has deprived of a loved one, will we fulfil the mission of our organization. The light of our Order streams out in the darkness, and is a beacon to all on whom it beams. Let the good work go on. Encourage others to join us, and make of the A. O. U. W. the greatest philanthropic Order of the day.

A Business Conundrum.

In the A. O. U. W. in this State are perhaps 500 professional accountants, to whom the following will be interesting:

Last season two men engaged in heading grain. At the end of the season they settled up, and passed receipts acknowledging payment in full. Finally one of the men concluded that, though he had given a receipt in full, he should have received $50 more. The more he thought the matter over the more this appeared to be just. At last he went to a lawyer. His partner went to another. Both submitted the same statement of facts. The lawyers disagreed. They in turn submitted the question to several accountants, no two of whom returned the same result. The following is the conundrum:

A and B engaged as equal partners in the business of heading grain. They work 85½ days and earn $2,388.75. A is to be allowed $3 per day for his work; B is to be allowed $2 per day for his work. Besides the partners, there were employed four men at $2 each per day for 85½ day; 12 horses at $1 per span for 85½ days; also two horses furnished by B at $1 per day. In addition, there were other expenses, including the purchase of the machine, amounting to $572.25, of which B paid from his private purse $81. B owes for heading his own grain $472, which amount is included in the earnings above stated, viz: $2,388.75. A collected the balance of the money and paid all the bills except the $81. How does the account stand beween the partners. Does B owe A anything, and if so how much? One accountant says B owes $114.25, another $77 and another $72.50. Who will give the correct result and state the matter so that it will be easily understood? The Watchman will be glad to publish the correct solution.

As an auxilary to our grand organization, we note the gratifying fact that D. of H. Lodges are in process of formation in all parts of this State. Several petitions are already in and Lodges will be formed soon. The rituals and supplies have arrived, and we confidently expect that some 25 Lodges will be formed before the meeting of the next Grand Lodge.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

City Deputies are requested to call at the Grand Recorder's office for the passwords of the coming term.

The semi-annual report blanks have been sent out to all the Lodges. Recorders should fill them out so far as they are able at once, so that at the close of the term little will remain to be done to complete the work. Then one copy should be forwarded as soon as possible after installation of officers.

Recorders should be careful in reporting on the last of this month to have their monthly reports exactly correct, for on the number of our M. W., as so reported, will be determined our per capita tax to the Supreme Lodge and the vote of our jurisdiction in that body.

E. F. Loud, Deputy Grand Master, will shortly make a flying trip through the southern portion of the State. He will leave the city in the latter part of the month, and expects to visit San Luis Obispo on the 27th inst. and Santa Barbara on the 29 h.

Official Visitations in Oregon.—We are pleased to note the interest taken in the work of advancing the cause of the Order in our sister jurisdiction of Oregon by Grand Master Workman J. A. Child, Grand Recorder R. Newcomb, and other Grand officers, by official visitations to the various subordinate Lodges. In no other way, we think, can so much interest be engendered and kept up than by these visits of the Grand Lodge officers. We remember the great good accomplished by such visits at the outset of our growth in this State, and to them we owe, in a great measure, our present strength and prosperity.

A Good Word for the Watchman.—In a recent letter from Bro. S. A. Joy, of Gold Hill, Storey county, Nev., he pays the following compliment to the Pacific States Watchman, showing the necessity of its being kept on file, for reference, by every Master Workman on the Pacific slope: "I find it impossible to keep posted in regard to the advancement of the Order without the aid of the Watchman, and in future I intend to keep a file of the same. Please forward to my address 25 copies of the next issue, and inclose bill for the same. I know of no better way of increasing our strength than to circulate the great champion of our cause (the Watchman) among our friends."

As an evidence of the favor in which Workmen are held in Santa Clara county we note these facts: Bros. W. H. Owens was elected County Clerk, and L. A. Spitzer, Assessor, both of Enterprise, No, 17; Bros. B. F. Branham, Sheriff, and J. M. Pitman, County Recorder, both of Mt. Hamilton, No. 43, and Dr. J. T. Harris, Los Gatos, No. 76, Coroner. Bro. Geo. Fetherson, P. M. W. will be appointed Assistant Recorder.

Misfortune.—We are pained to learn of the continued sickness of Bro. A. A. Egleston. His recent misfortunes in loosing his wife and personal injury to himself by an accident are very sad. His genial face and wise counsel are missed in our Lodges, and we hope that he will soon be able to resume his accustomed visits. Being a member of Yerba Buena Lodge, he has every attention and kindness shown him, for which the brethren of this Lodge are justly noted.

Bro. Jacob Davis, P. M. W., of Magnolia Lodge, which has been organized over four years, has missed but three meetings since its organization. If any of our brethren have made a better record we shall be pleased to know it and publish the same.

It is a significant fact that any entertainment, party or celebration held under the auspices and in the name of the Ancient Order of United Workmen is sure to be an unqualified success.

A benefit concert and ball will be tendered Bro. B. M. Bassim on Thursday evening, Dec. 28, 1882. Tickets of admission have been fixed at 50 cents.

The Grand Recorder Interviewed.

The Views of this Official Expressed Concerning Several Important Matters.

Another year's work of the A. O. U. W. in this jurisdiction is about closing. Consequently we have thought it timely to interview the Grand Recorder and learn what we might concerning the present standing of the Order, and obtain an expression of opinion upon several of the questions that are now prominent before the Order.

We found the official busily engaged in the duties of his office, and after telling us what new life had been infused among A. O. U. W. circles, the reporter asked: "Bro. Pratt, what have you to say concerning the present prospects and outlook of the Order?"

"The prospects of the Order were never so promising as at the present time. Peace and harmony may be said to reign within our borders. Since the deposition of the old Grand Lodge of Iowa, and the organization of a new one from the loyal elements, all serious difficulty in the way of unity seems to be removed. At one time a serious defection was threatened in New York, but no trouble there is any longer apprehended. During the year the Order has largely increased, and it is believed the personnel of the membership has greatly improved. At present there seems a general boom wherever the Order has found a foothold. Much important and wise legislation was done at the last session of the Supreme Lodge, which, no doubt, has contributed greatly to the happy results we are now experiencing."

"What are your views upon the matter of temperance legislation in the Order?"

"The question of temperance will, no doubt, result in some radical legislation in the near future. It appears from such statistics as we have that fully five per cent. of our death losses are directly traceable to intemperate habits on the part of deceased members, and many result from intemperance on the part of others. In the latter case we may not be able to find any remedy, but in the former we can, and probably will. It may appear strange, but I believe it to be true, that we suffer more from beer than from all other drinks combined, for the reason probably that beer is popularly supposed to be an innocent beverage, while the fact is it breeds a long list of diseases of the liver, kidneys, heart and stomach. The devotee of beer may appear healthy and robust, and yet be but one remove from sudden dissolution, which the slightest injury or other untoward circumstance may at any moment precipitate. The drinker of ardent spirits is apt to be boisterous and demonstrative insomuch as to bring disgrace on himself and his associates. Consequently he is usually kept out of the organization; but if otherwise, the chances are he will be expelled. Very few would think beer drinking a sufficient reason for refusing admission to an applicant, or sufficient cause to justify expulsion from the Order. Such being the case, it is safe to predict that legislation of the Order will sometime be directed against this evil."

"About how many initiations do you think will be made before the next meeting of the Grand Lodge?"

"From this time until the next meeting of our Grand Lodge we expect to initiate in this jurisdiction not less than 1,000 members. Since the political election there seems to have been a general awakening, and my office is crowded with applications for beneficiary certificates—about 10 per day on an average."

"What is the general character of those who are now coming into the Order?"

"The general character of our new members is fully up to the average, so far as one can judge from the examination papers, at least so far as physical and moral fitness is concerned. Socially, perhaps, they do not stand so high, for already all our most eminent men who are eligible have been gathered into our ranks."

"What is the financial condition of the jurisdiction?"

"Our finances are in good condition. Our beneficiaries have always been promptly paid, and our Lodges cheerfully respond to all assessments made for that purpose. At the next session of the Grand Lodge we shall have in our General fund about $4,000 with which to defray the expenses of the session, etc. As the session will be short probably this will be sufficient, or nearly so."

"How is the money appropriated, and how much is usually kept on hand?"

"The Beneficiary fund is kept separated from all other moneys, and paid only in liquidation of claims arising from the death of our members. Not a penny of this fund can be legally diverted to any other purpose. The General fund, which is raised in the subordinate Lodges from "dues" of members, and in the Grand Lodge by a capitation tax collected from the subordinate Lodges, fees for instituting new Lodges and the sale of supplies is used to pay running expenses, including salaries, etc. The General fund of the Grand Lodge varies from zero to say $4,500. It is largest just after the collection of the semi-annual installment of the capitation tax. We have usually in bank, of both funds, about $15,000, but the beneficiary fund is always drawn against within $2,000 of the amount on hand. The reason so much is constantly in bank is owing to the fact that many of our beneficiaries do not care to draw their money at once on receipt of their warrant, thinking, no doubt, that it is safer in bank than in their possession."

"Bro. Pratt, the matter of Degree of Honor Lodges is now an important question among the Lodges. Will you not express your views upon this feature for the benefit of our readers?"

"I believe the Degree of Honor is capable of being made a valuable auxilliary to our organization; but to do this it must be made, to some extent, beneficial. As at present constituted, there is not enough strength to it to hold Lodges together. They flourish awhile, and then suddenly collapse. That is the history of this Degree. Make it beneficial, and I know of no reason why this branch of the Order should not succeed as well as any other part. If those Lodges of this Degree we now have, and those we shall organize before the next session of the Grand Lodge, will but be unanimous, or nearly so, in asking that the Degree be made beneficial, the Grand Lodge will, no doubt, make it so, and then we shall be in a position to show to the world and the Supreme Lodge that the advantages of this Degree have been strangely overlooked."

We received an elaborately printed invitation and programme for the grand reception and musicale given under the auspices of all the city Lodges of the A. O. U. W., at the National Guard Armory, St. Louis, which was held on Wednesday evening, Nov. 29, 1882. The literary exercises of the evening opened with an address by Rev. John D. Vincil, D. D., Grand Receiver. In every particular the programme was most complete, and it was one of the best conducted and elegant affairs ever given by the Workmen. We congratulate our brothers of St. Louis upon their success.

Bro. J. Meredith Davies, P. M. W., one of our leading Workmen, will visit Oregon this week on official business, as the general agent of the Chicago and Northwestern railroad. We wish him a pleasant voyage and safe return, and bespeak for him at the hands of the brethren in Oregon a cordial greeting and warm reception, as one of the zealous and influential Workmen of the Pacific coast.

Bro. M. T. Brewer, P. G. M. W. of Sacramento, made a hurried visit to this city on the 14th inst. Bro. Brewer is one of our enthusiastic Workmen, and it always affords us great pleasure to greet him.

Brief Lodge Notes.

The third degree was conferred on a candidate from San Francisco, by California Lodge, No. 1, of Oakland on Tuesday evening, the 5th inst, a special dispensation having been obtained from G. M. W. Barnes. This Lodge is noted for the excellence of its work.

Vesper Lodge, No. 62, A. O. U. W., of Livermore, is about to organize the Degree of Honor. The wives, daughters, mothers and sisters can become members and enjoy themselves with brother Workmen.

A large delegation of Healdsburg Lodge, A. O. U. W., visited their brethern at Santa Rosa on Wednesday evening, the 29th ult, and were treated among other things to a royal supper.

Ashler Lodge of Alameda, is making preparation for a grand entertainment to take place at the Park Opera House, on Friday evening, the 29th inst.

Los Gatos Lodge, No. 76, A. O. U. W., will give an entertainment at Lyndon hall, on Friday evening, December 22, 1882.

Newark Lodge, No. 169, held a public meeting on December 8th, when an official visit was made.

The Lodge at Haywards initiated four candidates on the 5th inst.

An official visit will be paid to Hercules, No. 53, on December 15th.

Brooklyn Lodge, No. 3, will soon give an entertainment.

An Example of Charity.—Our late deceased Bro. Patrick Rowley was a member of Enterprise Lodge, No. 17, San Jose. His death occurred at West Oakland, and the brethren of California, No. 1, buried him and advanced $30 to his destitute family, and reported to his Lodge. The members of Enterprise not only reimbursed them but dispatched Bro. Geo. Fetherston to visit the widow at West Oakland. He found such utter destitution and want in this family, consisting of the widow and four small children, that he advanced them $100 to keep the wolf from the door. Such examples of true disinterested charity are worthy of record and form a part of our history as an organization.

Bros. W. F. Foss and Charles M. Shortridge, of San Jose, have associated themselves as real estate and general insurance and business agents. Office, Knox Block, San Jose. They are active, energetic and reliable men, and business intrusted to them will receive careful, prudent and intelligent attention. They have kindly consented to act as local agents for the Pacific States Watchman and the *Fraternal Record*.

Order Notes.

The increase in the membership of the Lodges of Maryland during October was 67; losses reported, 24, making a net gain of 43. Seven Lodges in the State show an aggregate loss of 13; four Lodges in New Jersey show a loss of 6, and two Lodges in Delaware a loss of 5.

At the last meeting of the A. O. U. W. Grand Lodge of New York the Committee on Laws gave their opinion that during the intervals between the meetings of that Grand body the Trustees constituted the Lodge.

The returns of assessment No. 9 of the "old" Grand Lodge of Iowa indicated a membership of about 9,000. The new, or loyal Grand Lodge, of that State is reported as doing as well as could be expected under the circumstances.

Our social features will be found of great value by those who will become members of the Order. Friendships are formed at Lodge meetings which grow stronger with time, and are only ended with life itself.—*Missouri Overseer.*

The Good We Do.—We are permitted to make up the following table from answers received in reply to letters, addressed by the Grand Secretary of the American Legion of Honor of New York, to the Supreme Secretaries of the several Fraternal Beneficiary Societies as to the amount of moneys disbursed by them to the beneficiaries of deceased members from the date of organization up to the first of November, current. These figures furnish the following facts:

Knights of Honor	$7,229,021 55
A. O. U. W.	6,000,000 00
Royal Arcanum	1,602,000 00
American Legion of Honor	1,461,376 21
Knights of Pythias	1,386,750 00
E. O. M. A.	317,348 30
Knights of the Golden Rule	127,625 43
Total	$18,124,121 49

This splendid record shows what can be done to alleviate the distress of the widow, the aged mother and the fatherless by united effort.—*K. of H. Standard.*

The *Missouri Overseer* has the following in regard to the prompt payment of our beneficiaries: One characteristic of our Order must commend itself especially to all, and that is, the promptness with which death losses are paid. It is not an unfrequent occurrence in this State for the beneficiaries of a deceased brother to receive their money within 10 days or two weeks after his death, and where there is a longer delay it is because the parties most in interest are negligent in furnishing the required proofs. The old-line companies generally insist upon waiting 60 days after receiving proof of a loss before they pay it, and serious embarrassment has often been thereby caused, but our Order responds at once and the beneficiaries receive their dues immediately. This promptness is something in which we may justly take pride, for it gives us special claims upon insurers.

We met Bro. O. N. Cronkite, District Deputy of Sacramento county, at the District meeting held under the auspices of Bernal Lodge, No. 19, on the 11th inst. Bro. Cronkite reports the two Lodges of Sacramento in a healthy and flourishing condition, as also all the Lodges in his district. The new sister, Lily of the Valley, No. 11, organized in November, has made rapid strides in membership, and at present is one of the attractions of the city of Sacramento in society circles. At their last meeting 20 candidates received the degree, and there was a long list of applicants to be acted upon.

Dressmaking Parlors.—Sister E. Stevenson, 115 Kearny St., rooms 7, 8 and 9, is one of the leading establishments, of this city. The best material and most artistic, and experienced help is employed and terms are very reasonable.

Furniture.—For a fine and well selected stock of new and latest designs in window draperies, lambrequins, pedestals, Louis XV ebony furniture, go to the grand establishment of F. S. Chadbourne, 735 Market street.

An enricher of the blood and purifier of the system; cures lassitude and lack of energy; such is Brown's Iron Bitters.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation etc., to the publishers of this paper.

PALMER'S,

How the Weather Indications are Determined.

At the Signal Service Bureau in Washington the weather indications are recorded at 5 A. M., 11 A. M., 4 P. M. and 11 P. M., daily. A reporter undertakes to tell how the work is done, and this is what he sees:

Take a seat in the indication room with me, and we will see how the weather is gotten up. It is now 4 o'cock, Washington time, and telegrams are pouring in from all parts of the United States, Canada, British America, West Indies, Nova Scotia, and falling into the lap of the sergeant in charge. The territory covered is from Olympia, in Victoria, on the northwest coast of British America, across to Sydney, above Newfoundland, thence down to Havana, across to San Diego, California, and thence back again. There's a girdle for Puck. At a certain hour of the day—3 o'clock, Washington time—observations are taken at all the stations, and then they begin to come in, chasing each other over the wires pell mell, like a crowd of unruly school boys. These dispatches are called off to six gentlemen, each of whom sits before a map, one noting the thermometer, another the barometer, a third the condition of the weather, and so on. These are transferred to one large map, and then Old Probabilities makes his appearance. He glances over all; sees where a storm was at 1 A. M., and notes where it was at 3 o'clock. He takes into consideration the wind currents, the humidity, and all the minor details which his experience and learning have taught him. Not a word is spoken in the room. Old Probs. is in deep study. In a minute he will speak to 50,000,000 of people, and a few more over in Canada. His stenographer appears, and the indications are dictated for New England, then the Middlle States, the South, West, Mississippi Valley, and then, perhaps, a storm bulletin 24 hours in advance to warn some special section.

Among the innovations made is the furnishing to sections of the country special reports of floods, the conditions of rivers, and their probable rise and fall, within 24 hours following, at given points. Then reports are made for Southern States on the weather during cotton picking time, signals being displayed from the telegraph stations denoting clear or bad weather coming.

DAMAGE TO LEAD PIPES BY RATS.—In the cellar of a house in Berlin a large number of rats had recently taken up their permanent abode. Notwithstanding traps and poison, the vermin could not be got rid of. The brickwork was carefully examined, and a good many holes were discovered, which probably served as nests for the rats, or led to the outside soil. All the openings were filled with cement, and the walls of the cellar pointed. The floor, which had hitherto been loose, was laid with bricks and cement. The rats disappeared, but after a short time a wet spot was observed in the brickwork, near where the water supply pipe ascended. On examination, a number of dead rats were found in a space of the cutting made for the pipe, which had not been filled up when the pipe had been moved, and close by the lead pipe had been gnawed right through. The above may be very easily explained. A family of rats had settled in the cutting; exit had been cut off by the closing up of all the holes; the rats, trying to get out, had attacked the lead pipe as being the softest material in their prison. They gnawed until they had made an opening, when they were drowned by the outflowing water.—*The Builder.*

IRON SUPPORTS.—Unprotected iron posts, girders or other iron supports, are out of place in mill construction. In the nature of work done in mills and the structural material thereof a fire proof mill is out of the question. Subjected to heat, an iron girder will warp and let down before a wooden one would be well fired. Cast iron cracks the instant water touches it. Iron posts and girders are sometimes covered with wood, terra cotta, Teil lime composition or other non-conducting material to protect them from fire. There is a method of terra cotta construction with wrought and cast iron frame for the interior of mills, in which all the constructive iron work would be protected, and the use of inflammable material would be discarded for all interior purposes, in so far as it pertains to the building. Much attention is being paid to this matter at this time, and it is to be hoped that some device will ere long be introduced which will meet with the general approval of architects and builders.

BENT GRASS FOR SAND DUNES.—The experience of the Commissioners of the Golden Gate park with "bent" grass to fix down shifting sands may be of use to those who have coast ranches. This grass was planted two or three years ago, and it soon appeared that ordinary movement of the sand surface had no effect upon it, while, if such violent displacements took place as were often occasioned by storms, this invincible sand subduer forced its way up through the overlying drift and went on growing as if nothing had happened. This last almost unique vegetive trait was quite opposite to the ready discouragement of the young pines, gums, acacias and other transplanted trees and shrubs. When once covered by the drift their usefulness was at an end.

Good Land and Sure Crops.

There has been steady and tolerably rapid advancement made in the growth of a majority of the towns in Colusa, Butte, Tehama and Shasta counties. Especially is this so in the agricultural districts where the land produces at least fair crops in all seasons—wet or dry—as does the land on the Reading Ranch. Those looking for homes in California where diversified farming will pay every year; where wood and water are plenty and easy to be obtained, and other desirable advantages are to be had, should address the proprietor of the Reading Grant.

Some 14,000 out of 26,000 acres of the grant remain for sale at comparatively low rates, in quantities to suit purchasers, on easy terms. Prices range from $5 to $30 per acre. The tract is between two and three miles wide, with the Northern Division of the C. P. R. R. passing centrally through its entire length. Send postage stamp for free circulars containing information about Shasta County and these lands, to the proprietor of Reading Ranch.

Report of the Arid Lands Commission.

We have received an early copy of the report of the "Arid Lands Commission," popularly so called, but more particularly a "report on the climatic and agricultural features and the agricultural practice and needs of the arid regions of the Pacific slope, with notes on Arizona and New Mexico, made, under the direction of the Commissioner of Agriculture, by E. W. Hilgard, T. C. Jones and R. W. Furnas."

This document has been long awaited, and we are pleased to find that it contains much which it will be to the advantage of the State to have generally known at the East. Ex-Governor Furnas and Judge T. C. Jones are gentlemen well known at the East, and their comments upon what they saw here will be received and believed when the *exparte* statements of a Californian would be questioned. We find in the observations of the Eastern members of the Commission many remarks which show them to be close observers and fair judges, and we expect to transfer to our columns, from time to time, parts of their reports. In this issue we give Judge Jones' report upon California horses.

The Chairman of the Commission, Prof. Hilgard, contributes to the report many pages of excellent information upon California climates, soils and special industries, and it cannot be doubted that California will be much better understood at the East when the document is generally circulated. In the printing of the report by the Government printers there have grievous omissions occurred in not crediting each member of the Commission with his individual work. Prof. Hilgard calls our attention to the following list of errati regarding authorship, which are serious: Page 92. All the matter from the heading "Sugar Cane and Sorghum" to the heading on page 98 should be credited to E. W. Hilgard. Page 98. All from heading "Horticulture and Viticulture" to page 107 inclusive should be credited to R. W. Furnas. Page 125. All from end of paragraph headed "Small Fruits" (being the discussion of citrus fruits) to heading on page 128 should be credited to E. W. Hilgard All from that heading to page 137 to R. W. Furnas. Pages 152 and 153 ("Insect Pests") should be credited to R. W. Furnas.

We presume that copies of this report can be had on application to the Commissioner of Agriculture, at Washington, or to the Congressional representatives in each district.

Cause and Cure of Rheumatism.

Common rheumatism is a disease which affects the joints, the hinges of the body, in such a way that the slightest motion of the ailing parts gives pain. A creaking hinge is dry and turns hard. A single drop of oil to moisten it makes a wonderful change, and it instantly moves on itself with the utmost facility. All kinds of rheumatism are an inflammation of the surface of the joints. Inflammation is heat; this heat dries their surfaces; hence, the very slightest effort at motion gives piercing pain. In a healthy condition of the parts, nature is constantly throwing out a lubricating oil, which keeps the joints in a perfectly smooth and easy-working condition. Rheumatism is almost always caused—indeed, it may be nearer the truth to say that it is always the result of a cold dampness. A dry cold or a warm dampness does not induce rheumatism. A garment, wetted by perspiration or rain or water in any other form about a joint, and allowed to dry while the person is in a state of rest, is the most common way of causing rheumatism. A partial wetting of a garment is more apt to induce an attack than if the entire clothing were wetted; because, in the latter case, it would be certainly and speedily exchanged for dry garments. There are two very certain methods of preventing rheumatism. The very moment a garment is wetted in whole or part, change it or keep in motion sufficient to maintain a very slight prespiration until the clothing is perfectly dried.

The failure to wear woolen flannel next the skin is the most frequent cause of rheumatism; for a common muslin or linen or silk shirt of a person in a perspiration becomes damp and cold the instant a puff of air strikes it, even in midsummer. This is not the case when woolen flannel is worn next the skin.

The easiest, most certain and least hurtful way of curing this troublesome affection is, first, to keep the joint affected wound around with several folds of woolen flannel; second, live entirely on the lightest kind of food, such as coarse breads, ripe fruits, berries, boiled turnips, stewed apples and the like. If such things were eaten to the extent of keeping the system freely open, and exercise were taken, so that a slight moisture should be on the surface of the skin all the time, or if in bed the same thing were accomplished by hot teas and plentiful bed clothing, a grateful relief and an ultimate cure will very certainly result in a short time. Without this soft and moist and warm condition of the skin and an open state of the system, the disease will continue to torture for weeks and months and years.

Inflammatory rheumatism may, for all practical purposes, be regarded as an aggravated form of the common kind, extended to all the joints of the body, instead of implicating only one or two. For all kinds, time, flannel, warmth, with a light and cooling diet, are the great remedies.—*Hall's Journal of Health.*

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the WATCHMAN'S progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tell whether the WATCHMAN has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the WATCHMAN family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the WATCHMAN.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men

G. W. MCGREW—Santa Clara county.
M. P. OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
L. L. WOODMANSEE—Nevada State.
B. W. CROWELL—Los Angeles county.
L. WALKER—Butte, Tehama and Shasta counties.
E. A. WILLIAMS—San Francisco.
S. E. BAKER—Eastern States.
J. WILTSE, Amador county.

Agents Now Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to our business. Apply soon, or address this office, giving address, age, experience and reference.

DEWEY & CO., Publishers,
No. 252 Market St., S. F.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this coast now for so many years, the firm's name is a well-known one. Another reason for its popularity is that a great proportion of the Pacific coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That is this understood and appreciated is evidenced by the number of patents issued through their agency from week to week and year to year.

Business Offices and Sunny Rooms to Let.

We have some desirable rooms to let adjoining the offices of this paper which will be rented on favorable terms. Stair entrance, No. 252 Market St. Elevator, No. 12 Front St. Parties wishing offices, etc., will do well to call and see them DEWEY & CO.

Apprentice Wanted.

Wanted, a well-recommended, able and steadfast boy, of fair education and good intellect, to thoroughly learn the printing business. None other need apply. Address this office.

SAMPLE COPIES.—Occasionally we send copies of this paper to persons who we believe would be benefited by subscribing for it, or willing to assist us in extending its circulation. We call the attention of such to our prospectus, terms of subscription, etc., and request that they circulate the copy sent.

Extra Type for Sale.

We offer Scotch brevier type (same as used on this paper) for sale in any quantity from 100 lbs. to 1,000 lbs., for 25 cents per lb., if ordered soon. Also, several hundred pounds of nonpareil at favorable rates. The type is in good condition and is of a very durable character.

DEWEY & CO.

Pay in Advance.

Our terms for subscription are in advance, and we desire no new names on our list without prepayment.

Shorthand Writer.

The Pacific Rural Press.

[Established in San Francisco in 1870.]

This is the leading farming journal on the western half of the continent, and second to none in America. It is well printed and illustrated, weekly. Contains an unusual amount of fresh, original farm, household and family circle literature. Careful attention is paid to giving full and reliable weekly market reports. The following are among its ably conducted departments: Editorials on agricultural and other timely and important subjects of live interest to farmers and their families; agricultural, and other useful and ornamental illustrations; correspondence from various quarters of our new and rich developing fields of agriculture on the Pacific coast, embracing new hints and ideas from progressive men and women in all branches of rural industry; Horticulture; Floriculture; The Garden; The Home Circle; The Grange; Young Folks; Domestic Economy; Good Health; Entomological; Sheep and Wool; The Dairy; The Stock Yard; Poultry Yard; The Swine Yard; The Apiary; The Vineyard; Queries and Replies; New Inventions (and illustrations of new and improved machinery); Agricultural Notes; Items of General News, etc. Its columns are studiously filled with chaste, interesting, fresh and useful reading, devoid of questionable literature for old or young and fancifully alluring clap-trap advertisements. Send for sample copies.

Subscriptions, *in advance*, $3 a year. Agents wanted, on liberal pay. DEWEY & Co., Publishers.
No. 252 Market St., S. F., Cal.

(Established 1867.)

A NEW BOOK.

A Treatise on the Horse and his Diseases.

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses, Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines

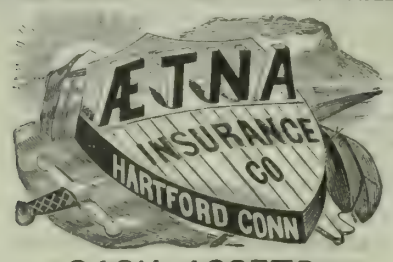
Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year.

It is printed on fine paper and has nearly 100 pages, 7½x5 inches. Price only 25 cents, or 5 for $1, on receipt of which we will send by mail to any address.

DEWEY & CO.,
252 Market St., S. F.

BY TELEPHONE.—Subscribers, advertisers and other patrons of this office can address orders, or make appointments with the proprietors or agents by telephone, as we are connected with the central system in San Francisco.

Bro. Terrance Sullivan, one of the best and most skillful boot and shoe makers in this city, has removed from Sixteenth St., and established a manufactory for all kinds of ladies' and misses' gaiters and gents' custom work at 526 Hayes St. Bro. Sullivan has a high reputation as an anatomical boot maker, and his friends who wish to benefit themselves can do so by calling at 526 Hayes St.



Mr. Page has presented in the House recently a petition of citizens of California to the Tariff Commission, recommending an increase of duty on chiccory. The petitioners claim that this industry needs protection, and that the reduction from five cents to one cent per pound has practically ruined their business.

Sale of Horses and Cattle.—Bro. J. D. Horan, corner of Tenth and Howard streets, is the proprietor of stock yards for horses and cattle. As a commission agent for the purchase and sale of horses and cattle, his long experience and square dealing has given him an extensive business. Parties wishing anything in his line will do well to engage his services.

Whitmore's Improved Gear.—Bro. E. Whitmore, 1920 Union street, has invented and patented what is known as "Whitmore's Improved Gear," which is applied to all kinds of vehicles. It is simple in construction, combining the best advantages of side and end springs. Its popularity is such that orders for this gear are coming in from all parts of the State.

Bro. Louis Dampf, one of the leading frame manufacturers and picture dealers, wholesale and retail, owing to a change in his business relations, is offering from his immense stock choice and select goods, at largely reduced rates.

The magnificent painting, 40x50, of lilacs, now on exhibition at Kohler & Chase's, which took the first premium at the Mechanics fair, is a master piece in design and natural appearance, that will well repay a visit.

A California Success.

Happening to know personally the facts, it is but justice for us to state that the fine organ manufactured by Mr. John Bergstrom, of San Francisco, and exhibited in the Mechanics' Fair of 1876, has, by time and use, proved that the high meed of praise then bestowed upon it by some of the best musical critics in attendance was not over stated. The organ has performed excellent service in Hamilton church, Oakland, since the spring of 1877, having constantly been much used for congregation and concert purposes from that day to this. Although the best makers in Massachusetts and England have sent samples of their highly reputed instruments for several elegant churches in Oakland, none of them have yet equaled the California production of Bergstrom in its fullness and sweetness of tone and easy and perfect action. None other has yet proved so popular with the best of performers or their delighted listeners. It is the more pleasant for us to make this statement at the present, from the fact that we learn that one of the leading churches of Oakland has lately furnished Mr. Bergstrom an order for a new organ, which may confidently be expected to far excel anything that has been received in that city from abroad, if it does not even decidedly eclipse Mr. Bergstrom's earlier efforts.

Bro. J. F. Jenness, P. M. W. of Excelsior, No. 126, owing to sickness and a desire to make a change in his residence offers for sale at very low cost his valuable express route known as Jenness' Mission Express. It has been established 11 years, and it is offered at less than its actual value, as his physician has ordered a change of climate.

Family Groceries.—For a choice line of family groceries of the best quality and at low prices, go to Bro. Fred. Mangoin, corner of Market and Brady streets.

Sister E. C. Hatch, as one of our California artists, has justly earned a reputation that is not only creditable to our State, but places her in the galaxy of noted artists.

Washington Territory boasts of being out of debt with money in the Treasury.

A NEW STEAM ENGINE.—Two Tennesseeans have patented a new steam engine which aims to economize steam and maintain a constant equal pressure on the driving shaft, accomplishing the idea involved in the as yet impracticable circular engine. It is an improvement on those engines which have more than one movable piston working in the same cylinder, each separately connected by the crank. The new engine has three pistons in the cylinder, and the rod of the central one passes through the center of the inner piston. The rods of the outer piston also pass through the wires, secured to it at equal distances from the rod of the center piston; these rods are not fastened to the center piston, though they pass through it. By this system the movements of the outer and inner pistons are steadied. The central and outer pistons are forced apart in opposite directions when the steam is let in between them through the port, until the exhaust port allows it to escape; and when it is admitted between the central and inner pistons, the former is moved back, going in one direction, while the end pistons move in the other; and as the cranks of the central and end pistons are set opposite, the crank shaft is at the time pulled and pushed in opposite directions by the movement of the three pistons, and the strain upon it is equal in both.

A NEW CARBON ARRANGEMENT.—The following description is given of a new electric lamp recently introduced by Mr. Selignac, of Paris. To each of the carbons is intimately attached along their sides a glass rod. Both rods come together horizontally, actuated in their approach by a spring. Between the glass rods there is a stopper of glass, which is heated as soon as the arc is established in such a way that the rods yield gradually to the pressure of the springs, and keep the carbons sufficiently apart to insure a steady light.

A RELIABLE PILL FOR DYSPEPSIA.—Diastase, 10 grains; pepsine, 50 grains; extract of gentian, 50 grains; tartaric acid, 50 grains; powdered rhubarb, 50 grains, and gentian, q. s. Divide into three grain pills. Dose, two to three pills, shortly before meals.

EDGE TOOLS.—All cutting and piercing edge tools operate on the principle of the wedge. A brad-awl furnishes an example which all can readily understand. The cutting edge of the awl severs the fibers of wood as the instrument enters, and the particles are compressed into a smaller compass, in the same manner as when a piece of wood is separated by a wedge. A chisel is a wedge in one sense, and an ax, drawing-knife, or jack-knife is also a wedge. When a keen-edged razor is made to clip a hair or remove a man's beard, it operates on the principle of the wedge. Every intelligent mechanic understands that when a wedge is dressed out smoothly it may be driven in with much less force than if its surface were left jagged and rough. The same idea holds good with respect to edge tools. If the cutting edge be ground and whet to as fine an edge as may be practical with a fine-gritted whetstone, and if the surface back of the cutting edge be ground smooth and true, and polished neatly, so that one can discern the color of his eyes by means of the polished surface, the tool will enter whatever is to be cut by the application of much less force than if the surfaces were left as rough as they usually are when the tool leaves the grindstone. All edge tools, such as axes, chisels and planes, that are operated with a crushing instead of a drawing stroke, should be polished neatly clear to the cutting edge, to facilitate their entrance into the substance to be cut.

EFFECT OF SUNLIGHT UPON GLASS SURFACES.—The action of sunlight on colorless and colored glass—both polished and rough—is so marked as to have received the special attention of chemists. Very perceptible changes have been observed; that is, from colorless to yellow, and from light yellow, green or blue to the darker or mellow shades of those colors, and specimens of coffee-colored glass are instanced, which, in the space of only five years, had materially changed to rose and amber colors. It is thought that the rich, mellow tones so much admired in the old and richly stained cathedral windows is due to the action of the sunlight in a long succession of years in toning down what were most probably comparatively bright or harsh colors originally; the action, it is supposed, may be a photo-chemical one.

DR CHARLES W. DECKER.

THE PACIFIC RURAL PRESS,

AN ILLUSTRATED

AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.

Because it is the largest and best agricultural weekly west of the Rocky mountains

That Patrons may be reliably informed on the progress of the Order in this and other fields.

That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.

That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress.

That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.

That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements.

That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information consubscription, etc., on application.

Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

Railroad Travel in This Country and in Europe.

In Europe the average speed of railroad trains is 23 12 miles per hour. In the United States 24.31.

In Europe the average fare is 2.74 cents per mile; but wherever there is a large amount of through travel the fare is advanced to an average of 3.02 cents, adversely to such travel. Such a policy to an inhabitant of the United States appears very singular, for here the average is 3.29; while when there is an exceptionally large amount of through travel the fare is reduced to 2.88 cents to encourage such travel.

For number of trains on a single road and for speed England leads the world. From London to Grantham, 105 miles, the regular trip is made at the rate of 52 miles per hour. The fastest train in the United States is the direct line between New York and Boston, which maintains a speed of 38.38 miles per hour. The fastest train in France is that from Paris to Bordeaux, 360 miles in nine hours or 46 miles per hour. The speed of the fastest German train is the same—from Berlin to Cologne. All other European countries run slow, as a rule, slower than in this country.

In France a workman can travel 30 miles in a third-class car on a day's wages; in Italy and Spain from 10 to 15 miles, while in the United States he can travel from 40 to 50 miles in a first-class car for a day's wages.

Railroading in the Central States possesses another peculiarity. While in Uurope second and third-class cars are almost invariably rare, in the United States the system of railroad travel is based on two grounds—that it is much easier to run trains with one class of carriages than with three, and that all travelers are, in theory at least, socially equal.

In England nearly all machinery is constructed after much heavier modes than the same class of machinery in the United States, with the single exception of railway locomotives and cars. An American passenger train is usually twice as heavy as a train for an equal number of passengers on an English road. It is now generally acknowledged by the engineers of this country that they should be a reduction in the weight of cars. While in this we are inclining to English practice, English railroad men are fast introducing our style of open cars in preference to their compartment cars.

CUTTING GLASS BY ELECTRICITY.—Mr. Fahdt, of Dresden, uses metal wires which have been made red hot by electricity for cutting glass. The apparatus consists of two screws, which are fastened on a plate at a distance from each other varying with the size of the object which has to be cut. The screws are in communication with the poles of a battery, and carry at their tops a metallic wire, which is placed round the object which is to be cut. The glass is carried by supports. When the circuit is closed the wire becomes red hot, and the places where the wire touches the glass (the glass can be turned round by the hand) become heated, so that by sudden cooling, or the contact with a humid body, a severance of the glass takes place. In order to remove the inequalities on the sections which have been obtained, the glass pieces are placed on an apparatus in which the section is exposed to the flame of a chalumean, the glass piece being made to revolve, in order that all parts are touched by the flame. The glass is then taken to a heating furnace in order to prevent the heated parts becoming broken by too quick cooling. The glass is then removed to a room where it is left to cool.

AN IMPROVED COIL SPRING.—A device for equalizing the driving power of a coiled spring, adapting it to drive sewing machines at a uniform speed, has been patented by a Hoboken, N. J., man. In this invention a regulating wheel, which is driven by the coiled spring, has a spiral row of holes on its face from near the center to the periphery. A spur wheel, whose teeth run in these holes, slides on a feather upon its shaft, the outer end of which is furnished with a gear wheel that engages with a train of wheels. Through these wheels the power is applied to the machine, with a gradually decreasing leverage as the force of the unoiling spring decreases.

SAWED veneers preserve the natural color and grain of the wood better than sliced.

Orange Culture in California.

With Appendix on Grape Culture.

An Important Work.

This book is written by Thos. A. Garey, of Los Angeles, after many years of practical experience and observation in orange culture. The subject is an interesting as well as important one, containing information which all reading Californians should possess, whether engaged in orange or grape culture or not.

There are few writers in America who could have contributed more richly or abundantly on this subject than has the author.

The book is issued in good style and print, and convenient form. It contains 225 pages, 12mo.

Printed and Sold at the Office of the "Pacific Rural Press," San Francisco.

Mailed (postpaid), in stiff cloth binding, for $1.25; in flexible cloth, $1. Agents wanted for this and other books.

REGILDING DONE.

727 Market Street, S. F.

We herewith give a front view of one of the largest furniture houses on the Pacific Coast. The house was built especially for this firm. It has a frontage of 40 ft. on Market St., and 170 ft. deep, running through to Stevenson St. The building is four stories with basement; the upper floor is used for manufacturing purposes, the third story as a wareroom, and the first and second stories as sales-room A large elevator is used in this building; and there are employed by this firm from 40 to 50 skilled workmen all the year. The immense stock represents all kinds of furniture used in humble life, and also of the finest class used in our palatial residences, ranging in price for bed-room sets from $20 to $500, and side-boards from $15 to $800. Combining home manufactured goods with all the latest patterns and newest designs of imported goods. Although the house deals in a general line of furniture, curtains, window draperies and lambrequins, pedestals, Louis XV. ebony furniture, etc., still they are prepared to furnish a private house or hotel from the floor up. Bro. F. S. Chadbourne is a representative Workman; one of the leading and enterprising men of this great city, and with the assistance of an able and polite corps of assistants, take great pleasure in showing visitors through this labyrinth of furniture, etc. It is with pleasure and pride that we have frequent occasion to refer to our leading citizens and solid business men as one of the great organizations who are helping us and each other in this humanitarian work.

Important to A. O. U. W.

We occasionally send complimentary sample copies of the WATCHMAN to the various officers and members of the A. O. U. W. We ask as a special favor that those receiving them, and all interested in the success of the various Lodges will lend us a helping hand in increasing our circulation. Nothing contributes more to the successful working of the A. O. U. W. than the circulation of general Fraternity news, and the best way to secure this is through the WATCHMAN, which is an able and faithful advocate. It is to the interest of the A. O. U. W. that the WATCHMAN be placed in the hands of every Workman, and to accomplish this we must rely in a large measure upon the voluntary efforts and subscriptions.

Liberal inducements will be offered to active and reliable members who will canvass for subscriptions. Sample copies will be mailed free on application to Workmen, all of whom are invited to endeavor to assist in extending the circulation of the WATCHMAN.

Let every Workman into whose hands this notice may come, if not already a subscriber, fill out the subscription blank below, enclose two dollars, and send it to us for a year's subscription.
